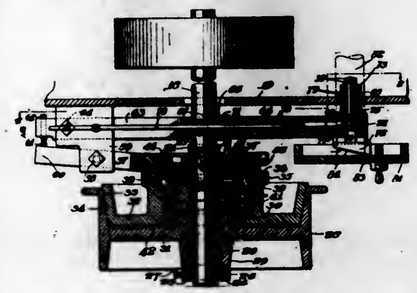
1. The combination, with a seat, a standard at the forward end and one side of and rigid with the seat, and a vertically adjustable bracket supported from and extending above the standard and having two spaced laterally extending substantially parallel arms at the upper end of the bracket in one and the same horizontal plane, of two laterally opposite parallel guide-bars arranged over opposite ends respectively of and rigid with said arms, two outer bars arranged at the outer side and extending endwise of opposite guide-bars respectively, a table mounted

on and secured to said outer bars, two slide-bars arranged at the inner side of and slidable endwise of and supported from opposite guide-bars respectively, the forward portion and rear portion of each slide-bar having respectively a horizontal top edge and an inclined top edge which ex-

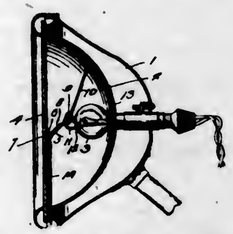
tends upwardly toward said horizontal edge, the aforesaid outer bars being pivoted to the slide-bars and having their axes coincident, and the table resting on the horizontal top edges or on the inclined top edges of the slide-bars according as the table is in its horizontal or inclined position.

1,348,925. BEEHIVE. DOUGLAS BAXTER, Three Rivers, Quebec, Canada, assignor of one-half to George Henderson, Three Rivers, Canada. Filed Sept. 18, 1919. Serial No. 324,486. 3 Claims. (Cl. 6—2.)



1. A bee hive provided with a suitable rectangular side frame, a suitable top and base for said frame, ends of said frames having a notch cut at the upper inside thereof, a metallic spacer attached to said ends to have a portion thereof extending up from the bottom of said notches formed in the upper side of said metallic spacer, said notches being a sufficient distance apart to space the hereinafter mentioned frames in proper relationship to each other, suitable frames adapted to fit inside of said frame, nails driven into the upper side of each end, said nails being adapted to hang in said notches of said metallic spacer, an angular spacer of V-shaped form, the upper end of said V-shaped form being attached to studs driven into the ends of said frame, notches formed in the lower inside end of said V-shaped portions, nails driven into the lower sides of said frame and extending out from the ends thereof, said nails engaging in said notches.

2. A bee hive consisting of a suitable frame provided with a top and base, frames adapted to be positioned inside of said frame, metallic spacers held at the top of the ends of said frame having suitable notches in spaced relationship to each other, a metallic angular spacer pivotally supported across near the bottom of said ends, each downwardly extending angular portion of last said spacer being provided with a notch on its inner side, said frames being provided with suitable hanger members adapted to engage at its top in the first said notches and at its lower side in second said notches so as to be properly adjusted and spaced apart.

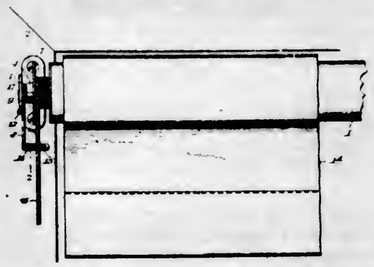


3. A hive having grooves at the top of its ends, upon the inner faces thereof, spacers on the inner sides of said ends, just below said grooves and provided with notches, combined with a comb frame having projecting means to engage in said notches, an angular spacer at the bottom of said ends with V-shaped portions having notches, and means on said frame engaged in said last-named notches.

1,348,926. CLUTCH MECHANISM. LAWRENCE F. BOYD, Chester, Pa. Filed Dec. 19, 1918. Serial No. 267,424. 12 Claims. (Cl. 192—8.)

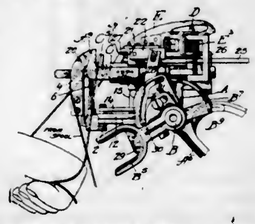
3. Clutch mechanism of the character described including a driving member; means adapted for engagement with a shaft; a clutch member adapted to engage said driving member; means for compressing said first means to clamp the latter to the shaft; and means for preventing relative rotatable movement between said compressing means and said clutch member, and permitting relative slidable movement between said compressing means and said clutch member; said first means providing a bearing for said driving member; substantially as described.

1,348,927. LIGHT-DEFLECTOR. CARL S. BROWN and RALPH R. SHAFFER, Ashland, Ohio. Filed Dec. 30, 1919. Serial No. 348,372. 3 Claims. (Cl. 240—48.2.)



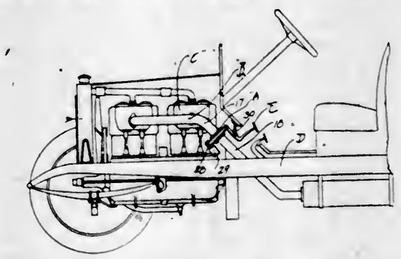
1. In a light deflecting device for headlights, the combination of a metal strip extending horisontally across the face of the front glass, said strip being disposed in a rearwardly slanting position and having an S-shaped folded upper edge portion, a light dimming half-moon strip removably held in a rearwardly slanting position in the aforesaid bent edge portion of the metal strip, and means for securely supporting the device within the headlight.

1,348,928. SHADE-ROLLER-OPERATING MECHANISM. ALLISON B. COLLINS, Denver, Colo. Filed Oct. 27, 1919. Serial No. 333,745. 2 Claims. (Cl. 156—35.)



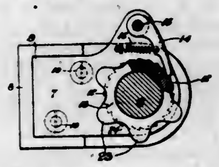
2. In shade roller operating mechanism, the combination with a roller having a shade thereon, of a bearing bracket for one end of said roller, a reel on that end of the roller next the said bracket, and a ratchet wheel thereon, a depending arm pivoted to the bracket on one side of the axis of the roller, having a dog, and a spring for normally holding the dog in engagement with the ratchet wheel, the lower end of said arm being out of vertical line with its pivot and terminating in a slotted horisontal

portion; a cord wound upon said reel in a counter direction to the shade and extending through the slotted portion of the arm, and adapted to be drawn upon to rotate the roller and raise the shade and at the same time, swing the arm and hold the dog out of engagement with the



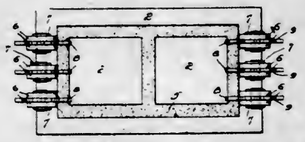
ratchet wheel, the shade being permitted to drop by gravity when the dog is thus held and the cord permitted to slip through the fingers, the arm being rocked by its spring to throw the dog into engagement with the ratchet wheel, when the cord is released, and stops for limiting the movement of said arm.

1,348,929. KNOTTER. HOWARD D. COLMAN, Rockford, Ill., assignor to Barber-Colman Company, Rockford, Ill., a Corporation of Illinois. Filed Oct. 26, 1918. Serial No. 259,766. 7 Claims. (Cl. 289—3.)



1. A knot-tying mechanism having, in combination, a rotary tying bill; means for supporting a thread extending across the tying bill, said bill being adapted to clamp said thread; means for supporting a thread which is doubled over the other thread; a shear for severing a portion of said other thread; a shear for severing a portion of said doubled thead; means for revolving the tying bill against the doubled thread, the other thread being thereafter caught by the tying bill and clamped; and means for actuating said shears.

1,348,930. AUDIBLE SIGNAL FOR MOTOR-VEHICLES. CHEEVER C. CONLEE, Dayton, Ohio. Filed Dec. 26, 1919. Serial No. 347,282. 12 Claims. (Cl. 116—33.)

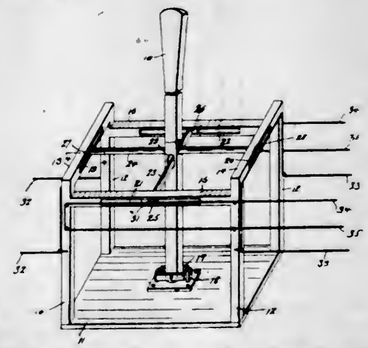


1. In a vehicle road and theft signal, the combination with an exhaust passage of an internal combustion engine, of a casing interposed in the exhaust passage, a slide block carried by the casing, and a signal whistle carried by the block.

1,348,931. RELEASING-CRANK MECHANISM FOR INTERNAL-COMBUSTION ENGINES. ROBERT N. COOK, Aspinwall, Pa. Filed May 24, 1919. Serial No. 299,577. 11 Claims. (Cl. 123—185.)

1. In combination with a power driven shaft subject to sudden reversal, a fixedly attached ratchet wheel, a loosely mounted cam wheel having a controlling ratchet wheel and a pawl therefor, and a crank having a pawl engaging the fixedly attached ratchet wheel and the cam wheel respectively.

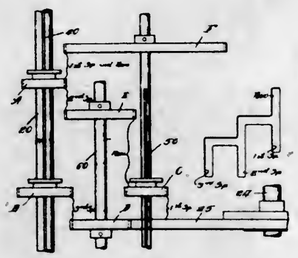
1,348,932. MANUFACTURING OF HOLLOW TILE AND THE LIKE. FRANK DOCHNAL, St. Louis, Mo. Filed Oct. 28, 1918. Serial No. 259,921. 1 Claim. (Cl. 25—20.)



The combination, with a tile forming die, of a rotary perforating and grooving means adapted to be set in motion by the tile leaving the forming die comprising radially extending arms perforating means, radially extending grooving means and a hub arranged on each side of said perforating and grooving means adapted for peripheral contact with the tile leaving the forming die.

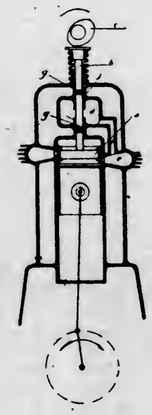
1,348,933. PURIFYING MAGNESIUM COMPOUNDS. CLINTON E. DOLBEAR, San Francisco, Calif. Filed Sept. 3, 1919. Serial No. 321,443. 2 Claims. (Cl. 23—13.)

1. The process of purifying magnesium compounds consisting in treating them at an elevated temperature with a solution of an ammonium salt; passing the volatilized gas therefrom into a comparatively cool solution of the magnesium salt formed in a previous similar operation; and separating the precipitated magnesium compound from the solution.



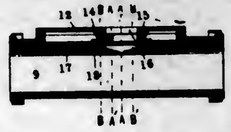
1,348,934. AEROPLANE. JOHN EBERT, Chicago, Ill. Filed Apr. 17, 1920. Serial No. 374,635. 2 Claims. (Cl. 244—29.)

1. A control mechanism for aeroplanes comprising a support, a hand lever fulcrumed to the support to swing



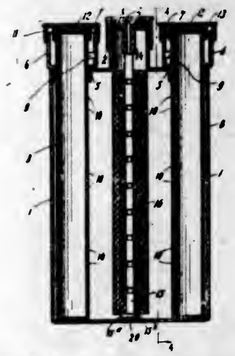
fore and aft and also sidewise, longitudinally slotted cross members in front of and to the rear of the hand lever and also at the sides thereof, slide blocks mounted in the slots of the cross members and having connection with the elements to be actuated, cross arms connecting the fore and aft slide blocks, cross arms connecting the side slide blocks, and an operative connection between the hand lever and the cross arms for independent actuation of the cross arms.

1,348,935. CHANGE-GEAR DEVICE. CONRAD E. FRUDDEN, Chicago, Ill., assignor to Parrett Tractor Company, Chicago, Ill., a Corporation of Delaware. Filed May 24, 1918. Serial No. 236,340. 6 Claims. (Cl. 74—58.)



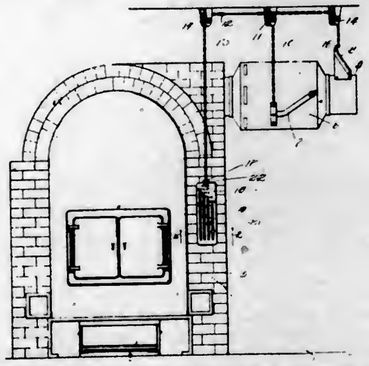
1. In a change-gear device the combination of a driving shaft and a driven shaft carrying a driven gear, a counter-shaft interposed between the driving shaft and the driven shaft, a sliding pinion on the driving shaft, a fixed and a sliding pinion on the counter-shaft, and means for meshing the first sliding pinion with the fixed pinion and for meshing the second sliding pinion with the driven gear at a single operation.

1,348,936. PACKING DEVICE FOR VALVE-RODS OF EXPLOSION-ENGINES. PIERRE LOUIS ALFRED GIAUQUE, Levellois-Perret, France, assignor to Societe Anonyme Des Automobiles & Cycles Peugeot, Paris, France. Filed Aug. 28, 1919. Serial No. 320,355. 5 Claims. (Cl. 123—75.)



1. The combination of an explosion cylinder, a valve working in said cylinder and having a rod, a guide for said valve rod and means whereby the gases which may escape between the valve rod and the guide are led to the admission conduit of the engine.

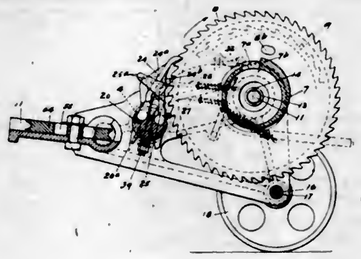
1,348,937. ASH-CONVEYER. ALEXANDER GIRTANNER, New York, N. Y. Filed Oct. 24, 1919. Serial No. 332,862. 6 Claims. (Cl. 137—75.)



1. In an ash conveyer, the combination with an intake section having an adjustable inlet opening, of a plurality of conduit sections differing in length and coöperating with said intake section to position the inlet section.

1,348,938. COMBINED POCKET-CASE AND STERILIZER FOR SURGICAL INSTRUMENTS. AUGUSTO H. DE GOENAGA, Gobleville, Mich. Filed Dec. 21, 1918. Serial No. 267,785. 2 Claims. (Cl. 167—3.)

1. A pocket case and sterilizer comprising a casing having a sterilizing element disposed therein, bushings mounted in and projecting above the top of said casing, perforated containers inserted into the casing through said bushings and in open communication with the interior of said casing, tongue and groove connections between said bushings and containers, and caps upon said bushings, said caps engaging the tops of said containers to hold them fixed in place.



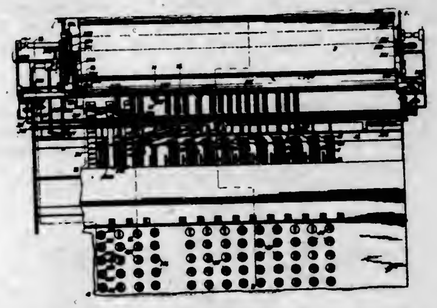
1,348,939. DAMPER-GAGE. HERMAN GOLDBERG, Chicago, Ill., assignor to Wolff Coal Saver Company, Chicago, Ill., a Corporation of Delaware. Filed Nov. 24, 1919. Serial No. 340,144. 5 Claims. (Cl. 126—286.)

1. The combination with a furnace draft control means having a control chain, of a gage; and a plurality of

spaced members adjustably mounted on the gage, each member being adapted to engage the chain, one at a time, and hold the draft means in a position of adjustment.

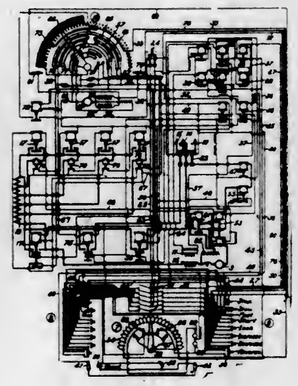
1,348,940. STUMP-PULLER. JOHN F. GORMAN, Portland, Oreg., assignor, by mesne assignments, to A. J. Kirstin Company, Escanaba, Mich., a Corporation of Michigan. Filed May 3, 1916, Serial No. 95,109. Renewed Jan. 17, 1920. Serial No. 352,231. 17 Claims. (Cl. 254—164.)

1. In a device of the character referred to, in combination, supporting means, a drum rotatably mounted therein and provided with an operating gear, a rocker member, a pair of operating pawls pivotally carried by said rocker member and adapted to alternately engage said gear in an operating manner as said rocker member is rocked, means yieldingly moving said pawls away from said gear, and operating connections between said pawls for alternately and positively moving said pawls into holding engagement with said gear, as said rocker member is rocked.



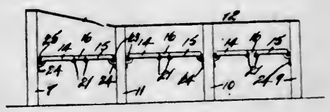
1,348,941. SHOE AND METHOD OF MAKING THE SAME. JAMES A. GREEN, Dolgeville, N. Y., assignor to Daniel Green Felt Shoe Company, Boston, Mass., a Corporation of Massachusetts. Filed Dec. 10, 1919. Serial No. 343,772. 12 Claims. (Cl. 12—142.)

1. The method of making shoes which consists in securing a padding on the inner side of an outer sole inside the outer edges of said sole, then attaching said outer sole with the thereto secured padding to an upper, all the parts being wrong side out, then securing an inner sole over said padding, then turning the shoe so made right side out, and finally lasting same to form.



1,348,942. DATING MECHANISM FOR CALCULATING AND LIKE MACHINES. WILLIAM S. GUBELMANN, Buffalo, N. Y. Original application filed Jan. 10, 1900. Serial No. 1,004. Divided and this application filed Sept. 30, 1918. Serial No. 256,263. 26 Claims. (Cl. 235—58.)

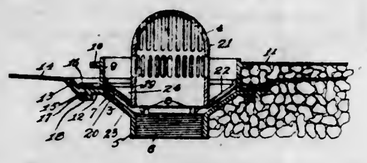
3. In a calculating machine, the combination of accumulating mechanism for accumulating items, a platen, printing mechanism for printing on a record sheet supported by said platen the items as accumulated, setting keys for controlling said accumulating and printing mechanisms, a dating mechanism comprising types movable



toward said platen for printing dates in conjunction with said items, and setting devices for controlling said dating mechanism.

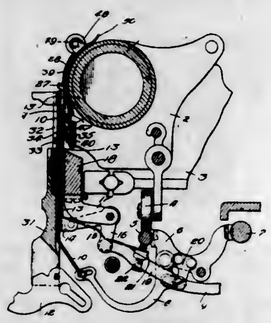
1,348,943. ELECTRICAL SYSTEM. FLETCHER D. HALLOCK, Pittsburgh, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 14, 1916. Serial No. 125,637. 39 Claims. (Cl. 273.)

12. The combination with a plurality of rolls for sheet material, separate electric motors for each of said rolls, and an idler roll between each pair of said rolls for maintaining a substantially constant tension upon said material, of means for adjusting the speed of certain of said electric motors in accordance with the positions of the idler rolls, and means controlled by said idler rolls for indicating, at a remote point, the approach of said idler rolls to predetermined positions by reason of abnormal slack in said sheet material.



1,348,944. FOLDABLE BED. ELLES E. HARTMAN, New York, N. Y. Filed May 10, 1919. Serial No. 296,147. 3 Claims. (Cl. 5—5.)

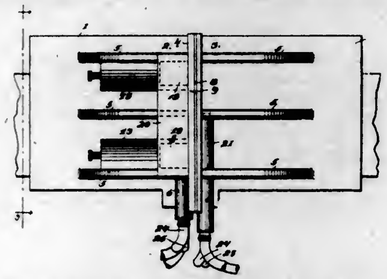
1. In a collapsible bed, a plurality of tubular post members having elongated openings in the wall thereof, fold-



able braces pivotally connected to said posts exteriorly of said openings consisting of a plurality of pivotally connected members, the center members being relatively short, the openings in said posts being arranged to receive the longer of said brace members when the structure is collapsed.

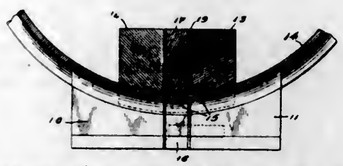
1,348,945. DOUBLE-DRAINAGE ROOF-DRAIN AND SEDIMENT-CUP. JOSEPH HIRSHSTEIN, St. Louis, Mo. Filed Jan. 27, 1916. Serial No. 74,685. 10 Claims. (Cl. 182—10.)

1. In a drain, the combination with means forming a drainage outlet communicating with the surface to be drained, of a removable perforate member in said outlet and extending a substantial distance above the surface to be drained, said member being positioned and dimensioned to provide a sediment receiving opening between it and said surface, and means forming a sediment basin adapted to receive and collect sediment carried to the sediment receiving opening, said sediment basin being removable with the perforate member.



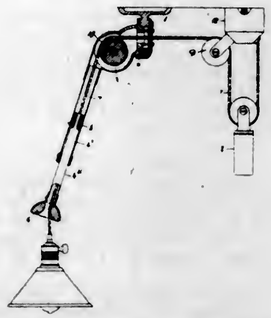
1,348,946. TYPEWRITER. OTTO A. HOKANSON, Woodstock, Ill., assignor to Woodstock Typewriter Company, Woodstock, Ill., a Corporation of Illinois. Filed Apr. 1, 1918. Serial No. 225,949. 16 Claims. (Cl. 199—135.)

1. In a typewriter; a shiftable line finder; and a paper finger at each side of the line finder adapted to slide thereunder with a projection extending forwardly from the further side of each paper finger and adapted to engage the side of the line finder to limit the sliding movement.



1,348,947. TRAIN-COUPLING. JOSEPH B. HOLLAND, Youngstown, Ohio. Filed May 22, 1919. Serial No. 298,832. 4 Claims. (Cl. 213—40.)

1. A car coupling, comprising a drawhead with laterally carried air line connecting means, including a vertically flat integral contactor with air passages and outlets, at one side; a relatively movable vertically flat receiver on the other side, including air passages with outlets; a plurality of supporting means for the movable receiver, arranged to enable horizontal movement without distorting the plane of contact, the integral and movable contactor and receiver coöperating with a similar receiver and contactor of a companion drawhead; and communicating air connections between the various passages of the contactor

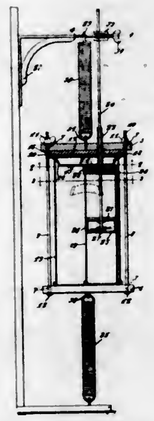


and receiver, establishing an air line when the drawheads are in operation.

1,348,948. ELECTRIC BUTT-WELDING AND MOLDING DEVICE FOR METAL WHEEL-RIMS. JOSEPH W. JACKSON, Anderson, Ind. Filed July 11, 1919. Serial No. 310,150. 2 Claims. (Cl. 219—4.)

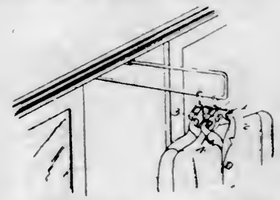
1. A welding device for channeled metal wheel rims to receive tires, comprising two sets of electrode devices relatively reciprocable, each including a channel member shaped to fit snugly within the channel of a wheel rim or felly and an inner member shaped to fit snugly against the inner surface of such rim or felly in opposition to the first mentioned member, a channel forming member between the channel members first mentioned and alined with a geometrical longitudinal projection thereof, and a second forming member between the said inner members of said electrode devices but spaced inwardly of a geometrical longitudinal projection thereof, whereby when the electrodes are energized and said electrode devices pressed toward each other in engagement upon rim butts the latter will be welded with a continuous unmodified surface in the channel and reinforced by an enlargement at the inner side.

1,348,949. ADJUSTABLE SUPPORT FOR ELECTRIC LAMPS. JOHAN PETTER JOHANSSON, Fannalund, Sweden. Filed Apr. 19, 1919. Serial No. 291,300. 2 Claims. (Cl. 248—8.)



1. An adjustable support for electric lamps comprising a flexible electric conductor, a bracket, an annular friction joint carried by said bracket, a second friction joint carried by said annular joint and perpendicular thereto, a tangential extension on said second joint carrying a stem, said joints and stem being adapted to permit of the conductor passing freely therethrough, a single guiding roller for the conductor mounted in said second joint and co-axial therewith, the axis of both the annular joint and stem extending tangentially to said guiding roller.

1,348,950. AVIATOR'S HELMET. ANDZEI KAMINSKI, Uniontown, Pa. Filed Dec. 22, 1919. Serial No. 346,669. 4 Claims. (Cl. 2—117.)

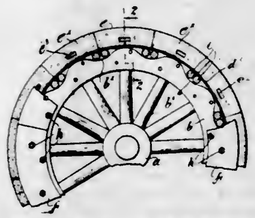


1. An aviator's helmet including an air container shaped to substantially conform with the wearer's head and to envelop the neck of the wearer, a flexible fluid container enveloping the air container and similarly shaped, the lower edges of said containers being cut out to rest upon the shoulders of the wearer, and means for respectively introducing air and fluid into said containers.

1,348,951. ICE-CREAM FREEZER. WILLIAM H. KNEMEYER, San Antonio, Tex. Filed Nov. 14, 1919. Serial No. 337,971. 2 Claims. (Cl. 259—94.)

1. In a device of the class described, a frame including an upper section and a lower section, an ice can supported between the sections, a circular head having an annular groove formed therein, contacting with the under surface of the upper section, said ice can having its upper extremity positioned in the annular groove, means for securing the sections together, a salt pan forming the closure for the ice can, a cream can positioned in the ice can and having its upper end in close engagement with the lower surface of the salt pan, for securing the cream can against displacement, a dasher in the cream can, and means for causing the dasher to move within the cream can.

1,348,952. CARD-HOLDER FOR GARMENT-HANGERS. WALLACE J. LANDRY, Baton Rouge, La. Filed Feb. 26, 1920. Serial No. 361,447. 3 Claims. (Cl. 40—10.)

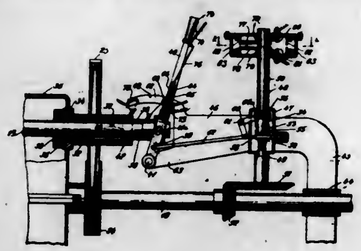


1. The combination with an ordinary garment hanger provided with a central projection extending upwardly from the garment shoulder supports of the hanger and having a label receiving edge, said label receiving edge being provided with a depression, one of the edge walls of the depression being cut away, the remaining marginal edge of the depression being under cut and provided with an over-hanging part, the under cuts being adapted to be engaged by the label or card, while the overhanging part is designed to overlie and retain the label in place.

1,348,953. EXPANDER FOR PISTON-RINGS. WILLIAM J. MCGINNISS, Washington, D. C. Filed June 21, 1919. Serial No. 305,746. 4 Claims. (Cl. 74—109.)

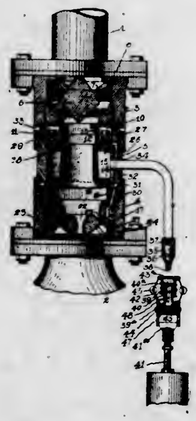
1. As a new article of manufacture, an expander for a piston ring comprising a ring adapted to be interposed between a main piston ring and a piston, said ring being formed with integral resilient tongues projecting from a face thereof.

1,348,954. TIRE. CONSTANTINE D. MACROPOULOS, New York, N. Y. Filed Dec. 19, 1919. Serial No. 345,973. 2 Claims. (Cl. 152—8.)



2. A tire structure comprising a wheel felly provided with transverse depressions, a flexible rim carried on the felly and provided with circumferential slots therein, screws passing through the slots and engaging the felly to permit flexing of the rim, a plurality of cylindrical cushions disposed transversely in each of the depressions and crowded between the walls thereof and the flexible rim, a tire carried on the rim, a circumferential plate secured on one side of the felly and a segmental plate secured on the other side of the felly, said plates being provided with flanges on their inner faces to engage the tire and said plates serving to hold the cushions, the rim and the tire in proper relation to the felly.

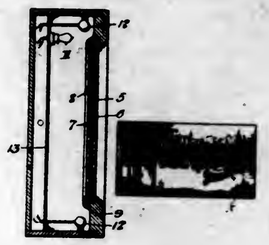
1,348,955. REVERSIBLE INTERNAL-COMBUSTION ENGINE. ALDEN E. OSBORN, New York, N. Y. Filed Apr. 6, 1916. Serial No. 89,267. 11 Claims. (Cl. 123—41.)



1. An internal combustion engine comprising a crank shaft, a valve operating shaft, means for connecting the

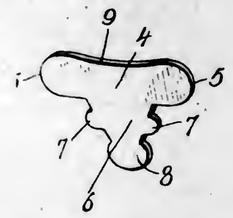
valve operating shaft with the crank shaft, means for rotatively adjusting the valve operating shaft relative to the crank shaft, a circuit breaker comprising a pair of contact members, a rotary member having two sets of con-

tact actuating cams longitudinally spaced thereon, and means dependent upon the rotative adjustment of the valve operating shaft for moving the rotary member to selectively render one of said sets of cams active.



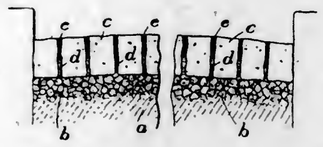
1,348,956. GOVERNOR. FRANK POKORNY, Jr., New York, N. Y., assignor of one-third to Francis W. Keegan and one-third to D. McRa Livingston, New York, N. Y. Filed Feb. 6, 1919. Serial No. 275,361. 6 Claims. (Cl. 137—153.)

2. In an internal combustion motor, in combination, a vacuum chamber subject to the aspiratory tension of the motor, a governor responsive to the pressure variations of said chamber, a self-closing valve for said chamber to control the operation of said governor, a motor driven member, and means, governed by the speed of said motor driven member, to operate said control valve.



1,348,957. ILLUMINATION OF PICTURES. FREDERICK JOHN POPE, New Rochelle, N. Y., assignor to William B. Thompson, Yonkers, N. Y. Filed July 15, 1918. Serial No. 245,061. 8 Claims. (Cl. 40—132.)

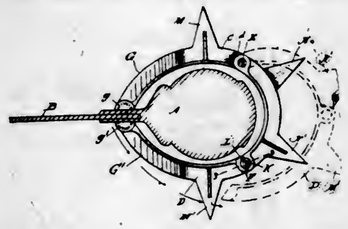
1. In the illumination of a transparent pictorial landscape to simulate a varying natural lighting effect, the combination with the pictorial landscape, of a plurality of incandescent electric lamps arranged to illuminate the picture from the rear, said lamps being arranged in a plurality of different electric circuits, the lamps in each of said circuits producing in combination a lighting effect of a different color than the lamps of any other circuit, and means whereby the degree of incandescence of the lamps in each circuit may be independently and successively varied, the different colors produced by the lamps in each of said circuits and the range of varia-



tion of the incandescence of the lamps being such that said several circuits combine to simulate successively different periods of the varying natural lighting effect; substantially as described.

1,348,958. COLLAR-BUTTON. FREDERICK A. REINHOLD, Jr., Astoria, N. Y. Filed Dec. 19, 1919. Serial No. 346,136. 2 Claims. (Cl. 24—101.)

1. A collar button comprising a flat integral member consisting of an elongated body, a shank extending substantially in the plane of the body from one side edge thereof and tapering outwardly, a head on the end of said shank, and an ear projecting laterally from each side edge of the shank to present a neck-band engaging stud portion of greater width than the said head.

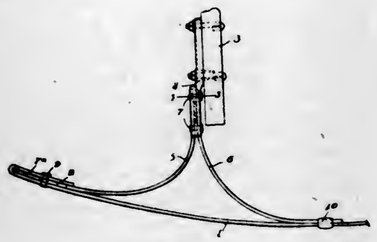


1,348,959. PAVEMENT. ALBERT TAYLOR RHODES, Worcester, Mass. Filed Apr. 4, 1919. Serial No. 287,474. 3 Claims. (Cl. 94—17.)

1. A pavement consisting of a suitable foundation, a series of paving blocks supported thereon and spaced apart, and a joint filler in the interstices containing carborundum or a like material to increase the wearing surfaces of the joint filler.

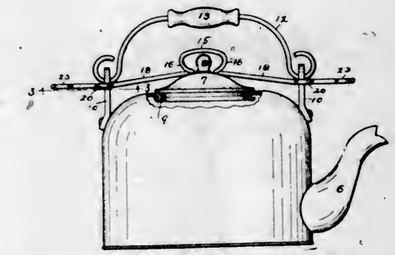
1,348,960. AUTOMOBILE-LOCK FOR DISK WHEELS. ALBERT W. SAEGESSER, Granite City, Ill., assignor to Liberty Auto Lock Co., St. Louis, Mo., a Corporation of Missouri. Filed Feb. 9, 1920. Serial No. 357,159. 7 Claims. (Cl. 70—90.)

6. A device of the character described comprising two members having radiating projections and having opposing forked and recessed inner ends and overlapping outer ends, a pivot and locking means connecting the respective



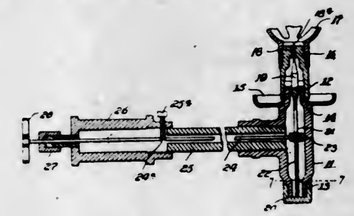
outer ends with the adjacent intermediate portion of said members substantially as described.

1,348,961. BUMPER. JAMES H. SAGER, Rochester, N. Y., assignor to J. H. Sager Company, Rochester, N. Y., a Corporation. Filed May 29, 1920. Serial No. 385,112. 6 Claims. (Cl. 293—55.)



6. A bumper provided with a supporting arm having a curved end to conform to the curved end of a vehicle frame bar, said supporting arm also having lugs on opposite sides formed with openings, a reversible adapting member having a face curved to conform to the curved end of the supporting arm and a face curved to conform to the curved end of another vehicle frame bar, said adapting member having lugs on opposite sides provided with openings adapted to register with the openings in the lugs on the supporting arm in either position of the adapting member, and fastening means passing through the registering openings in the supporting arm and the adapting member to hold the supporting arm and the adapting member to a vehicle frame bar.

1,348,962. BUMPER. JAMES H. SAGER, Rochester, N. Y., assignor to J. H. Sager Company, Rochester, N. Y., a Corporation of New York. Filed May 29, 1920. Serial No. 385,113. 5 Claims. (Cl. 293—55.)

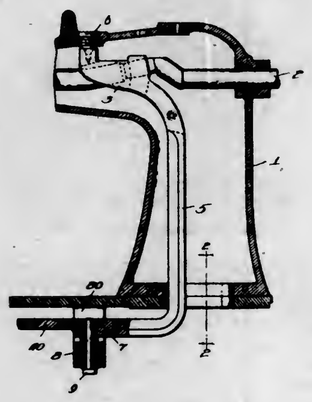


3. A bumper comprising a front bar formed of a spring strip with its ends turned inwardly on its rear face, bolts connecting said inwardly turned ends with the front portion of the front bar, and supporting means comprising two arms formed of spring stock and each deflected outwardly, each of said arms being provided with a slot near its free end through which the bolt extends, the end of each arm lying between an inwardly turned end and the front portion of the front bar.

1,348,963. COVER-RETAINER. CHRISTIAN E. SCHAFER, East Cleveland, Ohio. Filed June 26, 1919. Serial No. 306,940. 3 Claims. (Cl. 53—9.)

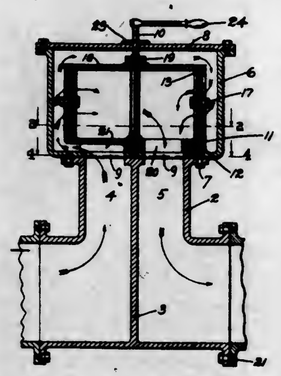
1. The combination, with a receptacle the body of which is provided at one side with a spout and has two ears formed at the top of the spout-carrying side and opposite side respectively of the body and facing each other and also has an opening formed at the top of the body centrally between said ears, a bail carried by said ears, and a cover forming a closure for and removable from said opening, of a cover-retainer engaging said cover and comprising two arms which are substantially in line and spaced endwise and extend from over the cover to said ears, said cover-retainer also comprising a handle-forming portion connecting said arms together at their inner ends, and said arms having offset portions embracing said ears under the end portions of the bail.

1,348,964. VAPOR-STOVE. STANLEY SELWA, Detroit, Mich., assignor of one-fourth to Louis Selwa, Detroit, Mich. Filed Sept. 2, 1919. Serial No. 321,079. 1 Claim. (Cl. 158—67.)



A burner comprising a T body having a lateral liquid fuel receiving connection, said body having reduced ends, a nipple on the upper reduced end of said body, said body having guide grooves in the lower reduced end thereof, a cap closing the lower reduced end of said body, a needle valve in said body movable to and from said nipple and having a slotted rack portion slidable in the guide grooves of said body, a basin on the upper reduced end of said body and retained thereon by said nipple, a flame distributer on said nipple, a rotatable rod extending through the lateral connection of said body into the slotted rack portion of said needle valve, a pinion on said rod meshing with the rack portion of said valve, and means carried by the lateral connection of said body and engaging in said rod to prevent longitudinal displacement thereof.

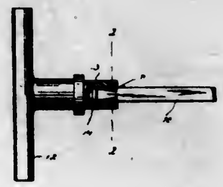
1,348,965. MOUNTING FOR SHUTTLE-OPERATING LEVERS. HARRY E. SMALLBONE, Buffalo, N. Y., assignor to King Sewing Machine Company, Buffalo, N. Y., a Corporation of New York. Filed May 15, 1919. Serial No. 297,272. 3 Claims. (Cl. 112—193.)



1. In combination with a shuttle-operating lever comprising an upper horizontal arm, a lower horizontal arm, and an upright connecting member between corresponding

ends of said arms; an upper pivotal bearing in the vicinity of the free end of said upper arm, a lower pivotal bearing for said lower arm arranged in axial alinement with the

upper bearing and serving both to support the weight of the lever and as a pivotal center; and means associated with the latter bearing to hold said lever against upward movement thereon.



1,348,966. APPARATUS FOR PURIFYING GASES. HARRY F. SMITH, Dayton, Ohio, assignor to The Smith Gas Engineering Company, a Corporation of Ohio. Filed July 5, 1918. Serial No. 243,385. 12 Claims. (Cl. 183—63.)

1. In an apparatus for purifying gases, a housing having inlet and outlet openings, a hollow pad rotatably mounted therein and so positioned that the inlet and outlet openings are adapted to communicate one with the space inside the pad and the other with the space outside thereof.

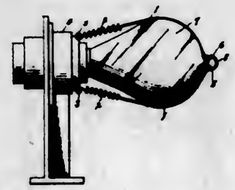
1,348,967. HANDLE. WILLIAM A. SOMERS, Hamden, Conn., assignor to The Mount Carmel Brass Foundry Works, Inc., Hamden, Conn., a Corporation of Connecticut. Filed Nov. 19, 1919. Serial No. 339,193. 1 Claim. (Cl. 292—347.)

In combination with a spindle angular in cross section with the corners thereof at one end cut at an angle to the length of said spindle, the deepest portion thereof being distant from the end of said spindle; and a grip member provided with a shank having a socket with a cross section the same as the said spindle and fitting it snugly, which shank is compressed so that portions of the corners of said

socket between the ends thereof enter the cut corners of said spindle and thereby form an interlocking inseparable engagement between said spindle and grip member.

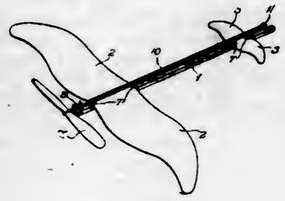
1,348,968. SHOE-STIFFENER. CHARLES E. SWETT, Boston, Mass., assignor of one-half to Harry H. Beckwith, Brookline, Mass. Filed Nov. 11, 1919. Serial No. 337,209. 5 Claims. (Cl. 91—68.)

1. A shoe stiffener comprising a fibrous body and a stiffening agent consisting of zein.



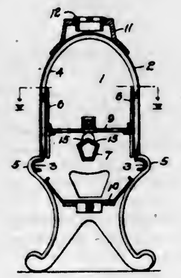
1,348,969. DROP-HAMMER. HOWARD TERHUNE, East Cleveland, Ohio, assignor to The Kilby Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 20, 1919. Serial No. 331,890. 9 Claims. (Cl. 78—29.)

1. In a drop hammer of the board type, the combination with the uprights and horizontal bearings located above the same, of rocker-members mounted in said bearings, one above each upright, shaft-bearings carried by said rocker-members eccentrically of said first bearings, the shaft bearings of the opposed rocker-members being in alinement, a rock-shaft parallel to said shaft bearings, an arm carried by said rock shaft adjacent to one of said uprights, a vertically movable friction bar secured to said arm and depending along said upright, a hammer movable along said uprights, operative connections between said hammer and bar, and operative connections between said rock-shaft and rocker-members whereby the latter will be rotated simultaneously in their bearings upon the movement of the latter.



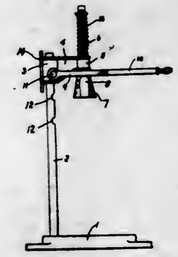
1,348,970. ELECTRIC-LIGHT-BULB STABILIZER. BENJAMIN L. THOMPSON, Roanoke, Va. Filed Mar. 18, 1920. Serial No. 366,935. 1 Claim. (Cl. 240—90.)

In an electric light bulb stabilizer, the combination with an electric light bulb socket of an electric light bulb, a substantially U shaped strandlike yieldable member adapted to engage said socket with its inner ends, and



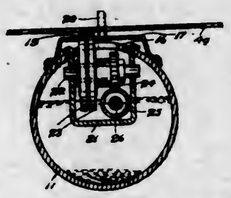
pass longitudinally around said bulb, means for centering said bulb in the outer portion of said strand and a dependent member carried below said centering means.

1,348,971. TOY AEROPLANE. ARTHUR F. THURNAU, Chicago, Ill., assignor to Lawrence Airplane Model and Supply Company, Chicago, Ill., a Corporation of Delaware. Filed Oct. 10, 1919. Serial No. 329,849. 6 Claims. (Cl. 244—14.)



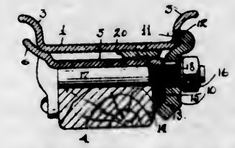
1. In a toy aeroplane, the combination of a longitudinally disposed body member, wings or planes comprising sheet material having a slot therein, said planes extending laterally from said member, a sheet metal fastening device formed with a flexible tongue inserted through said slot and bent over upon said sheet material to clamp a portion of the material flatwise upon the top of said device, having means whereby the portion of said device underlying the sheet material is secured to said member, and propelling mechanism carried by said member.

1,348,972. STOVE. JOHN MARK TOBIAS, Pittsburgh, Pa. Filed Aug. 18, 1919. Serial No. 318,116. 4 Claims. (Cl. 126—85.)



1. A stove comprising two end walls, means for securing said end walls against separation, a screen of resilient material bowed between said end walls, the said end walls being provided with internal support for the edges of the screen along the medial bowed portions thereof and with discontinuous external support for the edges of said screen at the terminal portions thereof, whereby the resilient screen may be applied and removed while the end walls remain held by their securing means, substantially as described.

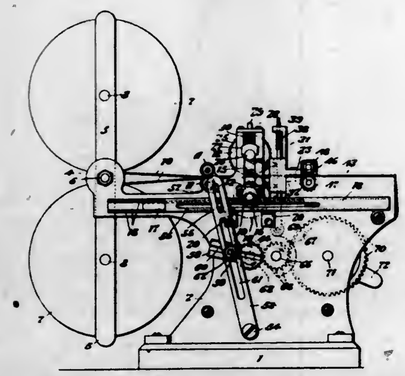
1,348,973. BOTTLE-CAPPING MACHINE. CARL F. TROTTNOW, Rock Island, Ill. Filed Apr. 10, 1919. Serial No. 288,956. 1 Claim. (Cl. 226—84.)



A device of the class described, comprising a suitably mounted standard, provided at its upper end with a series of notches; a head slidable on said standard; a pin removably held in said head and adapted for engagement with said notches; capping mechanism carried by said head, and provided on opposite sides with shoulders; and a bifurcated hand-lever pivotally connected with said pin and having a bearing on said shoulders.

1,348,974. DYEING-MACHINE. WILLIAM A. AINSWORTH, Utica, N. Y. Filed Jan. 19, 1920. Serial No. 352,347. 8 Claims. (Cl. 8—19.)

1. In a dyeing machine, means to transfer thread, yarn or like material from one holder therefor to another, a reservoir for coloring matter over which said material moves in passage, a roller mounted for rotation in said reservoir and projecting above the same, said roller being provided with liquid absorbing material around the same, means for continuously driving said roller, and means for intermittently pressing said thread, yarn or the like into contact with the liquid absorbing material, substantially as and for the purposes described.

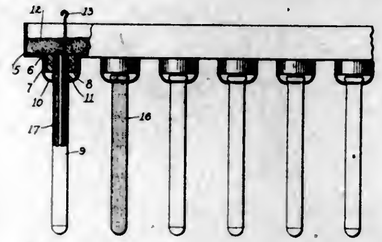


1,348,975. VEHICLE-WHEEL WITH DEMOUNTABLE RIM. LEE V. ANNABLE, Cleveland, Ohio, assignor, by mesne assignments, to The Standard Parts Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 7, 1916. Serial No. 89,624. 4 Claims. (Cl. 152—21.)

1. The combination with a wheel body; of a demountable rim therefor; and means for securing said rim onto

said wheel body, said means including a member attached to the latter and adapted to detachably engage said rim, an inwardly inclined face on said wheel body, said member having a complementary inclined face, and means adapted to draw said member toward said wheel body, whereby such inclined faces coöperate to move said member radially inward and exert a pull on said rim in the same direction.

1,348,976. MACHINE FOR MEASURING AND CUTTING RIBBON. ISRAEL ANTMAN, New York, N. Y. Filed Sept. 5, 1919. Serial No. 321,882. 4 Claims. (Cl. 164—49.)



1. In a machine of the class set forth, the combination of a frame, a lever pivotally held at one end to the frame, a crank shaft journaled in the frame, a crank arm held to said crank shaft, a crank pin adjustably held to the crank arm and engaging in a longitudinal slot in said lever, a rack, means on the frame for guiding the rack, means forming a pin and slot connection between the rack and the free end of the lever, a feed roll shaft journaled in the frame, a pinion fixed on the feed roll shaft meshing with the rack, a feed roll loosely mounted on the feed roll shaft, a ratchet wheel fixed on the feed roll shaft adjacent one end of the feed roll, a pawl pivotally held to the end of said feed roll and engaging the teeth of the ratchet wheel, a second feed roll journaled in the frame and coöperating with the first mentioned feed roll, meshing gears fixed to said feed rolls, a fixed knife supported in the frame, a movable knife, a spring normally tending to force the cutting edge of the movable knife past the cutting edge of the fixed knife, a cam shaft journaled in the frame, a cam fixed on the cam shaft adapted to shift the movable knife against the pressure of its spring, meshing gears fixed on the cam shaft and crank shaft, and means for rotating the cam shaft.

1,348,977. WATER-SOFTENING COMPOUND AND METHOD OF PRODUCING SAME. GEORGE LEONARD BORROWMAN, New Rochelle, N. Y. Filed June 2, 1916, Serial No. 101,248. Renewed May 8, 1919. Serial No. 295,703. 13 Claims. (Cl. 23—13.)

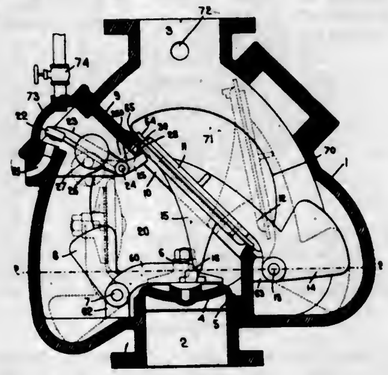
2. The method of producing a water softening material capable of delivering soft water which consists in stabilizing a natural base exchange silicate by baking whereby it is rendered capable of resisting the powdering action of water flowing in contact therewith.

1,348,978. METHOD FOR FILLING LAMPS. WILLIAM J. CAMERON, Chicago, Ill. Filed Sept. 5, 1919. Serial No. 321,898. 3 Claims. (Cl. 18—59.)

1. The method of loading tubular bodies with a cementitious filler consisting of mounting the bodies pendent in a sifting tray; introducing into the tray cementitious material in a dry, finely divided condition; agitating the cementitious material to fill the bodies, and inverting the

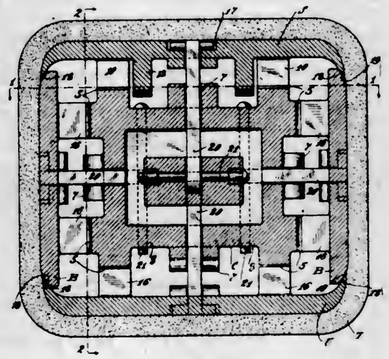
tray in a liquid, whereby the liquid permeates the material in said tubes by capillarity and the rate and extent of such permeation may be observed and controlled.

1,348,979. [WITHDRAWN.]



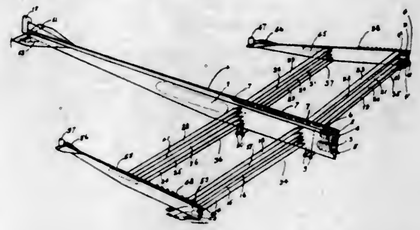
1,348,980. DEEP-WELL PUMP. MATTHEW T. CHAPMAN and MARK C. CHAPMAN, Aurora, Ill., assignors to The American Well Works, Aurora, Ill., a Corporation of Illinois. Original application filed Mar. 10, 1909, Serial No. 482,517. Divided and this application filed July 6, 1915. Serial No. 38,254. 7 Claims. (Cl. 253—199.)

1. In a deep well pumping mechanism, the combination of a pump casing located beneath the surface of the earth, a rotary impeller in said casing, a long power shaft driven from above and extending downward to said impeller, said power shaft being adapted to transmit power to said impeller, a fluid operated bearing located substantially at the top of said power shaft for supporting said shaft and impeller on a fluid surface, means for supplying fluid under pressure to said fluid bearing independently of the action of the pump means, and auxiliary bearing means for sustaining any resultant downward thrust of said power shaft.



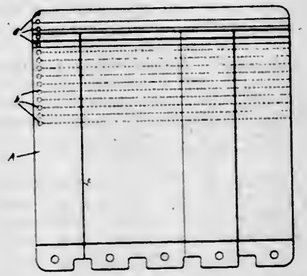
1,348,981. DRY-PIPE VALVE. EZRA E. CLARK, Newton, Mass. Filed Apr. 24, 1917. Serial No. 164,268. 3 Claims. (Cl. 169—22.)

1. In a dry pipe valve, the combination with a casing having a water inlet, an outlet communicating with the system, and a water-way forming communication between said inlet and outlet, of an inlet valve device pivoted to the casing at one side of the water-way and controlling the water inlet, an air pressure valve pivoted to the casing at the other side of the water-way and normally closing the same, said latter valve being situated in a position inclined to the water-way and being held to its seat by the



air pressure in the system, and two arms rigid with said air pressure valve and adapted when said valve is closed to engage the inlet valve device and hold it closed, said arms being situated and moving in planes either side of the inlet whereby when the valves are open said arms do not interfere with the flow of water through the water-way.

1,348,982. COLLAPSIBLE CORE-BAR. RAY G. COATES, Pasadena, Calif., assignor to Valley Mould and Iron Corporation, Sharpsville, Pa., a Corporation of New York. Filed June 7, 1919. Serial No. 302,458. 40 Claims. (Cl. 22—173.)



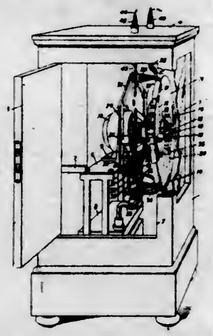
9. A collapsible core bar comprising a pedestal member, pattern wall members separately connected thereto for movement longitudinally and to and from the same, the extremity of the pedestal member at one end of the device providing a base upon which the device may stand, the extremities of the wall members at the opposite end of the device providing a base upon which the device may stand, members on the pedestal and wall members coöperating when the device is in standing position to maintain the wall members normally at their maximum distance from the pedestal member under the influence of gravity.

1,348,983. AEROPLANE. ISAAC COVINO, West New York, N. J. Filed Oct. 8, 1917, Serial No. 195,307. Renewed June 22, 1920. Serial No. 390,808. 2 Claims. (Cl. 244—14.)

1. An aeroplane comprising a main body having a horizontal and verticle steering means at its back or tail end and supporting wheels underneath said body, having on each side ten sustaining planes in sets of five each, vertically one over the other and forming two sets horizontally situated, each set being at a suitable distance apart, each plane having the usual angle of incidence; two equilibrating bodies of the same shape as that of central body and each located at the tip of the two series of planes on each side. All substantially as described.

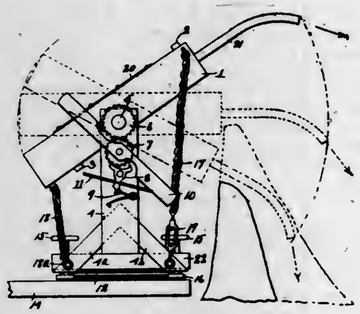
1,348,984. SHEET-FEEDING MEANS FOR ACCOUNTING AND TYPEWRITING MACHINES. SAMUEL S. DIXON, Detroit, Mich., assignor to Kalamazoo Loose Leaf Binder Co., Kalamazoo, Mich. Filed Mar. 27, 1917. Serial No. 157,818. 13 Claims. (Cl. 273.)

6. The combination of a record sheet having longitudinally disposed holes spaced uniformly to correspond with the printing spaces of the sheet and extending across the heading thereof, the last hole being one space in advance of the first printing space of the sheet, and a machine for making a record on said sheet provided with a sheet feeding means comprising a member acting through said holes, said machine being provided with means for forming additional holes in the sheet as the making of the record progresses.



1,348,985. SHIRT-BUTTON. BENJAMIN R. EVANS, Eudora, Kans. Filed Nov. 19, 1919. Serial No. 339,154. 2 Claims. (Cl. 24—99.)

1. In a button of the character described, a member having a flange at one end, a cap slidable on said member,

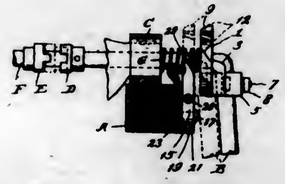


means to hold said cap in outward position on the member, a resilient element to draw the cap inwardly upon the member when said means is released, and elements operably connecting said member and the cap and adapted to coact with the flange in holding the button in active position.

1,348,986. HIGH-TENSION ELECTRIC MACHINE. CHARLES FAYER, New York, N. Y., assignor to Wappler Electric Co., Inc., a Corporation of New York. Filed June 26, 1919. Serial No. 306,813. 6 Claims. (Cl. 175—364.)

1. In a high tension electric machine the combination of a metallic table, a plurality of supporting members secured thereupon and disposed adjacent one edge thereof, posts of insulating material mounted upon said supporting members and extending away from said edge of said table, brushes mounted upon said posts and thus spaced away from said table and from all metallic parts in immediate proximity thereto, a synchronous motor mounted upon said table and provided with an armature shaft extending away from said table, and a rectifying disk mounted upon said armature shaft and provided with conducting members rotating in a plane disposed adjacent said brushes.

1,348,987. APPARATUS FOR DEFLECTING FIRE OF FIREARMS. ALEXANDER T. FISCHER, Detroit, Mich., assignor of one-third to Caroline Fischer and one-third to Mary Fischer, Detroit, Mich. Filed Feb. 28, 1919. Serial No. 279,839. 2 Claims. (Cl. 89—1.)

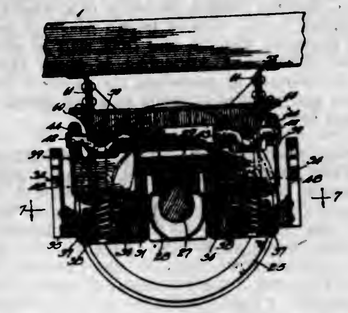


1. In a device of the class described, a gun platform, a rotatable table mounted thereon, friction plates carried by said rotatable table adapted to be forced against said platform so as to position said rotatable table thereon, a gun carrier mounted on said rotatable table comprising a tank adapted to contain water, a series of curved barrels mounted in said tank projecting therethrough and extending beyond the forward end thereof, said tank adapted at the rear of each of said curved barrels to receive the muzzle of a firearm in such a manner that the bore of the curved barrel will form a prolongation of the bore of the firearm.

1,348,988. PISTON. JOHN FLAMMANG, St. Louis, Mo., assignor to Ottmar G. Stark, St. Louis, Mo. Filed May 23, 1918. Serial No. 236,192. 11 Claims. (Cl. 74—108.)

1. A piston composed of a body expanded from its upper end to a point below the wrist pin and set in its expanded shape, and a wrist pin preventing compression of that portion of the piston below the wrist pin.

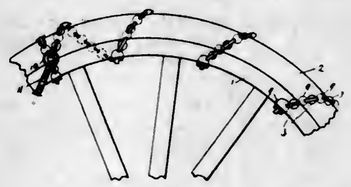
1,348,989. NON-KICK DEVICE. EDUARD FROHWERK, Kansas City, Kans. Filed Sept. 17, 1917. Serial No. 191,767. 9 Claims. (Cl. 123—185.)



1. In a device of the character described, the combination with a motor shaft having a clutch member at its forward end, a starting crank having a clutch member at its rear end for engagement with the first-mentioned clutch member, a bearing in which said starting crank is journaled, and a coil spring having one end abutting said bearing and its opposite end abutting the starting crank to normally hold the clutch member thereon out of engagement with the companion clutch member, of a cam wheel having a large axial opening to fit freely over the starting crank and the coil spring and provided with beveled teeth, means for removably securing said cam wheel to the starting crank, and a shift member adapted to engage the beveled teeth on the cam wheel and force the same outwardly with the starting crank should the motor shaft rotate backwardly while being cranked.

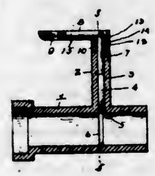
1,348,990. PROCESS FOR RECOVERING PROTEIN AND PHOSPHATES OF CALCIUM AND MAGNESIUM FROM ACID WASTE WATERS. ADOLPH GIESECKE, Buffalo, N. Y. Filed Mar. 10, 1919. Serial No. 281,846. 2 Claims. (Cl. 71—9.)

1. The precipitation of a combination of protein and phosphates of calcium and magnesium from corn steep acid waste waters by partially neutralizing the solvent with milk of lime.



1,348,991. RAILWAY-CAR. GARTH GRIFFITH GILPIN, Riverside, Ill., assignor to Walter P. Murphy, New York, N. Y. Filed Nov. 27, 1918. Serial No. 264,349. 38 Claims. (Cl. 105—165.)

1. In combination with the body, wheels, axle and journal box of a railway car, of a structure for supporting the car body on the journal box comprising a supporting member and a sliding member associated with the box, cushioning means interposed between said members, and

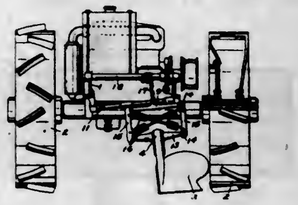


means connecting each end of said sliding member to the car body which have capacity for longitudinal and lateral movements.

1,348,992. NON-SKID ATTACHMENT FOR AUTOMOBILE-TIRES. JAMES M. GREEN, Chicago, Ill. Filed May 23, 1918. Serial No. 236,247. 1 Claim. (Cl. 152—14.)

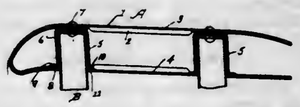
A non-skid chain for motor vehicle wheels adapted to be spirally wrapped around the tire and rim of a wheel and including anti-skid link members consisting of a body having an inner face to fit the tire and provided at its outer face with a rib extending longitudinally of the chain and disposed diagonally of the tread of the tire when the chain is in position thereon, said ribs being extended beyond the body and having openings, and connecting links passing through the openings of the ribs.

1,348,993. BACKWATER STOP OR VALVE. LOWELL R. HAHN and OSCAR L. MILLER, Kokomo, Ind. Filed Mar. 26, 1920. Serial No. 369,048. 4 Claims. (Cl. 251—56.)



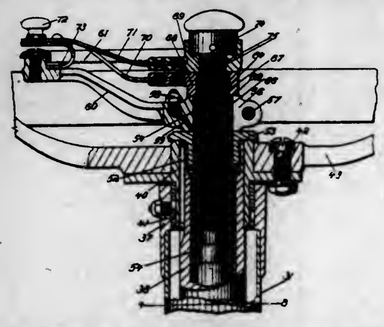
1. A back water stop including a pipe section, a hollow extension connected with the pipe section, a valve slidably mounted in said extension, a closure block for the outer end of the extension, a stem attached to said valve and projecting through said block, a packing chamber in the block through which the stem projects, a packing nut entering the packing chamber, and a handle section pivotally attached to the upper end of the stem.

1,348,994. PILE. GEORGE R. HECKLE, Montreal, Quebec, Canada. Filed Dec. 7, 1916. Serial No. 135,695. 9 Claims. (Cl. 61—57.)



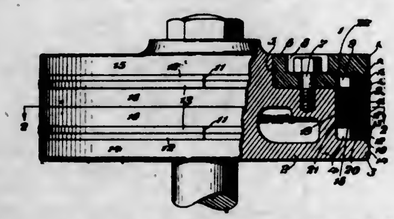
1. A pile driving apparatus consisting of an infrangible point, a hollow shaft, a removable core within the shaft and bearing upon the point and of greater height than the shaft, a head on the top of the core, and resilient means effecting a connection between the head and shaft whereby the driving impact is in part transmitted to the core and in part translated into a progressive pressure upon the shaft.

1,348,995. TRACTOR-PLOW. WALTER H. HIMES, Grove City, Pa., assignor to Himes Cohen Tractor Co., Grove City, Pa. Filed June 17, 1919. Serial No. 304,818. 7 Claims. (Cl. 97—60.)



7. In a plow, the combination with the frame, of a plow provided with a beam, a draft means connected to the front end of said beam, a cross arm at the rear of said beam, a supporting bar mounted on the frame, and links connecting the ends of said bar and arm.

1,348,996. AEROPLANE CONSTRUCTION. HARRIS G. HOOPER, San Francisco, Calif. Original application filed Aug. 28, 1917, Serial No. 188,623. Divided and this application filed Sept. 13, 1918. Serial No. 253,876. 8 Claims. (Cl. 244—31.)



7. In improvements of the character disclosed, means for producing sustentation by atmospheric re-action comprising spaced upper and lower walls, the structure of said lower wall being bent upwardly and developed into a hollow beam which extends into contact with the upper wall.

1,348,997. MOTOR-VEHICLE. ORMOND E. HUNT, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 30, 1915. Serial No. 69,394. 3 Claims. (Cl. 74—89.)

1. In a steering mechanism for motor vehicles, in combination, a stationary supporting casing having an upwardly extending tubular part, a tubular steering shaft having bearings in the upper and lower parts of said casing, a tube connected to the casing at its lower end beyond the end of said shaft, a steering wheel keyed to the upper end of said shaft, a threaded member adapted to hold said wheel in place and forming a bearing between the upper end of said shaft and said tube, and motor control devices mounted in said tube.

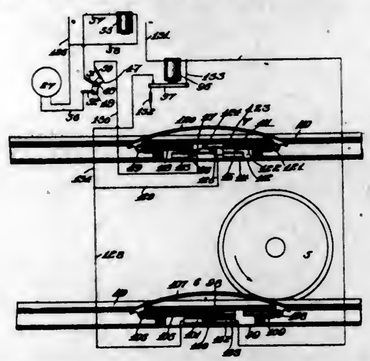
1,348,998. PISTON AND RINGS THEREFOR. MORTON C. HUTCHINSON, Woodbury, N. J., assignor of one-half to Leon G. BUCKWALTER, Merchantville, N. J. Filed Feb. 13, 1918. Serial No. 216,904. 2 Claims. (Cl. 74—109.)

1. In a piston, a body having an outer peripheral flange and a follower having its outer portion also provided with a flange, the chamber between said flanges containing a plurality of outer snap rings transversely cut, said snap rings having their peripheral portions of different diameters, solid bull rings located between said snap rings, and having their outer diameters substantially coincident with the outer diameters of said flange and follower and the lesser diameters of said snap rings, said bull rings consisting of a solid annular trough-shaped ring and a second ring having flat annular walls and spring holding pockets, said solid bull rings having their contiguous walls abutting, and a plurality of springs located in said pockets for pressing said bull rings outwardly against said snap rings to provide permanent adjustment for said rings.

1,348,999. FOOD BEVERAGE AND PROCESS OF MAKING THE SAME. JOHN L. KELLOGG and BORIS KAZMANN, Battle Creek, Mich., assignors to Kellogg Toasted Corn Flake Co., a Corporation of Michigan. Filed Mar. 31, 1917, Serial No. 158,961. Renewed June 27, 1919. Serial No. 307,249. 22 Claims. (Cl. 99—11.)

A hot food beverage product consisting of a soluble extract of a dextrinized and roasted starch-bearing material free from malt or saccharine material.

10. A beverage-producing process which consists in securing the extract of a dextrinized and roasted starch-bearing material free from malt or saccharine material.



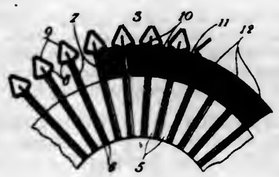
22. A beverage product consisting of a soluble extract of a roasted powder reduced from a dough of moistened starch producing material free from malt or saccharine material, cooked and dextrinized to about the extent which is produced by subjecting the loaves to the heat, moisture and pressure of steam at about fifteen pounds for about two and one-half hours.

1,349,000. FOOD BEVERAGE AND THE PROCESS OF MAKING THE SAME. JOHN L. KELLOGG and BORIS KAZMANN, Battle Creek, Mich., assignors to Kellogg Toasted Corn Flake Co., a Corporation of Michigan. Filed Mar. 31, 1917, Serial No. 158,962. Renewed June 27, 1919. Serial No. 307,250. 5 Claims. (Cl. 99—11.)

1. A beverage product process which consists in partially dextrinizing a mixture of starch-bearing and diastatic material, while arresting the diastatic formation of maltose to about the extent which results from subjecting the mixture in the presence of moisture to a temperature of about 250° F. for about two and one-half hours, in powdering the partially dextrinized material and roasting the powder.

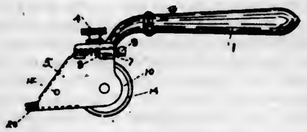
5. A beverage extract, consisting of the extract of a roasted mixture of starch-bearing material and diastatic material partially dextrinized, while the formation of maltose is arrested to about the extent which results from heating the mixture at about 250° F. for about two and one-half hours.

1,349,001. SIGNAL SYSTEM. DEWEY M. KENNEDY, Rochester, N. Y. Filed May 11, 1916. Serial No. 96,902. 7 Claims. (Cl. 246—126.)



6. In an electric signaling system for railway crossings, a train signal, a crossing signal arranged to be controlled by a train approaching the crossing, a normally open electric circuit including lamps for effecting a characteristic illumination of the crossing signal to indicate danger arranged to be closed upon operation of the crossing signal mechanism and means connected with said circuit when closed for operating the train signal, the operation of said means being dependent upon the illumination of the lamps.

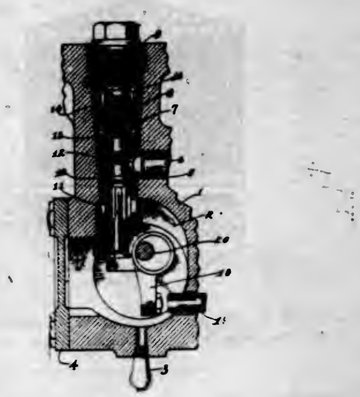
1,349,002. BALL-AND-SOCKET JOINT. JOHN W. LAKIN, Detroit, Mich. Filed June 19, 1919. Serial No. 305,272. 5 Claims. (Cl. 287—12.)



1. A ball and socket joint, having in combination, a pair of complementary and apertured cups, a washer within one of the cups, a rivet fastened to the washer and passing through the apertures in the cups, a yoke on the end of the rivet provided with a pair of lips, and a cam supported in the cup other than the one which bears the washer for engaging or disengaging the lips of the yoke and by the former drawing the washer toward such cup to bind the two cups together.

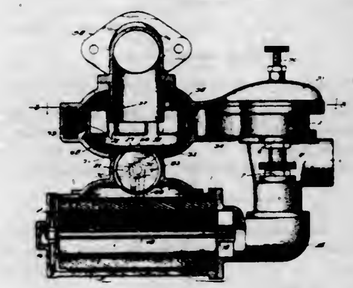
1,349,003. COMMUTATOR. EARLE P. LEE, Rochester, N. Y., assignor to North East Electric Company, Rochester, N. Y., a Corporation of New York. Filed Aug. 20, 1918. Serial No. 250,740. 3 Claims. (Cl. 171—321.)

2. A commutator-riser, for use in the manufacture of dynamo-electric machines, comprising two members adapted to receive, between them, the armature-leads, said members having, near their outer ends, opposed surfaces which first converge and then diverge, so as to provide abutments to retain the armature-leads temporarily in place during the construction of the armature.



1,349,004. HAIR-CUTTING AND NECK-SHAVING DEVICE. CHARLES J. MANLEY, Kingston, Wash. Filed Nov. 10, 1919. Serial No. 336,827. 1 Claim. (Cl. 30—12.)

A device of the character described, comprising a body member having a detachable top, a handle detachably connected therewith, a cylinder rotatably mounted in the body, having on its outer surface a plurality of circumferential resilient rubber sections, a shaft mounted in the body, a pair of serrated hair-cutting blades slidably mounted thereon, means recessed within the cylinder, extending circumferentially and on either side of the central rubber covered section, coöperating with means carried by said blades, whereby a reciprocating hair-cutting movement is imparted to said blades when the cylinder is rotated.

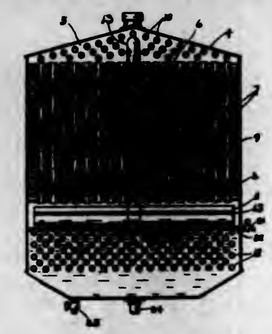


1,349,005. FUEL-PUMP. OSCAR W. PFEFFER, St. Louis, Mo., assignor to Busch-Sulzer Bros.-Diesel Engine Company, St. Louis, Mo., a Corporation of Missouri. Filed Sept. 14 1917. Serial No. 191,425. 1 Claim. (Cl. 103—75.)

The combination with a high pressure pump body of cast iron having formed therein a plunger chamber and passages for the inlet and outlet of the liquid to be pumped, said chamber and passages where exposed to the fluid under pressure having relatively thick walls suited to prevent leakage of the liquid therethrough, a tapered chamber forming a communication between said plunger chamber and passages and a tapered valve holder of denser metal, occupying said chamber and containing inlet and outlet valves controlling the communications from said plunger chamber to said passages respectively,

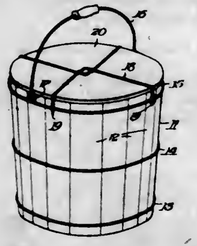
the walls of said valve holder, where exposed to the liquid under pressure, being relatively thinner than the cast iron walls of said chamber.

1,349,006. CARBURETER. WILLIAM J. RUFF, Quincy, Ill. Filed Sept. 18, 1916. Serial No. 120,633. 4 Claims. (Cl. 261—12.)



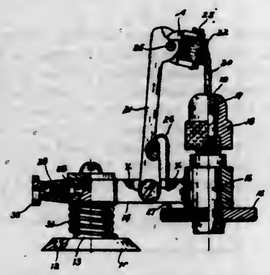
1. A carbureter comprising a housing having a mixing chamber and a divided air passage leading to the mixing chamber; a valve in each division of the air passage; a valve stem common to both valves; variable spring tensioning means for said valves for automatically controlling the passage of air through the divisions of said air passage; a porous cylinder in one of said divisions; means for supplying and maintaining fuel at a predetermined height partially immersing the cylinder; and a manually operable valve for controlling the passage of fuel and air from said porous cylinder to the mixing chamber.

1,349,007. STEAM-CONDENSER AND OIL-SEPARATOR FOR STEAM-DRIVEN VEHICLES. LOUIS E. SCHUCH, Cincinnati, Ohio. Filed Mar. 20, 1919. Serial No. 283,754. 2 Claims. (Cl. 257—25.)



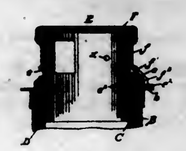
1. A steam condenser comprising a casing having a chamber at the upper end thereof, a chamber at the lower end thereof, vertical tubes connecting the chambers, a steam nozzle located at the lower ends of the tubes

within the lower chamber, cooling plates surrounding the tubes and in spaced relation to each other, and horizon-



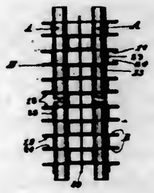
tal tubes in the upper and lower chambers adapted to permit the passage of air through them.

1,349,008. PAIL. HORACE J. SCOTT, Hill City, Minn. Filed Mar. 3, 1919. Serial No. 280,289. 5 Claims. (Cl. 217—89.)



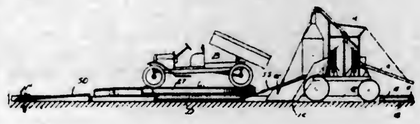
1. A pail including an endless wire hoop having laterally extending integral loops for the attachment of sealing wires, bails and the like, the wire of the hoop interlocked at the loop to prevent circumferential stretching.

1,349,009. PHONOGRAPH-NEEDLE-SHARPENING ATTACHMENT. JACOB SILBERSTANG, New York, N. Y. Filed Jan. 15, 1920. Serial No. 351,637. 9 Claims. (Cl. 51—241.)



1. A sharpening device for phonograph needles including a support, an arm pivoted thereto to swing about a vertical axis, a spindle mounted in said arm and having a needle clamp and a friction wheel for engagement with the periphery of a phonograph record support upon the horizontal swinging of said arm and a grinder for operative engagement with the point portion of a needle.

1,349,010. WICK CLEANER AND SHAPER. FREDERICK W. SPANGLER, Chicago, Ill., assignor to The Mantle Lamp Company of America, Chicago, Ill., a Corporation of Illinois. Filed June 1, 1918. Serial No. 237,708. 14 Claims. (Cl. 67—68.)

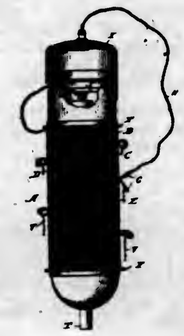


4. A wick cleaner and shaper having a tubular portion or body, blades extending laterally therefrom and terminating below their points of origin, and reinforcing arms for said blades.

1,349,011. RADIATOR FOR INTERNAL-COMBUSTION ENGINES. PHILMORE F. SPERY, Chicago, Ill. Filed Oct. 28, 1919. Serial No. 334,038. 3 Claims. (Cl. 257—130.)

1. A radiator core, comprising, in combination, a multiplicity of vertical water tubes in parallel spaced apart relationship, each of said water tubes being an oblong tube having smooth flat sides and rounded edges, there being on said tube a series of laterally extending fins, said fins being elongated ovates having parallel sides and rounded ends, said fins being each perforated by oblong openings fitting the water tubes by a tight fit, said fins being connected at their sides by bars, said bars being bent and rebent to place the ovates into parallel alinement, said fins being connected to said tubes by being soldered thereto.

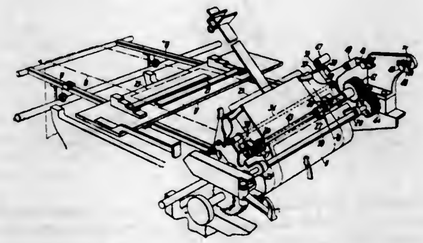
1,349,012. APPARATUS FOR USE IN ROAD-BED CONSTRUCTION. JOSEPH F. STABELL, Buffalo, N. Y. Filed Mar. 1, 1920. Serial No. 362,518. 1 Claim. (Cl. 104—45.)



In a road construction apparatus, the combination of a turntable, a carriage on which said turntable is rotatably mounted, wheels journaled on said carriage at its opposite sides, and adapted to roll on raised tracks at opposite sides of the road bed between which tracks said carriage depends, an inclined approach detachably connected to one end of said carriage, and a machine detachably connected to the opposite end of said turntable carriage, whereby a vehicle can be driven up onto said turntable and turned to a position to discharge material therefrom into said machine, and said turntable, said approach and said machine can be simultaneously advanced as the work progresses.

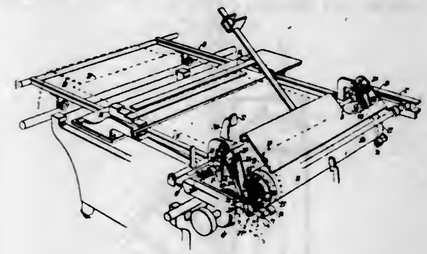
1,349,013. COLORING AND PARTING MATERIAL FOR DENTAL IMPRESSIONS AND MOLDS. WILLIAM H. STANLEY, Montreal, Quebec, Canada. Filed Dec. 6, 1919. Serial No. 343,116. 7 Claims. (Cl. 18—47.)

1. A combined coloring and parting material for plaster impressions which comprises water, washing soda, shellac and alcohol.



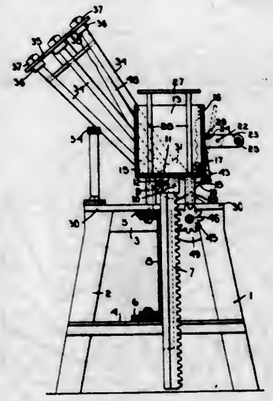
5. A mixture according to claim 4, in which the aqueous solution is in approximately the proportions of 2 oz. of soda and a quarter of an ounce of soda to 3 qts. (imperial) of water, and the shellac solution in the proportion of 1 lb. of dry shellac to 2 qts. (imperial) of water, the aqueous and alcoholic solution being mixed in approximately the proportion of 3 parts of aqueous solution to 1 part of alcoholic solution by measure.

1,349,014. SUBMARINE-DESTROYING BOMB. JOSEPH A. STEINMETZ, Philadelphia, Pa. Filed Apr. 13, 1917. Serial No. 161,874. 2 Claims. (Cl. 102—2.)



1. The combination with a bomb adapted to sink in water, of a float loosely attached to the bomb and initially forming an extension of its body and a series of connectible cable segments coiled about the bomb, one above the other, each with readily disconnectible ends exposed, one of the segments being connected to the float and another to the detonating devices of the bomb, whereby the exposed ends permit as many as desired of the wound segments to be connected in series to the float.

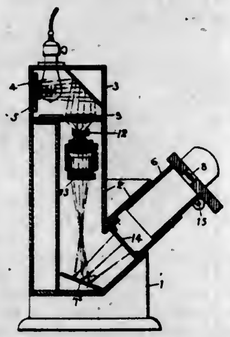
1,349,015. TYPEWRITING-MACHINE. BURNHAM C. STICKNEY, Elizabeth, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed June 15, 1918. Serial No. 240,130. 39 Claims. (Cl. 197—126.)



1. In a typewriting machine, the combination of a platen; a line-space wheel therefor; means to coöperate with said line-space wheel for feeding around the platen webs, carbon sheets and a record sheet as a unit in superposed relation, with the record sheet between the webs and the platen; means for displacing the platen to ease the carbon sheets and permit them to be shifted along the webs; and means connected to the platen-displacing means for advancing said record sheet relatively to said webs and platen.

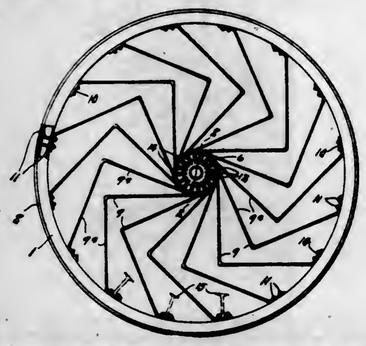
1,349,016. TYPEWRITING-MACHINE. BURNHAM C. STICKNEY, Elizabeth, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 9, 1918. Serial No. 253,241. 21 Claims. (Cl. 197—126.)

1. The combination with a carriage and a revoluble platen therein, of a device whereby the platen may be lifted relatively to the carriage, feed-rolls mounted on said carriage for holding work-sheets to the platen while the latter is in depressed position, an axle for the platen, a separately-revoluble portion journaled on the platen-axle, a special feed-roll carried by said lifting device to coöperate with said separately-revoluble portion adapted to hold a work-sheet thereagainst, and means whereby said special feed-roll will be maintained in ineffective position relative to said separately-revoluble portion while the platen is in depressed position on said carriage.



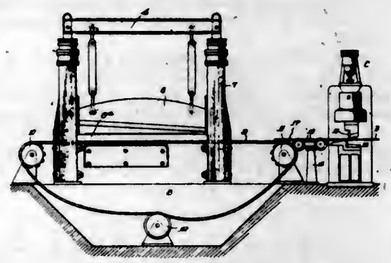
1,349,017. MOLDING-MACHINE. GEORGE H. TALBOT, Newtonville, Mass. Filed Nov. 8, 1919. Serial No. 336,708. 15 Claims. (Cl. 25—54.)

3. A molding machine comprising a frame, a vertically reciprocable mold, a follower adjustably mounted on said frame and adapted to be swung about its pivot to position said follower in and out of operative relation to said mold, adjustable means for limiting the swinging movement of said follower support to cause the follower to register with the mold and means for reciprocating said mold toward and from said follower.



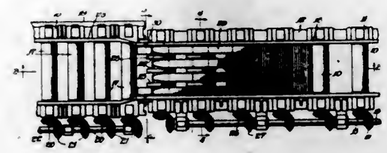
5. A molding machine comprising a frame, a vertically reciprocable mold, a follower support comprising blocks pivotally mounted on said main frame, set screws adjustably mounted on said blocks adapted to engage said frame to limit the swinging movement of said blocks, a follower supporting plate, a follower secured to said plate at a distance therefrom, tension members connecting said follower supporting plate to said blocks and means for reciprocating said mold toward and from said follower.

1,349,018. STEREOSCOPE. TOYOJIRO TERASHIMA, Tokyo, Japan. Filed July 25, 1916. Serial No. 111,111. 1 Claim. (Cl. 88—29.)



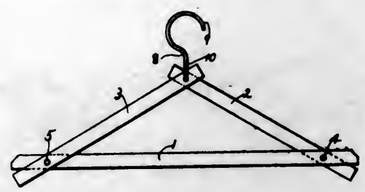
A stereoscope comprising a lamp casing containing a lamp and reflector, a light directing casing, compound lenses disposed between said casings, spaced apart a pupillary distance and one being slightly in advance of the other, condensing lenses disposed within the light directing casing and spaced apart a pupillary distance, one being slightly in advance of the other, a picture support disposed between said compound and said condensing lenses, an observation chamber disposed at an angle to said light directing casing, a reflector at the junction of said last named casing and said chamber, a screen in said observation chamber, and observation openings in said observation chamber.

1,349,019. SPRING-WHEEL. GEORGE B. TIMBERLAKE, St. Louis, Mo. Filed Aug. 25, 1917. Serial No. 188,201. 2 Claims. (Cl. 152—50.)



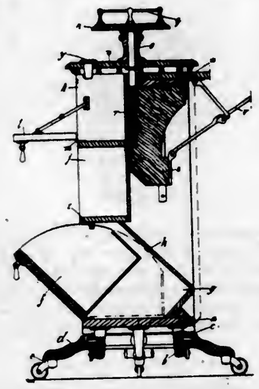
1. In a vehicle wheel, the combination with a hub and rim, of a spoke formed of a single piece of metal bent to form a pair of legs arranged substantially at right angles to each other and each of which leg varies in thickness throughout its length with the thinnest portion at the center of the leg.

1,349,020. SCRAP-CUTTER. WILLIAM J. TODHUNTER, Chicago, Ill. Filed May 10, 1918. Serial No. 233,674. 3 Claims. (Cl. 164—49.)



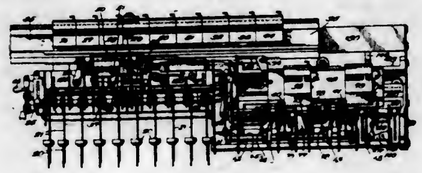
2. A metal plate trimming shear provided with a feed-in conveyer and a feed-out conveyer, a scrap conveyer disposed between the shear and the feed-out conveyer and traveling at an angle to said feed-out conveyer.

1,349,021. SLABBING-MILL. WILLIAM J. TODHUNTER, Chicago, Ill. Filed Dec. 31, 1919. Serial No. 348,623. 4 Claims. (Cl. 80—44.)



4. An ingot delivery mechanism including in combination an ingot run table, a mill approach table in alinement with said ingot table, and collared rollers interposed between said tables which collars are greater in diameter than the rollers of the ingot table, and a slotted slab for supporting an ingot adapted to be reciprocated on the ingot table whereby said slotted portion may straddle said collars, and the ingot carried thereby be transferred from said slab to said collars.

1,349,022. FOLDING SUIT-HANGER. LAYTON WATTON TOWNSEND, Hamilton, Ontario, Canada. Filed Feb. 12, 1920. Serial No. 358,281. 1 Claim. (Cl. 211—13.)



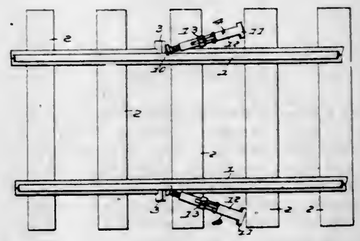
A folding suit hanger comprising three straight members, two of said members being of equal length and shorter than the third member, the shorter members being pivotally connected at one end to the third member adjacent its ends and on opposite sides thereof, a hook member pivotally connecting the free ends of the shorter members, and the three members being adapted to fold in parallelism with each other upon removal of the hook for a purpose specified.

1,349,023. BED-TABLE COMBINED WITH CUPBOARDS OR LIKE RECEPTACLES. ALBERT TROTTER, Loughton, England. Filed May 18, 1920. Serial No. 382,345. 2 Claims. (Cl. 45—81.)

1. An article of furniture, comprising a movable base, a pedestal rotatably mounted on the base, a block mounted for sliding movement in the pedestal, a screw mounted in the pedestal and having threaded connection with the block for vertically adjusting the block, a table hinged to the block, and means between the block and table for holding the table extended relative to the block and pedestal.

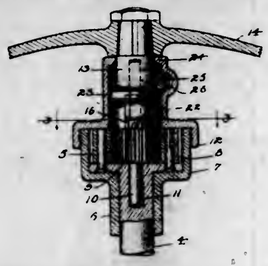
1,349,024. CALCULATING-MACHINE. JOHN C. WAHL, Chicago, Ill., assignor to The Wahl Company, Wilmington, Del., a Corporation of Delaware. Filed Sept. 22, 1917. Serial No. 192,681. 22 Claims. (Cl. 235—59.)

3. In a calculating machine, the combination of a main carriage, a set of numeral keys, a totalizer mounted on said main carriage, an actuating mechanism for said totalizer, a control for said actuating mechanism whereby its action on said totalizer may be determined, a subsidiary carriage adapted to be intermittently connected to said main carriage, a plurality of totalizers mounted on said subsidiary carriage, an actuating mechanism for each of said totalizers, a gear control for each of said actuating mechanisms to control the atcion of said actuating mechanism on said totalizers as a result of the action of said numeral keys, and a common reverse effective on all of said actuating mechanisms whereby each may be thrown into the reverse of its former conditions regardless of the condition of its individual control.



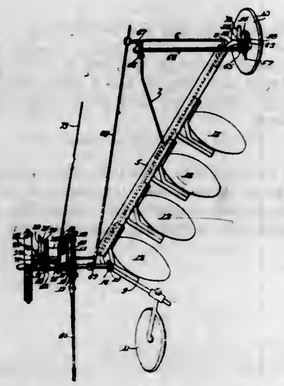
15. In a calculating machine, the combination of a totalizer, a framing therefor, a pair of adjustable cams mounted in said framing, each of said cams being capable of adjustment to any of three positions, and a common means to clamp said cams in their adjusted positions.

1,349,025. MECHANICAL PENCIL. JOHN C. WAHL, Chicago, Ill., assignor to The Wahl Company, Wilmington, Del., a Corporation of Delaware. Filed Feb. 10, 1919. Serial No. 276,131. 5 Claims. (Cl. 120—18.)



5. In a mechanical pencil, the combination of a casing, a screw thread interior to said casing, a plunger device including two pieces relatively movable to each other and adapted to engage said thread, and a spring supported by said pieces and adapted to hold them into engagement with said thread.

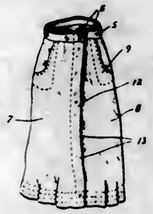
1,349,026. TIE-SPACING DEVICE FOR RAILROADS. ASA C. WALKER, Mount Airy, Ga., assignor of one-half to Frank M. Boston, Atlanta, Ga. Filed Feb. 18, 1920. Serial No. 359,742. 2 Claims. (Cl. 254—133.)



1. In a device of the kind set forth, an abutment clamp comprising a body having a base adapted to engage under the base of the rail, said body having a lateral projection to overlie the base of the rail and engage under the ball of the rail and in contact with the web thereof, said abutment clamp adapted to wedge in engagement with the rail, when pressure is applied thereon when using a jack between the clamp and a tie, the upper face of the base of the clamp and the under face of the projection of the body being correspondingly beveled, whereby the clamp may be disposed angularly with relation to the rail, to insure its wedging engagement with the rail, said lateral projection having its upper inner portion cut away and beveled to wedge under the ball of the rail.

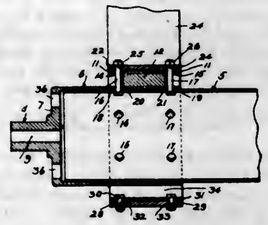
1,349,027. STEERING-WHEEL LOCK. FRANK R. WARREN, Chicago, Ill. Filed Dec. 5, 1919. Serial No. 342,657. 9 Claims. (Cl. 70—129.)

5. The combination with a steering wheel, of clutching mechanism for bringing it into operative relation with the steering post, and resilient means for holding the wheel with the clutching mechanism in inoperative position.



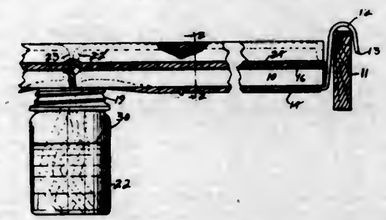
1,349,028. POWER-LIFT PLOW. LEWIS E. WATERMAN, Rockford, Ill., assignor to Emerson-Brantingham Company, Rockford, Ill, a Corporation of Illinois. Filed Oct. 26, 1916. Serial No. 127,912. 2 Claims. (Cl. 97—55.)

1. In a plow, the combination of a plow-carrying frame, supporting wheels therefor, a rockable crank axle mounted on the frame carrying one of said wheels, power-operated means adapted to be driven from the wheel on said crank axle for raising the frame including a revoluble member and a connection between said power-operated means and the frame through which the raising and lowering movement is transmitted, comprising a link connected eccentrically to said revoluble member, an adjusting lever mounted on the frame, a link pivotally connecting the adjusting lever and the first mentioned link, and means for maintaining the pivotal connection between said links substantially stationary when the power means is operated to raise the plow frame and permitting said pivot to be adjusted by the lever when it is desired to vary the working depth through adjustment of said lever.



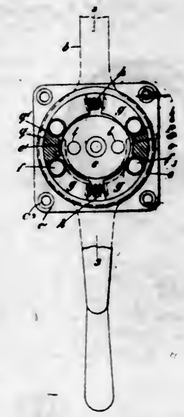
1,349,029. GARMENT. JULIA WEIAS, Kenosha, Wis. Filed July 16, 1919. Serial No. 311,117. 1 Claim. (Cl. 2—42.)

A combination garment which consists of a divided skirt secured to a suitable waist band, the upper portion of the meeting edges of the skirt sections at the rear of the garment being permanently secured together, button holes and buttons on the lower portions of the meeting edges at the rear of the garment and on the meeting edges of the skirt sections at the front of the garment to hold the sections in one position in the form of a skirt and in another position to form a pair



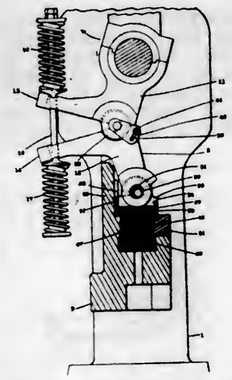
of trousers, a relatively wide slotted hem at the lower edge of each section, a strap or tape provided with a button hole secured to said hem and passed through the slot thereof, and buttons intermediate the ends of said tape adapted to be engaged in said button holes when it is desired to use the garment as trousers, substantially as described.

1,349,030. WHEEL-GUDGEON. WILSON B. WIGLE, Montebello, Calif. Filed Sept. 29, 1919. Serial No. 327,035. 4 Claims. (Cl. 242—117.)



1. A device of the class described, comprising a hollow cylindrical drum, a sleeve provided with a closed end adapted to fit over the end of said drum, a trunnion projecting from the closed end of said sleeve, a plurality of radially projecting webs adapted to support a hollow polygon secured to said sleeve, a plurality of tangential spokes adapted to abut against the flat outer surfaces of said polygon, and bolts adapted to pass through apertures in said spokes, polygon, sleeve, and drum, for securing these parts together.

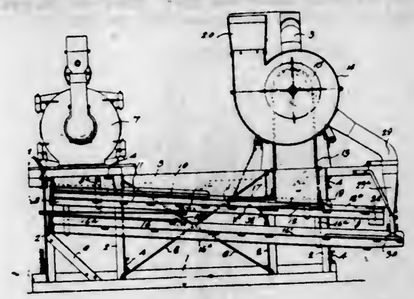
1,349,031. SANITARY CHICKEN-ROOST. HENRY WINDAHL, New Sharon, Iowa. Filed Apr. 27, 1920. Serial No. 377,084. 5 Claims. (Cl. 119—25.)



1. A chicken roost having a cross bar, provided with a wick extended longitudinally along the top of said bar, downwardly around the ends of the bar, and along the bottom of the bar, a germicide container connected with said wick below said bar.

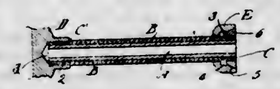
1,349,032. SELF-LOCKING PIVOTED JOINT. CECIL STANLEY WINDSOR, London, England. Filed Feb. 17, 1919. Serial No. 277,569. 3 Claims. (Cl. 296—92.)

1. A self-locking pivoted joint comprising two parts pivoted together, a cam-block secured to one of the parts, free rollers in a race in the other part normally locking the cam-block against movement, shoulders on said part and a device mounted to rotate coaxially with the pivot of the joint, lugs on said device to engage between the rollers and to bear against said shoulders for the purpost of unlocking the parts and effecting their relative movement.



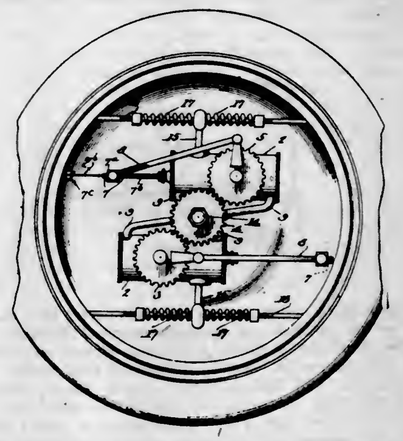
1,349,033. POWER-PRESS. EDMUND W. ZEH, Newark, N. J. Filed Nov. 12, 1917. Serial No. 201,690. 19 Claims. (Cl. 74—48.)

1. The combination of a pitman comprising sections hinged together, arms on the hinged ends of said sections projecting adjacent each other, a rod extending slidably through said arms and secured against withdrawal, and compression springs one between each arm and the end of the rod.



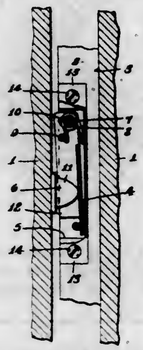
1,349,034. METHOD OF AND APPARATUS FOR TREATING COTTON-SEED. DOW L. ADELSPERGER, Springfield, Ohio, assignor to The Bauer Brothers Company, Springfield, Ohio, a Corporation of Ohio. Filed Dec. 24, 1917. Serial No. 208,618. 15 Claims. (Cl. 130—17.)

1. A process of treating cotton seed, consisting of cutting the major portion of a flow of seed by spacing apart the cutting devices, allowing the cut and uncut portions to flow as one stream for a predetermined distance when the hulls and uncut portions of the seed are separated



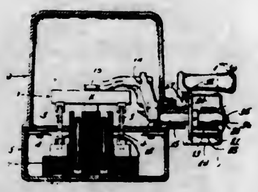
from the meats and the meats, hulls and uncut seed are directed in separate streams, the uncut seed being returned to the original flow for cutting.

1,349,035. VEHICLE WHEEL AND SPOKE. FREDERICK T. ALDER, Mount Vernon, N. Y. Filed Mar. 29, 1919. Serial No. 286,159. 4 Claims. (Cl. 21—69.)



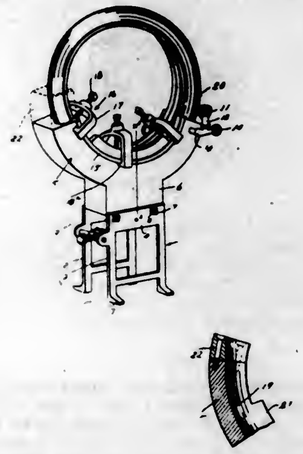
1. A vehicle wheel having spokes respectively comprising an inner tubular member and an outer tubular member, said last named member embodying a closely wound coil of wire, and fastening means for fixing said members together, said fastening means engaging the wheel hub and felly.

1,349,036. COMPRESSED-AIR POWER-DRIVE. GEORGE C. ALSTAD, Chicago, Ill. Filed June 1, 1918. Serial No. 237,791. 8 Claims. (Cl. 60—57.)



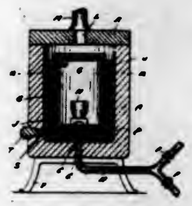
1. In a fluid driving mechanism, the combination of a wheel, a motor cylinder carried by the wheel, a stationary axle, gearing between said axle and cylinder for rotating said wheel and cylinder by fluid pressure in said cylinder, and a resilient connection between said cylinder and wheel.

1,349,037. BRAKE FOR WINDOW-SASHES. ROY T. AXE and EDWARD F. CHAFFEE, Syracuse, N. Y., assignors to The O. M. Edwards Company Inc., Syracuse, N. Y., a Corporation of New York. Filed Dec. 31, 1917. Serial No. 209,712. 8 Claims. (Cl. 16—77.)



6. The combination of a window frame, a sash movable in the frame, a carrier pivoted to one of said parts and having a guide, extending lengthwise of the path of movement of the sash and toward the axis of the carrier, the carrier being also movable in a direction transversely of its pivot, a brake shoe rockably mounted in the guide on an axis extending parallel to the axis of the carrier and also shiftable lengthwise of the guide toward and from the pivot of the carrier, the brake shoe coacting with the other of said parts, and spring means tending to move the carrier on its pivot and to resist transverse movement of the carrier relatively to its pivot, substantially as and for the purpose specified.

1,349,038. QUICK-ACTION SWITCH. CARL H. BISSELL and FLOYD C. SMITH, Syracuse, N. Y., assignors to Crouse-Hinds Company, Syracuse, N. Y., a Corporation of New York. Filed May 2, 1917. Serial No. 166,062. 8 Claims. (Cl. 200—67.)



1. In a quick action switch, the combination of a movable switch member, an operating element movable in reverse directions, a spring interposed between said element and the switch member to transmit the motion of said element, and the operating element having means for acting upon the spring to tension the same in one direction or the other when said element is moved forwardly or rearwardly, means for normally delaying the operation of the switch member in either direction by the spring, means for releasing the former means as the operating element approaches the end of its throw in one direction or the other, and means for limiting the movement of the operating element, substantially as and for the purpose specified.

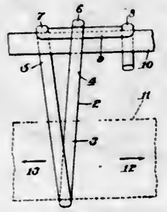
1,349,039. VULCANIZER. ARTHUR A. BITTER, Los Angeles, Calif., assignor, by mesne assignments, to Western Vulcanizer Manufacturing Company, Chicago, Ill., a Copartnership consisting of Herbert K. Wheelock, Frank A. Weller, and Walter R. Fontaine. Filed Sept. 12, 1917. Serial No. 190,946. 6 Claims. (Cl. 18—18.)

1. In a vulcanizer, a vulcanizing iron having an arcuate tire receiving groove therein, and a block of nonmetallic material secured to one of the iron and having a groove forming a continuation of the tire receiving groove in the vulcanizing iron, the groove of the block flaring throughout its length from its inner end to its outer end to prevent marking of a tire under treatment in the vulcanizer.

1,349,040. COMBUSTION OF FUEL. WILLIAM ARTHUR BONE and JAMES WILLIAM WILSON, Leeds, and CYRIL DOUGLAS MCCOURT, London, England, assignors, by mesne assignments, to Surface Combustion, Inc., Wilmington, Del., a Corporation of Delaware. Filed Nov. 5, 1910, Serial No. 590,774. Renewed Dec. 29, 1919. Serial No. 348,038. 4 Claims. (Cl. 158—7.)

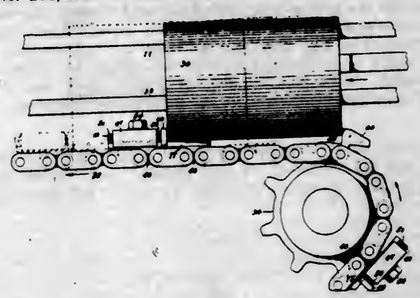
1. An apparatus for burning explosive gaseous mixtures comprising a furnace structure having an outer wall of low heat conductivity and having a heating chamber having comparatively thin side walls spaced away from the outer wall to provide a combustion space extending about the side walls of the heating chamber, a restricted mixture supply passage opening into the lower part of said combustion space, a bed of granular refractory material in the combustion space filling said space adjacent the inlet opening of the supply passage and extending upward about the side walls of the heating chamber, and means for supplying an explosive gaseous mixture to the supply passage under pressure sufficient to cause the mixture to flow through the passage with a velocity greater than the speed of ignition of the mixture, whereby the mixture is caused to burn within the bed of refractory material near the inlet opening of the supply passage and the products of combustion are caused to pass through additional portions of the bed adjacent the side walls of the heating chamber.

1,349,041. CURTAIN-FIXTURE. JAMES H. BOYE, Chicago, Ill., assignor to James H. Boye Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 13, 1920. Serial No. 358,474. 15 Claims. (Cl. 156—19.)



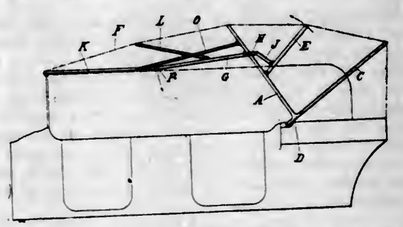
15. In a double curtain fixture, the combination of end brackets each having a pair of forwardly and laterally spaced sockets, an intermediate bracket having a pair of parallel vertical side walls formed with vertical slots, and two pairs of duplicate flat telescopic curtain rods, the rods of each pair having elbow shaped end portions supported in the sockets of said end brackets and straight end portions supported in the vertical slots of said intermediate bracket.

1,349,042. CURTAIN-ROD. JAMES H. BOYE, Chicago, Ill., assignor to James H. Boye Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 16, 1920. Serial No. 374,314. 7 Claims. (Cl. 156—19.)



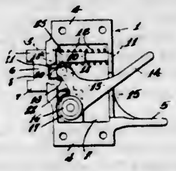
7. The combination with a hollow curtain rod, of a spring wire loop projecting from an end of said rod and having its stem portions anchored within said rod some distance inwardly from the end of the latter, and a flat metal strip anchored at its inner end within the end of said rod and at its outer end embracing the outer end of said loop, and serving as both a stiffening and locking member for the latter.

1,349,043. CABLE-SUPPORT. ORSON W. BRENIZER, Philadelphia, Pa., assignor of one-fifth to Andrew V. Groupe, Philadelphia, Pa. Filed Sept. 25, 1917. Serial No. 193,067. 5 Claims. (Cl. 248—33.)



1. A cable support comprising a cable receiving loop adapted to extend transversely beneath a supporting wire, a hook on one end portion of said loop, an arm extending laterally from said hook, a hook on the other end portion of said loop, said hooks facing different directions and being adapted to be hooked around said wire from opposite sides thereof, the last named hook being adapted to coöperate with said arm and said wire to lock the first named hook upon said wire.

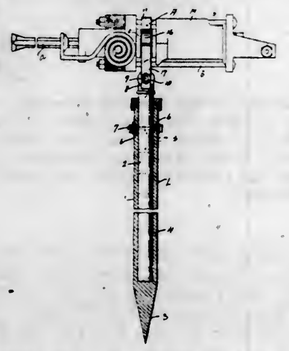
1,349,044. CAN-BODY-SIDE-SEAM-SOLDERING MACHINE. JULIUS BRENZINGER, Fairfield, Conn., assignor to The Max Ams Machine Co., Bridgeport, Conn., a Corporation of New York. Filed Jan. 31, 1919. Serial No. 274,194. 13 Claims. (Cl. 113—61.)



1. In a machine of the character described, the combination, with means for applying solder to the side seam of a can body in transit, of means for advancing said can body which at the same time yieldingly engages the same at each end thereof to prevent rotation during advancing movement.

1,349,045. CAPE CART-HOOD FOR USE ON MOTOR-VEHICLES. MAX BUCH, Birmingham, England, assignor, by mesne assignments, to Edwards Corporation, Jackson, Mich., a Corporation of Michigan. Filed May 28, 1914. Serial No. 841,627. 3 Claims. (Cl. 296—116.)

2. In a vehicle top, a side arm or standard adapted for pivotal connection with the vehicle body, an outrigger bow arm, a link member pivotally connected respectively to the outrigger bow arm and said side arm, a second link member pivotally connected to said side arm or standard, a rear auxiliary bow arm pivotally connected to said side arm, said second link member having an extension connected with said rear auxiliary bow arm, and means connecting said second link member with the outrigger bow arm.



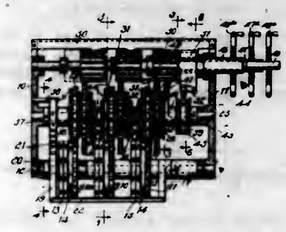
1,349,046. SASH-LOCK FOR RAILWAY-CAR WINDOWS. EDWARD F. CHAFFEE, Syracuse, N. Y., assignor to The O. M. Edwards Company, Inc., Syracuse, N. Y., a Corporation of New York. Filed Jan. 12, 1918. Serial No. 211,554. 8 Claims. (Cl. 292—169.)

1. A sash lock comprising two parts, one a casing having a recess opening through its rear face, and the other a bolt supported in the casing, the casing being formed with a guide for the bolt extending transversely of said

recess and an operating member placeable in and removable from the casing through said open side and being detachably mounted in the recess and having means engaging the bolt to actuate the bolt and attachable to and detachable therefrom upon movement of the lever through the open side of the recess, said member also having means for interlocking with one of said parts upon movement of the operating member in one direction at an angle to its movement into and out of the recess, to normally prevent detachment of said member from the casing, substantially as and for the purpose described.

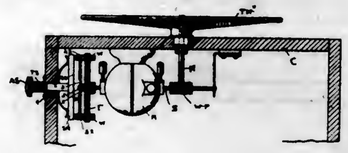
1,349,047. SUPPORT FOR HAMMER-MACHINE DRILLS. JOHN H. COCKS, Morenci, Ariz. Filed Jan. 31, 1920. Serial No. 355,436. 4 Claims. (Cl. 255—52.)

1. A support for a jack hammer machine drill comprising a supporting leg, a substantially U-shaped saddle having its intermediate portion arcuate to receive the machine, the side arms of the saddle extending in a direction toward the support, a second substantially U-shaped saddle having its intermediate portion arcuate to embrace the machine at a point opposite to the intermediate portion of the first-named saddle, the arms of the second-named saddle overlying the arms of the first-named saddle, and means for clamping the arms of both of the saddles to the leg.



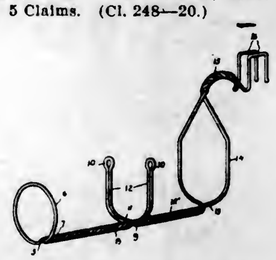
1,349,048. FIRE-EXTINGUISHER FOR OIL-TANKS AND THE LIKE. ISAAC N. COOPER, Fort Worth, Tex. Filed Dec. 8, 1919. Serial No. 343,410. 4 Claims. (Cl. 220—88.)

2. A fire-extinguishing apparatus comprising a hood placed on a vessel containing inflammable material and having communication therewith, means for permitting air to flow in said vessel, a vertical shaft journaled in said hood, one or more sets of fan blades rigid with said shaft, means for driving said shaft, and a pipe connected to said hood for conveying away the draft created by said fan blades.



4. A fire-extinguishing apparatus in combination with a tank containing an inflammable material and provided with a cone-shaped cover having an opening at the apex thereof, means for spacing said cover from the edge of the tank, a hood mounted on said cover and covering said opening, a discharge pipe connected to said hood, and means for creating a suction draft in said hood.

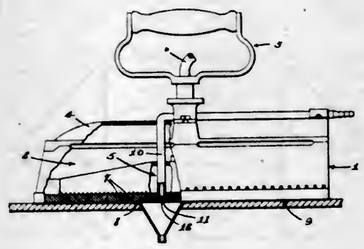
1,349,049. REGISTER. WILLIAM J. CRUMPTON, Evanston, Ill., assignor to William R. Heath, Buffalo, N. Y. Filed Oct. 31, 1913, Serial No. 798,446. Renewed Dec. 26, 1919. Serial No. 347,633. 25 Claims. (Cl. 235—60.)



2. A totalizer comprising a plurality of figure wheels and differential mechanism adapted to move the units wheel one step by a series of delayed carrying operations when the highest figure wheel crosses the zero point.

1,349,050. FRICTIONAL GOVERNOR. WILLIAM W. DEAN, Wilmette, Ill., assignor to Efficiency Electric Corporation, New York, N. Y., a Corporation of New York. Filed June 2, 1919. Serial No. 301,171. 9 Claims. (Cl. 74—45.)

7. In a friction governor, in combination with a rotatable shaft, of a reed spring secured to an end of the said shaft, and having its free end extending radially from the said supporting shaft, a centrifugal weight secured to the said reed spring, the said weight being so disposed as to be moved by the power of centrifugal force when the said shaft is rotated to flex the supporting reed spring, and a stationary friction disk having a face adapted to make frictional contact with the said reed spring when flexed.

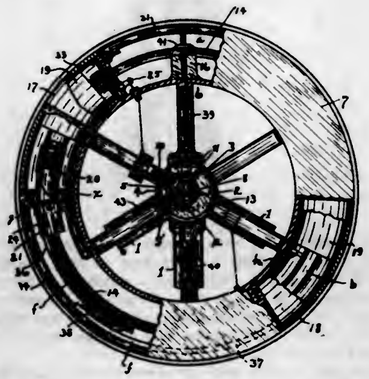


1,349,051. NURSING-BOTTLE HOLDER. OSCAR DULAC, Woonsocket, R. I. Filed Feb. 21, 1920. Serial No. 360,272. 5 Claims. (Cl. 248—20.)

1. A device of the class described formed from a single strand of wire, loops at each end, vertically extending arms midway between the loops, and a twisted portion forming a hook.

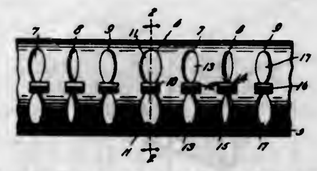
1,349,052. SADIRON. SAMUEL ELMAN, Syracuse, N. Y. Filed Apr. 6, 1917. Serial No. 160,097. 1 Claim. (Cl. 68—26.)

A sad iron including a hollow body having a heating chamber therein, and a perforation opening through the ironing face of the body and into the chamber, and a pipe extending through the hollow body and the chamber and having its lower end secured in said opening, the



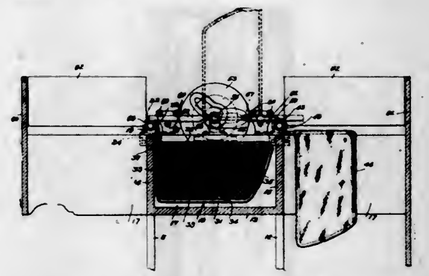
upper end of the pipe extending outside of the hollow body for connection to a steam supply, substantially as and for the purpose described.

1,349,053. NON-METALLIC RESISTANCE ELEMENT AND PROCESS OF MAKING SAME. ALEXANDER L. FEILD, Lakewood, Ohio, assignor to National Carbon Company, Inc., a Corporation of New York. Continuation of application Serial No. 266,703, filed Dec. 14, 1918. This application filed June 16, 1919. Serial No. 304,634. 18 Claims. (Cl. 219—76.)



2. An electric resistance element containing a compound of a metal of the titanium-zirconium group, and a refractory oxid, said element having a substantially zero temperature resistance coefficient.

1,349,054. ENGINE. ALBERT C. FISCHER, Kansas City, Mo. Filed Feb. 15, 1917. Serial No. 148,878. 10 Claims. (Cl. 123—43.)



1. In an engine, a support, a tire axially mounted on the support, a ring gear having bearings within the tire, radially disposed shafts provided with gears for engaging the support and ring gear, a cylinder within the tire circumscribing the ring gear, a tubular piston arranged for longitudinal reciprocation within the cylinder and circumscribing the ring gear, and a clutch connected with the piston for engagement with the ring gear to move the latter longitudinally for actuating said radially disposed shafts.

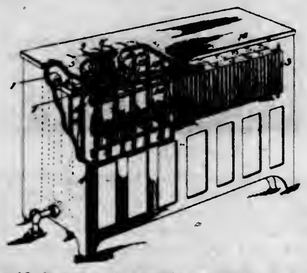
1,349,055. TIRE-TREAD. WESLEY N. FORBES, Dartmouth, Nova Scotia, Canada. Filed June 27, 1918. Serial No. 242,281. 1 Claim. (Cl. 152—14.)

A tire including a casing having raised elements on its tread, said elements extending transversely of the casing, said elements consisting of elongated semi-cylindrical ribs extending circumferentially of the casing and being spaced apart, webs extending from the sides of said ribs, said webs being substantially elliptical and having increased thickness at their ends, whereby the elements will engage the road bed throughout their entire length, while the elliptical construction of the webs provides maximum engaging surfaces around the edges of the webs to hold the tire casing from slipping or skidding.

1,349,056. FILTER. PETER C. FORRESTER, West Tacoma, Wash. Filed Mar. 22, 1919. Serial No. 284,495. 12 Claims. (Cl. 210—196.)

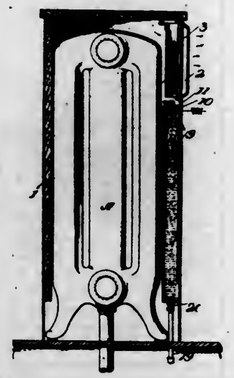
1. A filtering apparatus, comprising a reservoir, a filtering member mounted adjacent said reservoir, means for moving said filtering member into and out of said reservoir, means for straining the liquid through said filtering member when in said reservoir, and means for drying the cake formed on said filtering member when out of said reservoir.

1,349,057. POWDER-PUFF. HARVEY E. FRY and WALTER O. KEITER, Lockport, N. Y. Filed Mar. 28, 1919. Serial No. 285,716. 1 Claim. (Cl. 15—72.)



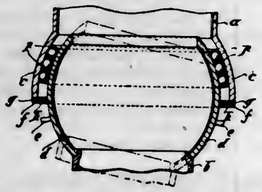
A device of the class described including a disk of chamois, a substantially circular puff of wool affixed to each surface of the disk and concentric therewith, and a band secured between the disk and one of the puffs and extending diametrically across said puff to form a finger receiving loop, the ends of the band being detachably connected.

1,349,058. HEAT-REGULATING MEANS. WESTON M. FULTON, Knoxville, Tenn., assignor to The Fulton Company, Knoxville, Tenn., a Corporation of Maine. Filed July 10, 1916. Serial No. 108,492. 8 Claims. (Cl. 257—136.)



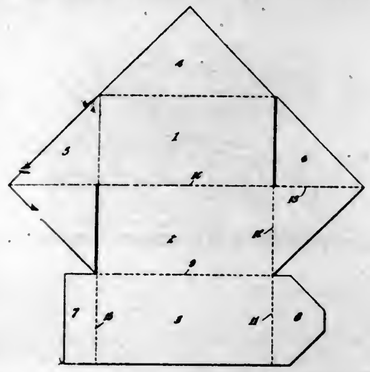
1. In combination, a radiator casing provided with one or more dampers, indicating means and a scale graduated

to indicate amounts to heat associated with said indicating means, and damper-operating means operatively connected with said indicating means and constructed



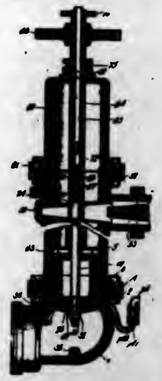
to move said dampers to supply amounts of heat in conformity with the indications of said first-named means on said scale.

1,349,059. RADIATOR-CASING IN COMBINATION WITH HUMIDIFYING DEVICES. WESTON M. FULTON, Knoxville, Tenn., assignor to The Fulton Company, Knoxville, Tenn., a Corporation of Maine. Filed July 24, 1916. Serial No. 110,958. 16 Claims. (Cl. 257—138.)



3. A radiator casing provided with an air-outlet opening in a side wall thereof, a vaporizing pan in said side wall below said opening, a damper for said opening, a damper for controlling the escape of vapor from said pan, and a common controlling means for said dampers.

1,349,060. WATER AND PRESSURE TIGHT BALL-JOINT. FRIEDRICH GALL and GEORG STOLLE, Kiel, Germany. Filed May 20, 1914. Serial No. 839,706. 15 Claims. (Cl. 61—71.)



1. A joint for the ends of members of diving armor comprising partial spherical portions on the members partially enveloping one another and packing rings of sinuous form engaging the outer surfaces of the inner spherical parts.

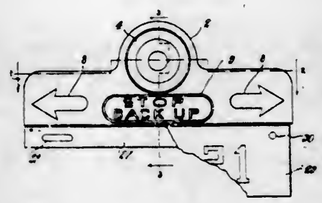
1,349,061. SAFETY-ENVELOP. MARY R. GEYER, Pittsburgh, Pa. Filed Sept. 6, 1919. Serial No. 322,057. 1 Claim. (Cl. 229—75.)

An envelop comprising two body portions folded upon each other, one body portion having a flap folded against the other, and each of said body portions having a triangular flap at one end thereof, said flap being folded to close the end of the envelop and against the outer surfaces of both of the body portions.

1,349,062. MEANS FOR REMOVING FIRE-HYDRANT VALVES WHILE UNDER WATER-PRESSURE. DAVID GOLDBERG, Chicago, Ill. Filed Dec. 20, 1915. Serial No. 67,841. 5 Claims. (Cl. 137—13.)

1. In combination with a high pressure hydrant including a valve casing, a valve seat in said casing and threaded thereonto, a valve, and a standpipe attached to said casing, an auxiliary valve adapted to be secured to the upper end of said standpipe, and means for engaging said valve whereby said valve seat and said valve may be withdrawn above said auxiliary valve.

2. For use with a high pressure hydrant including a valve casing, a valve seat in said casing and threaded thereonto, a valve, a standpipe, and a sectional valve spindle, an upper casing, an auxiliary valve adapted to be interposed between said upper casing and said standpipe, means for disengaging said valve seat from said valve casing, and means engaging said valve spindle for withdrawing said valve and valve seat above said auxiliary valve.

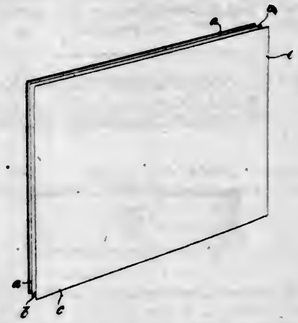


3. For use with a high pressure hydrant, including a valve casing, a valve seat in said casing, and threaded thereonto, a valve, a standpipe, and a sectional valve spindle, an upper casing, an auxiliary valve interposed

between said casing and said standpipe subsequent to removal of the upper valve spindle section, means extending through said standpipe and in engagement with said valve seat for disengaging the latter from said valve casing, and means for withdrawing said valve and valve seat above said auxiliary valve, said first and second named means being manually operated independently of each other.

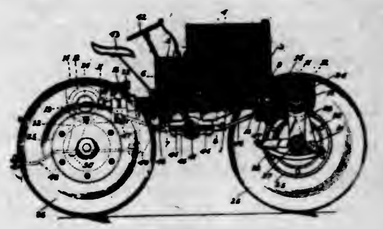
4. For use with a high pressure hydrant including a valve casing, a valve seat in said casing and threaded thereonto, said valve seat being provided with a plurality of spaced upright lugs, a valve, a sectional valve spindle and a standpipe, an upper casing, an auxiliary valve secured to said upper casing and adapted to be secured to said standpipe, means adapted to engage the lugs of said valve seat to remove the same from the valve casing, and means engaging the lower section of the said valve spindle for withdrawing the valve and seat above said auxiliary valve, substantially as described.

5. For use with a high pressure hydrant including a valve casing, a valve seat in said casing and threaded thereonto, said valve seat being provided with a plurality of spaced upright lugs, a valve, and a standpipe, an upper casing, a gate valve secured to said upper casing and adapted to be secured to said standpipe, a tube having means for engaging said valve seat to remove the same from the valve casing, and means inserted through said tube for withdrawing the said valve and seat above said gate valve, substantially as described.



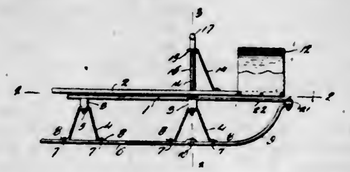
1,349,063. AUTOMOBILE-SIGNAL. NORMAN Y. GORDON, Rochester, N. Y., and JOHN HODGES, Detroit, Mich. Filed Feb. 4, 1920. Serial No. 356,256. 1 Claim. (Cl. 40—132.)

A signal for the purpose described, comprising a casing with a cross partition, a tail light in the upper compartment thus formed, a light in the lower compartment, the floor of the lower compartment having an inclined opening to throw the light rays onto the number plate below said casing, upright partitions in said casing, lights in the end compartments thus formed, arrow-shaped openings at the front of the casing, transparent material over said openings, and means for controlling said lights to illuminate the license plate.



1,349,064. SCREEN FOR CINEMATOGRAPH-PICTURES AND THE LIKE. FRANK HEALE, Putney, and GEORGE WALLACE BRYANT, Southsea, England. Filed Jan. 30, 1919. Serial No. 274,140. 2 Claims. (Cl. 88—24.)

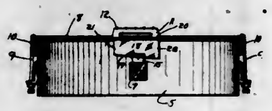
1. A screen for cinematograph pictures and the like comprising a plurality of surfaces on which the picture is simultaneously projected from a single projector, and on which the picture is simultaneously viewed by the audience, said surfaces consisting of a back screen having its front surface suitably prepared for the reception of the projected image, and at least one veiling screen of a material having the qualities of fine mesh netting stretched



completely over parallel to and fixed in close proximity to the back screen, for the purposes set forth.

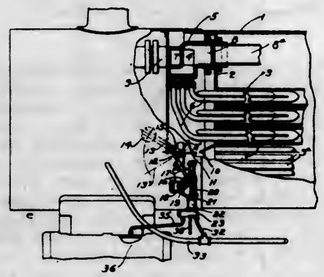
1,349,065. TRACTOR. HORACE HOUSE, Rayl, Calif. Filed Apr. 14, 1919. Serial No. 289,784. 5 Claims. (Cl. 180—50.)

1. A tractor comprising a main longitudinal housing having a power plant thereon, transverse housings positioned at the ends of the main housing transversely and centrally thereof, vertical pins on the ends of the main housing turnably mounted in the transverse housings, shafts in the same operatively connected to wheels mounted thereon, a longitudinal drive shaft in the main housing in driving relation with the power plant and with the transverse shafts to turn the wheels, and universal joints on the drive shaft in vertical alinement with the vertical pins on the main housing.



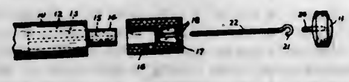
1,349,066. SLED. JAY B. JORDAN, East Rochester, N. Y. Filed Nov. 11, 1919. Serial No. 337,294. 2 Claims. (Cl. 280—22.)

1. In a device of the class described, the combination of a pair of rear runners pivotally connected to a pair of forward runners, means provided for moving said forward runners upon their pivots, a sled body, a pair of inverted V-shaped braces formed of resilient material, said braces connected to said body, lips provided at the



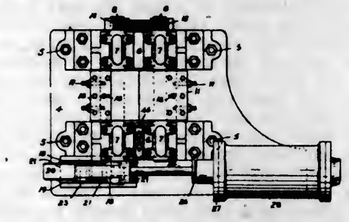
terminal of said braces, one pair of said terminals of said braces connected to the forward runner and the other pair of said terminals connected to said rear runners, whereby said forward runners will normally be held in alinement with said rear runners.

1,349,067. COÖPERATING MEANS FOR BANJO-HEADS. LOUIS L. KENYON, Iowa City, Iowa. Filed May 28, 1920. Serial No. 384,994. 6 Claims. (Cl. 84—270.)



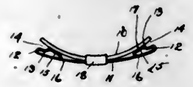
6. The combination with a banjo, or analogous musical instrument embodying a rim support, a parchment head therefor, a neck, a strut bar within said rim and providing a continuation of said neck, and a string bridge seated on said head; of a base member supported by said strut bar and having a transverse open slot providing an inclined bottom face; and a wedge member having a straight edge upper face and an inclined underneath edge face, the said pair of members being so adjustably associated and interposed between said head and said strut bar that the stright edge face of the wedge piece transversely extends in direct engagement with the underneath face of said head at a position substantially to the rear of said bridge element while its inclined edge face is slidingly supported within said slot, substantially as described.

1,349,068. DAMPER. JOSEPH A. KEYES, New York, N. Y., assignor to Locomotive Superheater Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 12, 1918. Serial No. 216,787. 4 Claims. (Cl. 122—480.)



1. In apparatus of the class described, the combination of a boiler having flues, a superheater with a portion of its heating surface located in the flues, a compartment into which the flues discharge gases, a damper controlled opening in the wall of said compartment, a steam chest, a blower pipe, means to operate the damper comprising a cylinder, and a valve subject to opposing pressures from the steam chest and the blower pipe respectively controlling the admission of steam to and its exhaust from said cylinder.

1,349,069. CUE-TIP. STANISLAW KOSINSKI, Schenectady, N. Y., assignor of one-half to Frank A. Taberski, Schenectady, N. Y. Filed June 3, 1920. Serial No. 386,339. 6 Claims. (Cl. 46—9.)

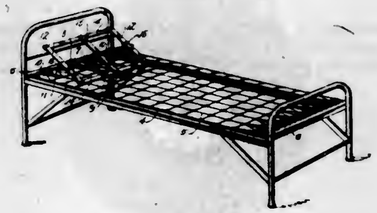


1. In a cue, the combination of a cue body having a dowel at one end provided with an axial threaded opening, a sleeve on the dowel, a tip, means forming an eye on the tip, a pin which extends through said sleeve and has a hook on one end engaging with said eye, the other end of said pin being threaded into said opening, and connecting the pipes axially to position the longitudinal edges relative to said dies, and means for actuating said rotary support-move axially thereof.

1,349,070. APPARATUS FOR DRESSING SKELP. JOSEPH W. LATSHAW, Pittsburgh, Pa., assignor to National Tube Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Apr. 10, 1919. Serial No. 289,165. 3 Claims. (Cl. 153—44.)

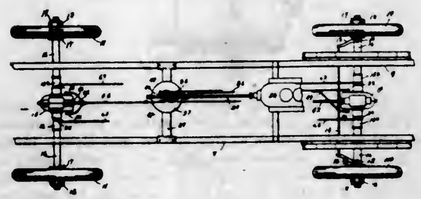
1. Apparatus for dressing the ends of bent pipe skelp comprising oppositely facing dies having opposite end dressing cavities, means for causing a relative approach of said dies, supporting means on which the bent skelp are moved lengthwise into and out of position to be operatively engaged by said dies, a stop for locating the ends of the bent skelp relative to said dies preparatory to the end dressing operations, rotary supporting means for turning the pipes axially to position the longitudinal edges relative to said dies, and means for actuating said rotary supporting means.

1,349,071. COLLAR-HOLDER. FRANK J. LE CLAIR, Attleboro, Mass., assignor to Freeman-Daughaday Co., Chartley, Mass., a Corporaton of Massachusetts. Filed June 2, 1920. Serial No. 386,022. 2 Claims. (Cl. 24—81.)



1. A collar holder comprising a pair of oppositely disposed coöperating gripping bars connected together at their middle portion, one of said bars having both of its opposite ends folded back upon itself for a short distance then offset toward the opposite bar to provide an entering mouth, said offset portion extending along for a short distance normally in contact with said inner bar, said engaging surface being roughened and the extremity of this folded end being rounded backwardly to prevent piercing and tearing the fabric upon being removed therefrom.

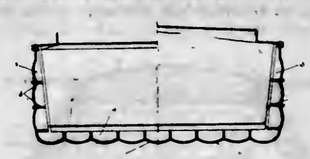
1,349,072. HEADREST. FANETTE OKELL LINES, Mount Pleasant, Iowa. Fled Oct. 24, 1919. Serial No. 333,052. 11 Claims. (Cl. 5—15.)



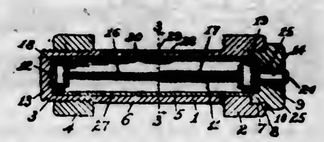
1. In combination, a pillow, a supplemental support arranged thereon and comprising means for maintaining the head of the user in position on said pillow with the face out of engagement with said supplemental support and said pillow, and means for detachably securing said supplemental support in position on said pillow.

1,349,073. HEADREST. MORRIS LIPPS, New York, N. Y. Filed Jan. 31, 1918. Serial No. 214,653. 4 Claims. (Cl. 5—43.)

1. In combination with the frame of a cot or bed, a spring supported by the frame, a crank shaft having its ends pivoted at one end of the frame and its transverse portion extending from side to side of the frame so that the transverse portion is movable above and toward and from the bed spring, a head-rest frame pivotally supported upon the transverse portion of the crank shaft, a spring bar secured at one end to the bed frame and having a free end, and a stop lug carried by the free end of the spring bar with which an edge portion of the head-rest frame engages to yieldably hold the head-rest frame in a desired adjusted relation whereby the head-rest frame is adapted to yield with the yield of the bed spring.



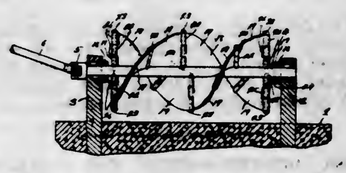
1,349,074. TRANSMISSION MECHANISM. SYVER LOE, Minneapolis, Minn. Filed May 7, 1919. Serial No. 295,429. 7 Claims. (Cl. 180—18.)



1. In a motor-propelled vehicle, the combination with an axle casing and traction wheels journaled on the ends thereof, of a motor on said vehicle, a driving axle mounted in said casing and extending therethrough to points outward of said traction wheels, clutches applied to the outer ends of said axle and to the outer sides of the wheel hubs, and transmission mechanism connecting said engine to said driving axle, and a steering device having connections for independently or simultaneously rendering said two clutch devices operative.

1,349,075. CONSTRUCTION OF VESSELS OF REINFORCED CONCRETE. PIERRE MARIE LORTON, Paris, France. Filed Aug. 11, 1917. Serial No. 185,802. 6 Claims. (Cl. 114—65.)

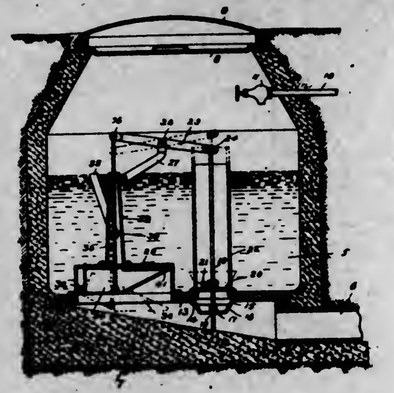
1. The improved construction of the hulls of vessels of reinforced concrete, which consists in forming the walls of elliptical vaultings having their convexity turned toward the direction whence the pressure is exerted, and having their generating lines arranged along the longitudinal axis of the vessel, said vaultings being connected together by longitudinal ribs against which they are buttressed.



1,349,076. BEARING-LUBRICATING DEVICE. KENT E. LYMAN, Cleveland, Ohio. Filed Jan. 17, 1920. Serial No. 352,138. 5 Claims. (Cl. 64—24.)

1. In a lubricating bearing bolt, the combination of a hollow body, the hollow body having an opening through its wall, a receptacle for containing a lubricant, the receptacle being adapted to fit into and be removed from said hollow body, and the receptacle being provided with a filling opening opposite the opening in the wall of the body, substantially as described.

1,349,077. PROPELLING MEANS FOR MOTORS. PRESLEY B. MCCHESNEY, Princeton, Ky. Filed Aug. 6, 1918. Serial No. 248,534. 1 Claim. (Cl. 170—133.)



In a current water motor, the combination with a base, of a screw propeller having a shaft mounted in bearings of the base, said propeller comprising a pair of detachable spirally arranged propeller blades radially disposed in relation to the shaft, said blades each comprising a plurality of detachable removable sections, said sections having their ends radially disposed in relation to the shaft center, the ends of said sections being provided with interengaging rolls and notches and radially disposed bolts passing through said rolls and having their inner ends detachably secured in the shaft.

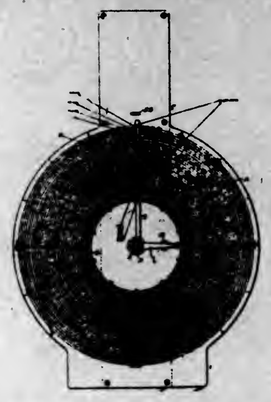
1,349,078. SEWER-FLUSHING MECHANISM. ROBERT A. MADDOX, Los Angeles, Calif. Filed Nov. 1, 1919. Serial No. 334,951. 1 Claim. (Cl. 182—4.)

A sewer flushing system comprising a well, a sewer pipe leading to the bottom of said well, a false bottom in said well, a valved opening in said false bottom, said false bottom being also provided with an opening, a housing secured to the upper face of said false bottom and covering said opening, a tiltable pan or bucket pivotally mounted within said housing, said tilting pan or bucket being above the upper face of said false bottom when in a normal position, a tubular standard extending upwardly from said housing, an overflow pipe leading to said tubular

standard, an arm secured to the upper end of said tubular standard, a lever pivotally secured to said arm midway of its ends, an actuating rod pivotally secured to one end of said lever, the free end of said rod being pivotally

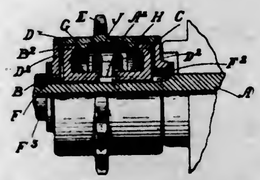
secured to said pan or bucket, and a valve actuating rod secured to the other end of said lever and to the valve controlling said valve opening, whereby when said tilting bucket is empty said valve will overbalance the same and when said bucket is filled it will overbalance the valve.

1,349,079. ANGULAR COIL-SPRING. SIDNEY L. MARKHAM, Jamestown, N. Y. Filed Nov. 5, 1918. Serial No. 261,278. 2 Claims. (Cl. 267—61.)



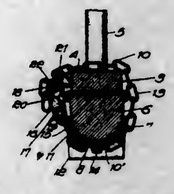
1. A torsional spring composed of a series of contacting coils closely wound under tension, each coil consisting of a series of straight sides joined by bends, the bends of adjacent coils being uniformly offset to maintain the general cylindrical shape of a coiled spring.

1,349,080. IGNITION-SWITCH. CARL T. MASON, East Orange, N. J., assignor to Splitdorf Electrical Company, Newark, N. J. Filed Aug. 1, 1917. Serial No. 183,975. 10 Claims. (Cl. 200—164.)



1. In a switch of the class described, the combination of a base having contact terminals mounted thereon and a central guiding piece, a switching member consisting of a series of switch blades arranged on a central bearing stud and a stop arm carried on the bearing stud adjacent the switch blades, a cover for the switch base and a removable handle adapted to pass through the cover and to engage the switching member, said central guiding piece being adapted to receive said central bearing stud to assist said handle in operating the switching member, said cover carrying means coacting with the stop arm to define the position of the switch handle as described.

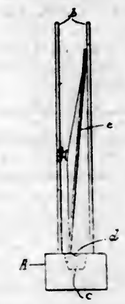
1,349,081. INTEREST-CALCULATOR. CHARLES S. MIDDLETON, Blakely, Ga. Filed June 11, 1918. Serial No. 239,466. 8 Claims. (Cl. 235—61.)



3. In a device for calculating interest, a chart having a series of concentric lines of figures indicative of the principal sum, a radial arm pivoted at the center of the circle of the series and having figures indicative of time terms in a problem and coördinate with respective principal series, and a scale member operative by said term arm for giving the interest on a given sum for a given term.

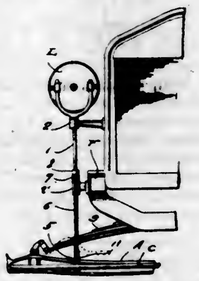
1,349,082. TRANSMISSION SHOCK-ABSORBER. EDWARD CHARLES MIDDLETON, Coventry, England, assignor to Triumph Cycle Company, Limited, Coventry, England. Filed Mar. 17, 1920. Serial No. 366,462. 3 Claims. (Cl. 74—29.)

1. In a transmission shock absorber the combination of a shaft of non-circular cross-section, a sleeve surrounding said shaft, inclines at one end of said sleeve, inclines of the opposite sense at the other end of said sleeve, two coupling members each engaging one set of said inclines and adapted to slide on said shaft, bearings for said sleeve on said shaft, and spring pressure means engaging said coupling members and self-contained within said bearings, substantially as set forth.



1,349,083. TRACTION ATTACHMENT FOR AUTOMOBILES. JOSEPH O. MOOK, Kankakee, Ill. Filed Apr. 7, 1919. Serial No. 288,127. 1 Claim. (Cl. 152—14.)

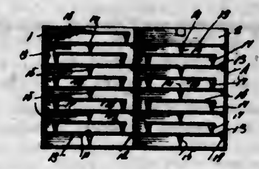
The combination with a traction element for a vehicle wheel, of means for securing said traction element to a



wheel, comprising a locking plate having a hook formed adjacent one end and a plurality of spaced notches formed longitudinally thereof, a locking lever having a transverse projection adjacent one end for adjustable engagement with said notches, and a chain the links at one end of which can be adjustably engaged with said hook, the other end of said chain being connected with said locking lever intermediate the ends thereof, the notches of said locking plate being spaced apart a distance less than the length of the links of said chain.

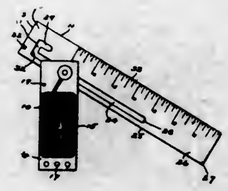
1,349,084. KETTLE-COVER DRAINER AND HOLDER. LENA C. MOORE, Binghamton, N. Y. Filed Aug. 28, 1919. Serial No. 320,349. 2 Claims. (Cl. 65—65.)

2. In a kettle cover drainer, a metallic base, having an oval cup shaped recess in its upper surface, vertical bent wire supports, mounted on the upper surface of the base on either side of the cup, a mouth extending from the drain cup outward on the upper surface of the base.



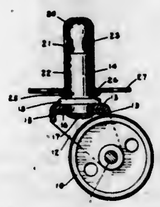
1,349,085. DIRIGIBLE HEADLIGHT. HAROLD E. MOUSE, Elkins, W. Va. Filed Jan. 10, 1920. Serial No. 350,606. 6 Claims. (Cl. 240—62.)

1. In a headlight structure for autos, the combination with a bearing on the body, a lamp carrying post rotatably mounted in said bearing, and movable elements connected with the post for rendering it dirigible; of a collar slidable on the post beneath said bearing, means for locking the collar to the post and engaging it with said bearing when the collar is raised, and connections between the collar and one of said elements for interrupting the dirigibility of the structure when the collar is raised.



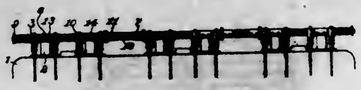
1,349,086. METAL PRECIPITATOR AND SEPARATOR. JOHN ANDREW MURPHY, Pueblo, Colo. Filed Aug. 15, 1919. Serial No. 317,762. 2 Claims. (Cl. 83—68.)

1. A metal separator comprising a reservoir divided into a plurality of communicating compartments, vertically spaced cleats secured in each compartment, plates supported on the cleats and provided with central openings having depending prongs formed adjacent thereto, and small plates arranged intermediate the plates sup-



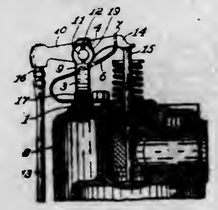
ported on the cleats, said smaller plates provided with legs adapted to engage the tops of the other plates and said depending prongs adapted to engage the surface of said smaller plates.

1,349,087. SQUARE AND BEVEL STRUCTURE. FREDERICK CONRAD NIEBLING, Southington, Conn. Filed June 4, 1919. Serial No. 301,684. 3 Claims. (Cl. 33—117.)



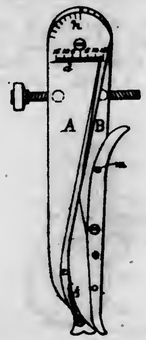
1. A square and bevel structure comprising a handle part of appreciable thickness and provided with a transversely directed slot and a blade part of sheet material fitting the said slot, a pair of positioning pin devices crossing the said slot and positioned in spaced relation along a line directed diagonally of the handle part, and the said blade part being provided with a set of slots for engaging with the said positioning pin devices for positioning the parts for use as a square comprising one slot for engaging with one of the said devices and a second slot, disconnected from the said one slot, for engaging with the other of the said devices.

1,349,088. CASTER. WILLIAM H. NOELTING, Evansville, Ind., assignor to Faultless Caster Company, Evansville, Ind., a Corporation. Filed Apr. 21, 1919. Serial No. 291,446. 1 Claim. (Cl. 16—76.)



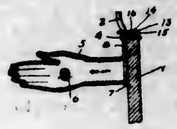
A caster having a stem, a socket for receiving the stem with its lower end turned out to form an outwardly extending flange and with an annular groove on the upper side of the flange and projecting upwardly and outwardly, and a track plate surrounding the lower part of the stem with an inwardly and downwardly extending flange fitting in said groove in the socket flange.

1,349,089. SPRING-DAMPER FOR VALVE MECHANISM. EMIL W. OHRT, Reinbeck, Iowa. Filed June 19, 1919. Serial No. 305,265. 2 Claims. (Cl. 123—90.)



2. In combination with an engine cylinder block having a transversely-orificed standard, a rocker-arm positioned in contact with said standard and transversely orificed in alinement therewith, a pintle loosely mounted in said alined orifices and projecting therebeyond, and a helical compression spring mounted on the projecting part of said pintle, secured at one end, and bearing yieldingly against the abutting part of said rocker-arm to prevent side-play thereof.

1,349,090. SPRING DAMPING MEANS FOR VALVE MECHANISM. EMIL W. OHRT, Reinbeck, Iowa. Filed July 31, 1919. Serial No. 314,448. 2 Claims. (Cl. 123—90.)



2. The combination with supporting-means, and a rocker-arm medially mounted thereon, of a spring-device comprising integrally-connected spring-arms extending from each other at an angle and respectively shaped to bear upon and engage different parts of the rocker-arm to exert thereon resilient tensions in different directions.

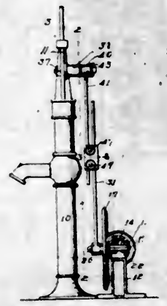
1,349,091. CALIPER OR INDICATING GAGE. FRANK E. ORMSBY, Chicago, Ill. Filed Dec. 6, 1918. Serial No. 265,591. 4 Claims. (Cl. 33—148.)

1. In caliper indicating gages, two legs of different lengths, pivotally connected to each other and having scales at the pivotally connected ends thereof, each leg having a point member pivotally connected thereto at the free end thereof, one of said legs having a secondary scale and the point member pivotally connected thereto having an indicator extension adapted to move over said secondary scale.

1,349,092. AUTO-SIGNAL. ED ORTMAN, Kokomo, Ind. Filed Feb. 7, 1920. Serial No. 356,900. 4 Claims. (Cl. 116—52.)

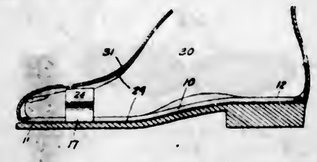
1. The combination with a vehicle body having a wind shield support thereon, of a signal, means for suspending the signal from the wind shield support, a lever attached to the signal for moving said signal toward or from the side of the vehicle body, a rod attached to the free end of said lever, a block through which said rod passes, means for retarding the lengthwise movement of said rod, and means for removably clamping the block on parts of the vehicle body.

1,349,093. SCAFFOLD. MICHAEL OSTROSKI, Coniston, Ontario, Canada. Filed Mar. 14, 1918. Serial No. 222,419. 3 Claims. (Cl. 304—10.)



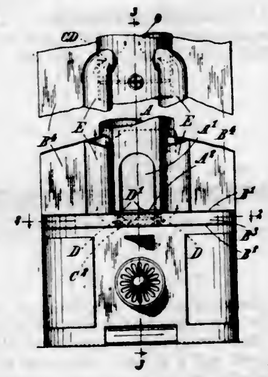
1. A sectional scaffold including similar and interchangeable upright units, each of which is provided at the bottom with a flat foot plate and at the top with a corresponding head plate, fastening members connecting the foot plate of one upright unit to the head plate of another upright unit, brackets projecting from the uprights, a cross head constructed to engage one of the brackets, and a platform mounted upon the cross head.

1,349,094. PUMP-JACK. ARCHIE EUGENE OWEN, Malcom, Iowa. Filed Jan. 6, 1917. Serial No. 140,985. 1 Claim. (Cl. 74—14.)



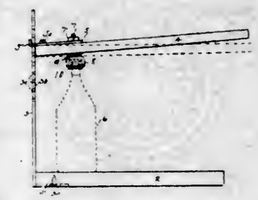
In a device of the class described, a base having a pair of bearing members thereon, shafts rotatably mounted in said bearings, said shafts being at right angles to each other, gear wheels fixed to each of the shafts on their adjacent ends and in mesh with each other, whereby rotation of one imparts rotation to the other, a pulley wheel on the free end of one of the shafts, one of said gear wheels being provided with a web having formed therein a radially elongated slot, a shaft extended through said slot having a collar fixed thereon intermediate of its ends, a screw-threaded portion on one end of said last shaft adapted to receive a nut, the parts being so arranged that the collar rests against one side of the web and the nut against the other, whereby the shaft may be locked in said elongated slot against movement therein, an upwardly extending arm having a hub with an opening therein formed at its lower end, said arm being adapted

to be pivotally connected with the free end of said last shaft, a pump rod operatively connected with a pump mechanism, a second arm extending downwardly operatively connected with the upper end of the pump rod, the said arms being of sufficient length to overlap each other, means for fastening the upwardly extending arm to the



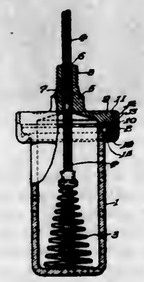
downwardly extending arm, said last means including a pair of opposite spaced plates having recesses formed in their adjacent faces, said recesses being designed to receive the edges of the arms, and means for frictionally gripping said arms between said plates in any of a plurality of positions, whereby rotation of the pulley wheel may impart reciprocating movements to the pump rod.

1,349,095. INNERSOLE. SEBASTIANO PARISI, New York, N. Y. Filed Sept. 13, 1919. Serial No. 323,467. 6 Claims. (Cl. 36—1.)



1. An inner sole, the toe portion of which is provided with a plurality of toe loops into which the separate toes of a foot are adapted to pass, and means in the toe portion of the sole for adjusting the size of said toe loops and for holding the same in position.

1,349,096. DOMESTIC HEATING AND COOKING APPARATUS. NOEL PEMBERTON-BILLING, Hertford, England. Filed July 23, 1919. Serial No. 312,853. 12 Claims. (Cl. 126—4.)

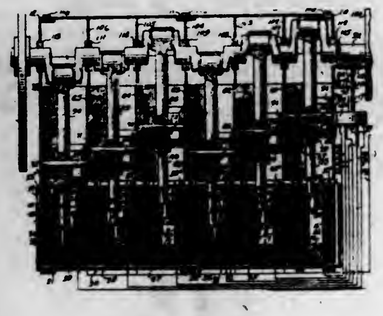


1. For a domestic stove having a fireplace and a chimney-damper, the combination of a front chamber situated in front of the fireplace opening in the stove, baffles within the chamber, a flue connecting the interior of the rear portion of the chamber with the fire space of the stove, and flues extending from the chamber into communication with the chimney above the chimney-damper, substantially as described.

1,349,097. BOTTLE-CAPPING MACHINE. EDWARD E. PHILLIPS, Syracuse, N. Y. Filed June 24, 1920. Serial No. 391,268. 3 Claims. (Cl. 226—84.)

1. In a hand capping machine, a frame comprising a base and a standard, said standard provided with a plurality of parallel slots disposed one above the other, a detachable capping lever, having a hook at one end adapted to be inserted in the different slots corresponding to the height of the bottles to be capped, a cap receiving and clenching member depending from the bottom side of the lever, and a cushion rubber washer disposed between said cup and said lever for allowing said cup to flex in different directions during the capping operations.

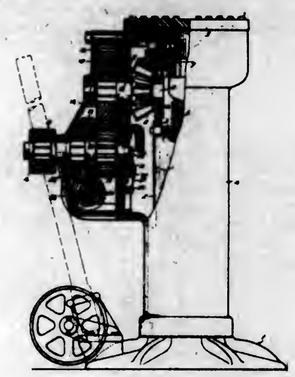
1,349,098. OIL-CUP. CLARENCE E. QUINTIN, Glenriddle, Pa., assignor to Leander W. Riddle, Glenriddle, Pa. Filed Mar. 12, 1920. Serial No. 365,146. 4 Claims. (Cl. 184—64.)



2. In an oil cup, the combination of a cup body closed throughout except at its inlet end and having thereat an exteriorly projecting and horizontally disposed annular flange, a closing cap having an annular portion conforming to and adapted to rest on said flange of the cup body, and a locking ring composed of two members at right angles to each other, one of them a horizontally-disposed member adapted to pass under said flange of the cup body and the other of them a vertically disposed member interiorly threaded, and means peripherally threaded adapted thereby to register with said last mentioned threaded member of the locking ring and operating to hold said closing cap in locked relation to the locking ring and cup body.

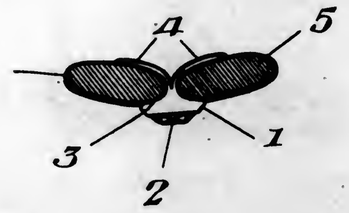
1,349,099. DOILY. CORABELL REDPATH, Los Angeles, Calif. Filed Dec. 2, 1918. Serial No. 264,956. 4 Claims. (Cl. 65—53.)

1. A doily construction, comprising a flexible member provided with a centrally disposed opening therein, and an adhesive abutment strip secured to said member around the opening therein.



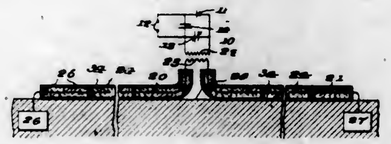
1,349,100. DYNAMO-ELECTRIC MACHINE. WILLIAM T. REYNOLDS and BRUCE A. REYNOLDS, Port Arthur, Tex. Filed May 4, 1918. Serial No. 232,558. 6 Claims. (Cl. 172—126.)

2. An electric motor comprising a plurality of solenoids, a crank shaft, piston rods connected to the crank shaft a collar formed on each piston rod, a core slidably mounted on each piston rod and adapted to engage the collar on said piston rod, and operable in an alining solenoid, and commutating means operable by the crank shaft for energising and deënergizing the solenoids.



1,349,101. SELF-LOWERING LIFTING-JACK. CHARLES W. RIPSCH and JAMES C. DAWLEY, Dayton, Ohio, assignors to The Joyce-Cridland Company, Dayton, Ohio, a Corporation of Ohio. Filed Dec. 15, 1919. Serial No. 344,973. 15 Claims. (Cl. 254—103.)

1. In a lifting jack, a base, a movable member mounted on said base, a rotatable member to actuate said movable member, a gear connected with said rotatable member, a shaft journaled in said movable member, a pinion carried by said shaft and meshing with said gear, a second shaft journaled in said movable member, reducing gears connecting said shafts one to the other, means for rotating said second shaft, a worm gear rotatably mounted on said second shaft, means to cause said worm wheel to rotate with said second shaft when said movable member moves

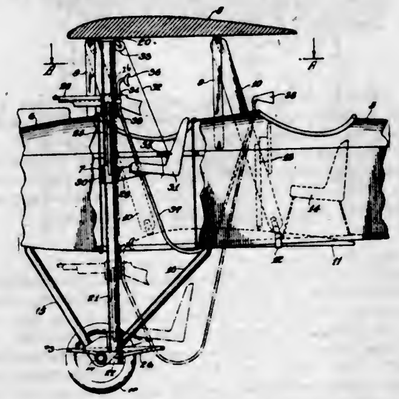


downwardly, a worm meshing with and rotatable by said worm gear, and a brake to control the rotation of said worm.

1,349,102. DENTAL ORNAMENT. ANDERSON COPIS SOLMON ROBINSON, Suffolk, Va. Filed Nov. 7, 1919. Serial No. 336,247. 1 Claim. (Cl. 63—29.)

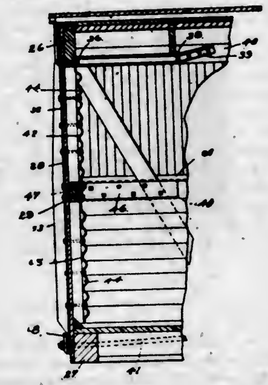
A setting to be applied between a pair of teeth having converging surfaces to fit the teeth, and prongs disposed close together and projecting from said setting between said surfaces to pass between the teeth and bendable in rear thereof.

1,349,103. RADIOSIGNALING SYSTEM. JAMES HARRIS ROGERS, Hyattsville, Md. Filed May 2, 1917. Serial No. 165,875. 3 Claims. (Cl. 250—33.)



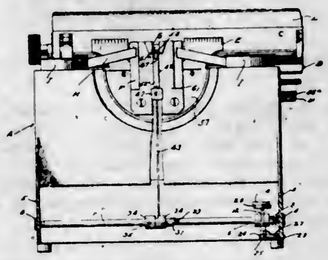
1. A radio signaling system comprising an antenna extending horizontally substantially parallel to the surface of the earth, signal instruments associated with said antenna at one end and a ground connection at the other end, and a metallic screen in intimate contact with the earth substantially throughout its length and inclosing said antenna.

1,349,104. RADIOSIGNALING SYSTEM. JAMES HARRIS ROGERS, Hyattsville, Md. Filed Jan. 17, 1918. Serial No. 212,197. 4 Claims. (Cl. 250—33.)



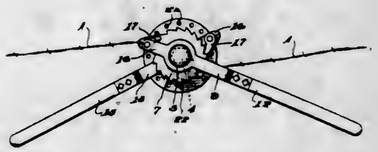
1. A radio signaling system comprising an antenna extending horizontally substantially parallel to the surface of the earth and insulated therefrom, a metallic covering inclosing said antenna but insulated therefrom and in intimate contact with the earth substantially throughout its length, signal instruments associated with said antenna, and a balancing connection on the opposite side of said instruments.

1,349,105. MILITARY AEROPLANE OR THE LIKE. OSCAR A. ROSS, New York, N. Y. Filed Sept. 14, 1917. Serial No. 191,437. 2 Claims. (Cl. 89—40.)



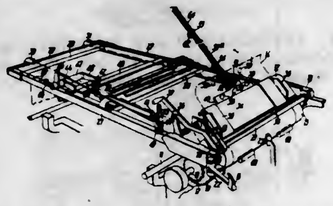
1. In a military aeroplane having a body, or car, a gun mounted thereon, a movable carriage supporting said gun, means for conveying said carriage from above to below said body or car, in combination with a system of communication, one end of which terminates adjacent the said body or car and the other end on said movable carriage.

1,349,106. FREIGHT-CAR. AUGUST G. SANDMAN, Baltimore, Md., assignor to Walter P. Murphy, Chicago, Ill. Filed May 22, 1916. Serial No. 99,022. 25 Claims. (Cl. 105—411.)



10. In a railway box car, the combination with the end framing of the car comprising corner posts and intermediate end posts, of a sheet metal sheathing on the inside of said posts formed with horizontal corrugations which terminate within the edges of the sheathing so as to leave attaching flanges for attachment to the corner posts, and means for securing said sheathing to the corner posts.

1,349,107. UNDERSCORER FOR TYPEWRITERS. ESTER M. SEALY, Fort Shafter, Hawaii. Filed Dec. 12, 1918. Serial No. 266,444. 8 Claims. (Cl. 197—113.)

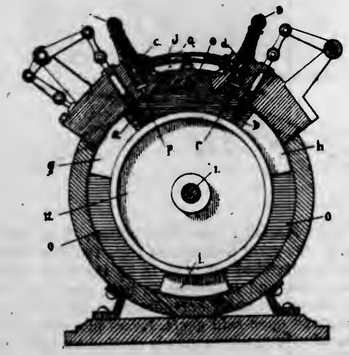


1. In underscoring means, an underscorer provided with a head at its upper end adapted to be engaged by the type head of a type bar of a typewriter upon which the underscorer is mounted when the head thereof is brought into position adjacent the platen roll of a typewriter and the type bar is operated, a stop member carried by the typewriter, a stop member secured to the underscorer and cooperating with the stop member carried by the typewriter so as to positively limit upward movement of the underscorer so as to cause movement thereof in accordance with the vertical movement of the stop member carried by the typewriter, the stop member carried by the typewriter being adjustable in accordance with adjustment of the shifting mechanism of the typewriter when shifting from one case to another.

1,349,108. WIRE-STRETCHER. CHARLES S. SHIPPEN, Tipperary, Wyo. Filed Apr. 16, 1919. Serial No. 290,437. 4 Claims. (Cl. 24—71.1.)

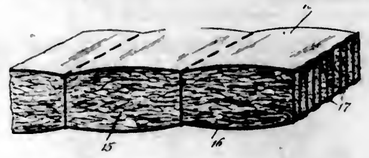
4. In a wire stretcher, the combination, of a spool, a pin carried by the spool and spaced from the core thereof, the wire to be stretched adapted to be threaded between said pin and core, and extending in both directions from the spool, a polygonal shaft extending through said spool, ratchets mounted upon said shaft, levers pivotally carried by the hubs of said ratchets, pawls carried by said levers and engaging said ratchets for rotating said spools upon pivotal movement of the lever, said spool including end flanges provided with a plurality of circumferentially spaced openings near their peripheries, and pins adapted to be inserted through certain of said openings for engagement with said wire upon each side of the core to prevent unwinding of the wire from said core, said shaft being detachably connected to said spool whereby the shaft, ratchet and levers may be disconnected from the spool.

1,349,109. TYPEWRITING-MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 2, 1918. Serial No. 260,811. 31 Claims. (Cl. 197—126.)



1. In a typewriting machine, the combination with a traveling carriage and a carbon-paper carriage slidable thereon, of a device upon which sheets are adapted to be grasped, a platen, means along which said device may be moved relatively to the platen, and a stop for limiting said movement to enable the automatic measuring of sections of sheets thereby.

1,349,110. TOOTHBRUSH AND PASTE-CASE. WILLIAM OGLE SNYDER, Veedersburg, Ind. Filed Apr. 2, 1920. Serial No. 370,739. 6 Claims. (Cl. 132—32.)

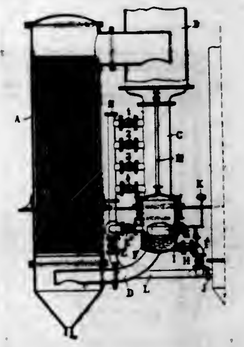


1. In a toilet article and the like, the combination with a tubular handle portion, an operating member supported thereby, and a container adapted to be positioned within the tubular handle portion, of a closure member for one end of the tubular handle portion, and a reel member rotatably supported by said closure member within said handle portion.

1,349,111. INTERNAL-COMBUSTION MACHINE. ISAAC SANTOS Y SUAREZ and ROBERTO DE AROZARENA Y MENDIVE, Habana, Cuba. Filed Oct. 4, 1919. Serial No. 328,490. 4 Claims. (Cl. 123—14.)

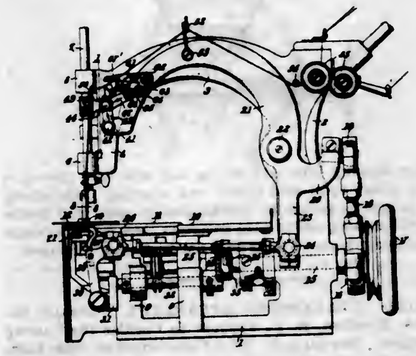
1. An internal combustion engine, comprising a casing provided with an annular chamber, a shaft mounted for rotation in said casing, a plurality of members secured to said shaft and adapted to traverse said annular chamber, a pair of members adapted to slide radially of said annular chamber, thereby to form an explosion chamber within said annular chamber, said explosion chamber being provided with a plurality of valve-controlled inlet and outlet passages, communicating means between one of said inlet passages and one of said outlet passages, and means for operating the slidable members and valves in proper sequence for admitting an explosive charge to said explosion chamber during the passage therethrough of one of said traversing members, and for establishing communication between the said communicating inlet and outlet passages during the passage of another of said traversing members through the explosion chamber.

1,349,112. FIBROUS PRODUCT. HOWARD F. WEISS, Madison, Wis., assignor to C. F. Burgess Laboratories, Madison, Wis., a Corporation of Wisconsin. Filed July 11, 1919. Serial No. 310,135. 11 Claims. (Cl. 92—3.)



1. The process of treating redwood bark which comprises softening the bark by treatment with hot water, beating the softened bark in water to disintegrate the same and separate the fibers thereof with a minimum of breaking or cutting, washing the separated fibers to remove non-fibrous matter, and drying the washed and separated bark fibers; substantially as described.

1,349,113. PROCESS OF OBTAINING POTASSIUM AND OTHER ALKALI-METAL COMPOUNDS. ERIC HJALMAR WESTLING, Antioch, Calif. Filed Oct. 14, 1918. Serial No. 258,025. 7 Claims. (Cl. 23—22.)



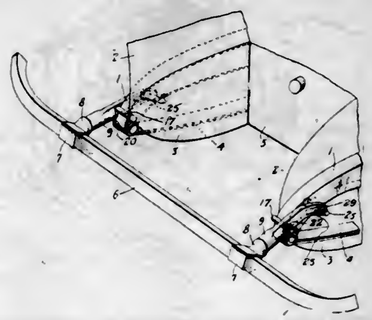
1. The process of obtaining soluble alkali metal compounds from anhydrous alkali metal containing substances which comprises heating a mixture of the substance and a heavy metal sulfate to a temperature sufficiently high to decompose the sulfate in the presence of the substance.

1,349,114. APPARATUS FOR REGULATING AND MAINTAINING A DESIRED LEVEL OF LIQUID IN EVAPORATING INSTALLATIONS. EMILE AUGUSTIN BARBET, Paris, France. Filed Mar. 26, 1917. Serial No. 157,579. 4 Claims. (Cl. 127—9.)

1. Means for regulating the liquid level in tubular evporating apparatus, comprising a tube connected with the evaporating vessel at a point below the lowest normal working level of the evaporating vessel and a plurality of valves connected to the tube at different heights, so that the level of the liquid in the tube and thus the level of liquid in the evaporating vessel will correspond with the height of the lowest of the aforesaid valves which is in the open position, a pipe adapted to receive the liquid discharged through all of said valves, and a float regulator connected to said pipe.

1,349,115. THREAD-CONTROLLING MECHANISM FOR SEWING-MACHINES. RUDOLPH BECKER, Roselle Park, N. J., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed Jan. 20, 1917. Serial No. 143,441. 14 Claims. (Cl. 112—241.)

1. In a sewing machine, in combination, a needle, a looper, a needle-bar, a needle-bar actuating lever, a thread-engaging device carried by the needle-bar, a thread-controlling device mounted on the needle-bar actuating lever for differential movement relatively to the latter, and bodily movable mechanism for controlling said differential movement.



1,349,116. MULTIPLANE AEROPLANE. GIANNI CAPRONI, Milan, Italy. Filed Jan. 8, 1918. Serial No. 210,936. 1 Claim. (Cl. 244—14.)

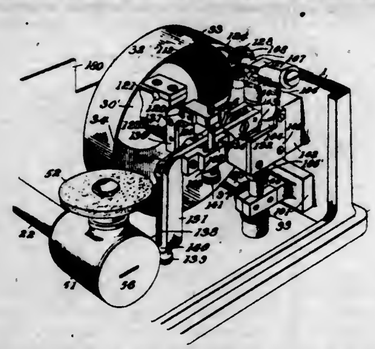
A flying machine comprising a plurality of continuous superposed planes forming a cell structure, two fuselages arranged under the middle plane at equal distance from the longitudinal axis of the flying machine and projecting forward outside said cell structure, a car located transversely at the middle of the cell structure and projecting forward and backward outside said cell-structure, structure supports transversly arranged on said cell structure and projecting outside said cell structure and located on an imaginary plane containing the imaginary axis of said fuselages, a motor arranged at the rear end of said car, two motors respectively arranged at the front end of said fuselages, two motors respectively arranged at the projecting ends of said structure supports and propellers respectively connected to the shafts of said motors.

1,349,117. VEHICLE-BUMPER. ALBERT S. CLUCKER, New York, N. Y. Filed Aug. 13, 1917. Serial No. 185,824. 2 Claims. (Cl. 293—55.)

2. In a bumper, a bracket adapted to be positioned at one side of the frame member of the vehicle and having two openings, bolts in said openings having hooked ends adapted to engage the other side of said frame member, one of said bolts being adapted to engage the upper edge of said member and the other of said bolts being adapted to engage the lower edge of said frame member so that the points of engagement are substantially in a horizontal

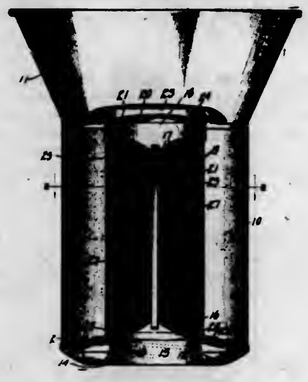
line when said bracket is in operative position, one of said bolts being vertically adjustable, and means for holding a bumper member substantially in the horizontal line passing through the points of engagement of said bolts with said frame member.

1,349,118. WINDOW-WIPER. PIETRO A. CONTI, Nevada City, Calif. Filed Feb. 6, 1919. Serial No. 275,330. 10 Claims. (Cl. 15—59.)



1. A window cleaner comprising a movably mounted wiper frame, a wiper element carried by the frame for movement toward and from the window surface, trips arranged adjacent the limits of travel of the frame, one of said trips being mounted for movement by the wiper element from the path thereof, and means operable by the trips for alternately removing the wiper element from and applying it to the window surface.

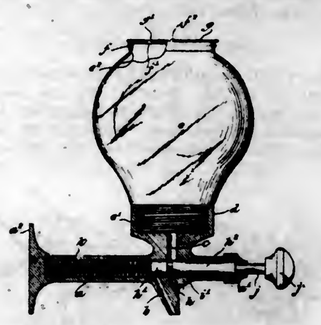
1,349,119. SKIVING-MACHINE. WILLIAM P. CROCKETT, Harrison, N. J., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed Nov. 28, 1916. Serial No. 133,853. 6 Claims. (Cl. 69—9.5.)



3. A machine of the character described, having in combination a main-shaft, a cutter-head actuating shaft carrying a cutter-head and operatively connected with said main-shaft, and a feeding mechanism operated from said main-shaft through connections including a feed actuating shaft carrying a multiple of spiral gears having sliding relationship therewith, and a worm gear journaled in a gear carrying yoke having swinging movements about the

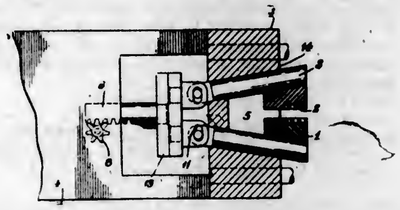
axis of said main-shaft, said worm gear being provided with a gear member meshing with the gear member carried by said main shaft, the worm gear and said multiple

spiral gears being manually controlled to transmit to said feeding mechanism the feed action best calculated to meet the feed requirements of the material being acted on.



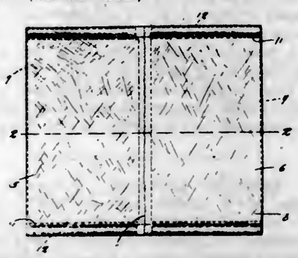
1,349,120. MILK-STRAINER. CHARLES H. CUTTING, Alameda, Calif. Filed May 10, 1919. Serial No. 296,074. 5 Claims. (Cl. 210—157.)

1. A strainer comprising an outer shell formed with an annular bottom around a central opening, an inner strainer surrounding said central opening and extending upwardly therefrom, an annular deflector extending outwardly from the bottom of said central strainer and forming a chamber between said deflector and the bottom with a narrow space between the outer edge of said deflector and said bottom and a second strainer surrounding said central strainer and formed with a closed top overhanging the upper end of the strainer structure, substantially as set forth.



1,349,121. LIQUID-SOAP DISPENSER. JOSEPH M. DABROWSKI, Brooklyn, N. Y., assignor to Moore Brothers Company, New York, N. Y., a Corporation of New York. Filed Sept. 9, 1919. Serial No. 322,636. 2 Claims. (Cl. 221—104.)

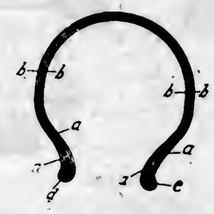
1. A liquid soap dispenser embodying therein a cylindrical valve casing having a discharge nozzle leading therefrom at a point intermediate the ends thereof, and an intake port arranged in advance of said nozzle, a reservoir for liquid soap surmounting said casing and communicating therewith through said intake port, a reciprocatory piston mounted in said casing and having a peripheral groove adapted to receive a limited quantity of soap and dividing said piston into two distinct valves, one operative in relation to said nozzle and the other operative in relation to said intake port, said piston also having an air



passage opening into said casing and into said groove, a spring acting upon said piston and normally maintaining said peripheral groove in communication with said intake port and causing one of said valves to close said discharge nozzle, and a stem whereby said piston may be actuated.

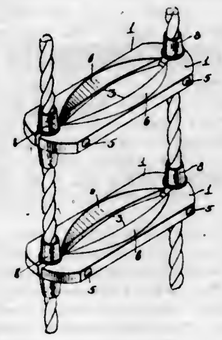
1,349,122. DIE-CASTING APPARATUS. CONRAD EDLUND, Brooklyn, N. Y., assignor to Doehler Die Casting Company, Brooklyn, N. Y., a Corporation of New York. Filed Apr. 23, 1920. Serial No. 375,997. 4 Claims. (Cl. 22—92.)

1. In a die casting apparatus, the combination of a die having a plurality of segmental parts adapted to meet along longitudinal planes, said parts having jointly a die cavity extending lengthwise thereof, with undercuts, elongated members secured to said parts, respectively, arranged symmetrically at inclinations to the axis of the die, and means for moving said members in the directions of their lengths in opening and closing the die.



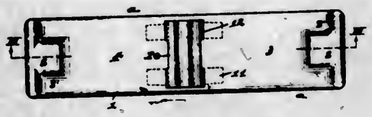
1,349,123. KNIFE-CLEANER. AXEL EMKSON, Baltimore, Md. Filed Apr. 1, 1920. Serial No. 370,469. 1 Claim. (Cl. 51—182.)

A cutlery scourer comprising a pair of scouring members flexibly connected to permit folding, one on top of



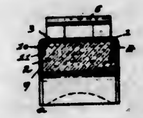
the other, for insertion therebetween of the article to be scoured, each member being composed of a rigid block and a covering therefor, said covering at the edges of the members where the article enters therebetween being provided with a hem, and rigid rods seating in the hems to distend the same and form beads having rubbing surfaces.

1,349,124. TIRE. GEORGE F. FISHER, Plainfield, N. J., assignor to Revere Rubber Company, a Corporation of Rhode Island. Filed July 15, 1915. Serial No. 39,979. 7 Claims. (Cl. 152—13.)



3. A tire carcass comprising superposed plies of circumferentially continuous pieces of fabric looped around oppositely disposed beads and continuations formed of less than the whole number of said plies passing respectively from each bead to the opposite sides of the tire.

1,349,125. SHIP'S LADDER. PETER FULL, Vermilion, Ohio. Filed June 20, 1919. Serial No. 305,658. 6 Claims. (Cl. 228—40.)

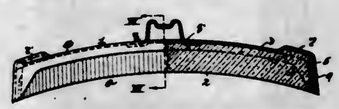


1. In a ship's ladder, the combination of flexible cables, two coöperative step plates mounted on opposite sides of said cables, coöperative cable-indenting and engaging members carried by said plates, and adjustable means adapted to lock said plates and members together in firm engagement with said cables.

1,349,126. BRAKE-SHOE. WILLIAM GIBSON, Pittsburgh, Pa. Filed July 18, 1919. Serial No. 311,848. 11 Claims. (Cl. 188—251.)

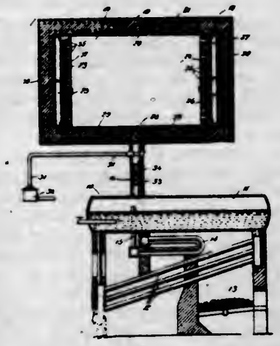
1. A brake-shoe having an inclosing casing and a filling material, said casing being provided with walls of soft material integral therewith.

1,349,127. BRAKE-SHOE. WILLIAM GIBSON, Pittsburgh, Pa. Filed Aug. 15, 1919. Serial No. 317,748. 17 Claims. (Cl. 188—251.)



2. A brake-shoe having a supporting member and a filling member, and separate side supporting plates formed of soft material and supported by said filling member and by a seat formed at the junction of said plates and supporting member.

1,349,128. BRAKE-SHOE. WILLIAM GIBSON, Pittsburgh, Pa. Filed Aug. 16, 1919. Serial No. 317,896. 19 Claims. (Cl. 188—251.)



1. A brake-shoe having a supporting member and a filling member, and separate end supporting plates formed of soft material and held by the co-action of the filling member and the supporting member, with the exterior surfaces of the end plates flush with the outside surface of the supporting member.

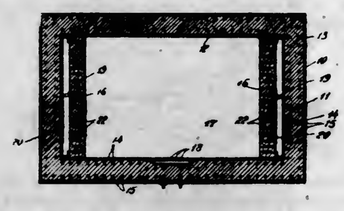
1,349,129. BRAKE-SHOE. WILLIAM GIBSON, Pittsburgh, Pa. Filed Aug. 18, 1919. Serial No. 318,179. 13 Claims. (Cl. 188—251.)

1. A brake-shoe composed of integral plates each of which comprises more than one wall, a separate back supporting member, and a filling member within said back supporting member and plates.

1,349,130. HEATING APPARATUS. WILLIAM S. HADAWAY, Jr., New Rochelle, N. Y. Filed Mar. 4, 1916, Serial No. 82,067. Renewed Nov. 15, 1919. Serial No. 338,328. 14 Claims. (Cl. 219—35.)

1. A heat chamber comprising walls of heat insulation, a partition wall dividing off a narrow vapor compartment

and means in the partition for permitting the passage of vapor therethrough into the heat chamber and for increasing the temperature of the vapor as it passes therethrough.



7. An oven having inclosing walls, means for preventing loss of heat therefrom, a body of relatively large heat capacity dividing off a vapor compartment, and electric heaters in the form of tapering tubes embedded in said body and providing a plurality of vapor passages from the compartment to the oven, said tubes being arranged with their larger ends opening into the oven and being adapted to increase the temperature of the vapor as it flows from the compartment into the oven.

11. A heat chamber having inclosing walls, means for preventing loss of heat therefrom, a partition dividing the chamber into vapor inlet and outlet compartments, a body of relatively large heat capacity in the partition having means for permitting the slow passage of the vapor through it, and means in the body for increasing the temperature of the vapor as it passes therethrough.

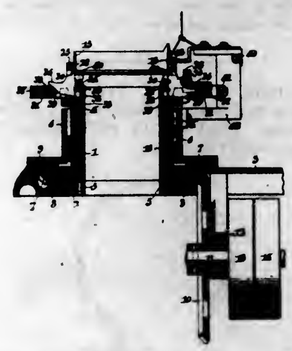
13. A heat chamber comprising a working compartment, a heat storage mass forming one of the walls of the compartment, heaters in the mass, and means for causing a heating medium to enter the working compartment through the mass.

14. A heat chamber comprising walls of heat insulating material, a heat storage mass disposed close to one of the walls of the chamber, electric heaters in the mass, and means for causing hot vapor to enter the chamber through the mass.

1,349,131. HEATING APPARATUS. WILLIAM S. HADAWAY, Jr., New Rochelle, N. Y. Filed Mar. 4, 1916, Serial No. 82,070. Renewed Nov. 15, 1919. Serial No. 338,329. 14 Claims. (Cl. 219—35.)

3. A heater comprising a chamber constituting a source of heated gas, a working chamber to which the gas is supplied and interposed porous metallic mass having large heat capacity and through which the gas percolates from the source to the working chamber, and electric heating elements embedded in the porous mass.

5. A heater comprising a porous metallic mass having insulated electric heaters associated therewith, and means for causing vapor to pass through the pores of the metallic mass.



7. A heater comprising a metallic mass having insulated armored electric heaters embedded therein, and adapted to permit the passage of vapor therethrough.

8. A tubular heater comprising a tubular porous body having an interior vapor passage, and heater elements disposed in the body and adapted to heat the vapor as it passes through the pores of the body.

12. A heater comprising a hollow perforated pipe constituting a support and adapted to be supplied with steam, a porous mass of large heat capacity mounted on the pipe and electric heater elements associated with the porous mass and adapted to produce useful heat, the temperature of which is built up from the level established by the steam.

1,349,132. SPRING-NEEDLE KNITTING-MACHINE. EMIL A. HIENER, Allentown, Pa. Filed Jan. 31, 1919. Serial No. 274,160. 5 Claims. (Cl. 66—26.)

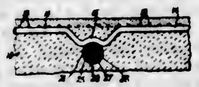
3. In a knitting machine, the combination of a series of spring beard needles; a group of actuating cams therefor; a beard presser element common to the said needles; a web holder associated with each needle and provided with a projection for engaging the corresponding needle, where-

by, when the web holder is retracted to permit the drawing of a new fabric loop, the coöperative needle is deflected so that its beard is closed by contact with the presser element.

1,349,133. SHEET-FEEDING MACHINE. EDWIN F. HULBERT, Milwaukee, Wis., assignor to National Paper Can Company, Milwaukee, Wis., a Corporation of Delaware. Filed Dec. 27, 1917. Serial No. 209,187. 5 Claims. (Cl. 271—62.)

2. In a machine for feeding sheets of paper or the like from a pile having means for transferring the top sheet from a pile, the combination of a frame having a plurality of legs, a table having mechanism engaging the legs to raise the table with relation thereto, an electric motor carried by the table for driving the table raising mechanism and means for controlling the motor to maintain the top of the pile at a substantially constant level with relation to the transferring means, including a feeler adapted to rest against the top of the pile, and an electric contact moved by the feeler and operating to start the motor when the feeler moves downwardly upon the removal of the top sheet or sheets and operated to stop the motor when the top of the pile of sheets is raised to the desired predetermined level; substantially as described.

1,349,134. RECOVERY OF POTASSIUM SALTS AND BORAX. KARL J. JACOBI, Roselle Park, N. J., assignor to Pacific Coast Borax Company, New York, N. Y., a Corporation of Nevada. Filed Aug. 25, 1919. Serial No. 319,744. 15 Claims. (Cl. 23—22.)



6. The method of improving the recovery of potassium salts and borax from alkaline brines containing them, which comprises acidifying the brine to reduce its alkalinity, concentrating the resulting brine and cooling the concentrated brine, substantially as described.

1,349,135. CORNUCOPIA-SERVING DEVICE. SAMUEL A. KORNSWEET, Los Angeles, Calif. Filed Dec. 16, 1918. Serial No. 266,872. 2 Claims. (Cl. 294—33.)

1. A cornucopia serving device comprising an elongated body member, a resilient ring member secured at one end to said body member and formed in a circular curve, a slot member secured to the opposite side of the body member, said ring member being slidably received in said slot member, and said ring member being provided with a thumb rest.

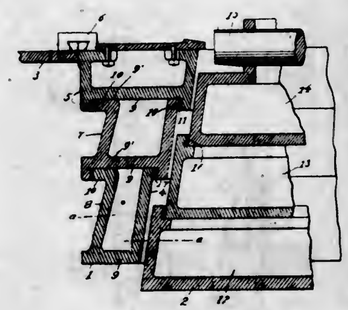
1,349,136. HEATING MEANS. WILLIAM W. LILLARD, Irvington, N. J., assignor of one-half to Ernest John King, Jersey City, N. J. Filed Oct. 26, 1917, Serial No. 198,654. Renewed Sept. 29, 1919. Serial No. 327,264. 8 Claims. (Cl. 219—19.)

1. A heating means, comprising a monolithic structure of relatively low thermal conductivity, a heat distributing medium of relatively high thermal conductivity embedded in the said structure in close proximity to its upper surface, and a heat receiving medium embedded in the said monolithic structure below and in contact with the said heat distributing medium, and means for heating the said heat receiving medium.

2. A heating means comprising a monolithic structure, a heat distributing medium embedded therein, a tube embedded in said monolithic structure and in contact with the said heat distributing medium, and means for heating the said tube interiorly, the said heat distributing medium being a better thermal conductor than the said monolithic structure.

3. A heating means, comprising a monolithic structure, a heat distributing medium embedded therein a short distance below its upper surface, and an electric heating coil embedded in the said monolithic structure below and in contact with the said heat distributing medium, the said heating coil being arranged for connection with a source of electrical energy.

5. A heating means, comprising a monolithic structure, a heat distributing medium embedded in the said structure in close proximity to its upper surface, a tube embedded in the said structure below and in contact with the said heat distributing medium, and an electric heating coil arranged within the said tube to heat the latter, the said heating coil having electric conductors extending to the outside for connection with a source of electrical energy.

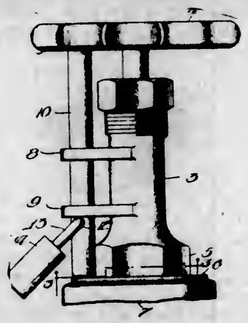


7. A heating means, comprising a monolithic structure, a heat distributing medium embedded in the said structure and formed of a heat distributing wire netting and metallic contact bars, of which the wire netting is in close proxmity to the surface of the monolithic structure and is in contact with the said contact bars, the latter being provided wih curved offset saddles, a metallic tube embedded in the said monolithic structure and engaged exteriorly by the said saddles, an electric heating coil within the said tube and in contact therewith, a core within the said coil, and electric conductors within the said core and connected with the said coil, the said conductors extending to the outside of the structure for connection with a source of electrical energy.

1,349,137. CAP FOR AUTOMOBILE-RADIATORS AND THE LIKE. HENRY S. MORGAN, Poughkeepsie, N. Y., assignor to Pouvaliesmith Corporation, Poughkeepsie, N. Y., a Corporation of New York. Filed Aug. 14, 1917. Serial No. 186,115. 1 Claim. (Cl. 220—39.)

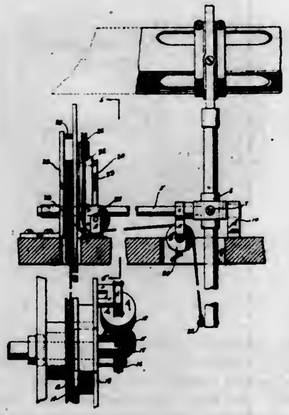
A cap for automobile radiators and the like, comprising a bushing adapted to fit a radiator pipe and open at both ends, a covering of hard moldable material unaffected by the action of steam or hot water and having a relatively high elastic limit, said covering surrounding the periphery and closing one end of the bushing, and provided with an annular shoulder against which the end of said pipe may abut, the ratio of mass and disposition of bushing to covering being low enough so that the bushing does not crack the covering by differential expansion with changes of temperature.

1,349,138. VAULT-VESTIBULE. MOSES MOSLER, Cincinnati, and CARL BARTELS, Hamilton, Ohio, assignors to The Mosler Safe Company, New York, N. Y. Filed Sept. 22, 1919. Serial No. 325,577. 7 Claims. (Cl. 109—1.)



1. A vault vestibule comprising, a vestibule section having a front provided with a dovetail and with an inner door-step, a second similar section having a dovetailed juncture with the first-mentioned section, tightly fitted filling strips engaging the dovetailed elements of the two sections, an inner door section, a second similar door section having a dovetailed connection with the front of the first-mentioned door section, and filling strips tightly fitting permanently between the engaging dovetailed elements of the two door sections combined, substantially as set forth.

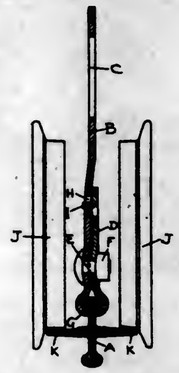
1,349,139. VALVE-LOCK. JOHN M. MCDONALD, Dubuque, Iowa, assignor to A. Y. McDonald M'f'g. Co., Dubuque, Iowa, a Corporation of Iowa. Filed Dec. 30, 1918. Serial No. 268,874. 3 Claims. (Cl. 70—125.)



1. In combination with a valve casing having a neck enlarged at its base to provide a polygon with flat faces, a hand wheel projecting from the outer end of the neck, a guide lug outstanding from the neck at a point in alinement with one of the flat faces of the polygonal base, a locking pin slidably mounted within the guide lug in adjacent relation to said flat face of the base and adapted when projected to have its acting end brought into lock-

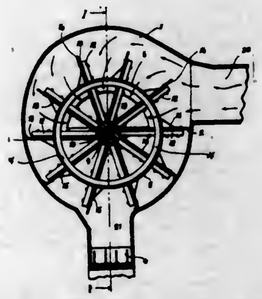
ing relation with the hand wheel, said pin being provided with a transverse hole, and a padlock having a loop

adapted to be entered through the hole either when the pin is adjusted to bring the hole above or below the guide lug, substantially as described.



1,349,140. MACHINE-GUN-CONTROL SYSTEM. FRED J. MARTEL, Hanover, N. H., CLARK ARTHUR BRIGGS, Joplin, Mo., DOUGLAS L. MACAULAY, Montreal, Quebec, Canada, WINTHROP R. WRIGHT, Swarthmore, Pa., and FRANK WENNER, Asadia Park, D. C., assignors to Newton D. Baker, Secretary of War, trustee. Filed Dec. 10, 1919. Serial No. 343,973. 7 Claims. (Cl. 89—27.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

1. In a device of the class described, the combination with a propeller and a traversable machine gun mounted adjacent thereto, of means for timing the firing of the gun, a member controlled by said gun and having a fixed pivot substantially on a line with the center of revolution of said gun and the center of revolution of the propeller, and means associated with said member for transmitting the angular movement of said member to said timing means, and for interrupting the firing when the gun is aimed at a fixed object on the airplane.

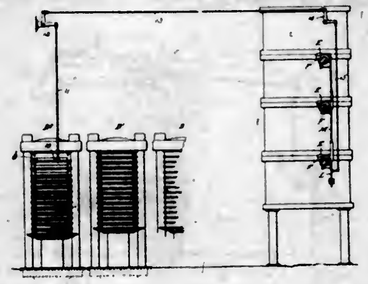


1,349,141. OVERHEAD-TRACK HANGER. ALBERT H. NELLES, Fairfield, Iowa, assignor to The Louden Machinery Company, Farfield, Iowa, a Corporaton of Iowa. Filed June 12, 1920. Serial No. 388,445. 6 Claims. (Cl. 104—111.)

1. In hangers for overhead tracks, a suspending member having means to connect with an overhead support, a shorter clamping member adapted to be connected to the suspending member, both members being made of rolled metal pressed to shape and having their lower ends spread apart and inturned to catch around and under the head of a track-rail, an opening in the body of the suspending member below the upper edge of the clamping member,

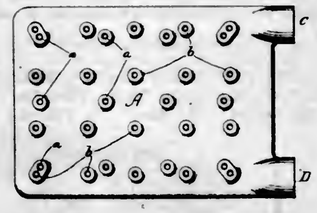
and a portion of the clamping member being cut away at its lower edge opposite the opening in the suspending member and bent to the side to form an integral laterally projecting lug to enter the opening in the suspending member and to rest upon the lower edge of the opening, thus forming a support for the clamping member.

1,349,142. COTTON-SEPARATOR. MELFORD L. WILLIAMS and EARSKIN G. KEMPER, Dallas, Tex. Filed Mar. 14, 1919. Serial No. 282,643. 2 Claims. (Cl. 13—19.)



2. In a machine for separating cotton from atmospheric suction, in combination with a casing, inlets and outlets for the air and cotton, an exhaust pipe and fan, of a sectional screened drum within the casing arranged to shut off air suction from the top thereof, and a small pipe leading from the exhaust pipe to an opening in either end of the casing, said openings adapted to admit air with or without connection to said pipe to keep the periphery of the screened drum free from adhering cotton.

1,349,143. CONTROLLING MECHANISM FOR MEAL-COOKERS AND THE LIKE. KIRTLAND C. BARTON, National Stock Yards, Ill., assignor to The French Oil Mill Machinery Co., Piqua, Ohio. Filed Sept. 16, 1918. Serial No. 254,245. 10 Claims. (Cl. 87—6.)



1. The combination with a cooker comprising a plurality of kettles and means for causing the delivery of the material from one kettle to another, and a press for pressing

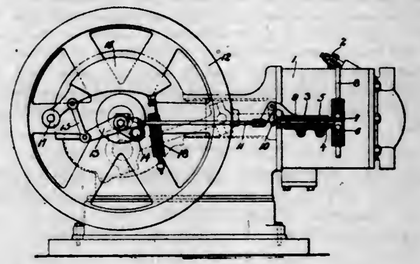
material withdrawn from said cooker, of means which are controlled by the operation of said press and which act

when said press is operated to set in action said first mentioned means and cause the delivery of material from one kettle to another.

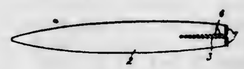
1,349,144. NOZZLE-HEADER FOR BOTTLE-WASHING MACHINES. WILLIAM W. BIRNSTOCK, York, Pa., assignor to Hench & Dromgold Company, York, Pa. Filed Sept. 25, 1919. Serial No. 326,269. 1 Claim. (Cl. 141—7.)

A nozzle header for bottle washing machines, comprising a hollow shallow box-like header body; partitions between the top and bottom thereof, dividing the interior of the header into two sets of passage-ways, the one set comprising an outer continuous U-shaped passage-way on two sides and an intermediate end of the header, and, within the area not occupied by said outer passage-way, two additional passage-ways formed by oblong inclosures located therein at intervals apart from one another and from the walls which bound the area in which they are contained, and the other set comprising the passage-ways formed by intervals which separate said inclosures from one another and from the walls of the area in which they are contained; cross-ducts extending between, and opening at their ends into the two legs of the U-shaped outer passage-way, and, at suitable points between their ends, into the two inclosures which are thus brought into communication each with the other and with the outer passage-way: two sets of nozzles in the top of the header communicating with their appropriate sets of passage-ways: and a separate and distinct feed inlet for each set of passage-ways.

1,349,145. VALVE. JOSEPH C. BREINL, Prague, Czechoslovakia. Original application filed May 24, 1916, Serial No. 99,648. Divided and this application filed Feb. 8, 1917, Serial No. 147,331. Renewed Mar. 2, 1920. Serial No. 362,680½. 3 Claims. (Cl. 251—119.)



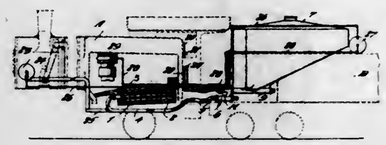
1. A valve, comprising a valve seat, a valve plate, a stop plate, means connecting said valve seat and stop plate, and a cushioning guide plate of spring material comprising a central portion secured to the alve seat, a peripheral ring attached at spaced points only to the valve plate, and arms extending from the central portion of the guide plate and connected with said ring at points adjacent to its points of attachment to the valve plate, said ring being cut between said points of attachment and the adjacent arms, whereby parts of said ring disposed between the spaced



points and the arms move toward and from the valve plate as it opens and closes and said guide plate insures a parallel opening movement and lateral rigidity of the valve.

1,349,146. GOVERNING MECHANISM FOR INTERNAL-COMBUSTION ENGINES. ADOLPH F. CHRISTMAS, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed May 26, 1915. Serial No. 30,508. 2 Claims. (Cl. 123—97.)

1. In a fuel injector for oil engines, a fuel pump, a plunger therefor, a rotary element, a centrifugal element rotating with said rotary element, a controlling lever pivoted at one end eccentrically of said rotary element, a plunger operating rod pivotally secured to said controlling lever between the said pivot point of said lever and the rotation center of the rotary element and a connection between the other end of said controlling lever and said centrifugal element adapted to rotate said controlling lever oppositely to the direction of rotation of said rotary element and advance the point of connection between the plunger operating rod and the controlling lever in the direction of rotation when the speed increases, said movement serving to actuate said plunger earlier in the piston stroke of said engine, the movement of said plunger being derived solely from said controlling lever.



1,349,147. CIGAR. ELBERT L. COUCH, Farmington, and GEORGE H. CONNERS, Hartford, Conn. Filed June 9, 1920. Serial No. 387,551. 7 Claims. (Cl. 131—52.)

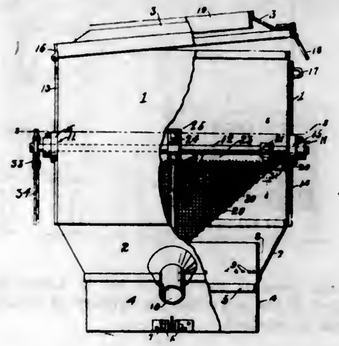
1. A cigar provided with a combination lighting and advertising member, the advertising means being adapted to light said member.

7. An igniting device for a cigar comprising a wedge like body having two branches to fit flatwise against each other, and having ears carrying advertising matter which functions also to ignite the ears, said device being insertible in the tuck end of a cigar with the ears folded back against the cigar end.

1,349,148. PULVERIZED-FUEL-BURNING DEVICE. JOHN DICKSON, Vancouver, Wash. Filed July 28, 1917. Serial No. 183,341. 2 Claims. (Cl. 110—28.)

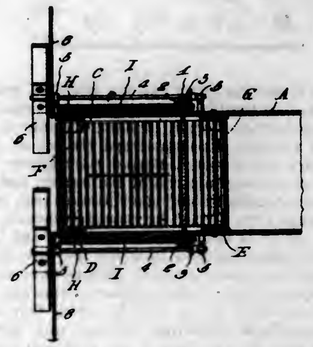
1. A device for feeding pulverized fuel comprising a tender having a fuel hopper, a locomotive engine having a fire box, a burner nozzle disposed at the front of the fire box and directed toward the rear, a fuel pipe connected with said burner nozzle and extending rearwardly toward the tender, a nozzle discharging into said pipe and carried by the tender, means for introducing compressed air into said discharge nozzle, connections between said discharge nozzle and said fuel hopper for introducing fuel into said discharge nozzle whereby the fuel is delivered to the burner nozzle, auxiliary air pipes connected with said fuel pipe, said air pipes being directed to assist in the travel of the fuel, means for heating the air prior to its delivery to said discharge nozzle and to said fuel pipe, said last named means comprising a tank disposed in the smoke box of the locomotive, and means for forcing air through said tank.

1,349,149. ANTISKID ATTACHMENT FOR TIRES. FRANK M. FICHTEN, Milwaukee, Wis., assignor to Franklin Rightmire, Paterson, N. J. Filed Aug. 2, 1917. Serial No. 184,067. 9 Claims. (Cl. 152—14.)



5. A traction attachment for a vehicle driving wheel including a flexibly connected series of members having means to secure it to the wheel with said members in contact with the tread face of the wheel, said members increasing in thickness one after another.

1,349,150. TANNING. CONRAD VARLEY GREENWOOD, Blundellsands, near Liverpool, England. Filed July 28, 1915. Serial No. 42,339. 8 Claims. (Cl. 149—4.)

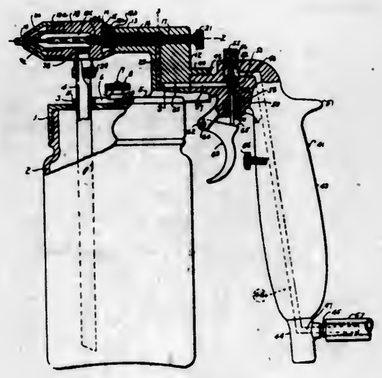


8. A process of tanning in which the goods are first treated with a vegetable restraining colloid and subsequently treated with a tanning agent of such strength as would injure the goods except for the presence of the restraining colloid.

1,349,151. SPARK-ARRESTER. BURTON C. HARDGROVE, Portland, Oreg., assignor of one-half to Clifton Osborne. Filed Aug. 7, 1919. Serial No. 315,949. 4 Claims. (Cl. 183—63.)

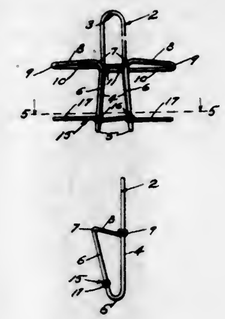
1. In a spark arrester, a chamber through which products of combustion can pass, a foraminous screen substantially in the shape of an inverted cone, a rotary shaft extending across the interior of said chamber, an arm on and extending radially from said shaft, and a disk having its central part secured to said arm and its peripheral part secured to the apex-end of said screen.

1,349,152. STRAW-SPREADING ATTACHMENT. SHERMAN A. HARN, Waterville, Wash. Filed Mar. 15, 1920. Serial No. 365,847. 1 Claim. (Cl. 275—6.)



A spreading attachment for a thresher or like machine which includes a vehicle having an open rear end, a belt-conveyer having its discharge end at said open rear end, and a rotary shaft on which said belt-conveyer is supported; this spreading attachment comprising a sprocket wheel attachable to said shaft at a point exteriorly of said vehicle, a driven shaft, a sprocket wheel carried by said driven shaft, a chain to transmit motion from the first said sprocket wheel to the second said sprocket wheel for rotating said driven shaft, a pair of shafts adapted to be journaled on opposite sides of the vehicle and to extend to said open rear end from said driven shaft, paddles on the rear ends of said pair of shafts, gear wheels on the front end portions of the paddle-carrying shafts, and gear wheels on the end portions of said driven shaft and meshing with the gear wheels of said paddle-carrying shafts respectively, whereby straw or material from said belt-conveyer can be spread in and laterally of the path of the harvester or like machine.

1,349,153. ADJUSTABLE VALVE-SEAT FACER. FRANK HOZANER, Los Angeles, Calif. Filed Mar. 17, 1919. Serial No. 283,205. 6 Claims. (Cl. 90—12.5.)

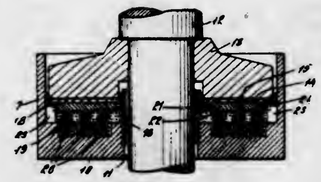


1. In a valve seat facer, a head formed with radial slots in its upper face, cutters slidable in said slots, said head being provided with screw holes in its upper face between said slots, a plate fitting on the upper face of said head, said plate being provided with a central opening and with radial slots extending from said opening, said plate being also provided with screw holes between its slots adapted to register with the screw holes in said head, screws extending through the screw holes in said plate and screwing into the screw holes in said head to hold said plate on said head, a stem secured in said head and extending through the opening in said plate, a thread on the lower portion of said stem, an expanding head screwing on said stem thread for engaging said cutters to force them outwardly, a wrench seat on the upper end of said stem, and a pilot stem secured to said head adapted to fit in a valve bearing.

1,349,154. AIR-BRUSH. BIRCHARD E. HOLTON, Los Angeles, Calif. Filed June 9, 1919. Serial No. 302,981. 6 Claims. (Cl. 91—45.)

1. In an air brush, a paint receptacle, a cap on the paint receptacle, a base removably connected to the cap, a pedestal extending upwardly from the base, a barrel extending from the upper end of said pedestal, a paint chamber in said barrel and a nozzle on said barrel leading from said paint chamber, a paint tube screwed into said barrel leading from said chamber and extending loosely through said cap into said paint receptacle, a regulating valve for said nozzle, a handle connected to said pedestal and provided with an air passage, a hose nipple on said handle communicating with said passage, said pedestal having an air passage communicating with the air passage in said handle, said barrel having an air passage leading from the air passage in said pedestal through the forward end of the barrel, an air nozzle on the forward end of the barrel around said paint nozzle, a valve controlling the supply of air through said passages and said air nozzle, and a trigger for actuating said valve.

1,349,155. LID-HOLDER. JOE HUTTNER, Sierra Madre, Calif. Filed Jan. 2, 1920. Serial No. 349,097. 2 Claims. (Cl. 65—65.)

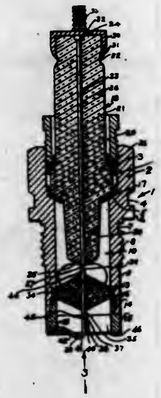


2. In a utensil holder formed of a single piece of wire bent downwardly to form a U-shaped back with the bend at the top, the extended portions then bent upwardly, spaced substantially parallel to a point approximately midway of its height forming lower seats, thence outwardly and away from each other in a substantially horizontal plane to a part remote from the back, thence inwardly toward the back and toward its vertical center, forming side seats, the respective ends thereof overlapping and bent around the remote back member.

1,349,156. PYROXYLIN SHEET OF LOW INFLAMMABILITY. JOHN G. JARVIS, Stamford, N. Y. Filed Mar. 13, 1919. Serial No. 282,440. 1 Claim. (Cl. 106—40.)

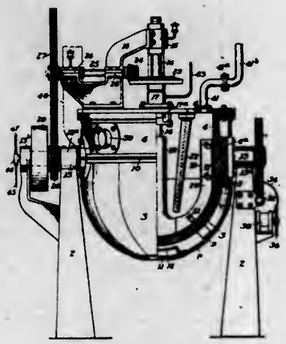
A composition of matter containing acetyl cellulose compound, in combination with acetone cinchonine and its salts.

1,349,157. THRUST-BEARING. ALBERT KINGSBURY, Pittsburgh, Pa. Filed May 1, 1917. Serial No. 165,685. 12 Claims. (Cl. 64—25.)



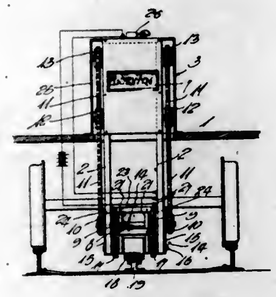
1. A thrust bearing comprising relatively rotatable bearing members one of which consists of a continuous flexible ring having an annular bearing surface, and means for supporting the ring to permit it to be flexed in response to the varying pressures due to the wedging action of the oil between the bearing surfaces when the said surfaces are in relative movement.

2. A bearing comprising a member having an annular bearing surface with one or more oil apertures therein, a relatively thin flexible continuous bearing member having a coöperating bearing surface, and yielding means for supporting said flexible member.



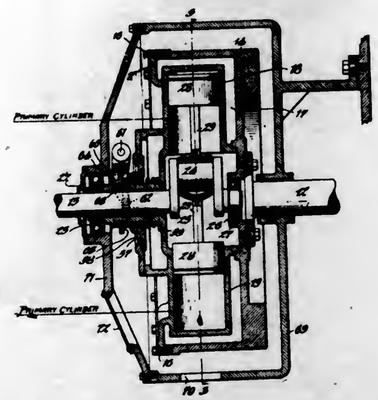
9. A bearing comprising a relatively rigid member having an annular bearing surface and a continuous relatively flexible annular member having a coöperating bearing surface and yielding means for supporting the flexible member, at least one of said bearing surfaces having apertures through which oil is delivered to the surfaces.

1,349,158. SPARK-PLUG. ARTHUR V. KINSEL, Los Angeles, Calif. Filed June 17, 1919. Serial No. 304,930. 1 Claim. (Cl. 123—169.)



A spark plug comprising a metallic casing, a main insulator mounted in the metallic casing its inner end terminating at a proper point within the casing, a conductor rod mounted centrally through the main insulator its inner end extending from the end of the main insulator, a second insulator fixed in a recess within the end of the casing opposite the inner end of the main insulator having a conductor rod through the center thereof, its inner end positioned within proper sparking distance of the inner end of the rod of the main insulator there being a chamber formed between the two insulators and there being ports cut through the wall of the metallic casing communicating with the chamber, means for holding the second insulator in place, and a third conductor rod connected with the metallic casing and having its free end disposed within sparking distance of the outer end of the conductor rod in the second insulator thereby forming two spark gaps within the plug in a sparking circuit.

1,349,159. POT-FURNACE. ELMER L. KNOEDLER, Gloucester City, N. J., assignor to Welsbach Company, Gloucester, N. J., a Corporation of New Jersey. Filed May 1, 1918. Serial No. 231,859. 15 Claims. (Cl. 263—13.)

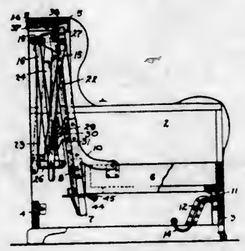


1. A pot furnace, comprising a tiltable pot, means whereby heat may be applied thereto, and stirring means mounted on the pot to rotate therein about an axis which is at an angle to the tilting axis of the pot, substantially as described.

1,349,160. STATION-INDICATOR. JOHN JOSEPH KOVACH, La Belle, Pa. Filed Mar. 4, 1920. Serial No. 363,248. 5 Claims. (Cl. 40—46.)

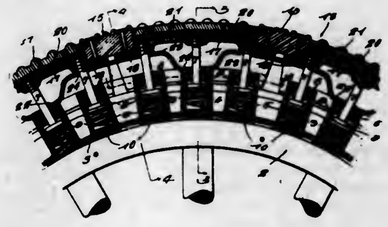
1. A device of the class described comprising a support, movable indicator mechanism carried thereby, gearing also carried by the support for imparting motion to said mechanism, a vertically movable frame, springs between the frame and the support, a shaft journaled in said frame, a roller on said shaft for frictional contact with a cam track section, and a gear on the shaft held out of mesh with said gearing by said springs.

1,349,161. PNEUMATIC TRANSMISSION FOR AUTOMOBILES. WILLARD C. KRESS, Buffalo, N. Y. Filed Sept. 18, 1919. Serial No. 324,544. 7 Claims. (Cl. 192—18.)



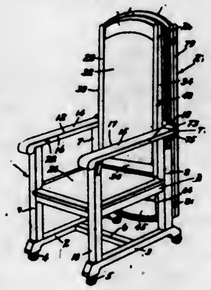
1. In a transmission mechanism, the combination with a driving shaft and a driven shaft, of a resistance-cylinder revoluble with the driving shaft and having a piston therein, a crank carried by said driven shaft and connected to said piston, a pneumatic pressure chamber adapted to communicate with said cylinder, means for creating pressure in said chamber, and means for controlling communication between said cylinder and said chamber.

1,349,162. DAVENPORT-BED. JACOB KRONHEIM, Cleveland, Ohio. Filed July 15, 1918. Serial No. 244,892. 4 Claims. (Cl. 5—48.)



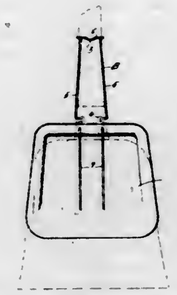
1. In a davenport bed, a tilting back rest and a couch seat pivotally connected therewith, a couch frame for

said parts, and folding braces at each side connected with the rear and top of the couch frame and the front



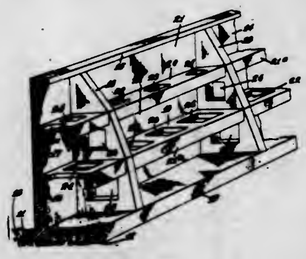
of the said back rest adapted to support said back rest when lowered.

1,349,163. RESILIENT TI... CARL LA COUR, Dixon, Ill. Filed July 17, 1919. Serial No. 311,428. 11 Claims. (Cl. 152—8.)



11. In a device of the character described, the combination of a rim, a cushion tire casing mounted upon said rim and having its tread cut out at intervals, radial cylinders mounted upon said rim, spring pressed plungers mounted in said cylinders and having their stems projecting out of the same, inflexible tire sections carried by the stems of said plungers and disposed in the cut out portions of said tire casing, said tire sections bearing against portions of said tire casing, and a sinuous spring band having portions bearing against the ends of some of said cylinders and other portions bearing against said tire sections.

1,349,164. CHAIR. JOHN W. LANG, Redondo Beach, Calif. Filed Oct. 13, 1919. Serial No. 330,393. 4 Claims. (Cl. 155—43.)

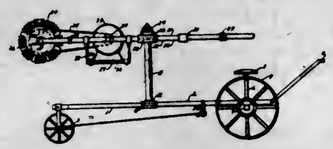


1. A transformable chair comprising a stand having horizontal parallel arms, pivot pins extending inwardly from the rear ends of the arms, supporting pins extending inwardly from near the front ends of the arms, a chair back having side bars fitting loosely between the arms, plates at the outer faces of the side bars and having longitudinally extending slots and lateral slots intermediate of the ends of the longitudinally extending slots, said slots being adapted to receive the pivot pins, second plates at the outer sides of the side bars and having L-slots adapted to receive the supporting pins, and a table top mounted upon the chair back.

1,349,165. DUSTPAN. JOHN M. LUND and HANS ANDERSON, Battleview, N. D. Filed June 4, 1920. Serial No. 386,480. 2 Claims. (Cl. 65—62.)

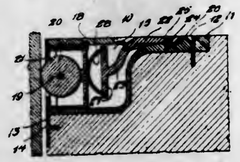
1. A dust pan comprising a handle formed from a single strand of resilient wire so as to provide two pairs of parallel jaws connected by diagonal extensions, legs extending at right angles to one pair of said jaws so as to lie along the bottom of the dust pan.

1,349,166. RETAINING-WALL FOR EMBANKME... S. CHARLES PAFF, New York, N. Y. Filed May 25, 1918. Serial No. 236,484. 5 Claims. (Cl. 61—39.)



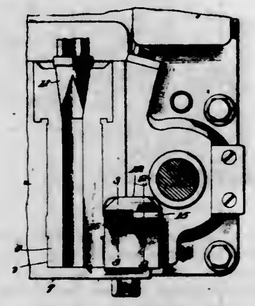
1. In a retaining wall, the combination with a substantially flat horizontal base having a wall member extending upwardly substantial from the forward edge thereof, of superposed spaced horizontal hook-shaped ledges and spaced vertical web members extending rearwardly from the wall member and forming with the base and wall member superposed rows of open pockets, said ledges and web members having large orifices therethrough, and said base being of greater width than the ledges.

1,349,167. POWER SHIP-CLEANING DEVICE. WILLIAM J. PATTOSIEN, San Francisco, Calif. Filed Mar. 23, 1920. Serial No. 368,118. 2 Claims. (Cl. 114—222.)



1. A longitudinal frame, supported by and freely swinging on a portable pole engaging said frame at or near its

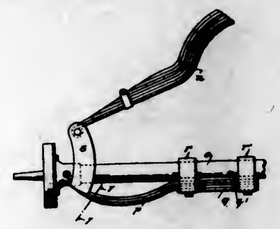
center, one end of the frame carrying a rotating brush and a motor in fixed relation, the motor adapted to rotate



the brush, the other end carrying a slidable counterweight and means for the operator to swing the frame in a desired position.

1,349,168. SASH ATTACHMENT. HARRY S. PIERCE, Wilmington, Del. Filed Aug. 22, 1919. Serial No. 319,160. 1 Claim. (Cl. 292—75.)

A sash attachment comprising a casing open at one end and having a slot in the side wall of the casing, a frame slidable in said casing, a roller journaled in the frame and extending through the opening in the end of the casing, an arm pivotally mounted within the casing, a spring located at one end of the arm and engageable with the sliding frame for yieldingly holding the roller against the window frame, an offset terminal portion at the opposite end of the frame, whereby the latter will extend into the slot of the side wall of the casing and means for adjustably securing the terminal portion of the arm to the casing.

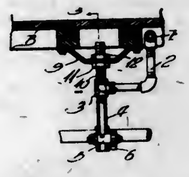


1,349,169. DRILL-SHARPENING MECHANISM. PETER SCHEIB, Denver, Colo., assignor to The Denver Rock Drill Manufacturing Company, Denver, Colo., a Corporation of Delaware. Filed Mar. 25, 1918. Serial No. 224,616. 12 Claims. (Cl. 76—95.)

1. In drill sharpening apparatus, the combination with relatively movable die members, said members having an open drill steel receiving mouth between them, of dies carried by the die members and located transversely to the die receiving mouth, said dies having coacting rounded corner drawing faces.

1,349,170. SPRING-SUPPORT FOR VEHICLE-BODIES. JOHN E. SIMMONS, Portland, Oreg. Filed Sept. 7, 1918. Serial No. 253,051. 7 Claims. (Cl. 267—46.)

1. In a vehicle running gear, the combination of a laminated half elliptic spring fastened to the vehicle body, a complementary laminated spring member fastened on the under side of the axle, and a connection between the

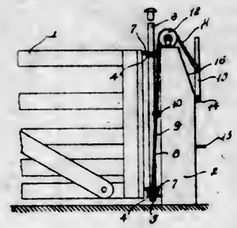


adjacent ends of the complementary spring mmeber and the half elliptic spring, the connection spanning the axle end, which is permitted relative vertical motion therein.

1,349,171. RAILROAD-TIE. ROBERT H. SPENCER, Turlock, Calif. Filed Oct. 15, 1919. Serial No. 330,885. 1 Claim. (Cl. 238—32.)

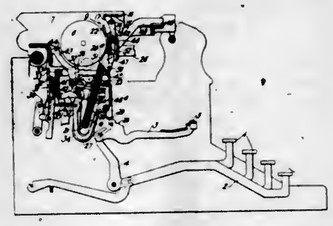
A railroad tie comprising a pair of metal channels positioned end to end, the bottoms of said channels being cut for a certain distance from the adjacent ends and turned up to form ears, the ears and ends on one channel interlocking with those on the other, a pivotal pin through such ends and ears, and blocks secured in the channels, such blocks terminating short of the hinged ends and adapted to receive the rails thereon.

1,349,172. AUTOMATIC TRAIN-STOP. MARION TAYLOR, Soudan, Va. Filed Jan. 19, 1920. Serial No. 352,480. 5 Claims. (Cl. 246—170.)



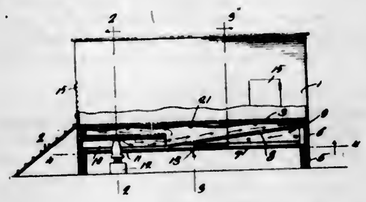
5. In an automatic train stop device, the combination with a car body equipped with a pneumatic brake system; of a bracket carried by said body, piping connected to and communicating with the train pipe of said system, means between the bracket and the piping to permit vertical adjustment of the latter, and axle operated brake controlling mechanism associated with the piping.

1,349,173. VERTICALLY-ADJUSTABLE GATE. ORISON VEEDER, New Windsor, Ill. Filed Aug. 14, 1919. Serial No. 317,547. 1 Claim. (Cl. 39—14.)



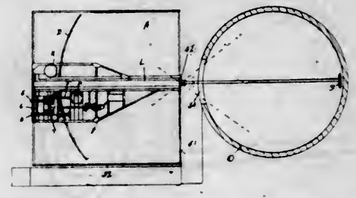
The combination with a gate and a gate post, a vertical hinge rod connected with the post and positioned in spaced relation thereto, a gate, and eyes connected with the gate and slidably mounted upon the hinge rod, of an elongated supporting rod extending vertically of the hinge rod and having its lower end portion substantially circular in cross section and bent to provide an eye extending to one side

and slidably mounted upon the hinge rod beneath the lower eye of the gate, and actuating means for raising the sup-



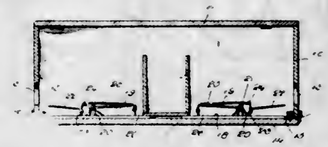
porting rod and gate carried by the gate post and including a flexible element connected with the upper end of the supporting rod.

1,349,174. TYPEWRITING-MACHINE. JOHN WALDHEIM, Elizabeth, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 16, 1918. Serial No. 266,950. 26 Claims. (Cl. 197—135.)



1. In a typewriting machine, the combination with a platen and types for printing upon said platen, of a ribbon-vibrating mechanism adapted to operate at a type-stroke, means for silencing said vibrating mechanism, and a device adapted to be controlled by a work-sheet upon which the printing is being done, to automatically make said vibrating mechanism effective or ineffective.

1,349,175. CHICKEN-BROODER. PERCEVAIL E. WALKER, Holbrook, Oreg. Filed Jan. 9, 1920. Serial No. 350,341. 1 Claim. (Cl. 237—14.)

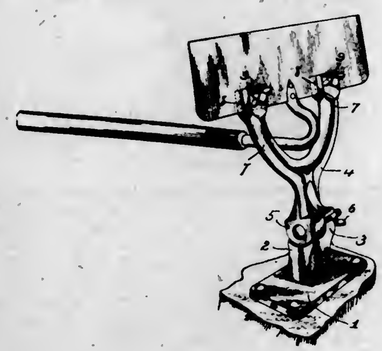


In a poultry brooder, the combination of a brooding chamber and a heating chamber, said heating chamber provided with a foraminous partition at its top and a partition at its bottom provided with a circular opening and a rectangular opening, a shield situated within said chamber and over said circular opening, a source of heat provided within said circular opening, an inclined partition leading from said shield to the top of said heating chamber, the upper portion of said inclined partition provided with an opening, said brooding chamber situated upon said heating chamber whereby the floor of the brooding chamber will be heated.

1,349,176. COKE-RAKE. BUNZO WATANABE, Salt Lake City, Utah, assignor of one-tenth to Henry D. Moyle and Paul H. Ray, Salt Lake City, Utah. Filed May 5, 1919. Serial No. 295,020. 11 Claims. (Cl. 214—32.)

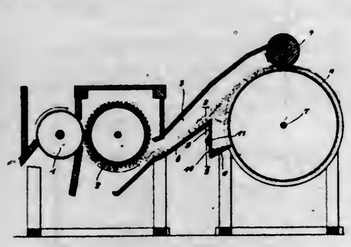
1. In a coke rake the combination of a wheel supported platform adapted to be run on a railway track, with a frame pivoted and supported at one point on said platform and supported by a curved track at other points; a handle race pivoted at one end to said frame and free to move vertically at its other end; a guide stay to hold said free end in a vertical plane over the pivot of said frame; an air cylinder; a connecting rod secured at its upper end to said handle race and whose lower end is movable in said cylinder; means to introduce compressed air into said cylinder to raise and lower the free end portion of said handle race; a handle slidable in said handle race; a rake blade on one end of said handle; rollers on said handle race which bear against said handle; rollers carried on said handle which bear against the inside of said handle race; a rotatable shaft on which said handle race is pivoted; sprocket wheels secured on said shaft and rotatable therewith; other sprocket wheels mounted on the free end of said handle race; chains operable over said sprocket wheels; means to fasten one end of said handle to said chains whereby said handle is moved longitudinally in one direction within said race when said chains are made to travel in one direction by the first mentioned sprocket wheels, and in the opposite direction when said chains travel in the reverse direction; and a source of power to rotate said shaft in either direction as desired.

1,349,177. CABINET-TRAP. ALBERT WIEMER, Bradley, Ill. Filed May 13, 1919. Serial No. 296,848. 2 Claims. (Cl. 43—81.)



1. A trap including a casing having side walls and a bottom, means to detachably secure the bottom to the casing, the opposite side walls of said casing being provided with spaced openings, a row of traps mounted on said bottom and arranged rearwardly of each set of openings in the side walls of the casing, the traps of each row having their rear ends arranged in opposed spaced relation to the traps of the other row, and a bait trough extending across the intermediate portion of the casing and having its ends rigidly secured to the opposite sides of the casing, the rows of traps having their rear end portions engaged by the bottom of said trough whereby the traps are securely held in position.

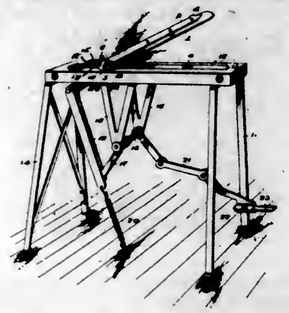
1,349,178. TOOL FOR HOLDING HOES WHILE SHARPENING THE SAME. HARRY E. WIGGS, Mannford, Okla. Filed Oct. 7, 1919. Serial No. 329,157. 2 Claims. (Cl. 81—3.)



2. A tool for holding a hoe while being sharpened consisting of a base plate, a post thereon, an integral Y-

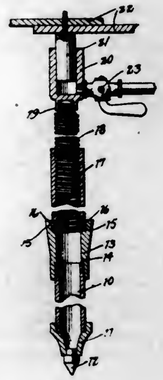
shape holder adjustably secured to the post whereby the holder may be adjusted to permit the end of the handle of the hoe to rest on the ground or other support while the blade is being supported by the holder, the upper free ends of the side members of the holder being separated as

shown for the entrance of the shank of the hoe handle between them, and the free ends of said side members being slotted to receive the rear edge of the blade and support the latter in position to be sharpened, clamping screws for locking the blade to the holder, and a screw bolt and nut for locking the holder in its adjusted position to the post.



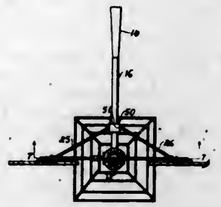
1,349,179. LINTING-MACHINE. GEORGE N. WOODRUFF, Hugo, Okla., assignor of one-half to Thomas D. Bruce, Paris, Tex. Filed Nov. 24, 1919. Serial No. 340,167. 1 Claim. (Cl. 13—17.)

In a linting machine, the combination with an inclined passage; of a rotary screen operating across the upper delivery end of said passage, the bottom of said passage terminating at its upper end in spaced relation with said screen, at a point in approximately the same plane with the screen axis, a vertical wall extending from said upper end of said passage bottom, and an auxiliary bottom inclining downwardly from said screen to the lower edge of said wall, said wall and supplemental bottom coacting to form an air pocket exposing an increased portion of said screen for collection of the material passing through said passage and providing for trapping any foreign matter dropping from said screen, said pocket having a door by means of which the foreign matter may be discharged.



1,349,180. SHEARS. GEORGE P. YEAKEL, Norristown, Pa. Filed Nov. 19, 1918, Serial No. 263,203. Renewed June 30, 1920. Serial No. 393,095. 5 Claims. (Cl. 164—46.)

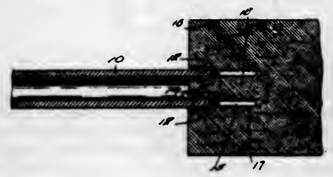
1. Shears comprising blades, the heels of which are provided with transverse slots, a hub fitted therein to admit of vertical adjustment of the blades with respect thereto, means connected with the blades for causing



this vertical adjustment, and means for laterally pressing one blade against the other.

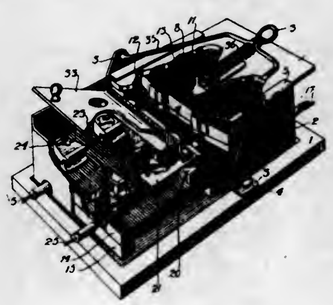
1,349,181. SUPPORT. PATRICK J. YOUNG, Philadelphia, Pa. Filed Aug. 23, 1918. Serial No. 251,197. 2 Claims. (Cl. 78—53.5.)

2. A support for use in connection with a riveting machine comprising a standard having a foot, a cap engaged on the upper end of the standard, said cap having a pair of inwardly directed lugs, an internally threaded sleeve engaged with the cap and having a circumferential groove for the reception of the said lugs, and an externally threaded stem engaged in the sleeve and provided with means for supporting engagement with a rivet holder.



1,349,182. WINDMILL. HERMAN ZAHNOW, Balfour, N. D. Filed June 30, 1919. Serial No. 307,824. 1 Claim. (Cl. 170—38.)

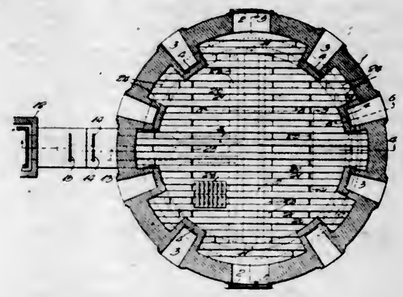
In a windmill, the combination with a tower supporting an upright tubular member, a shaft rotatably mounted



in the latter, and a double faced beveled pinion on the shaft; of collars on said shaft, horizontal arms and oblique braces projecting from said collars to both sides of the shaft, wind wheels mounted in the outer ends of said arms, shafts connected with them and leading inward and having beveled pinions meshing with opposite faces of that mentioned, arms projecting to the rear from certain of said collars and carrying a vane, a block slidably mounted on one of said arms, links pivotally connecting it with said lateral arms, and means drawing the block forward and swinging the lateral arms into position to hold the wheels normally in a single plane, said means yielding under excess wind pressure to permit the wheels to swing back into parallel planes.

1,349,183. MINE PULLEY OR ROLLER. JAMES BOYD ANDERSON, Philadelphia, Pa. Filed Feb. 3, 1920. Serial No. 356,087. 2 Claims. (Cl. 64—41.)

2. A gudgeon for wooden pulleys and rollers comprising a metal tube having the end adapted to be driven into the pulley provided with a cutting edge beveled in opposite directions.



1,349,184. INSTANTANEOUS SAFETY-SWITCH. MIGUEL BUKOVECZ, Mexico, Mexico. Filed Jan. 25, 1919. Serial No. 273,056. 3 Claims. (Cl. 200—50.)

2. An instantaneous reversible safety switch, comprising a casing, an insulating base inclosed therein, three sets of alined stationary contact knives projecting from said base, the end sets of contact knives being diagonally cross connected, and the intermediate set of knives receiving direct current, a slidable cover on the casing, and a set of contact bridge pieces attached to the inside of said cover and adapted to move therewith so as to bridge either of the end sets of knives with the intermediate set of knives.

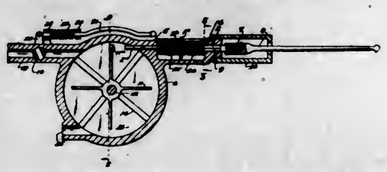
1,349,185. KILN. CHARLES E. CARPENTER, Postville, Iowa. Filed Nov. 20, 1919. Serial No. 339,353. 8 Claims. (Cl. 25—145.)

1. A kiln bottom comprising a pair of crossed flues communicating with each other at their point of intersection, one of said flues being open at the top to communication with the interior of the kiln and one end of the other flue forming an outlet to a stack, and an annular flue

intersecting and communicating with said crossed flues and being open at the top to communication with the interior of the kiln.

1,349,186. VENTILATOR. LEONORA CHAPMAN, Ariel, Pa. Filed Mar. 8, 1920. Serial No. 364,171. 2 Claims. (Cl. 98—31.)

2. A window ventilator comprising a lengthwise adjustable segmental drum composed of slidably connected arcuate sections, each section including a laterally extending apertured end wall for disposition against the window frame, two bars having laterally bent end which are secured to the end walls and are provided with screw-threaded openings registering with the apertures in the end walls, headed binding screws extending through the threaded openings and apertures, the heads thereof being adapted to bear against the window frame, the free ends of said bars being lapped one on the other, a collar surrounding the lapped ends, and a set screw carried by the collar for retaining the bars in adjusted position.

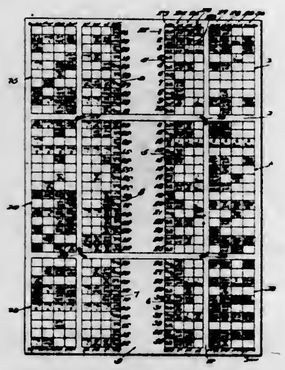


1,349,187. NECKTIE. JOSEPH COSTELLO, New York, N. Y. Filed Sept. 2, 1919. Serial No. 321,043. 1 Claim. (Cl. 2—83.)

A necktie composed of an endless neckband and an apron, the latter being made from a single piece of fabric and being substantially rectangular in shape at one end, the opposed edges at this end being brought inwardly toward each other and stitched together to form an eye,

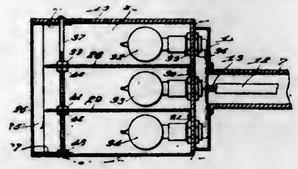
through which the neckband is freely slidable, portions of the latter being disposed above and below the eye, forming upper and lower loops, the free end of said apron being brought through said upper loop, wrapped partially around the eye and stitched to the rear side thereof, forming an imitation knot, the tie being complete when the free end of the apron is again brought through the upper loop and passed downwardly through the knot.

1,349,188. DENTAL APPLIANCE. GEORGE F. DU BUQUE, Los Angeles, Calif. Filed Jan. 20, 1920. Serial No. 352,790. 4 Claims. (Cl. 32—18.)



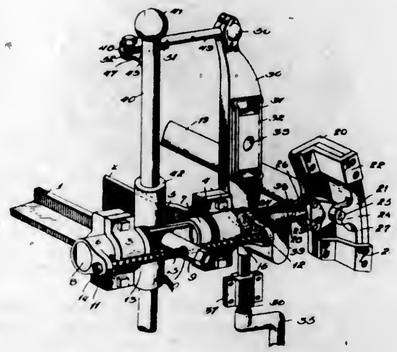
1. A dental engine having, in combination, a reciprocating tool holder; means for maintaining the holder in an intermediate position for yielding action in opposite directions; and means for reciprocating the holder, said means including a pneumatic, rotafy motor.

1,349,189. GAME-CARDS. JAY R. DUNCAN, Kewanee, Ill. Filed May 21, 1919. Serial No. 298,590. 7 Claims. (Cl. 46—25.)



1. A game card deck comprising a number of cards divisible into a plurality of sets of suits, the suits of one set relating to such matter different from that to which the suits of another set relate, and each card being common to a suit of each of the sets.

1,349,190. GAME-BOARD. JAY R. DUNCAN, Kewanee, Ill. Filed Dec. 3, 1917, Serial No. 205,063. Renewed Jan. 6, 1920. Serial No. 349,841. 4 Claims. (Cl. 46—63.)

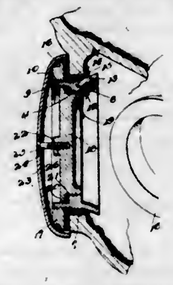


1. A game board, for use in the playing of a game simulating an actual field game, having its playing surface divided into distinct series of zones, each zone of each series being subdivided by intersecting lines into spaces certain of which bear indicia relative to plays to be made upon the board, the indicia within the zones of one series relating to conditions different from those to which the indicia within the zones of another series relates.

1,349,191. DIRECTION-INDICATOR. WOLF H. DUNCOMB, Spokane, Wash. Filed Oct. 14, 1919. Serial No. 330,618. 11 Claims. (Cl. 40—132.)

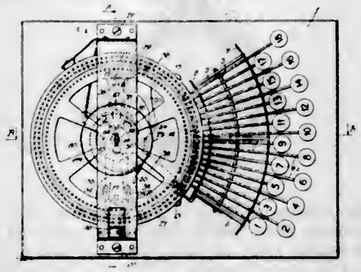
1. A direction indicator for vehicles and adapted to be attached in lateral projecting relation thereto, comprising a casing having a vertically disposed direction plate facing rearwardly and disposed substantially at right angles to the direction of travel, and said casing having a direction plate facing forwardly and disposed at an oblique angle to the direction of travel and inclined laterally of the vehicle, whereby with a given size casing a front plate of larger area than the rear plate can be used.

1,349,192. LASTING-MACHINE. WILLIAM A. ELLIASSON, Bridgeport, Conn., assignor to Hamel Shoe Machinery Company, a Corporation of Massachusetts. Filed Jan. 7, 1918, Serial No. 210,618. Renewed Jan. 7, 1920. Serial No. 350,063. 10 Claims. (Cl. 12—2.)



1. In a machine of the class described, in combination, a pincers-bar, a carrier therefor, a slide mounted for reciprocation upon the carrier, means for reciprocating said slide and a pair of compression springs therefor directly interposed between said slide and the carrier for transmitting movement of the slide to the carrier.

1,349,193. WATER-CLOSET BOWL. HARVEY D. FARRIS, Spokane, Wash. Filed Apr. 7, 1919. Serial No. 288,179. 10 Claims. (Cl. 137—76.)



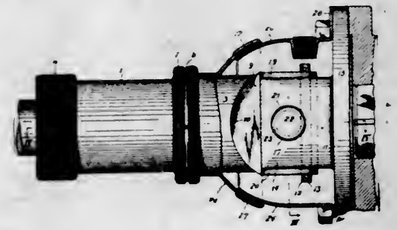
1. A closure for the clean out opening of a bowl comprising a bushing having an opening and a circumferential

expanding surface, a gasket fitted upon the bushing with the expanding surface entering the gasket, means upon

the bushing adjustable to relatively adjust the bushing and gasket to circumferentially expand the latter, and a closure for the opening in the bushing.

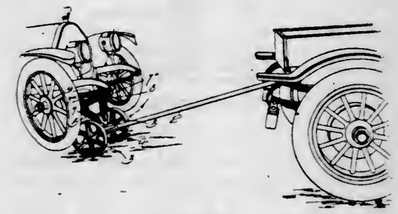
1,349,194. ADDING-MACHINE. CHARLES M. FITCH, Chicago, Ill., assignor, by mesne assignment, to Bird Adding Machine Company, Chicago, Ill., a Corporation of Illinois. Filed June 25, 1917. Serial No. 176,742. 8 Claims. (Cl. 235—66.)

3. A device of the class described, comprising a numbered rotatable disk, a spring for rotating said disk, a ratchet wheel rigid with said disk, a pawl for engaging said ratchet wheel and normally preventing rotation of the disk under the action of the spring, an arm arranged to oscillate around the axis of said disk and to rock vertically into and out of engagement therewith, a pivoted bail for rocking said arm vertically, said bail being arranged to rock the pawl out of engagement with the ratchet wheel, and manipulative means adapted to rock said bail and limit the rotation of the disk by coöperating with said arm.



1,349,195. LIFTING-JACK. OTTO E. FLOHR, Tolna, N. D. Filed May 24, 1919. Serial No. 299,542. 1 Claim. (Cl. 254—117.)

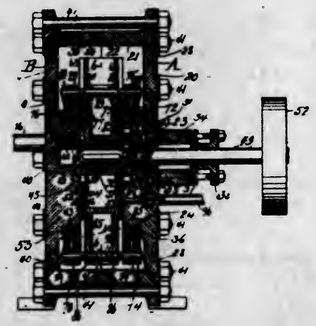
A lifting jack comprising a supporting base, a standard rising therefrom with its upper end bifurcated and having a metal strap extending over and connecting the furcations thereof, a substantially elbow-shaped lever fulcrumed intermediately of its ends adjacent the bend thereof between said furcations under said strap, one end of said lever being longer than the other, a lifting bar pivoted at its upper end to the terminal of the short end of said lever, and an upwardly and outwardly inclined spring metal bar fixed at one end to said standard and projecting on the side thereof opposite to that carrying the lifting bar, said metal bar having a hook at its free end for engaging the long end of said lever when in lowered position.



1,349,196. [WITHDRAWN.]

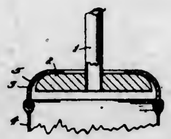
1,349,197. UNIVERSAL JOINT. HARRY B. GARMAN, Detroit, Mich., and DAVID V. BUCK, Milton, Pa., assignors to Charles E. Thompson, Cleveland, Ohio. Filed Jan. 27, 1919. Serial No. 273,373. 3 Claims. (Cl. 64—91.)

1. In a universal coupling device, the combination with driving and driven members, of a female joint element secured to one of said members and formed with a pair of spaced jaws having oppositely disposed bearing surfaces; a male joint element secured to the other of said members and extending into the space between said surfaces, said male member having lateral bearing surfaces; a pair of intermediate elements having bearing surfaces adapted to coöperate with said lateral surfaces, and journal surfaces adapted to coöperate with said oppositely disposed bearing surfaces; a pin whose ends, respectively, are extended into said pair of intermediate elements, said pin having an intermediate journal surface upon which said male element is pivotally mounted, and means for securing together against relatively longitudinal movement said spaced jaws and the adjacent intermediate elements, respectively.



1,349,198. WRECKING-TRUCK. DAN GOULD, Sacramento, Calif. Filed Jan. 19, 1920. Serial No. 352,452. 1 Claim. (Cl. 280—61.)

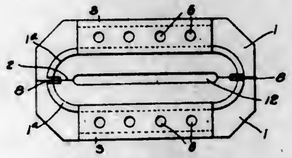
A device of the class described comprising a wheeled truck, including a vertical pivot which has an apertured head at its upper end, an axle engaging member composed of upper and lower metal strips secured together at their centers, the lower strip having its ends bent down to provide attaching ears, the latter being provided with apertures which are alined with the apertures in said head, a fastening member extending through said apertures, the



upper strip being bent to form a substantial U and having its ends longitudinally split and forced apart to form V-shaped notches, of a size and depth to receive either a front or rear automobile axle therein, the member itself being of a size to accommodate and straddle the differential housing when a rear axle is seated in said notches.

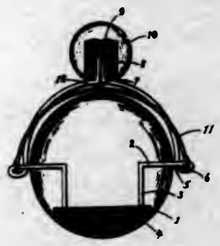
1,349,199. COMPRESSOR. CHARLES D. HAVENSTRITE, Chicago, Ill. Filed May 27, 1918. Serial No. 236,770. 2 Claims. (Cl. 230—31.)

1. In a compressor the combination of a casing comprising a pair of members, means to connect said members, a shaft journaled in bearings in said members, a hub extending from the inner face of each member of the casing eccentric fo said shaft, a disk shaped piston support having an end face bearing against the end face of one of said hubs carried on the shaft and turning therewith, guide cavities in said support with their axis in radial directions with respect to the shaft, a piston in each cavity, a pair of eccentric straps on each hub, a head formed with each eccentric strap, a spindle extending through bearings at the outer end of each piston, the end of each spindle extending into an opening in one of the heads of one of the eccentric straps, an inlet port and an outlet port formed in the end face of one of the hubs that has bearing against it the said end face of the piston support and means to inject a lubricant into the casing.



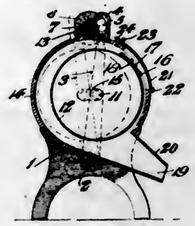
1,349,200. GLASS-DRAWING BAIT AND THE METHOD OF USING IT. HALBERT K. HITCHCOCK, Pittsburgh, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Oct. 23, 1917. Serial No. 198,186. 8 Claims. (Cl. 49—17.)

1. A glass drawing bait having a glass engaging portion of a metal with a coefficient of expansion substantially the same as that of glass.



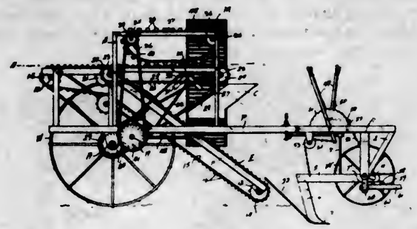
6. The process of drawing glass cylinders which consists in immersing the relatively thin lower edge of a metal bait of a material having substantially the same coefficient of expansion as glass, in a body of molten glass, permitting the bait to remain in the glass until the glass is welded thereto, drawing the bait upward, severing the cylinder thus produced at a point adjacent the bait, immersing the annular glass edge left upon the bait in the body of molten glass and drawing another cylinder.

1,349,201. APPARATUS FOR DRAWING GLASS SHEETS. HALBERT K. HITCHCOCK, Pittsburgh, Pa., assignor of one-half to Hitchcock Experiment Company, a Corporation of New Jersey. Filed Aug. 5, 1918. Serial No. 248,444. 13 Claims. (Cl. 49—17.)



7. A container for glass approximating in length the width of the glass sheet to be produced and comprising side and end walls downwardly and inwardly inclined, and heating chambers along the side walls only.

1,349,202. ROTARY CHARACTER TOY. EUGENE HOLBROOK and MOLLIE E. HOLBROOK, Oakland, Calif. Filed Mar. 12, 1918. Serial No. 222,027. 3 Claims. (Cl. 46—45.)

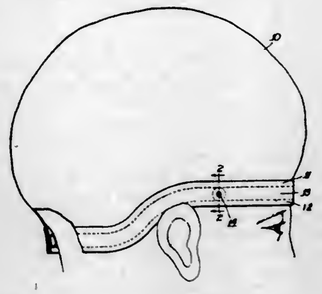


1. The combination in a toy, of a hollow rotary body with a head or figure having arms flexibly connected thereto, said head or figure supported over said body by means having a U shaped member formed solid with the axle portion and a weight rigidly attached thereto inside of said body; the vertically extending companion portions of said supporting means being joined together over center of said body securing a cork or fibrous member, and a permanent connection between said member and said head or figure, substantially as described.

1,349,203. MIXER AND SEPARATOR. CHARLES W. HOTTMANN, Philadelphia, Pa., assignor to Christopher Offenhauser, Philadelphia, Pa. Filed Mar. 20, 1920. Serial No. 367,326. 6 Claims. (Cl. 259—72.)

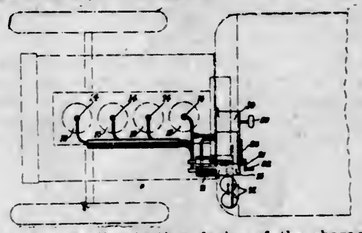
1. In a device of the character stated, an outer casing having a discharge outlet and provided with an inlet opening, an article container within said outer casing, crank arms on which said article container is mounted, means to actuate said crank arms, and means to continuously revolve said article container.

1,349,204. VEGETABLE-TOPPER. CLARENCE W. HOUGLAND, Seal Beach, Calif. Filed Dec. 10, 1919. Serial No. 343,786. 2 Claims. (Cl. 146—11.)



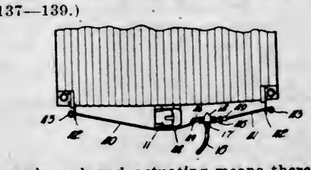
1. A machine of the class described comprising an endless feed member having its upper stretch substantially horizontally disposed, a severing medium positioned adjacent said feed member, an endless retaining member positioned above the feed member, the lower stretch of the retaining member being slack and engaging by gravity the upper stretch of the feed member, and means for imparting movement to the feed member and the retaining member at substantially the same rate of travel.

1,349,205. OFFSET STYLUS-ARM. JAMES W. HUGHES, Philadelphia, Pa. Filed Jan. 14, 1920. Serial No. 351,302. 6 Claims. (Cl. 274—28.)



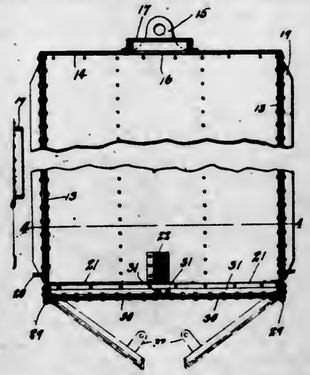
1. An offset stylus arm having means to engage the inside and outside of the chuck of the stylus lever.

1,349,206. BATHING-CAP. OWEN R. JEFFERS, Chicago, Ill., assignor to General Patent Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed July 30, 1917. Serial No. 183,437. 3 Claims. (Cl. 2—106.)



1. A bathing cap having its lower edge provided with an inner pneumatic tube and an outer relatively broad and heavy contractible and expansible band, said band curved edgewise to extend when in place from the forehead to a point back of the ears and thence downwardly around the back of the neck.

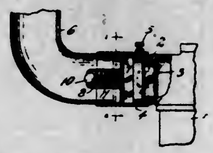
1,349,207. STARTER FOR AUTOMOBILES. DAMIAN JOKUBAITIS, Terre Haute, Ind. Filed Oct. 15, 1919. Serial No. 330,707. 1 Claim. (Cl. 123—184.)



In an automobile starting device of the character described, the combination of an operating spring and its drum carrying a spur driving gear, with a pivotally arranged locking lever, a series of detent teeth on the free end of said lever engaging the teeth of said gear, an operating rod attached to said lever, a spring coiled around said rod for holding the teeth of its detent normally in engagement with the teeth of said gear, and an operating handle adapted to disengage the teeth of said detent and gear upon a pull exerted on said handle, and a long pinion in mesh with said gear adapted to be rotated upon the operation of said locking lever to disengage the teeth of said detent and gear, said long pinion adapted to start the ignition of the machine, substantially as described and for the purpose set forth.

1,349,208. ANGLE-COCK AND ACTUATING MEANS THEREFOR. PAUL J. KAVENEY, Bloomington, Ill. Filed Jan. 21, 1920. Serial No. 353,053. 8 Claims. (Cl. 137—139.)

1. An angle cock and actuating means therefor for use on railway cars, comprising in combination with an angle cock, embracing a casing and a closure member provided with horizontal, oppositely disposed stems, actuating devices connected at their inner ends to said closure member stems and extending outwardly therefrom, and means at the sides of the car to support said actuating devices.

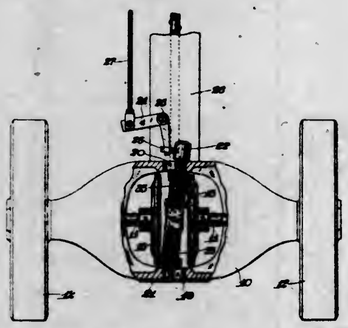


1,349,209. INTERCHANGEABLE-UNIT CAR. HENRY W. KIRCHNER, St. Louis, Mo., assignor to River and Rail Transportation Company, St. Louis, Mo., a Corporation of Oklahoma. Filed Dec. 22, 1917. Serial No. 208,363. 19 Claims. (Cl. 105—366.)

7. In a car of the class described, a removable container, drop bottom doors normally closing the bottom of

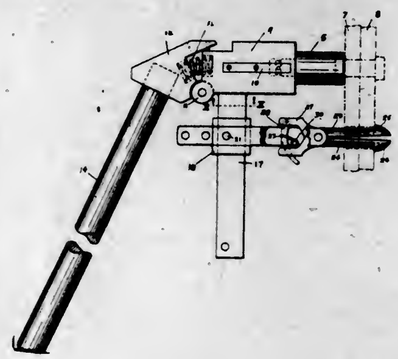
said container, latching means on the container for engaging the sides of the doors, and means extending through the lower portion of the container for simultaneously releasing the latching means.

1,349,210. AIR-SUPPLY-VALVE ATTACHMENT. MONROE C. KIRKPATRICK, Files Valley, Tex., assignor of one-fourth to Tim Kirkpatrick and one-fourth to William M. Shippey, Ellis County, Tex. Filed Jan. 24, 1918. Serial No. 213,457. 2 Claims. (Cl. 261—121.)



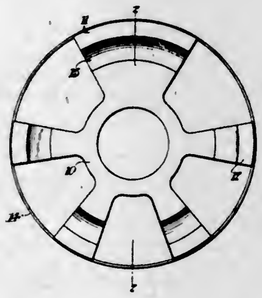
1. An air supply attachment for a carbureter, comprising a collar adapted to receive in one end thereof the inlet of the carbureter, said collar having its periphery imperforate and being straight and having its opposite ends open for providing a straight open ended bore, a transverse partition arranged within the collar and spaced from the ends thereof and provided with a substantially central opening and apertures surrounding the opening, a valve sleeve extending longitudinally within said collar and secured to the partition and surrounding said opening, said valve sleeve having its free end extending inwardly to provide a valve seat, a valve arranged within the valve sleeve to engage the valve seat, and a spring arranged within the valve sleeve and engaging the valve.

1,349,211. STOVE-LID LIFTER. JOHN H. LAMBERT, Belvidere, Ill., assignor of one-half to John W. Eldredge, Belvidere, Ill. Filed May 31, 1919. Serial No. 300,860. 3 Claims. (Cl. 294—13.)



1. A stove lid lifter comprising a handle lever having a recess therein; a jaw lever pivoted to the handle lever and having a recess therein; a clamp lever pivoted to the jaw lever and engaging the handle lever; and a spring having its ends disposed against the bottoms of said recesses, the sides of said recesses holding the spring against displacement.

1,349,212. TWO-WHEEL DRIVE. HENRY LAVE, Milwaukee, Wis. Filed June 3, 1918. Serial No. 238,026. 6 Claims. (Cl. 74—58.)

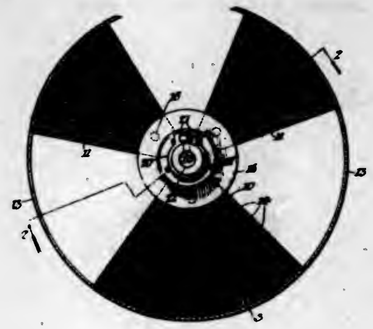


1. A two wheel drive for automobiles and the like, comprising a drive shaft, a pinion thereon, a swinging shaft, a pinion mounted on said swinging shaft and meshing with the pinion of the drive shaft, a pair of pinions on the swinging shaft turning therewith and positioned on opposite sides of the fulcrum of the swinging shaft, and drive wheel shafts, each having a gear wheel alternately engaged by the pinions respectively in the extreme positions of the swinging shaft.

1,349,213. PRESSURE-BAR. OSCAR A. LAWRENCE, San Francisco, Calif. Filed Mar. 31, 1919. Serial No. 286,618. 10 Claims. (Cl. 78—53.5.)

1. In a device of the character described, the combination of an anvil base; an anvil removably secured in said base; gripping means, adapted to enter a rivet hole, parallel with said anvil base for holding the anvil in alinement with a rivet to be driven, and a spring pressed member attached to said anvil base for holding the same against a rivet to be driven.

1,349,214. SHUTTER FOR MOVING-PICTURE MACHINES. JOSEPH H. LEHMAN, New York, N. Y. Filed Jan. 2, 1915. Serial No. 33. 15 Claims. (Cl. 88—19.3.)



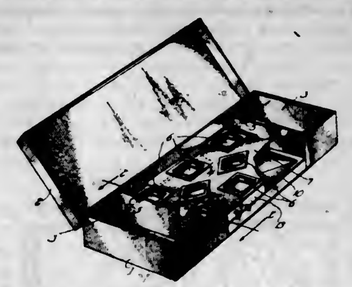
12. In a motion picture machine, a shutter comprising a body of transparent material having means for diffusing or destroying the focus of the rays going to the screen while maintaining the area of illumination upon, and the amount of light going to, the screen substantially constant at all times.

1,349,215. SHUTTER FOR MOVING-PICTURE MACHINES. JOSEPH H. LEHMAN, New York, N. Y. Filed Oct. 27, 1915. Serial No. 58,158. 8 Claims. (Cl. 88—19.3.)

1. A shutter for moving picture machines, including an obscuration blade formed of transparent celluloid and

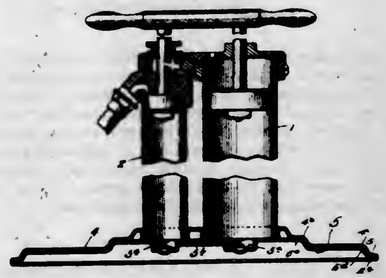
having one plane surface and having the opposite surface thereof presenting a series of ridges of comparatively

low altitude in respect to their width and serving as light refractors.



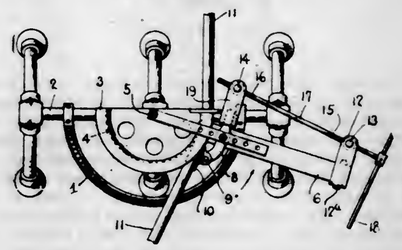
1,349,216. BRAKE MECHANISM FOR TALKING-MACHINES. THOMAS H. LOY, Terre Haute, Ind. Filed Jan. 10, 1917. Serial No. 141,633. 21 Claims. (Cl. 74—46.)

1. In brake mechanism for graphophones or the like, the combination with a turn table and a reproducer arm movable relatively thereto, of braking means including means for holding the same in brake applied and retracted positions with respect to the turn table, and release means operable coincident with the initial movement of the reproducer arm to playing position and engageable with said braking means to retract the same upon movement of the reproducer arm a predetermined extent in one direction, said release means being arranged to cause the braking means to be applied while the reproducer arm continues moving in its playing operation whereby to stop the turn table upon a greater degree of movement of the arm in the same direction as aforesaid.



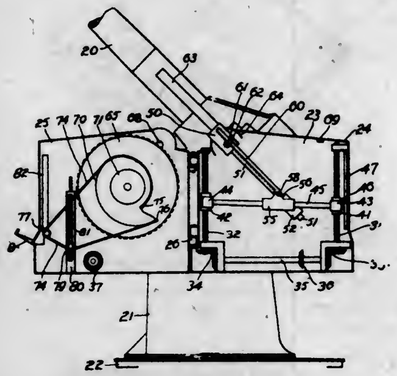
1,349,217. WATER-COLOR-PAINT OUTFIT. JOHN P. MENTZER, Chicago, Ill. Filed Nov. 28, 1919. Serial No. 341,101. 11 Claims. (Cl. 41—4.)

1. A water color paint outfit comprising a box, water pans at the opposite ends of the same, a support for paints located between said water pans and provided with



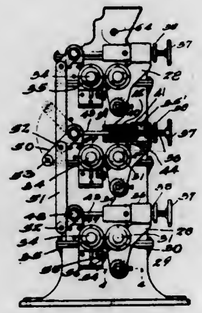
means for holding paints, and a mixing pan also located between said water pans.

1,349,218. PUMP. JOHN C. MOON, St. Louis, Mo. Filed Nov. 26, 1917. Serial No. 204,041. 2 Claims. (Cl. 103—65.)



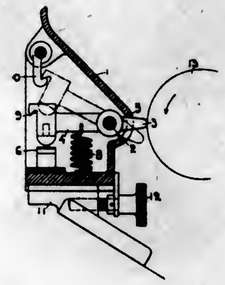
1. A pump base comprising a top plate having a plurality of flanged bosses to which pump cylinders are adapted to be secured, said plate having a marginal flange and reinforcing stepped portions, and a bottom plate forming in conjunction with the top plate a conduit or duct leading from one flanged opening to the other, said bottom plate having reinforcing stepped portions which are nested together within the stepped reinforcing portions of the top plate, said bottom plate also having a marginal flange around which the edge of the top plate is folded for the purpose of securing the plates together.

1,349,219. PIPE-BENDER. GEORGE R. MOORE and CHESTER S. LEONARD, Philadelphia, Pa. Filed Oct. 2, 1919. Serial No. 327,867. 8 Claims. (Cl. 153—39.)



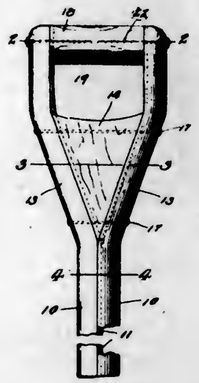
1. An organized pipe-bending mechanism comprising in combination a form, a positioning lever, means for holding the positioning lever against swinging movement in one direction, pipe-bending means carried by and movable on the positioning lever, and means on the positioning lever to actuate the pipe-bending means individually.

1,349,220. AUTOMATIC FUSE-SETTER FOR ANTI-AIRCRAFT ARTILLERY. ROBERT V. MORSE, Ithaca, N. Y., assignor to Morse Instrument Company, Inc., Ithaca, N. Y., a Corporation of New York. Filed Oct. 10, 1919. Serial No. 329,697. 10 Claims. (Cl. 89—41.)



1. In a fire control mechanism, the combination of a member having an angular movement, an adjustable member which can be set for various altitudes, a movable connecting means whose motion is determined by the aforesaid members, a cam shaped element, gearing connecting the movable connecting means to the cam shaped element, a fuse setter, a toothed wheel for operating the fuse setter, a chain connecting the cam shaped element to the toothed wheel, and means for keeping the chain taut.

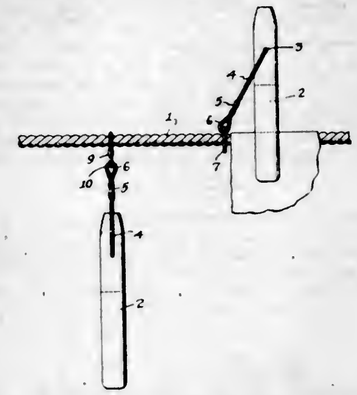
1,349,221. MILL. ROBERT RUFUS NOLEN, Dallas, Tex. Filed June 17, 1918. Serial No. 240,508. 1 Claim. (Cl. 83—12.)



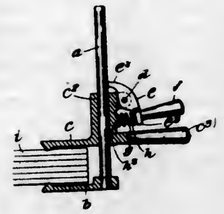
In a mill, the combination with a frame, a non-adjustable roll mounted therein, and an adjustable roll arranged to coact with the non-adjustable roll, of swinging arms carried said frame, said adjustable roll being secured thereto, an eccentric pivotally mounted on the frame adjacent each swinging arm, a housing arranged on each of the swinging arms, a plunger arranged in each of said housings, a coil spring arranged within said housing and engaging said plunger, the free end of said pitman being connected to said plunger, and an adjusting screw arranged in said housing and having a slot in its inner end, a transverse rod carried by said plunger, said rod being adapted to enter said slot to permit adjustment of the plunger when the screw is turned and to permit separation of the plunger and adjusting screw when the adjustable roll is moved outwardly.

1,349,222. MEANS FOR AUTOMATICALLY CUTTING OFF THE FEED-MOTION OF MACHINE-TOOLS. NILS JOSEF OLSSON, Gottenborg, Sweden, assignor to Aktiebolaget Svenska Kullagerfabriken, Gottenborg, Sweden, a Corporation of Sweden. Filed June 22, 1918. Serial No. 241,392. 3 Claims. (Cl. 51—165.)

1. In a device for automatically cutting off the feed motion of machine tools, the combination of a pivoted trip member one end of which engages the unfinished work and thereby holds it in inoperative position, and means controlled thereby to operate a feed motion cut off, the member being released from engagement with the work substantially at the instant when the work has reached a predetermined size and thereby actuating the operating means of the feed cut off.



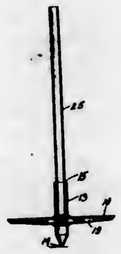
1,349,223. IMPLEMENT-HANDLE. CHARLES H. RIETH, St. Louis, Mo. Filed Dec. 8, 1919. Serial No. 343,209. 8 Claims. (Cl. 294—57.)



1. As a new article of manufacture, an implement handle comprising a pair of straight grained wooden strips connected to each other by a glue joint, said strips being spread apart at one end to form diverging end portions, and a wedge block inserted between said diverging end portions.

1,349,224. CLOTHESPIN. ADA ROEHR, Brooklyn, N. Y. Filed Apr. 12, 1919. Serial No. 289,680. 2 Claims. (Cl. 24—137.)

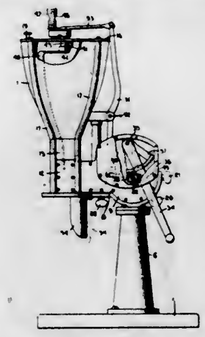
1. In combination with a clothes pin provided with opposite bores affording journal bearings, a holder formed of a single piece of wire bent to provide a pair of arched arms adapted to receive the pin above said bearings, and also to provide a pair of normally inturned journal pins adapted to enter said bearings, said holder also having a twisted portion above said arched portion making a stiff body member terminating in an eye, and means coöperating with said eye for detachably securing the holder to a line.



1,349,225. CLAMP DEVICE. HENRY I. ROSENBLUM, New York, N. Y. Filed Mar. 27, 1919. Serial No. 285,622. 4 Claims. (Cl. 223—54.)

1. A clamp device of the class described comprising a rod or shaft, a bottom jaw member mounted on the lower end portion of said rod or shaft, and a vertically adjustable jaw member mounted on said rod or shaft above the first named jaw member and provided with a sleeve through which the rod or shaft passes, said sleeve being provided with a projecting handle member above which is pivoted a spring-controlled pawl adapted to bear on said rod or shaft and provided with a handle.

1,349,226. SPINNING-TOP. HERMAN C. SAUTER, New York, N. Y. Filed Jan. 8, 1920. Serial No. 350,175. 1 Claim. (Cl. 46—32.)



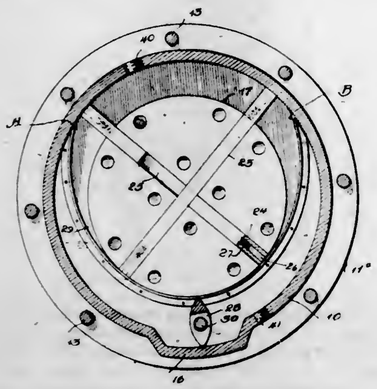
A spinning top comprising a hollow pointed spindle provided a substantial distance above its point with two spaced peripheral grooves, said grooves extending in planes at right angles to the longitudinal axis of said spindle, a disk having a central opening fitted into the upper one of said grooves, a star-shaped concaved body having a central opening fitted into the lower one of said grooves, said star-shaped body abutting against the underface of said disk and being fixed thereto to form passages extending from said spindle to the periphery of said disk, a plurality of apertures in said spindle between its grooves, and a shoulder on the inner face of said spindle disposed above said grooves.

1,349,227. COMBINATION CHAIR AND SOFA. JOHN SHKOR, Sparrows Point, Md. Filed Jan. 13, 1920. Serial No. 351,188. 1 Claim. (Cl. 155—49.)

A combination chair and couch comprising a seat element, a back element hinged to said seat element, a head rest hinged to said back element, adjustable legs carried by said back element, and a common means for supporting said back element in raised position when the device is in use as a chair, and said head rest in a slightly inclined position when the device is in use as a couch, said means comprising a pair of rods hinged to the back element and adapted to be attached either to the seat element or to the head rest.

1,349,228. SUGAR-DISPENSER. JUDSON L. SIMPSON, Kennebunk, Me., assignor of one-half to Asa A. Wheeler, Somerville, Mass. Filed Feb. 17, 1917. Serial No. 149,340. 6 Claims. (Cl. 221—112.)

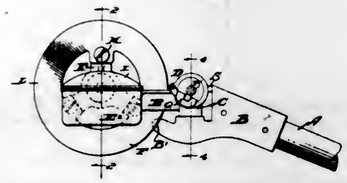
1. In a device for dispensing powdered or granular material of the type comprising a container having a discharge passage and two slides situated at different points along said passage and forming between them a measuring chamber, the combination with a casing or housing having said discharge passage formed therein and also being formed with a chamber in which said slides are received and which is provided on opposite sides with grooves in which said slides are guided, each slide having a forked end, a cam operating in the forked ends of said slides and provided with a cam groove on each face, the upper slide having an extension depending from one arm of the forked end and operating in one of said grooves and the lower slide having an extension rising from one arm and provided with an extension operating in the other groove.



2. In a device for dispensing powdered or granular material of the type comprising a container having a discharge passage and two slides situated at different points along said passage and forming between them a measuring chamber, the combination with a casing or housing having said discharge passage formed therein and also provided with two chambers, one of which contains guides for the slides, of an actuating cam situated in said chamber and operatively connected to said slides, an oscillatory handle pivoted in the other chamber and extending through the wall thereof, a pinion connected to said cam, and a segmental gear rigid with said handle and situated in said latter chamber.

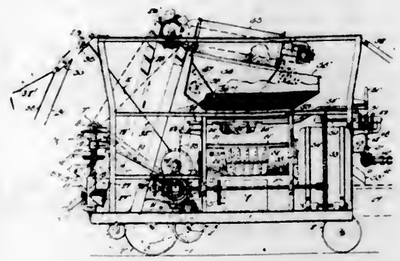
3. In a dispenser of the type having a container provided with a discharge passage and two slides situated at different points along said passage and forming between them a measuring chamber, a cam connected to said slides, a shaft on which said cam is mounted, a crank connected to said shaft, a lever pivotally connected to said crank, a pivotally-mounted stirrer situated within said container, a connection between said lever and said stirrer, and means to turn said shaft.

4. In a dispenser of the type comprising a container having a discharge passage and two slides situated at different points along said passage and forming between them a measuring chamber, the combination with a cam connected to said slides, of a shaft on which said cam is mounted, a crank arm fast to said shaft, a lever connected to said crank arm, a stirrer pivotally mounted in the top of the container and having a crank arm connected thereto, a connection between said lever and said latter crank arm, and means to actuate said shaft.



5. In a dispenser, the combination with a container having a discharge passage, of two slides situated at different points along said passage and forming between them a measuring chamber, a cam for actuating said slides alternately to effect the discharge of measured quantities of material from said container, a stirrer depending into the container from the top thereof, and means connecting said stirrer with said cam.

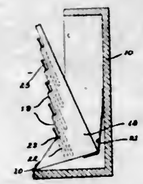
1,349,229. GEARLESS ROTARY CLUTCH AND TRANSMISSION MECHANISM. ONIAS C. SKINNER, Montrose, Colo. Filed Sept. 16, 1919. Serial No. 324,068. 2 Claims. (Cl. 192—18.)



1. In combination with driving and driven shafts, a cylindrical casing mounted on one of the shafts, a cylindrical rotor mounted on the second shaft and arranged within the casing, the periphery of the rotor and the peripheral wall of the casing being separated and concentric to the axial center of the rotor, the intervening space constituting an annular liquid chamber also concentric to the axial center of the rotor, the peripheral wall of the casing being provided with a well, a blade carried by the rotor and engaging the portion of the peripheral wall of the casing remote from the well, a rotary valve arranged within the liquid chamber at a point substantially midway the well, said valve being substantially elliptical in cross section with its major cross sectional dimension substantially equal to the space between the periphery of the rotor and the base of the well, said valve when radially disposed with respect to the rotor, preventing the flow of the liquid within the chamber, the side faces of the valve when the valve is in an open position permitting the liquid to freely flow thereover, and means for imparting rotary movement to the valve.

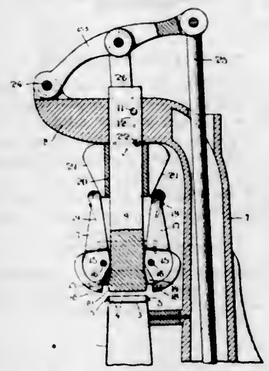
1,349,230. TROLLEY-WHEEL. CHARLES P. SKUBLIN, Detroit, Mich., assignor to William A. Adams, Detroit, Mich. Filed June 19, 1919. Serial No. 305,232. 6 Claims. (Cl. 64—70.)

1. In a device of the character described, a trolley wheel, a removable fitting in which the trolley wheel is journaled, a bracket adapted for attachment to the end of a trolley pole, having an upstanding pintle with opposite flattened faces, and a pair of opposing spring actuated plungers supported in the fitting adapted to bear upon the flattened sides of the pintle to yieldingly maintain the trolley wheel in alinement with the trolley pole.



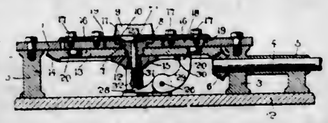
1,349,231. SELF-LOADING CONCRETE MIXING AND DISTRIBUTING MACHINE. HUGO O. STAMP, Milwaukee, Wis. Filed May 6, 1918. Serial No. 232,785. 35 Claims. (Cl. 214—17.)

1. In a portable loading and distributing machine of the character described comprising a receiving truck, an adjustable delivery conveyer, a distributing conveyer, means for operating the distributing conveyer and means controlled by adjustment of the delivery conveyer for preventing operation of the distributing conveyer.



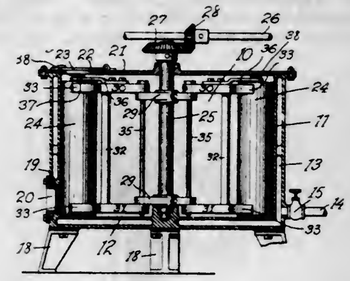
1,349,232. NEEDLE-HOLDER. JOHN STANKO, Kooi, Wyo. Filed May 24, 1919. Serial No. 299,441. 2 Claims. (Cl. 206—16.)

2. In a needle holder, the combination with a hollow rectangular casing, a cover hingedly engaged therewith, and means for securing said cover when in a closed position, of a block pivoted at its base near the marginal edges of said casing, and adapted to be received wholly therewithin, a plurality of recessed steps formed in said block, cork inserts secured in the recesses, said cork inserts being receptive of sharpened cylindrical implements, an elastic tape secured within said casing upon the bottom wall



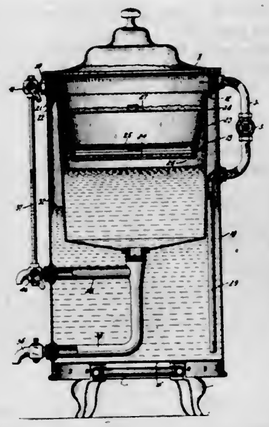
thereof at one end, and upon the base of said block at the other end whereby said block is forced outwardly when the cover is released, and a sharpening means secured upon the inner surface of said cover, adapted to be used in connection with said implements.

1,349,233. MACHINE FOR CAPPING MULTISIDED PAPER BOTTLES. LEONARD DEE STEPHENSON, New York, N. Y., assignor, by mesne assignments, to Paper Bottle and Can Company, Inc., Wilmington, Del., a Corporation of Delaware. Filed Nov. 15, 1917. Serial No. 202,177. 1 Claim. (Cl. 113—18.)



In a machine for securing metal caps to multi-sided paper bottles, a suitable support, a plunger movable therein and having a tapered head for flaring the inner cap walls and the top sides of the bottle, crimping jaws carried by the plunger for clamping the top sides of the bottle between the inner and outer cap walls, and means for controlling the operation of the plunger and crimping jaws comprising a wedge block having a lost motion connection with the plunger and wedge block operating means.

1,349,234. MACHINE FOR CAPPING MULTISIDED PAPER BOTTLES. LEONARD DEE STEPHENSON, New York, N. Y., assignor, by mesne assignments, to American Paper Bottle and Can Company, Inc., Wilmington, Del., a Corporation of Delaware. Filed Nov. 15, 1917. Serial No. 202,178. 6 Claims. (Cl. 113—18.)

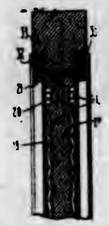


1. In a machine for securing metal caps to multisided paper bottles, a table having a projection fitting within the cap, crimping jaws movable along the table, an ejector working through the table, and a cam rotating underneath the table for controlling the movements of the jaws and the ejector.

1,349,235. CHOCOLATE-DEVELOPING MACHINERY. OSCAR M. STOUT, Brooklyn, N. Y. Filed May 22, 1919. Serial No. 298,925. 2 Claims. (Cl. 83—45.)

2. A machine of the character described comprising a cylindrical container having an imperforate vertical side wall, a centrally disposed shaft therein, a plurality of rollers, said rollers being of a length substantially equal to the height of the said side wall, means for supporting said rollers adjacent the wall of the said container and in diametrically opposite relationship, said means comprising arms secured to said shaft, levers pivoted on said arms and forming obtuse angles therewith, said levers having bifurcated ends adapted to receive the said rollers, the cylindrical surfaces of which rest within and against said bifurcated ends, means for pivotally suspending said rollers from the said levers and means for rotating said shaft in the direction opposite to that indicated by the apex of the said obtuse angles.

1,349,236. COFFEE-URN. HENRY STROHBACH, New York, N. Y. Filed Sept. 30, 1919. Serial No. 327,536. 2 Claims. (Cl. 53—3.)

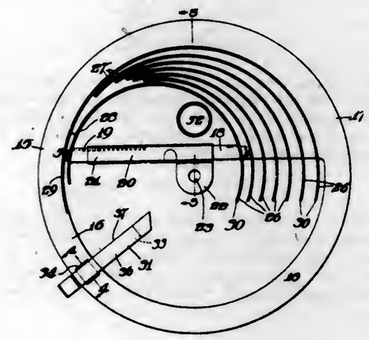


1. In an urn, the combination with a boiler, of an extract-holding receptacle therein, a coffee-holding vessel extending into said receptacle, a pipe leading from a point adjacent the bottom of said boiler above said vessel.

a delivery pipe leading from the bottom of said receptacle, and a gage connected at its lower end with said delivery pipe and at its upper end with the steam space of the boiler.

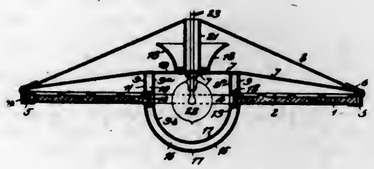
1,349,237. [WITHDRAWN.]

1,349,238. FILTER. ERNEST J. SWEETLAND, Montclair, N. J., assignor, by mesne assignments, to United Filters Corporation, a Corporation of Delaware. Filed Mar. 30, 1915. Serial No. 17,968. 4 Claims. (Cl. 210—195.)



1. In a filter of the plate and frame type, a filter plate having the central web portion thereof reduced in thickness to provide drainage areas on opposite sides thereof, a filter fabric section extending over each of the drainage areas, a sheet of reticulated spacing material arranged under each of the filter fabric sections, means upon the plate for positively clamping the edges of the filter fabric sections to the plate, and sealing means also extending around the edges of the filter fabric sections and engaging both the said edges and the plate to provide a tight joint, said sealing means being carried by the plate and providing means for sealing the joints between the plate adjacent filter frames.

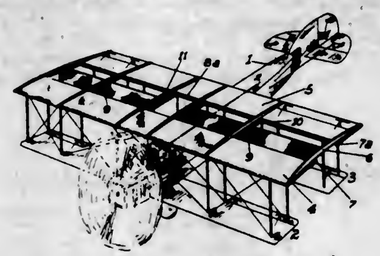
1,349,239. WORK-FEEDING MECHANISM FOR CHANNELING-MACHINES. FELIX E. VALOIS, Haverhill, Mass., assignor to Hamel Shoe Machinery Company, a Corporation of Massachusetts. Filed Nov. 15, 1917. Serial No. 202,136. 6 Claims. (Cl. 12—27.)



4. A feed attachment for channeling machines comprising, in combination, a box-like casing or receptacle having a detachable cover, with an opening therein, a stub-shaft fixed in the opposite wall of the casing and concentric with said opening, a combined gear and feed-wheel loosely mounted upon said shaft and extending through said opening, a second stub-shaft within the casing, a second gear mounted thereon and meshing with said first gear, and a power shaft journaled within opposed openings in said casing and having fixed thereto a gear meshing with said second gear.

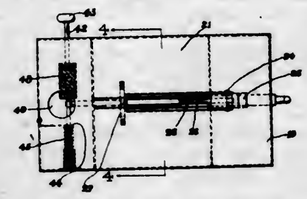
1,349,240. REPEATING DEVICE FOR TALKING-MACHINES. GEORGE F. VOITH, Philadelphia, Pa. Filed June 20, 1919. Serial No. 305,512. 4 Claims. (Cl. 274—15.)

1. A repeating device of the character described including a plate having a toothed rack; transfer rails on said plate; and a coupling member slidably connected to said plate and having a centering hole therein, said coupling member having a resilient portion providing a lug normally adapted to enter between the teeth of said rack and thereby lock the coupling member to the plate; substantially as described.



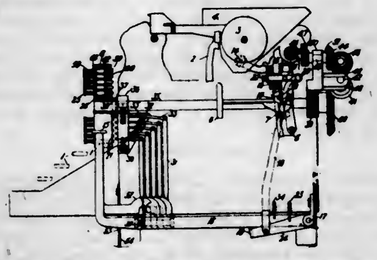
1,349,241. LIGHT-DISTRIBUTER. VINCENT WALSH, New York, N. Y. Filed Jan. 4, 1919. Serial No. 269,588. 7 Claims. (Cl. 240—92.)

1. In a light distributer, a transparent plate having an aperture through the same, an opaque housing over said aperture, a frame to support said plate and a lighting medium suitably supported and suspended in said aperture and housing, and adapted to pass rays of light into said plate through its aperture rim.



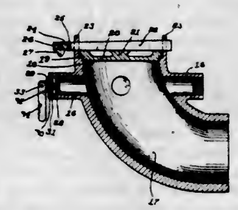
1,349,242. LANDING DEVICE FOR AEROPLANES. ALANSON C. WARREN, Stockton, Calif., assignor of one-half to Volet May Warren, Stockton, Calif. Filed July 30, 1919. Serial No. 314,255. 1 Claim. (Cl. 244—12.)

In an aeroplane having biplanes arranged in tandem, rigid stringers at spaced intervals connecting the upper wings of said biplanes, and a flexible curtain structure adapted to be rolled up positioned between said upper



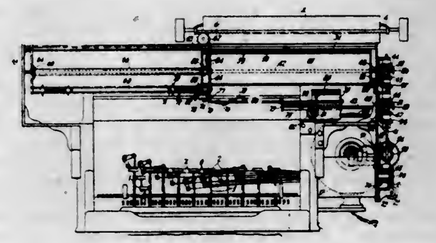
wings directly under the stringers, whereby the curtain is braced against air pressure thereunder when in use.

1,349,243. MATCH-BOX. JOSEPH M. WEREMKO, Herrick, Ohio. Filed Oct. 29, 1919. Serial No. 334,270. 1 Claim. Cl. 206—26.)



In a device of the class described, the combination with a hollow rectangular casing, and a base hingedly engaged therewith, of spring elements arranged transversely in said base, oblique plates secured rigidly on said base, said oblique elements approaching each other at their upper edges and providing a reservoir for matches, a slide movable longitudinally in said casing, means for controlling the ultimate movements of said slide, forked forward ends on said slide adapted to receive a match from the mentioned reservoir, means for guiding said slide, gripping elements formed with the forked ends of said slide adapted to engage with a match whereby it may be projected or retracted, said casing having a circular opening near its front end into which said match end may be projected, a rod movable transversely through said casing, an abrader carred by said rod adapted to contact with the end of a match adjacent to the mentioned opening, means for normally holding said abrader in a retracted position, and means for expelling a match coincident with the withdrawal of said slide.

1,349,244. TYPEWRITING-MACHINE. WILLIAM L. WHITE, Birmingham, Ala., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 14, 1918. Serial No. 262,428. 13 Claims. (Cl. 197—177.)



1. In a typewriting machine, the combination with a traveling carriage, a revolving disk, and gearing for causing the disk to always revolve with the traveling carriage, of stops settable on said disk in concentric circles, an escapement normally holding said carriage, an arresting arm for each circle of stops, and key-operated means for making any arresting arm effective to arrest the carriage by any set stop in the circle with which it coöperates.

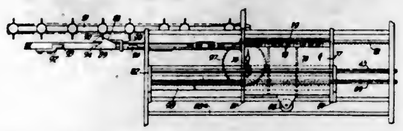
1,349,245. CLEAN-OUT HEADER FOR SEWER-ENTRANCES. JOHN F. WITT, Winchendon, Mass. Filed July 24, 1919. Serial No. 313,021. 1 Claim. (Cl. 137—76.)

In a device of the class described, the combination with a curved header open at both ends, said header having a conical passage therethrough, a plurality of internally threaded inlet openings entering the larger end of said header, plugs adapted to be screwed into said inlets, stems and plate covers on said plugs, and lever handles secured to said plates for the operation of said plugs, the upper end of said header having a circular recess, a cover suited thereto, lugs extending up from said header upon opposite sides, said lugs having an opening, a taper key adapted to pass through the openings in said lugs and press said cover upon its seat, a detent latch pivoted in an opening formed in the smaller end of said key adapted to prevent the removal of said key, means for locking said latch in position and a packing ring disposed between said cover and its seat.

1,349,246. COMBINED TYPEWRITING AND COMPUTING MACHINE. WALTER WRIGHT, New York, N. Y., assignor, by mesne assignments, to Underwood Computing Machine Company, a Corporation of New York. Original application filed Apr. 20, 1908, Serial No. 428,020. Divided and this application filed July 14, 1917. Serial No. 180,508. 30 Claims. (Cl. 235—59.)

1. The combination with a totalizer having a series of computing wheels, of a master wheel traveling step by step to register individually with said computing wheels, a carriage for traversing said master wheel, a second totalizer, a master wheel for said second totalizer, a carriage for traversing said second master wheel step by step to come in register with the computing wheels of said second totalizer individually, and means for traversing

said second-mentioned master-wheel carriage from said first-mentioned master-wheel carriage.



2. The combination with a long totalizer having a series of computing wheels, of a master wheel traveling relatively to said computing wheels to drive them one by one in groups to compute in several computing zones or major columns, a carriage for traversing said master wheel, a short totalizer having a plurality of computing wheels of at least the capacity of one of the groups of computing wheels of said long totalizer, a master wheel for driving the computing wheels of said short totalizer one by one, a carriage for traversing said second-mentioned master wheel, and means for intermittently traversing said second-mentioned carriage and master wheel with said first-mentioned carriage, so that said second-mentioned wheel may drive the computing wheels of said short totalizer repeatedly in separate synchronism with the computing wheels of different groups of said long totalizer.

3. The combination with a long totalizer having a series of computing wheels capable of being computed in groups to correspond with separate computing zones or major columns, of a master wheel driving said computing wheels one by one, a carriage for traversing said master wheel step by step, a short totalizer having a plurality of computing wheels equal in number at least to the number of computing wheels in a group of said long totalizer, a master wheel for driving the computing wheels of said short totalizer one by one, a carriage for traversing said second-mentioned master wheel step by step, a hook on said second-mentioned carriage, and a plurality of pick-up stops located on said first-mentioned carriage at intervals corresponding to a predetermined grouping of the computing wheels of said long totalizer, and arranged to engage said hook one by one to traverse said second-mentioned carriage and master wheel, from said first-mentioned carriage repeatedly for short periods inclusive of the long period of travel of said first-mentioned carriage and master wheel.

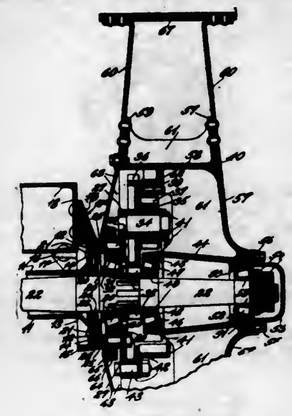
4. The combination with a typewriter carriage, of a totalizer including a series of computing wheels, a master wheel for driving said computing wheels one by one, a carriage for traversing said master wheel, a rack on said typewriter carriage, a rack on said master-wheel carriage, a pinion interposed between said racks and meshing with them to enable said master wheel to be traversed concomitantly with the traveling movement of said typewriter carriage and in the opposite direction, a second totalizer having a series of computing wheels, a master wheel for driving the computing wheels of said second totalizer, a carriage for said second totalizer, and an intermittent connection made and broken at intervals during the travel of said typewriter carriage to repeatedly traverse said second-mentioned master wheel and carriage with said first-mentioned master wheel carriage and typewriter carriage during a single run of said typewriter carriage.

5. The combination with a long totalizer including a plurality of computing wheels arranged to be computed in groups for several distinct computing zones or major columns, of a master wheel for driving said computing wheels one by one, a carriage for traversing said master wheel, a short totalizer having a plurality of computing wheels equal in number to at least the number of computing wheels in a group of said long totalizer, a master wheel for driving the computing wheels of said short totalizer one by one, a carriage for traversing said second-mentioned master wheel, an automatic connection between said first and second-mentioned master-wheel carriages acting to pick up said second-mentioned carriage and traverse it along with said first-mentioned carriage for a short period and then drop it at predetermined intervals during the continued run of said first-mentioned master-wheel carriage, and a spring-motor tensioned during each advancing movement of the short totalizer master-wheel carriage acting to return said second-mentioned master-wheel carriage each time it is released, so as to cause computations in the computing wheels of said short totalizer in synchronism with successive groups of the computing wheels of said long totalizer.

1,349,247. COMBINED TYPEWRITING AND COMPUTING MACHINE. WALTER WRIGHT, New York, N. Y., assignor, by mesne assignments, to Underwood Computing Machine Company, a Corporation of New York. Original application filed Apr. 20, 1908, Serial No. 428,020. Divided and this application filed Aug. 4, 1917. Serial No. 184,404. 10 Claims. (Cl. 235—59.)

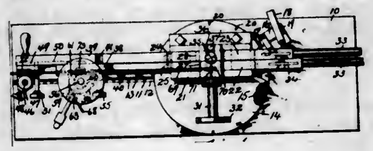
8. The combination with a typewriter carriage and a totalizer fast thereto and having wheels, of a master wheel therefor, a second totalizer having broader wheels, a master wheel therefor, a computing carriage for causing relative movement between the broader wheels and their master wheel, means for moving said computing carriage by said typewriter carriage, and means for simultaneously turning said master wheels.

1,349,248. CIGAR-PIERCER. PIOTR ZERA, Schenectady, N. Y. Filed Mar. 21, 1919. Serial No. 284,044. 2 Claims. (Cl. 131—20.)



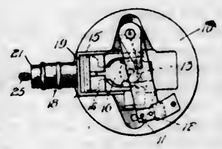
1. A smoker's implement comprising a tubular handle, a rod slidably engaged therein, a needle extending from said rod, means for projecting or retracting said needle within said handle, a detent operated by said retraction means, said detent being engageable with a slot formed in said handle, a knife blade pivoted at the end of said tubular handle opposite to said needle, and means formed with said rod adapted to hold said knife blade when in a closed position.

1,349,249. TRACTOR. HERBERT W. ALDEN, Detroit, Mich., assignor to The Timken-Detroit Axle Company, Detroit, Mich., a Corporation of Ohio. Filed Oct. 10, 1919. Serial No. 329,819. 15 Claims. (Cl. 180—75.)



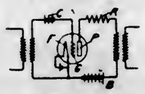
13. In an automobile of the kind described, a hollow axle housing adapted to support the body, traction wheels, and driving axle sections in said housing and operatively

connected to said wheels, said hollow axle housing having a bracket member rigidly secured to the ends thereof and



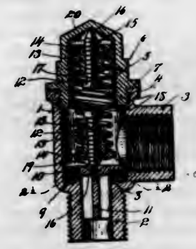
constituting an angular seat above the axle housing and channel-shaped body frame members seated on and rigidly secured to said bracket seats.

1,349,250. MACHINE FOR CARVING, ROUTING, AND SIMILAR OPERATIONS. HONESTUS M. ALBEE, Nutley, N. J. Filed Apr. 16, 1919. Serial No. 290,410. 20 Claims. (Cl. 90—13.1.)



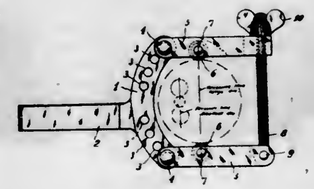
1. A machine of the kind described comprising a rotatable head, arms freely slidable on the head, means connecting the arms to control their movement relative to each other, and means on the arms for holding tools.

1,349,251. ACTUATING MEMBER FOR SWITCHES. ERNST G. K. ANDERSON, Chicago, Ill., assignor to Anderson Electric Specialty Company, Chicago, Ill., a Corporation of Illinois. Filed May 29, 1918. Serial No. 237,200. 7 Claims. (Cl. 74—5.)



1. An actuating member for an electrical switch and the like comprising a permanent tubular swingable and axially displaceable member, and a terminal extension member telescopic thereon, with means to lock the extension member on the permanent member when extended at definite distance from the permanent member.

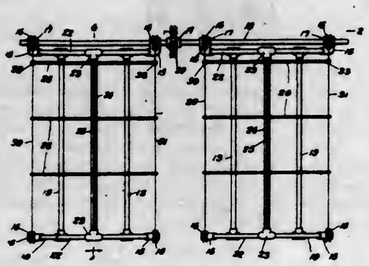
1,349,252. METHOD OF AND MEANS FOR UTILIZING THERMIONIC CURRENTS. HAROLD D. ARNOLD, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 20, 1916, Serial No. 85,362. Renewed May 16, 1918. Serial No. 235,043. 19 Claims. (Cl. 179—171.)



1. A thermionic amplifier having an input circuit and an output circuit, a source of electromotive force in each of said circuits, and a resistance in said output circuit, the magnitude of said electromotive forces and of said resistance being so related that the output current shall vary approximately linearly as the input voltage over a portion of the characteristic curve suitable for efficient operation of said amplifier.

1,349,253. VALVE. JOHN ASTROM, Fort Wayne, Ind., assignor to Fort Wayne Engineering & Manufacturing Co., Fort Wayne, Ind. Filed May 12, 1919. Serial No. 296,459. 4 Claims. (Cl. 137—53.)

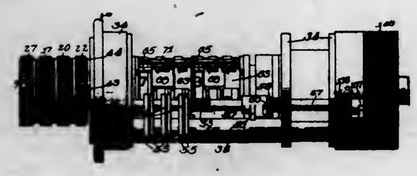
1. A device of the class described comprising a valve casing, a valve seatable therein, an expansile spring for urging the valve to a seating position, and a stem adjustably carried by each end of the spring and projecting therebeyond, said stems being relatively alined, the projecting end of one stem being engaged with the valve centrally thereof and the corresponding end of the other stem engaged with the valve casing.



1,349,254. NURLING-TOOL. WALTER S. AUSTIN, Pittsburgh, Pa. Filed Aug. 26, 1919. Serial No. 319,868. 4 Claims. (Cl. 80—5.1.)

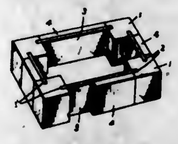
4. In a tool of the character stated, an arcuate head, nurl holding members pivoted to said head at their inner ends and spaced longitudinally of the head, one of said members having its outer end portion slotted, an eye bolt pivoted to the outer end of the other member and movable into the slot of the first mentioned member, a wing nut

secured on said bolt for forcing the nurl-holding members toward each other, and opposed nurls carried by said members and disposed substantially 180° apart.



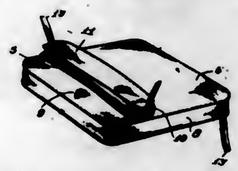
1,349,255. DISPLAY-RACK CANOPY. CHARLES BART, New York, N. Y. Filed Feb. 18, 1920. Serial No. 359,717. 5 Claims. (Cl. 211—14.)

1. An apparatus of the class described comprising a framework consisting of a plurality of standards connected by transverse and longitudinal members, the transverse members extending at the opposite sides of the framework and beyond said longitudinal members, means on the extensions of said transverse members for supporting other members which extend longitudinally of the framework, upwardly directed V-shaped extensions connected with said last named means, a longitudinal tubular member connected with the top portions of said extensions, said tubular member being provided with a longitudinal aperture, and a plurality of V-shaped frame members mounted to move longitudinally of the framework and said tubular member and provided with devices which operate in said member and the aperture thereof.



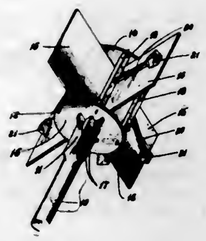
5. An apparatus of the class described comprising a framework consisting of end frame members connected by longitudinal frame members, pulley devices mounted at the opposite sides of said end frame members, endless members extending longitudinally of the frame work and connected with said pulley devices, supplemental frame members mounted to move longitudinally of the framework and in operative connection with said endless members, and a flexible inclosure secured to and adapted to be operated by said supplemental frame members.

1,349,256. METER FOR CONTINUOUS PUMPS. REUBEN E. BECHTOLD, Fort Wayne, Ind., assignor to S. F. Bowser & Co., Incorporated, Fort Wayne, Ind. Filed Dec. 1, 1916. Serial No. 134,271. 91 Claims. (Cl. 235—132.)



1. The combination of a registering meter, a control device for said meter, a pump, means for operating said pump and meter, a lost motion connection between the operating means and the pump to permit slight movement of said operating means without actuating said pump and mechanism for setting said control device during the said slight movement of said operating means.

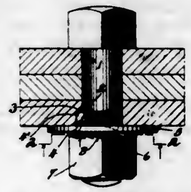
1,349,257. PRINTER'S FURNITURE. CHARLES E. BENHAM, Schenectady, N. Y., assignor to The Maqua Company, a Corporation of New York. Filed May 29, 1920. Serial No. 385,324. 4 Claims. (Cl. 101—402.)



1. A lock quad for use in building printers' furniture comprising a block having standard printers' dimensions provided with slots of standard printers' dimensions adapted to receive standard printers' slugs.

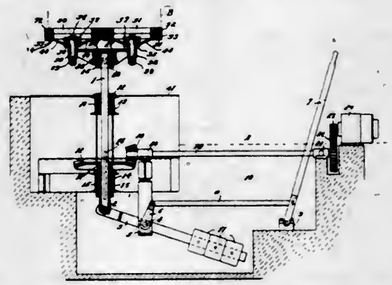
1,349,258. CUSHION-COVER. BERGET H. BLOCKSOM, Chicago, Ill., assignor to Wilson & Co., Inc., Chicago, Ill., a Corporation of New York. Filed May 21, 1917. Serial No. 169,810. 1 Claim. (Cl. 5—13.)

A cover for cushion pads comprising a bottom piece, a box edge stitched thereto about the entire edge thereof, an auxiliary top piece having one end and its side edges stitched to said box edge, a main top piece disposed opposite to said auxiliary piece and having one end and portions of both side edges stitched to said box edge, and a cap formed on the free end edge of said main top piece to fit over and about the end of the cover adjacent to said auxiliary piece.



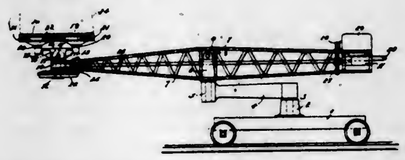
1,349,259. NOISY TOY. JOHN BORYK, Ansonia, Conn. Filed July 24, 1919. Serial No. 312,916. 4 Claims. (Cl. 46—46.)

1. In a toy of the class described, the combination with a handle adapted to be manually operated and a rectangular body extending therefrom, said body having cross recesses therethrough, of plates secured in the recesses extending at right angles, means for clamping said plates in fixed relation, and hammer heads pivotally engaged with said plate clamping means adapted to make contact upon opposite sides of adjacent plates.



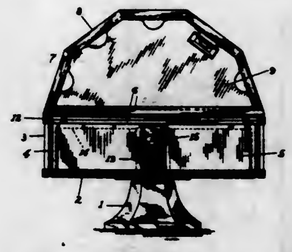
1,349,260. NUT-LOCK. JACOB A. BRADLEY, Milwaukee, Wis., assignor of one-half to Albert O. Anderson, Shawano, Wis. Filed Jan. 19, 1920. Serial No. 352,273. 1 Claim. (Cl. 151—13.)

In a pair of elements adapted to be bolted together comprising a facing element having a bolt recess therein and a locking washer recess; the combination of a bolt extending through the element having a longitudinal groove adapted to be alined with the washer recess of the facing plate, a washer fitted to the bolt provided with a tongue extending from its upper face, a lug extending from the lower face for engagement with the



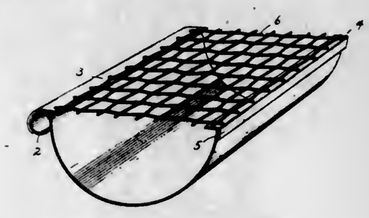
washer recess of the parts to be confined, the lug being provided with an inturned end engageable with the bolt groove, and a nut provided with a saw-tooth lower face for locking engagement with the washer tooth whereby the bolt, washer and nut are locked against turning relative to the face plate.

1,349,261. CLEANING-BRUSH. CLARENCE M. BROWN, Philadelphia, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Jan. 11, 1917. Serial No. 141,743. 1 Claim. (Cl. 15—37.)



A cleaning brush for glass melting pots, comprising in combination, a vertical rotary shaft, an upwardly directed brush carried at the upper end of the shaft, adapted to engage the bottom of a pot, a counterbalance for the shaft tending to hold the shaft in its uppermost position, and means for moving the shaft vertically.

1,349,262. BRUSH FOR CLEANING GLASS-MAKING POTS. CLARENCE M. BROWN, Philadelphia, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Jan. 11, 1917, Serial No. 141,742. Renewed Mar. 18, 1920. Serial No. 366,965. 3 Claims. (Cl. 15—37.)



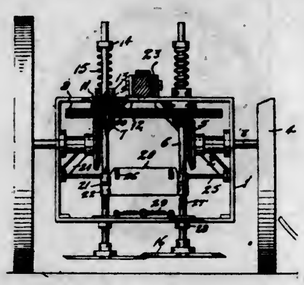
3. A brush for cleaning glass making pots, comprising in combination, a beam mounted for universal movement, an upwardly directed brush mounted pivotally upon the beam and adapted to be moved into contact with the bottom of a pot, and means carried by the beam for operating the brush.

1,349,263. GUM AND MINT CASE. LLOYD W. BUCHENAU, Stockton, Calif. Filed June 28, 1918. Serial No. 242,382. 1 Claim. (Cl. 211—20.)

In a show case having a base, and side walls thereon, a transverse division wall, a pair of lids disposed back to back along the center line of the division wall, hinges connecting the lids and a common U-shaped hinge pin mounted to each hiuge centrally thereof and being driven into the division wall and passing between the abutting edges of the lids.

1,349,264. EAVES-TROUGH OR GUTTER COVER. FRED W. BUSSE, Louisville, Ill. Filed Dec. 6, 1919. Serial No. 343,052. 3 Claims. (Cl. 108—28.)

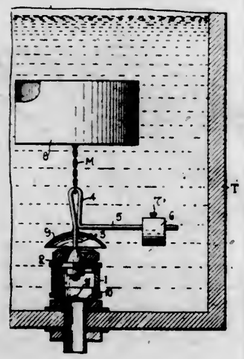
2. An eaves trough screen including a foraminous member and side strips attached thereto, one of said side strips being curved to interlock with the roll edge of the eaves trough, the other of said side strips being flanged to engage the opposite wall of the eaves trough.



1,349,265. ALKALI-PROOF DYE AND METHOD OF PRODUCING THE SAME. LELAND C. CATES, Chicago, Ill., assignor to Sunbeam Chemical Company, Chicago, Ill., a Corporation of Illinois. Filed July 27, 1918. Serial No. 246,988. 6 Claims. (Cl. 8—6.)

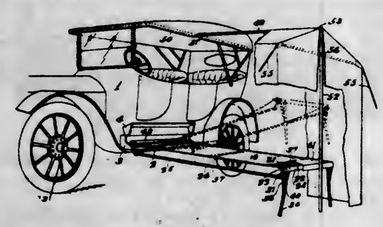
3. The method of producing alkali proof dyes, which consists in dissolving a non-alkali proof dye in a substantially one-quarter normal solution of sodium hydroxid, bringing the solution to substantially the boiling point, then adding an excess of a saponifiable oil, permitting the subsequent reaction to continue until the alkali is substantially exhausted, then adding alkali in the proper quantity to saponify the excess oil, then permitting the substance to harden, then powdering the same, substantially as described.

1,349,266. COTTON-CHOPPER. ROBERT H. COGBURN, McKinney, Tex. Filed Feb. 28, 1919. Serial No. 279,808. 4 Claims. (Cl. 97—47.)



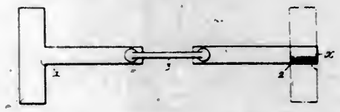
1. In a cotton chopper, a frame, axles supporting the frame, ground wheels mounted on the axles, vertical shafts slidable in the frame, coiled springs supporting the shafts, means for depressing the shafts against the tension of the springs, and means for imparting rotation to the shafts.

3. In a cotton chopper, a frame, axles supporting the frame, ground wheels mounted on the axles, vertical shafts slidable in the frame, means for imparting rotation to the shafts, coiled springs supporting the shafts,



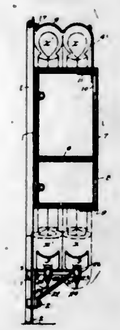
means for depressing the shafts against the tension of the springs, cutting disks on the lower ends of the shafts, and a second coiled spring connecting the shaft, the shafts being jointed above the points of connection with the second coiled spring.

1,349,267. FLOAT-VALVE. CLYDE L. CRAIG, Washington Court House, Ohio. Filed Jan. 18, 1917. Serial No. 143,071. 6 Claims. (Cl. 137—104.)



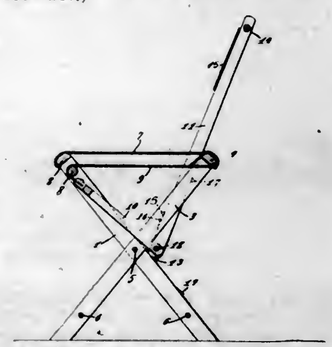
1. In combination with a valve member and its seat, a buoyant body operatively engaged with the valve member, and means for retarding the seating of the valve member under the influence of the buoyant body to submerge the buoyant body before the valve member is in close contact with its seat.

1,349,268. AUTO SPRING-BED. WILBUR E. CUMMINGS, Hollywood, Calif. Filed May 3, 1916. Serial No. 95,261. 5 Claims. (Cl. 5—72.)



1. The combination with a stable vehicular support; of a bed bottom comprising a sheet resiliently and detachably connected directly at one end to said support at one level; a crossbar resiliently and detachably connected directly to the other end of the bed bottom; stretching means pivotally and detachably engaging the support at a lower level than the bed bottom and provided with arms extending up and connected to the crossbar; and means to support said crossbar; whereby the crossbar is elevated above the level of the stable vehicular support.

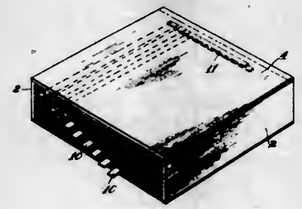
1,349,269. RENEWABLE FUSE. GUY D. FERNANDEZ, Haddon Heights, N. J. Filed Oct. 16, 1919. Serial No. 331,028. 7 Claims. (Cl. 200—135.)



1. A fuse element comprising two sheet metal terminal members each having a central stem and a flexible laterally extending head; with a relatively fusible link having its ends in permanent electrical connection with the stems of said terminal members.

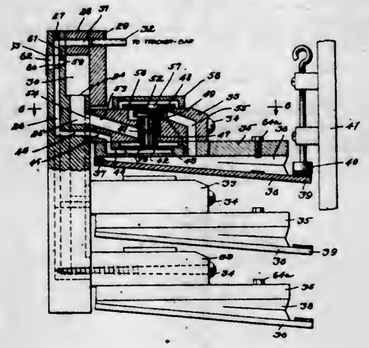
1,349,270. TIRE-HOLDER. ALFRED J. FERRIS, Philadelphia, Pa. Filed Feb. 24, 1916. Serial No. 80,223. 2 Claims. (Cl. 224—29.)

1. The combination of a supporting structure; a tool box thereon; a cradle placed to engage a portion of a tire shoe extending around the tool box; a hasp hinged to said structure and made in a plurality of parts hinged together to rigidly grip the tire shoe in the cradle; with common locking means holding the box closed and the hasp in position.



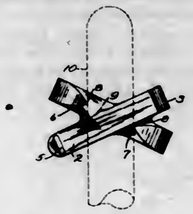
1,349,271. FOLDING CHAIR. ELMER E. FISHER, Kokomo, Ind. Filed Oct. 22, 1919. Serial No. 332,428. 8 Claims. (Cl. 155—147.)

2. A folding chair including crossed pairs of legs pivotally connected, front and back seat strips connecting



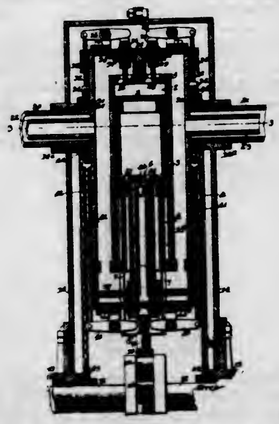
the upper ends of the legs of the respective pairs and extending laterally therebeyond, a flexible seat connecting said strips, connected back strips at opposite sides of the seat and movable between the projecting ends of the seat strips, a guide connecting the legs of one pair close to the front of the seat, a connection between the back seat strip and the lower ends of the back strips and extending over the guide, said back strips normally bearing on the legs of one pair, and means for limiting the upward movement of the back strips relative to the seat.

1,349,272. DISK-RECORD HOLDER. GUSTAV E. FOSS, Chicago, and HARRY GAROLD JENSEN, Berwyn, Ill. Filed Sept. 18, 1919. Serial No. 324,444. 10 Claims. (Cl. 129—15.)



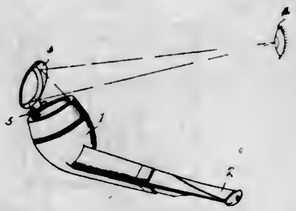
1. A disk record holder comprising a plurality of shelves spaced apart, each shelf having a groove extending from rear to front, a flexible drawing strip disposed in each groove, and a transversely disposed cleat or arm secured to said drawing strip.

1,349,273. PIANO-PLAYER ACTION. AXEL G. GULBRANSEN, Chicago, Ill., assignor to Gulbransen-Dickinson Company, Chicago, Ill., a Corporation of Illinois. Filed June 3, 1915. Serial No. 31,815. 8 Claims. (Cl. 84—53.)



1. In combination, a channel board having a plurality of independent channels therein, a longitudinal channel and a plurality of channels extending from and disposed below said longitudinal channel, a plurality of actuating pneumatics each having a passageway connecting with one of said third named channels, a valve in each said passageway, a diaphragm for operating each said valve, and a diaphragm chamber adjacent each said diaphragm, each diaphragm chamber being connected with one of said first named independent channels.

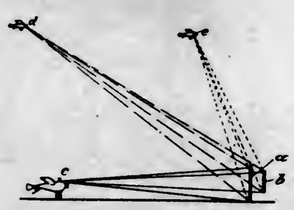
1,349,274. BROOM-HOLDER. CHARLES GUSTAFSON, Instanter, Pa. Filed May 28, 1920. Serial No. 384,996. 4 Claims. (Cl. 24—257.)



1. In a broom holder, strips spaced apart, arms integral with one of said strips and curved in the direction of the second strip, said arms having pointed ends, and a tooth formed upon one of said strips.

1,349,275. INTERNAL-COMBUSTION ENGINE. ARCHER P. HARDWICK, Vanadium, Colo. Filed Jan. 3, 1918. Serial No. 210,208. 12 Claims. (Cl. 123—42.)

1. An internal combustion engine, comprising outer and inner spaced cylinders with openings at the bottom, intake and exhaust valves in the head of each cylinder, the valves in the inner cylinder controlling the gas flow from the bottom of the inner cylinder; and a piston operating between the cylinder heads, arranged to receive a power stroke at each side of the head, and including portions projecting out of the bottom openings of the outer cylinder.

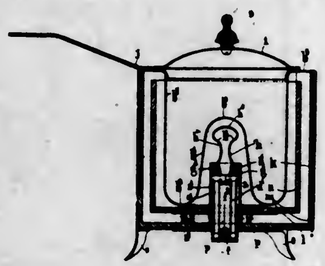


1,349,276. TOBACCO-PIPE. HARRY J. HAYS, Alexandria, Va. Filed Sept. 27, 1919. Serial No. 326,783. 2 Claims. (Cl. 131—12.)

1. In combination with a tobacco pipe, a cover having a reflecting surface on one face thereof; the cover being

adjustably attached to the pipe in such a manner as to enable operator to arrange the reflecting surface so that the light from the burning tobacco will be reflected to the eye of the smoker, substantially as described.

1,349,277. OPTICAL SIGN. EDGAR HÖNIG, Wilmersdorf-Berlin, Germany, assignor to the Firm Optische Signale Gesellschaft mit beschränkter Haftung, Berlin, Germany. Filed Oct. 17, 1914. Serial No. 867,244. 1 Claim. (Cl. 33—1.)

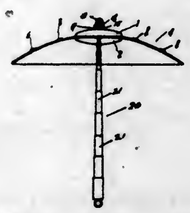


An optical sign comprising a set of stationary signs, each sign representing an open-worked regular geometrical figure of a predetermined size, the said signs being erected behind each other in a permanent predetermined position with relation to each other.

1,349,278. MECHANISM FOR REGULATING THE POINT OF IGNITION IN MAGNETO-ELECTRIC IGNITION APPARATUS. ERNST HURLIMANN, Zuchwil, near Solothurn, Switzerland, assignor to the Firm Scintilla, Solothurn, Switzerland. Filed Mar. 23, 1918. Serial No. 224,386. 2 Claims. (Cl. 123—149.)

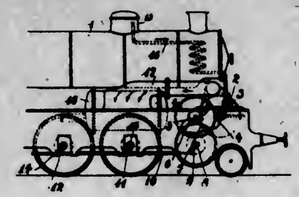
2. In a mechanism for regulating the point of ignition in magneto electric apparatus the combination of parts for effecting the feature as claimed comprising a hand operated interrupter member with a projection formed thereon and a yoke piece for carrying a coil attached thereto, a concentric segmental ring provided with a recess which forms a stop for said projection and a spring in said recess adapted to allow a differential movement between the adjacent parts, substantially as shown and described.

1,349,279. HEATING APPARATUS. ALEXANDER CONSTANTINE IONIDES, Jr., London, England. Filed Mar. 31, 1919. Serial No. 286,451. 7 Claims. (Cl. 158—99.)



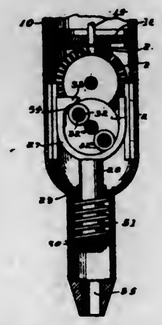
2. In combination in a device for generating heat by substantially complete gaseous combustion, a mixing cavity from which the surrounding air is excluded, separate conduits delivering supplies of two gaseous fluids such as gas and air thereto, an outlet passage from said cavity formed of refractory material, a gradually flared mouthpiece terminating said passage and forming a combustion chamber, a doomed cover to said chamber with apertures to permit the escape of heating medium and a heat transferring partition in close proximity to said mouthpiece.

1,349,280. SEALED LOCK FOR CAR-DOORS. MASSEY P. JENKINS, Newport News, Va. Filed Sept. 6, 1919. Serial No. 322,010. 5 Claims. (Cl. 292—284.)



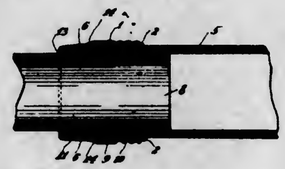
2. A sealed lock comprising a casing, a rectilinearly movable bolt having a longitudinal slot in its side and also having a head on which is an apertured extension, a movable guard member disposed in the casing alongside the bolt and having a tongue arranged in the slot of the bolt, a spring interposed between said guard member and an opposed abutment in the casing, a sealing strip looped through the aperture in the bolt head and having apertures adjacent to its ends, and a lever fulcrumed at an intermediate point of its length on the casing and having on one arm a stud to enter the apertures in the sealing strip and also having on its other arm a projection movable inwardly through an aperture in a wall of the casing when the guard member is clear of said aperture; the joint between the casing and the bolt head being broken, and the spring being socketed in the guard member, and the casing being provided with a socket to receive the lever stud.

1,349,281. UMBRELLA. PERCIVAL FAULKNER KING, Vancouver, British Columbia, Canada. Filed Apr. 28, 1919. Serial No. 293,146. 11 Claims. (Cl. 135—25.)



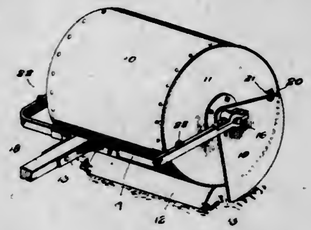
1. In an umbrella, a pole, a cover, and a frame for the cover connected to the pole including a plurality of sectional ribs lying adjacent to one another when closed and foldable to form a substantially box-shaped structure in which the cover is contained, said ribs being adapted when unfolded to be spread in a circumferential direction to equidistant stations.

1,349,282. STEAM-TURBINE-DRIVEN VEHICLE. CONRAD KOMLER, Zurich, Switzerland. Filed Dec. 22, 1919. Serial No. 346,695. 4 Claims. (Cl. 105—38.)



4. A steam turbine driven vehicle comprising a boiler, a turbine supplied from said boiler and a surface condenser into which said turbine discharges, a blind shaft, transmission spur gearing between said turbine and blind shaft and a crank mechanism operated by said blind shaft for actuating the several driving wheels of the vehicle,

1,349,283. MECHANICAL MOVEMENT. SAMUEL W. M. KOLLOCK, Seattle, Wash., assignor, by direct and mesne assignments, of one-fourth to George L. Kollock, one-fourth to Robert P. Martin, and one-fourth to Wilfred Baran, Seattle, Wash. Filed July 12, 1918. Serial No. 244,658. 1 Claim. (Cl. 74—14.)

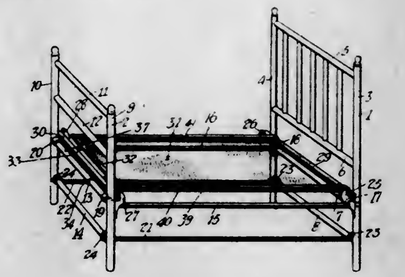


A device of the class described including a reciprocatory spring impelled plunger, a yoke carried by one end thereof and provided with a contact, a rotary tappet carrying member, tappets arranged on said member for successive engagement with the contact of the yoke, a cushion spring associated with the contact of the yoke to relieve the jar incident to the successive engagement of the tappets with said contact, fixed guides, and the arms of said yoke being channeled to receive said guides.

1,349,284. HOSE-COUPLING. JOSEPH P. LAVIGNE, Detroit, Mich., assignor to Detroit Mechanical Engineering Company, Detroit, Mich., a Corporation of Michigan. Filed Mar. 13, 1919. Serial No. 282,347. 4 Claims. (Cl. 285—86.)

1. The combination with a flexible conduit adapted to have a rigid conduit extend therein, of a sheet metal member fixed on the end of said flexible conduit, and provided with a contractible nose portion, and a sheet metal detachable member adapted to be mounted on said fixed member and having a flared portion adapted to contact with and contract the nose portion of said fixed member.

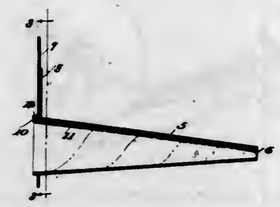
1,349,285. CONCRETE MIXER AND CONVEYER. JOHN J. LYNCH, Wason Flats, Mont. Filed May 10, 1919. Serial No. 296,113. 8 Claims. (Cl. 298—5.)



7. A device of the character described including a mixing drum, trunnions carried by the ends of the drum, means for pulling the drum from place to place including a yoke engaged with said trunnions, lifting members swingingly mounted upon said trunnions and retained thereon by the yoke, and means for connecting said members to the drum for elevating the drum by the rolling action thereof.

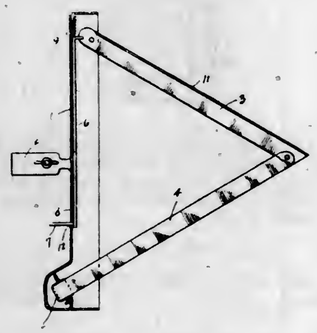
1,349,286. PHONOGRAPH-HORN. FRED C. LYON, Fayette, Ohio. Filed Feb. 2, 1920. Serial No. 355,563. 4 Claims. (Cl. 181—27.)

4. In a phonograph horn, a vertical tubular neck, a horn having connection with the neck, an open ended hollow control member in the neck extending across the connection between the born and neck, and means to operate the control member.



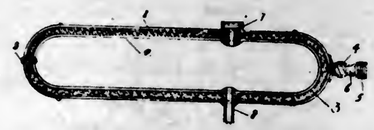
1,349,287. BEDSTEAD. JAMES MCALLAN, Toronto, Ontario, Canada. Filed Dec. 9, 1919. Serial No. 343,526. 1 Claim. (Cl. 5—39.)

The combination with a bedstead, of a cross bar removably carried by the head section of the bedstead, a second cross bar removably carried by the foot section of the bedstead, a fabric mattress attached at one end to



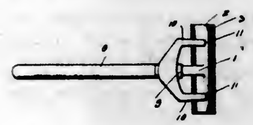
said first-mentioned cross bar, a cross bar carried by the free end of said fabric mattress and adjustably secured to said second mentioned cross bar, and pairs of reinforcing bars extending longitudinally along the top and bottom of the mattress at the side edges thereof, the pairs of bars extending along each side edge of the mattress being disposed on opposite sides of the transverse center of the mattress, so as not to interfere with the stretching thereof.

1,349,288. MEGAPHONE. GEORGE C. MASON, Springfield, Mass., assignor to Frank D. Spotswood, Lexington, Ky. Filed Dec. 9, 1919. Serial No. 343,449. 6 Claims. (Cl. 46—37.)



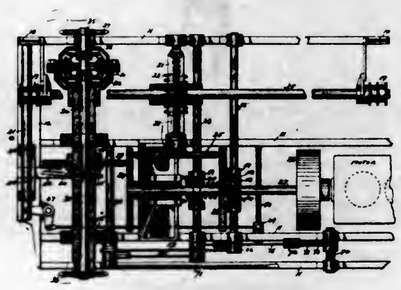
1. A toy including a tubular body portion, a display device mounted on one end thereof and having an opening therein for the reception of said body portion, and means for preventing movement of the display device longitudinally of the body portion.

1,349,289. AUTOMOBILE-SIGNAL. CHARLES MILLAR, Vancouver, British Columbia, Canada. Filed Sept. 26, 1919. Serial No. 326,601. 2 Claims. (Cl. 116—41.)



1. An automobile signal comprising a substantially rectangular casing open on one side and having a slot in the opposite side, said casing being provided with a clamp whereby it may be detachably connected vertically to the side of the automobile windshield, a signaling arm pivotally connected between the walls of said casing adjacent its upper end and arranged to hang normally vertical, said arm being formed out of a thin metal strip turned over on its edge to form a flange adapted to close the open side of the casing, a spring-roller rotatably mounted adjacent the lower end of the casing, a tape member wound on said roller having its free end secured to the free end of said arm and adapted to be unwound by the raising of the same, whereby the arm and the tape when extended form the sides and the casing the base of a triangle, the apex of which points outwardly, and a rod secured at its upper end to the said arm having its lower end bent and extended through the casing slot for the operation of the arm.

1,349,290. WAR-AEROPLANE FUEL-TANK. GEORGE J. MURDOCK, Newark, N. J. Filed Feb. 7, 1917. Serial No. 147,170. 13 Claims. (Cl. 220—88.)



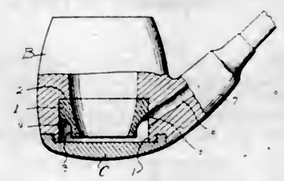
1. A fuel tank of the character described having spaced imperforate walls, and a filler for said space of elastic material compressed between said walls whereby to cause said material to close a puncture caused by the passage of a projectile through the tank.

1,349,291. SAFETY-RAZOR. EDWARD P. NORTON, Oakland, Calif. Filed Jan. 13, 1920. Serial No. 351,230. 3 Claims. (Cl. 30—12.)

1. In combination, inner and outer plates for receiving a blade, said inner plate having openings and a shank, a sleeve slidable on said shank, means carried by said sleeve and adapted to pass through the openings for binding the blade against the outer plate, and means adjustably connected to the shank for forcing the sleeve in the direction of the plates.

1,349,292. LUMBER-TRUCK. WILLIAM S. OVERLIN, Portland, Oreg. Filed Nov. 24, 1919. Serial No. 340,176. 7 Claims. (Cl. 254—166.)

1. Driving and hoisting mechanism for motor trucks, comprising the combination with the motor and the load-engaging shoes, of a transmission shaft operatively connected to the truck wheels, a friction wheel adjustable thereon, a hoisting drum shaft, a friction wheel fast thereon, a motor shaft operatively connected to the motor, two axially movable friction disks thereon, one of said disks being adapted to engage the friction wheel on the drum shaft to rotate the latter in one direction, and the other disk being adapted to either engage the same friction wheel to rotate the drum shaft in the other direction, or to engage the friction wheel on the transmission shaft to drive the wheels, and independent, manually operable means to move said disks into and out of engagement with said wheels.

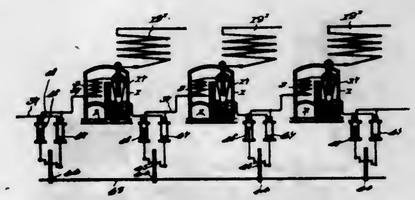


2. Driving and hoisting mechanism for motor trucks, comprising the combination with the motor shaft, the differential driving shaft and the hoisting shaft, of friction wheels on the driving and hoisting shafts, a pair of friction disks on the motor shaft, means to engage one of said disks with the friction wheel on the hoisting shaft or with the wheel on the driving shaft, and means to engage the other disk with the wheel on the hoisting shaft.

3. Driving and hoisting mechanism for motor trucks, comprising the combination with the wheel driving shaft mounted transversely of the frame and the motor shaft mounted longitudinally of the frame, of a drum shaft mounted parallel to the motor shaft and a hoisting shaft mounted parallel to the driving shaft, worm gearing to connect said drum and hoisting shafts, a friction wheel fast on the end of the hoisting shaft, a friction wheel slidable on the driving shaft, a friction disk fast on the end of the motor shaft, means to move the motor shaft to bring said disk into engagement with either the friction wheel on the driving shaft or the friction wheel on the hoisting shaft, a friction disk slidable on the motor shaft and means to move it into engagement with the friction wheel on the hoisting shaft.

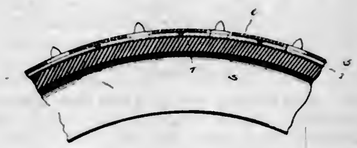
4. In a motor truck of the class described, the combination of parallel motor and hoisting drum shafts, a wheel driving shaft and a hoisting transmission shaft at right angles to said motor and drum shafts, worm gearing connecting said drum and transmission shafts, friction gearing to connect said motor shaft to said driving shaft and to said transmission shaft, and independent means to control said friction gearing according as to whether the load is to be raised or lowered or the truck is to be driven.

5. In a motor truck of the class described, the combination of a motor shaft, a driving shaft, and a hoisting shaft, a friction wheel on the driving shaft, a friction disk on the motor shaft, and a friction wheel on the hoisting shaft, means to bring said disk into engagement with either of said wheels, means to lock it in engagement with the wheel on the driving shaft, a second friction disk on the motor shaft, and means to bring it into engagement with the wheel on the hoisting shaft.



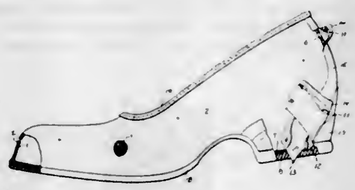
1,349,293. SMOKING-PIPE. RICHARD E. PERKINS, Joplin, Mo., assignor to A. H. Lanyon, Pittsburg, Kans., trustee for The Dealers Manufacturing Company. Filed July 23, 1919. Serial No. 312,761. 2 Claims. (Cl. 131—12.)

1. A pipe of the class described comprising a bowl, a removable cap closing the bottom of the bowl, the side wall of the bowl having its lower portion reduced in thickness from within, and a collar of infusible material snugly fitting within the lower portion of the bowl and spaced from the applied cap, the lower marginal portion of the collar being provided with a peripheral rabbet, and a stem for the bowl having a draft opening in communication with the rabbet of the applied collar.



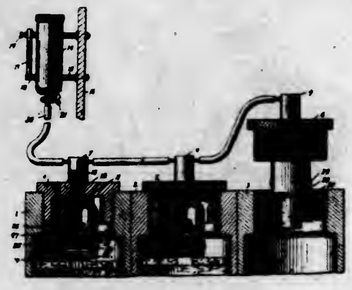
1,349,294. PROCESS AND APPARATUS FOR CONTINUOUSLY CRACKING OILS. WALTER B. PRICE, Los Angeles, Calif., and ERNEST DIETZ, New Orleans, La. Filed July 6, 1916. Serial No. 107,845. 6 Claims. (Cl. 196—25.)

1. The process of converting heavy hydrocarbon oils into oils of lower boiling point, which consists in subjecting a stream of such heavier oils to a succession of conditions in that successive portions of the same material are subjected simultaneously to progressively higher temperatures and pressures in a step by step way, to produce



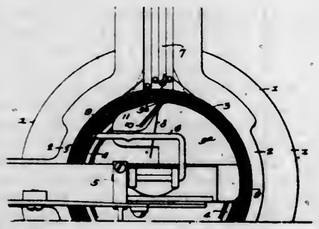
a uniform product, and removing the lighter hydrocarbons constantly as they are formed.

1,349,295. ANTISKID FOR TIRES. WILLIAM REINL, Secaucus, N. J. Filed June 6, 1919. Serial No. 302,275. 1 Claim. (Cl. 152—16.)



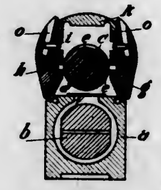
The combination with a tire tread, of a fabric band extending longitudinally of the tire tread midway the sides thereof, metal links cemented longitudinally upon the outer face of the band end to end, the ends of the links being beveled, metal plates secured upon the outer faces of the respective links between the ends thereof, fabric strips cemented longitudinally on the outer faces of the links across the meeting ends thereof from plate to plate, said strips being approximately of the same width as the links and of less thickness than the plates and the tire tread being vulcanized about and over the band, the links and the strips with the faces of the plates flush with the face of the tread, and calks carried by and projecting from the plates and the links.

1,349,296. RUBBER FOOTWEAR AND METHOD OF MANUFACTURING THE SAME. JOSEPH M. RICE, FRANK A. JOSEPH, and ALWYN D. RUPP, New Haven, Conn., assignors to L. Candee & Company, a Corporation of Connecticut. Filed Sept. 27, 1918. Serial No. 255,901. 18 Claims. (Cl. 12—142.)



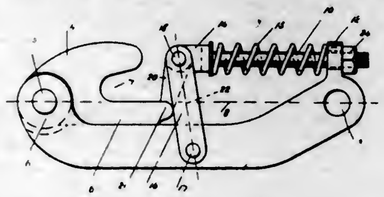
11. The method of manufacturing rubber footwear which consists in applying to a last a composite upper of lining and rubber, butt joining the quarter portions of the upper at the heel end of the last, applying a composite counter to the heel portion, and finishing and vulcanizing the article.

1,349,297. AUTOMATIC WATER-FEED FOR STORAGE BATTERIES. JACK D. SARTAKOFF, New York, N. Y. Filed July 1, 1919. Serial No. 308,057. 6 Claims. (Cl. 204—29.)



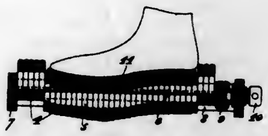
4. A storage battery cell provided with an opening at the top thereof, a closure for said opening, a means for feeding water through said opening, and means, positioned within the cell, for controlling the flow of said water, said controlling means embodying a collapsible float adapted to be collapsed for passage through the opening and thereafter expanded to present maximum floating surface to the liquid in the cell.

1,349,298. YARN-FEED MECHANISM FOR KNITTING-MACHINES. EDWARD SCANLIN and CALVIN REATH, Philadelphia, Pa. Filed Oct. 23, 1919. Serial No. 332,581. 5 Claims. (Cl. 66—12.)



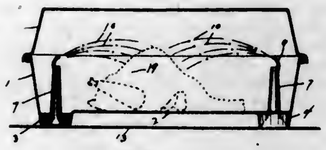
1. In a knitting machine, the combination with a revolving needle cylinder, of mechanism for feeding yarn between the needles, and means independent of said feeding mechanism for further depressing that portion of the yarn which passes between the needles.

1,349,299. HIGH-TENSION DISTRIBUTER FOR MAGNETO-ELECTRIC IGNITION-MACHINES. JACQUES SCHNEIDER, Solothurn, ERNST HÜRLIMANN, Zuchwil, and FREDERIC BILLON, Solothurn, Switzerland, assignors to The Firm Scintilla, Solothurn, Switzerland. Filed Aug. 22, 1919. Serial No. 319,234. 6 Claims. (Cl. 123—149.)



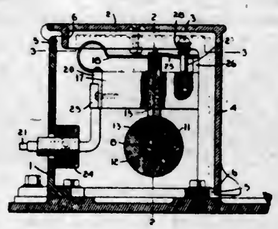
2. In a high tension distributer in magneto-electric ignition machines, in which the distributer rotates vertically above and parallel to the axis of rotation of the rotor of the machine in the same casing of the machine, the combination with the stationary current-collecting brushes, of two removable insulating cheeks in which said brushes are embedded, said insulating cheeks closing both sides of the distributer space, and also containing the insertion apertures and connecting clips or terminals for the sparking plug leads, and an insulating wall separating the distributer space from the rotor of the machine.

1,349,300. COUPLING DEVICE. SIGVART SILNES, Halma, Minn. Filed Jan. 29, 1920. Serial No. 354,760. 2 Claims. (Cl. 213—67.)



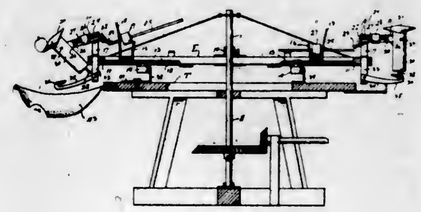
1. An automatically releasable coupling, comprising a frame, a hook pivoted to the front end portion of the frame and provided with a rearwardly projecting stem, a spring-controlled bolt slidable longitudinally in the rear end portion of the frame, a radius device pivoted to the front end portion of the bolt and to the frame, and an arm pivoted to the front end portion of the bolt and articulated with the rear end portion of the said stem.

1,349,301. PAD FOR SOLE-LAYING MACHINES. MARIUS METHILTUS SÖRENSEN, Valleröd, Denmark. Filed Apr. 29, 1919. Serial No. 293,510. 2 Claims. (Cl. 12—38.)



1. A pad for sole laying machines comprising a frame, a series of longitudinal and transverse rows of axially movable members mounted in said frame, and means for locking the members against axial movement in either direction after they have been placed in adjusted positions.

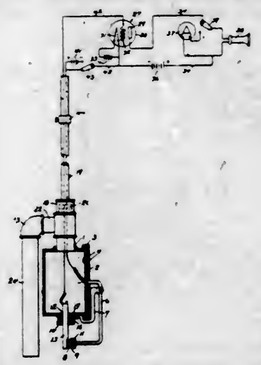
1,349,302. ROASTING-PAN. CHARLES SPITZ, New York, N. Y. Filed June 2, 1919. Serial No. 301,135. 8 Claims. (Cl. 53—6.)



6. A self-basting roasting pan having gravy wells disposed in the corners thereof a funnel shaped basting device provided with a smooth supporting edge for standing in each well and comprising a low flat cone shaped bowl with a short straight stem rising from the apex thereof, a spreader attached to the upper end of the stem and adapted to deflect the liquid ejected from the stem and cause the said liquid to separate into small globules and impinge upon the contents of the pan.

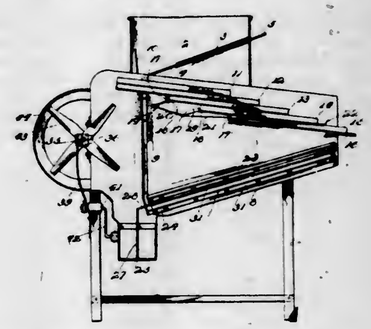
1,349,303. CURRENT-REGULATOR FOR ELECTRIC WELDING-MACHINES. FREDERICK S. STEARNS, Swampscott, Mass., assignor to Francis G. Gale, Waterville, Quebec, Canada. Filed Nov. 4, 1916, Serial No. 129,428. Renewed Nov. 28, 1919. Serial No. 341,267. 2 Claims. (Cl. 219—4.)

1. In a device of the class described, the combination with a casing, of a rotatable shaft journaled therein, a commutator fast on the shaft but insulated therefrom and having at one end a section of insulating material, the rest of the commutator being made of material having good conductivity, two brushes engaging said commutator, one of said brushes having engagement with the section of insulating material, two feed wires, resilient terminals connected to said feed wires and bearing against said brushes, and a spring acting against each terminal and yieldingly holding the corresponding brush against the commutator.



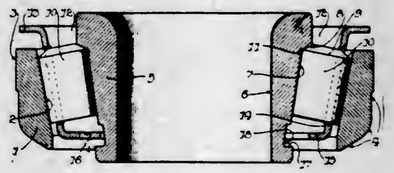
1,349,304. MECHANISM FOR ASSORTING FRUIT BY WEIGHT. BENJAMIN F. TUSSING, Fruitland, Idaho. Filed September 10, 1919. Serial No. 322,847. 17 Claims. (Cl. 130—32.)

1. In a weighing mechanism, a scale pan mounted for vertical movement and for limited tilting movement to discharge its contents and urged to a vertical position when the contents have been discharged, and means preventing tilting movement until the pan has descended a predetermined distance from its normal position.



1,349,305. SIGNALING APPARATUS. WILLIAM L. WALKER, New York, N. Y. Filed Apr. 11, 1917. Serial No. 161,179. 9 Claims. (Cl. 177—352.)

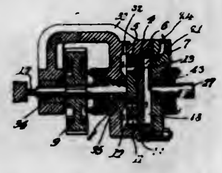
1. Signaling apparatus comprising wave responsive means, and a pair of electrodes of dissimilar materials adapted to produce a difference of potential therebetween when immersed in a galvanic fluid, one of the electrodes being connected to the wave responsive means so as to



be moved relatively to the other electrode by waves impinging upon the wave responsive means.

1,349,306. SEED-GRADER. EVERETT A. WATKINS, Wichita, Kans. Filed June 12, 1919. Serial No. 303,604. 2 Claims. (Cl. 130—15.)

1. In a machine for the purpose set forth, the combination of a supporting frame, a shoe mounted within the frame for gyratory movement, a plurality of screens secured within the shoe, means for forcing an air blast through the shoe and the screens, dampers at the receiving ends of the screens, and means operable from the discharge ends of the screens to adjust said dampers and control the flow of air to the screens.



1,349,307. ROLLER-BEARING. CHARLES A. WINN, Chicago, Ill., assignor to Chicago Bearings Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 22, 1917. Serial No. 197,806. 13 Claims. (Cl. 64—62.)

4. In combination, a tapered bearing, tapered rollers for the bearing, an inner peripheral shoulder adjacent

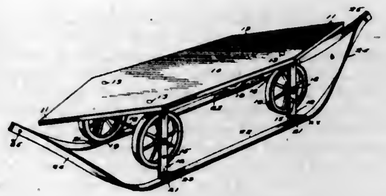
the smaller end of the bearing, and a cage carried on the rollers having a plurality of integral fingers therewith adapted to be formed to engage an inner edge of said shoulder for holding the rollers on the bearing.

1,349,308. ADJUSTABLE DISTRIBUTER FOR INTERNAL-COMBUSTION ENGINES. WILLARD JAY WOODCOCK, Brooklyn, N. Y. Filed Nov. 13, 1917. Serial No. 201,815. 3 Claims. (Cl. 60—16.)

1. In an internal combustion engine, a distributer disk or valve having a port or ports, and in contact with an adjustable disk valve or member having a port or ports with a connecting groove or grooves to provide a free passage to the port or ports in a stationary member with which it is in contact, and which has outlet openings, the said disk-valves or members being incased and provided with an inlet opening and means provided to keep the surfaces in contact.

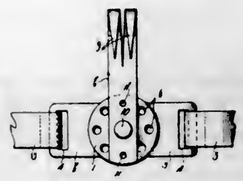
1,349,309. HATPIN-POINT PROTECTOR. HERBERT WOOLHOUSE, deceased, Norwood, R. I., by Walter Woolhouse, administrator, Norwood, R. I. Filed Nov. 28, 1919. Serial No. 341,288. 2 Claims. (Cl. 24—155.)

1. In a hat pin point protector, a point receiving member including a stem having a bore, said receiving member having a bore enlarged relative to the bore of the stem, split bushing secured in the enlarged bore and having a sleeve extension, the bore of which alines with the first named bore, said sleeve extension having a notch communicating with said bore, a spring actuated clamping member having a stationary jaw carried by the sleeve extension and a movable jaw provided with an inwardly extending bifurcated end to move into the notch, a shell attached to the receiving member and including a plurality of bendable sections and a press button operable through the shell and connected to the movable jaw for disengaging it from the notch.



1,349,310. RAIL-TIE. JOHN F. ALTAFFER, Aline, Okla. Filed Apr. 20, 1920. Serial No. 375,235. 1 Claim. (Cl. 238—339.)

A rail tie comprising a hollow body having a top wall provided with a longitudinal slot, a pair of rail engaging members secured to said body adjacent said slot, and a pair of arms having their adjacent ends provided with an interlocking tongue and groove connection, the combined length of said arms being greater than the length of said slot whereby said arms have their inner portions moved downwardly into engagement with the bottom of

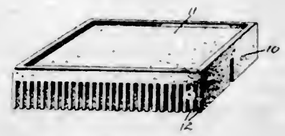


a tie, the outer portions of the same will be securely engaged with the rails, the outer portions of said arms being formed with sockets having their upper and lower sides inclined downwardly so as to firmly engage the bases of the rails and the under side of the top wall of the body.

1,349,311. COMBINED DOUBLE-ENDED SLED AND WAGON. HENRY ASMAN, Evansville, Ind. Filed Mar. 1, 1920. Serial No. 362,332. 3 Claims. (Cl. 280—9.)

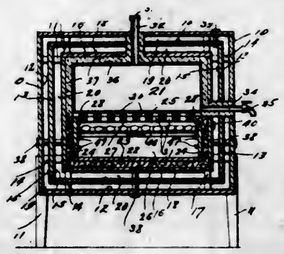
2. In a vehicle of the type described, a body portion, brackets secured to said body portion adjacent the ends thereof and provided with depending resilient arms having alined pairs of openings formed therein, axles interchangeably fitting said openings, runners secured to the lower ends of said arms, wheels rotatably mounted upon said axles, the diameter of said wheels being such that the wheels project below the runners for contact with the ground when the axles are arranged in the lowermost pair of openings and are disposed above said runners and free from contact with the ground when the axles are arranged in the uppermost pairs of openings.

1,349,312. LIGHT-HOLDER. ANDREW J. BARRETT, Britannia Beach, British Columbia, Canada, assignor of one-half to Gust Bergquist, Seattle, Wash. Filed May 26, 1917. Serial No. 171,300. Renewed Nov. 3, 1919. Serial No. 335,483. 3 Claims. (Cl. 248—30.)



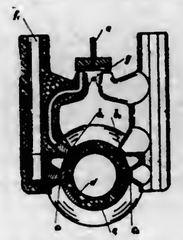
1. A light holder, comprising an elongated member, a strap attached to opposite ends of the member and adapted to engage around the light, a suspending device pivoted centrally to the said member, and coöperating depressions and projections between the said member and suspending device to hold them in a given relative position.

1,349,313. ELEVATOR SAFETY DEVICE. ANDREW J. BARRETT, Britannia Beach, British Columbia, Canada, assignor of one-half to Gust Bergquist, Seattle, Wash. Filed Aug. 23, 1917, Serial No. 187,910. Renewed Nov. 3, 1919. Serial No. 335,484. 1 Claim. (Cl. 187—48.)



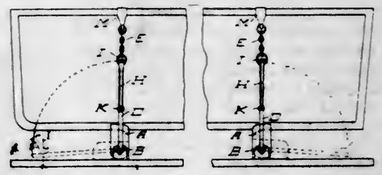
A device of the class described comprising a plate, adapted to be secured to the starting mechanism, said plate having side flanges, a pair of lugs on each flange, leaves hinged to the said plate, springs for normally holding said leaves in raised position and in engagement with the lugs and an electrically operated bolt adapted to engage with said leaves.

1,349,314. DRIP-CATCHER FOR REFRIGERATORS. AUGUST BUESING BATES, Washington, D. C. Filed Mar. 29, 1919. Serial No. 286,032. 5 Claims. (Cl. 299—20.)



1. A drip catcher for refrigerators and the like, having a shallow body adapted to be positioned beneath a refrigerator, said body being formed of a porous material and provided with a plurality of extending fins whereby to increase its radiation for evaporating purposes.

1,349,315. INCUBATOR. ALFRED E. BERGSTROM, Savage, Mont. Filed June 17, 1918. Serial No. 240,457. 1 Claim. (Cl. 119—38.)

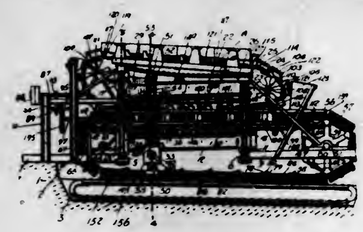


An incubator comprising an outer casing and an inner casing, and having an intermediate casing separated from the inner and outer casings, by air spaces, a perforated partition forming an upper and a lower chamber on the interior of the inner casing, and equipped with a hot water tank filling the said upper chamber, an egg tray, removably mounted and adjustably supported within the lower chamber, a slidable perforated board in contact with the said partition and adapted to be operated from the exterior of the outer casing whereby the said perforations in the partition may be opened and closed to regulate the heat directed into the egg tray, tubes extending into the lower chamber for admitting air thereto, a tube establishing communication between the said chamber and one of the air spaces surrounding the same, and an outlet vent tube leading from said air space through the top of the said casing.

1,349,316. HIGH-VOLTAGE DISTRIBUTER FOR ELECTRIC IGNITION APPARATUS. FREDERIC BILLON, Solothurn, Switzerland. Filed Mar. 14, 1918. Serial No. 222,383. 2 Claims. (Cl. 200—26.)

2. In a high voltage distributer for electric ignition apparatus for internal combustion engines having cylinders arranged in V-fashion the combination of a distributer ring of relatively small diameter, a relatively short conducting segment embedded therein, a brush holder including two sections arranged on opposite sides of the ring and provided with passageways, a pair of current-collecting brushes arranged in the holder sections and bearing on said distributer ring for coacting with the segment, separate current-supplying brushes in the holder sections for each of said current-collecting brushes and bearing on said ring for coacting with the segment and the supplying brushes, the collecting brushes being arranged as near as possible to the corresponding supplying brushes, conducting wires mounted in the passageways in the holder sections and leading to the brushes and a high voltage terminal connected with the current supplying conducting wires.

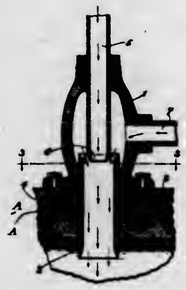
1,349,317. FASTENING DEVICE FOR LIFEBOATS. CARL VOIGT BODOM, Tampico, Mexico. Filed May 4, 1920. Serial No. 378,747. 1 Claim. (Cl. 9—22.)



In a fastening device for life boats, stools for gripping the keel of the boat, rotatable cross shafts on which said stools are mounted, radial arms at the inner ends of said shafts, hooks for gripping the gun-wale of the boat, and means comprising a pelican-hook for connecting the aforementioned hooks with the free ends of said arms when the same are in a vertical position.

1,349,318. PRESS. WILLIAM WATSON CAMP, Stratford, Ontario, Canada. Filed Jan. 15, 1920. Serial No. 351,559. 23 Claims. (Cl. 25—99.)

1. A press comprising a bed, a pressure beam swingably supported at one end above the bed, means for feeding a layer of pulverized material between the bed and the pressure beam, and means for transmitting the pressure of the beam on to the layer of pulverized material to compress it into an even compact sheet.

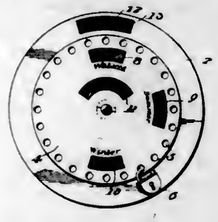


24. In a press, an endless conveyer comprising a series of trough like sections hingedly connected together, a chain of pressure members supported to revolve in unison with the conveyer and in a longitudinally converging direction thereof so as to bear against the upper face of the material to be pressed in each section, means for exerting a series of repeated pressures to gradually force the

pressure members and conveyer sections together as they travel in a converging direction, and wedging means car-

ried by the opposing faces of the pressure sections and conveyer sections and arranged alternately so as to produce a lateral pressure therebetween.

1,349,319. BURNER. JOHN O. CARREY, St. Louis, Mo., assignor to Carrey Rotary Engine Company, St. Louis, Mo., a Corporation of Missouri. Filed Apr. 26, 1919. Serial No. 292,934. 5 Claims. (Cl. 158—100.)

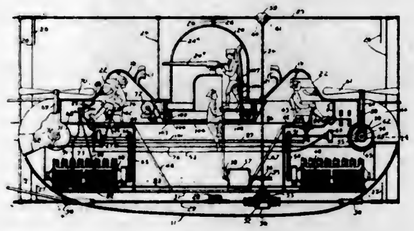


1. The combination with a chamber having an exteriorly recessed opening through the wall thereof, of a tubular burner nozzle extending through the opening and projecting on both sides of the chamber wall, a flange on said nozzle, a clamp device seated in the recess and engaging said flange for supporting said nozzle, a casing connected with the wall of the chamber and inclosing the upper end of said burner nozzle, an air passage entering said casing and overlapping the inclosed end of the burner nozzle, and a fuel supply passage entering said casing and arranged so that the suction of the air escaping from said air passage will withdraw fuel from said fuel passage and force the mixture into said chamber.

1,349,320. THREAD-CUTTER. HELEN SANTORINAOS CARSON, Stamford, Conn. Filed Mar. 21, 1919. Serial No. 284,208. 4 Claims. (Cl. 30—14.)

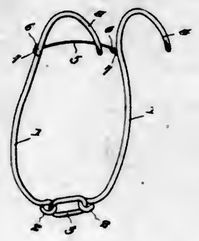
1. An attachable spring slip thread cutter arranged to be fitted over the edge of a thimble, including lateral thread cutting means forming a part of the clip attachment, and having protected inner cutting edges lying very close to the body of the thimble to offer no obstruction in using the thimble.

1,349,321. INDICATOR. JAMES WILLIAM CARTER, Jr., Abilene, Tex. Filed May 29, 1919. Serial No. 300,523. 1 Claim. (Cl. 40—70.)



An indicator comprising a pair of disks held together axially and rotatably with respect to each other, each disk having an annular series of openings near its periphery, the openings being adapted to register to receive a lock for locking the disks together, the rearmost disk having near its periphery and inside the annular openings a series of consecutively arranged numerals indicating the days of the month, the foremost disk having a series of display openings for permitting a certain predetermined sequence of numbers to be visible simultaneously, and having other display openings, the rearmost disk having legends to be displayed through said other display openings.

1,349,322. PROCESS OF TREATING OXID ORES OF MANGANESE. GALEN HOWELL CLEVENGER, Colorado Springs, Colo., and MARTINUS HENDRICUS CARON, Weltevreden, Java, Dutch East Indies, assignors to Research Corporation, New York, N. Y., a Corporation of New York. Filed Sept. 23, 1918. Serial No. 255,388. 6 Claims. (Cl. 75—17.)

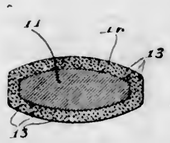


1. Process of treating oxid ores of manganese, comprising effecting reduction thereof to a state lower than the manganic oxid state, and then concentrating the manganese content by magnetic separation.

1,349,323. FLYING-CRUISER. NATHAN G. COX, Livengood, Alaska. Filed Nov. 19, 1918. Serial No. 263,212. 4 Claims. (Cl. 244—25.)

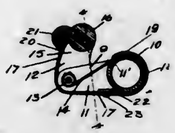
1. A device of the character described, comprising a hull, wings mounted thereupon, casings carried by said hull and each having the proximate form of a cylinder, a rocking cylinder mounted within each casing and adapted to turn to a limited extent relatively therein, a tubular bearing carried by said cylinder and extending radially therefrom, a revoluble shaft extending through said tubular bearing, a propeller mounted upon the outer end of said revoluble shaft and driven thereby, gearing located within said rocking cylinder and connected with said shaft for the purpose of turning the same, and mechanism controllable at will by the operator for actuating said gearing.

1,349,324. ANIMAL-POKE. CHARLES A. CUTLER, Adrian, Mich. Filed May 9, 1919. Serial No. 295,916. 1 Claim. (Cl. 119—138.)



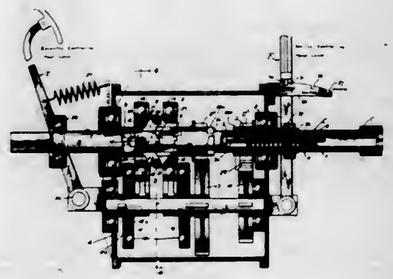
An animal poke comprising rigid side members shaped to conform to the neck of an animal and having their lower portions bent inwardly to extend under the animal's neck and provided with horizontally disposed eyes at their extremities, the upper ends of said side members being formed into forwardly projecting arms, a single rigid substantially oval link loosely connecting said eyes and disposed at substantially right angles thereto, staples on the rear faces of the side members at the bases of the forwardly projecting arms, and a substantially straight connecting member formed of relatively light material having its ends provided with hooks loosely fitting within said staples and terminating thereat, said hooks being constantly out of contact with the animal's neck.

1,349,325. CLOTHESLINE-PROP. CHARLES E. DAVIS, Battle Creek, Mich. Filed Apr. 3, 1920. Serial No. 371,042. 2 Claims. (Cl. 68—12.)



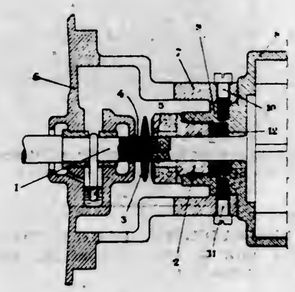
1. In a device of the class set forth, the combination with a pole or prop, of a clothesline-holding device comprising a shank seated in said pole and having oppositely disposed diverging side portions extending upwardly in substantially parallel arrangement, said side portions swerving rearwardly, thence downwardly and forwardly between said side portions, thence upwardly forwardly of said side portions and forming loops, the upper ends of said loops meeting in a curve diverging outwardly from a plane of said side portions at or near the top of said loops and forming a lip or tongue between which and said side portions a clasp is formed to engage a clothesline.

1,349,326. POISON-TABLET. CHARLES T. DAVIS, New York, N. Y. Filed Jan. 20, 1920. Serial No. 352,872. 7 Claims. (Cl. 167—9.)



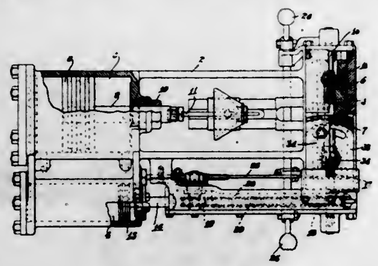
1. A poison tablet carrying a gritty substance adapted to act as a warning of the nature of the tablet.

1,349,327. SPRING DEVICE. DANIEL B. DAVIS, Marion, Ind. Filed Nov. 3, 1919. Serial No. 335,408. 3 Claims. (Cl. 200—19.)



1. In combination with the rotary brush member of a timer, and the supporting arms thereof, a brush carrying arm including an arm having a curved section embracing the supporting arms of the rotary brush member, said brush carrying arm having a contact point formed on one of the side faces thereof, and means carried by the brush carrying arm and engaging the supporting arms of the rotary brush, for preventing lateral movement of the brush carrying member with relation to the arms.

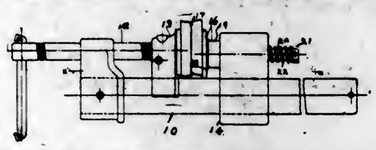
1,349,328. POWER-TRANSMISSION MECHANISM. JOSEPH DE MARTINO, Chicago, Ill., assignor to Mechanical Improvement Co., Chicago, Ill., a Corporation of Illinois. Filed July 16, 1918. Serial No. 245,186. 9 Claims. (Cl. 74—53.)



1. The combination of a longitudinally shiftable driving-shaft, variable-throw transmission mechanism, said mechanism comprising an eccentric adjustable by and actuated through the medium of said driving-shaft, and a pair of counter-shafts equipped with wheels for effecting rotation thereof and with oscillating members for effecting rotation of said wheels, connections between said eccentric and said oscillating members for positively actuating the oscillating members in both directions, a driven shaft and actuating means therefor actuated by said counter-shafts, and means for regulating the position of said driving-shaft.

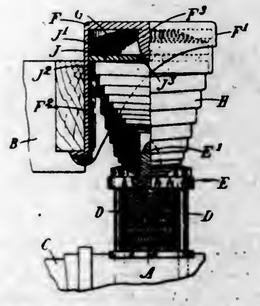
1,349,329. COUPLING FOR COUPLING PUMPS TO ELECTRIC MOTORS. ARTHUR DISPOT, Paris, France. Filed Mar. 3, 1919. Serial No. 280,264. 1 Claim. (Cl. 64—107.)

In a coupling for the direct coupling together of a pump and an electric motor the combination with the motor shaft and the driven pump shaft located substantially in alinement with each other with a short distance left between the adjacent ends of the two shafts, of a disk of relatively large diameter as compared with the diameter of the shafts located between said two shaft ends with its plane approximately at right angles to the axes of said two shafts, two tenons formed on opposite faces of said disk, extending across said axes and disposed each at right angles to the other, and corresponding slots formed in the said adjacent ends of said two shafts to receive said tenons, whereby the rotational driving power is transmitted from said motor shaft to said pump shaft, and any leakage of liquid that may have leaked through the pump shaft stuffing box will be caught and deflected by said disk and thereby prevented from reaching the motor.



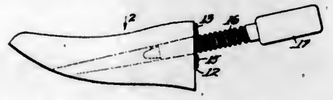
1,349,330. FLUID-OPERATED VISE. JESSE DITSON, Littleton, Colo., assignor, by mesne assignments, to Ingersoll-Rand Company, a Corporation of New Jersey. Filed July 22, 1919. Serial No. 312,570. 7 Claims. (Cl. 76—5.)

1. In a pinning out machine for drill steels, a pair of movable vise jaw members, a left and right screw threaded member for moving said jaw members, a gear on the end of said threaded member and piston and chain mechanism for rotating said threaded member.



1,349,331. CLAMP. JOHN P. DOLAN, Hartford, Conn., assignor of two-thirds to Joseph M. Motto, Hartford, Conn. Filed Aug. 20, 1919. Serial No. 318,650. 3 Claims. (Cl. 144—303.)

1. A clamp comprising a bar having a screw clamping member at one end and an adjustable clamping member for being positioned at different positions along the said bar, the said adjustable clamping member comprising a body slidably engaged with the said bar, a shoe for contacting with the work that is slidably engaged with the said body, and a dog positioned between the said shoe and bar and

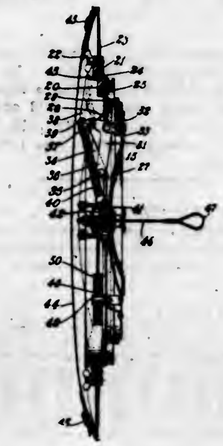


housed in the said body, and the said shoe having an inclined driving face that coöperates with the said dog for driving the dog against the said bar.

1,349,332. VEHICLE SPRING SUSPENSION. CHARLES KEARNS EDWARDS, Chingford, London, England. Filed May 24, 1920. Serial No. 383,021. 2 Claims. (Cl. 267—60.)

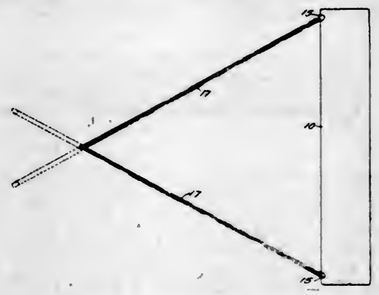
1. A vehicle spring-suspension comprising the combination with a main leaf-spring, of two auxiliary volute springs superposed thereon, one of which auxiliary springs is of such strength relatively to the other that it will remain virtually uncompressed until the load is such as to completely compress the lighter volute spring, and is made of a tapered strip of steel tapered edgewise to a knife-edge at both ends whereof one is narrower than the other, which strip increases in width for about three-quarters of its length from the narrower end, the degree of taper in width from the narrower end up to a point situated approximately one-eighth of the length of the strip away therefrom being greater than the degree of taper from said point to the point where the width is a maximum, substantially as and for the purpose set forth.

1,349,333. SHOE-STRETCHER. ANSHELM BURTON ELMSTROM, Worcester, Mass., assignor to Robert M. Elmstrom, doing business under the name of Standard Manufacturing Company, Worcester, Mass. Filed Dec. 4, 1918. Serial No. 265,274. 3 Claims. (Cl. 12—132.)



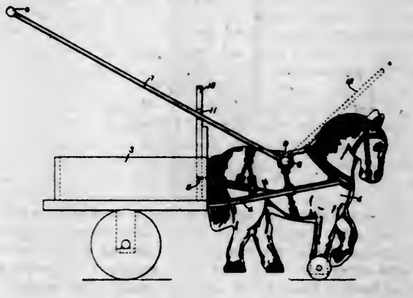
1. A shoe stretcher comprising two wooden blocks connected by a spring plate at their rear ends, said blocks being threaded from their rear ends forwardly, the screw threads being formed directly in the wood of the adjacent portions of said blocks and decreasing in depth toward the front ends of said blocks, and a wood screw of uniform pitch diameter throughout and fitting said threads at their rear full size portion, said screw being effective to separate said blocks at their front ends as said screw is advanced along said threads.

1,349,334. PROCESS OF PRODUCING WHITE LEAD. EDWIN EUSTON, Scranton, Pa. Filed Mar. 22, 1919. Serial No. 284,371. 2 Claims. (Cl. 134—75.)



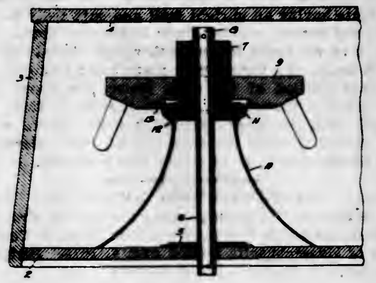
1. The process of producing white lead consisting in treating approximately neutral lead acetate solution with carbon dioxid gas, and introducing thereinto basic lead acetate solution in amount and at a rate sufficient to maintain the said approximately neutral condition of the said solution, and then treating the resultant solution and precipitate with carbon dioxid gas until a part of the precipitate of basic lead carbonate is converted into normal lead carbonate, thus yielding a mixture in proportions to form a product containing 11.3 per cent. to 14.3 per cent. of carbon dioxid.

1,349,335. BALLOON-VALVE. JOHN R. GAMMETER, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Oct. 4, 1918. Serial No. 256,887. 5 Claims. (Cl. 244—3.)



1. The combination, with a fluid-pressure receptacle, of an inwardly-opening disk-type valve controlling an outlet from said receptacle, an annular seat for said valve, a flexible-lipped, circumferential edge member on the valve, extending substantially radially outward therefrom, for sealing the valve edge against said seat and adapted to remain in sealed engagement with the seat during a substantial part of the movement of the valve body inwardly away from said seat, a spring, a lever connection between said spring and valve for permitting a large movement of the valve for a small variation of spring tension, and mechanical means for forcing said valve open against the spring and the fluid pressure.

1,349,336. AERONAUTICAL APPARATUS. CHARLES C. HADDOCK, Beverly, Mass. Filed Feb. 9, 1918. Serial No. 216,191. 3 Claims. (Cl. 33—46.)

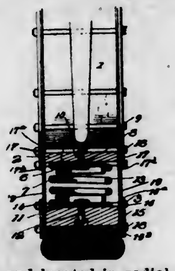


1. An aeronautical apparatus comprising an aeroplane, two sources of illumination mounted upon the aeroplane and each arranged to project a beam of light downward and toward the beam of the other in a manner to cause the two converging beams to intersect at a given point below the aeroplane.

1,349,337. TOY. FRANK HARRY HALL, Yonkers, N. Y. Filed Nov. 4, 1918. Serial No. 260,987. 4 Claims. (Cl. 46—22.)

1. A toy horse and cart comprising, in combination, a horse and cart rigidly secured together, rigid reins pivotally connected to the horse and means for rigidly but detachably securing said reins to said cart to prevent pivotal movement thereof.

1,349,338. WASHING-MACHINE. HERMAN C. HIRSCHY, Minneapolis, Minn., assignor to The Hirschy Company, Minneapolis, Minn., a Corporation of Minnesota. Filed May 18, 1918, Serial No. 235,370. Renewed July 21, 1919. Serial No. 312,321. 6 Claims. (Cl. 259—101.)

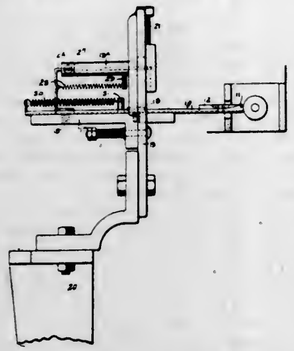


1. The combination, with a washing machine tub and its dolly and a drive shaft for said dolly projecting upwardly through the bottom of the tub, of a guard interposed between said dolly and the bottom of the tub and having a head at its upper end provided with a surface for directing the clothes outwardly and downwardly away from the bearing between the dolly and guard, the walls of said guard flaring outwardly and downwardly from said head to direct the clothes toward the walls of the tub and into the path of the dolly arms.

1,349,339. SPRING-WHEEL. HENRY M. HORNE, Sulphur Springs, Tex., assignor of one-half to W. J. Sudderth, Sulphur Springs, Tex. Filed Jan. 18, 1919, Serial No. 271,856. Renewed July 3, 1920. Serial No. 394,013. 2 Claims. (Cl. 152—8.)

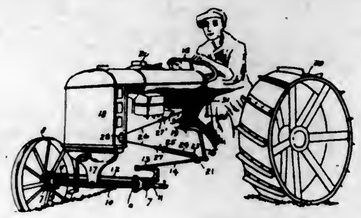
2. A spring wheel comprising inner and outer spaced rims, the opposing surfaces of which are transversely flat, springs interposed between and supported on the flat surfaces, means for anchoring the opposite ends of the springs, flanges on the opposite sides of the inner and outer rims, said flanges extending beyond the edges of the rims, flexible closures interposed between the rims and

the flanges, bolts connecting the extended portions of the opposite flanges on the sides of the inner rim and located in radial planes between the springs and engaging the inner and outer surfaces of said rim, bolts connecting the extended portions of the flanges on the sides



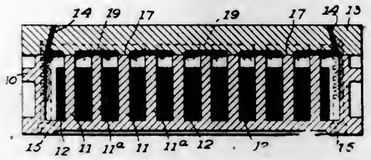
of the outer rim and located in radial planes between the springs and engaging the inner and outer surfaces of said outer rim, and a resilient tire on the outer periphery of the outer rim, said tire being retained in position by the extended flanges and the bolts connecting same.

1,349,340. STAKING DEVICE FOR ROAD-RAILS. MARK S. HITCHKISS, Binghamton, N. Y. Filed Jan. 27, 1920. Serial No. 354,351. 8 Claims. (Cl. 25—118.)



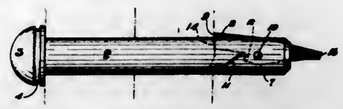
7. A form for concrete and similar work comprising a main plate having an upright wall and outwardly projecting slotted flanges, slotted lower and upper brace plates disposed at an angle to each other and hinged together at said angle, the lower brace plate being engaged with the lower portion of the main frame, the upper brace plate passing through the slot in the upper flange and engaged with the inner and outer faces thereof and a stake passed through the slots in both brace plates and lower flange adapted to be driven into the earth.

1,349,341. WEFT-DETECTING MECHANISM. ALLAN S. HUTCHINS, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Aug. 4, 1919. Serial No. 315,153. 8 Claims. (Cl. 139—85.)



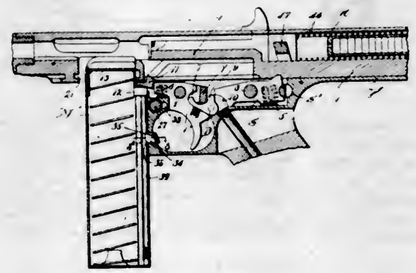
1. In a loom, a weft detector having a plurality of weft-engaging faces, means to hold any selected face in operative position, and weft-replenishing mechanism controlled by said detector.

1,349,342. TRACTOR-STEERING CONTROL FOR PLOWING. WALTER A. JACKSON, Laurel, Ind. Filed Sept. 2, 1919. Serial No. 321,199. 5 Claims. (Cl. 280—87.)



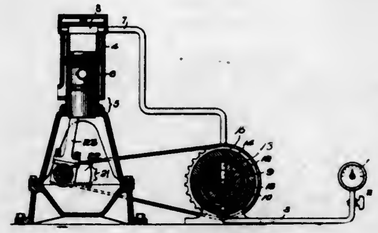
1. The combination with a tractor having steering wheels one of which tracks the furrow in plowing and means to steer the wheels comprising a stub-axle arm, a steering arm and a link connecting said arms, of means attached to the link to influence the said furrow wheel out of a straight forward direction and toward the land side of the furrow.

1,349,343. MAGNETIC CHUCK. JOHN L. MORAN, Worcester, Mass., assignor to Heald Machine Company, a Corporation of Massachusetts. Filed Nov. 11, 1919. Serial No. 337,137. 4 Claims. (Cl. 175—367.)



1. A magnetic chuck, having, in combination a base having a plurality of magnet cores thereon, coils for said cores, and a face plate comprising an outer frame having an opening, a plurality of pole pieces forming a unitary structure with bars connecting the lower portions thereof and engaging certain of said cores of one polarity, and a plurality of separate pole pieces mounted alternately with the first mentioned pole pieces and above said bars and having lugs projecting downwardly between said bars to engage certain other of said cores of the opposite polarity, all of said pole pieces being rigidly held in spaced relation in the opening in said frame.

1,349,344. SECURING-BOLT. ARTHUR M. O'NEILL, Pittsburgh, Pa., assignor to John D. Brown, Pittsburgh, Pa. Filed Jan. 14, 1919. Serial No. 271,031. 1 Claim. (Cl. 85—3.)



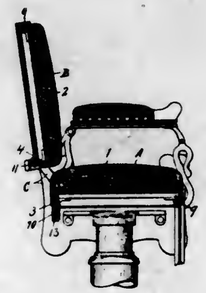
A securing bolt having a head at one end and provided at its other end with a longitudinal central slot extending centrally through the major portion of the bolt with an outer opening at one side, a closing wall at the other side and an outwardly sloping inner bearing end, a locking dog pivotally mounted at its middle portion in said slot between the sides of the bolt provided at its inner end with a sloping abutment terminal adapted to be depressed flush with the bolt periphery and against said sloping bearing and at its outer end with a tapered terminal extending beyond the end of the bolt and lengthwise thereof and a spring mounted in the slot between the locking dog and the bolt adapted to normally extend the inner end of the locking dog outwardly beyond the bolt.

1,349,345. FIREARM. OSCAR V. PAYNE, Cleveland, Ohio, assignor to Auto-Ordnance Corporation, New York, N. Y., a Corporation of New York. Filed May 15, 1919. Serial No. 297,282. 38 Claims. (Cl. 42—70.)

1. A firearm comprising an automatic breech closure movable to and from the firing chamber, means for supporting a magazine on the firearm in such a manner that cartridges may be automatically fed to the firing chamber, means including a sear for retaining the breech closure in retracted position, means including a trigger for disengaging said sear from the breech closure, and means for automatically rendering said trigger means inoperative to disengage the sear from the breech closure after the last cartridge has been fired, whereby the breech closure is automatically retained in retracted position after the last cartridge is fired.

1,349,346. ENGINE-INDICATOR. DELMAR G. ROOS, Bridgeport, Conn., assignor, by mesne assignments, to The Locomobile Company, Bridgeport, Conn., a Corporation of Delaware. Filed July 17, 1916. Serial No. 109,625. 9 Claims. (Cl. 73—111.)

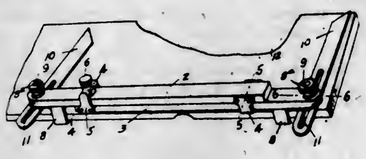
1. In an indicator for pressure fluid engines, the combination of pressure-responsive means, and engine-driven means including a valve having a cycle of movement corresponding in duration to the piston's power stroke and means through which said valve establishes communication between the engine's cylinder and said pressure-responsive means during a predetermined portion only of the piston's power stroke and during a predetermined portion only of said cycle of movement of said valve.



2. In an indicator for pressure fluid engines, the combination of pressure-responsive means, engine-driven means including a valve having a cycle of movement corresponding in duration to the piston's power stroke, means to cause said valve to establish communication between the engine's cylinder and said pressure-responsive means during a predetermined portion only of the piston's power stroke, and during a predetermined portion only of said cycle of movement of said valve, and means at will to determine the particular point in said valve's cycle and in such power stroke at which such communication will be established.

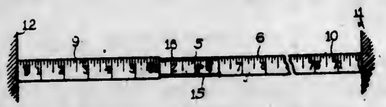
3. In an indicator for pressure fluid engines, the combination of pressure-responsive means, and valve means including two coöperating valve elements one of which is driven continuously during the power stroke in definitely timed relation with the engine and the other of which is adjustable with reference to the travel of the first, said valve means having provision to establish communication between the engine's cylinder and said pressure-responsive means at a period in the piston's stroke, which period is determined by such adjustment.

4. An instrument of the class described comprising, in combination, a pressure-fluid supply conduit, pressure-responsive means, and means to place said pressure-responsive means in communication with said supply conduit, the second mentioned means comprising a valve and a valve casing, valve operating means for relatively moving said valve and valve casing, and means for varying the timing of said alve by moving said valve casing.



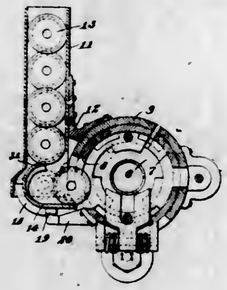
5. An instrument of the class described comprising, in combination, a pressure fluid supply conduit, pressure-responsive means, and means to place said pressure-responsive means in communication with said supply conduit, the second-mentioned means comprising a rotatable valve, valve operating means, and rotatable means directly coöperating with said valve for varying the timing of said valve.

1,349,347. CUSHION-COVER FOR THE SEATS AND BACKS OF CHAIRS. ROBERT STEINMETZ, Rochester, N. Y., assignor of one-tenth to Samuel S. Andursky, Rochester, N. Y. Filed Mar. 8, 1917. Serial No. 153,474. 1 Claim. (Cl. 155—183.)



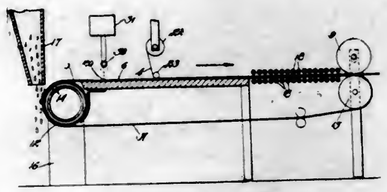
In combination with the main frame of a chair having a seat and a back hinged to the frame near its lower edge to swing forwardly and rearwardly, rollers supported wholly below the bottom of the seat near the front and rear edges thereof, an endless belt covering extending across the top and front and rear edges of the seat and around the underside of the rollers, a pressure roller spring pressed against the underside of the belt covering directly under the rear roller, additional rollers wholly at the rear side of the back near the lower and upper edges thereof, a separate endless belt covering extending across the front and lower and upper edges of the back and around the rear sides of said additional rollers, and an additional presser roller spring pressed against the back covering at the rear of its lowermost roller, gears secured to one end of the rear roller of the seat covering and lower roller of the back covering, respectively, an intermediate gear meshing with said gears and substantially coaxial with the axis of movement of the back of the chair, and means for rotating said intermediate gear for effecting the simultaneous operation of both endless belt coverings for the seat and back.

1,349,348. STAIR-RULE. GEORGE F. THIELMAN, St. Cloud, Minn. Filed Apr. 8, 1919. Serial No. 288,477. 5 Claims. (Cl. 33—98.)



2. A stair rule comprising a pair of bars mounted to slide one upon the other, an arm slidably and pivotally mounted on the outer end of each bar, and a guide loop on the inner end of each bar guidingly receiving the companion bar and designed to receive the adjacent arm when the latter is folded into registry with the respective bar and then moved lengthwise thereof for holding the arms in their folded inoperative position.

1,349,349. RULE ATTACHMENT. KNUT G. THIMAN, New York, N. Y. Filed Aug. 14, 1919. Serial No. 317,395. 3 Claims. (Cl. 33—106.)

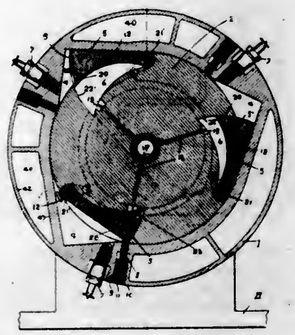


3. A rule attachment including a strip to be attached to a rule, and numerically marked in the opposite direction to the part covered, a second strip slidably attached to said first strip having thereon the same numerals and markings as the portion of the rule covered by said first strip, and stops upon said first strip adapted to engage said second strip on both extreme extended and withdrawn positions.

1,349,350. MAGAZINE. CHARLES A. TUNKS, Cleveland, Ohio, assignor to Auto Ordnance Corporation, New York, N. Y., a Corporation of New York. Filed Apr. 12, 1920. Serial No. 373,165. 13 Claims. (Cl. 42—17.)

1. In combination with a gun having fixed and reciprocating parts, a magazine adapted to contain cartridges attached to the fixed parts, the magazine having a closure at the bottom thereof, the closure having a cam guide thereon, an actuating lug attached to the reciprocating part, and coacting with the cam guide to move the magazine closure to release the lowermost cartridge during the movement of the reciprocating part of the gun, and means to return the closure to the closed position.

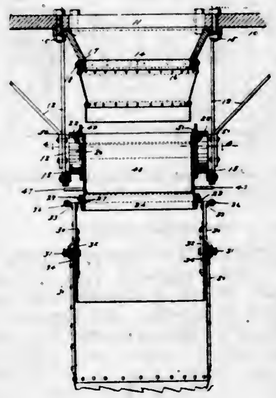
1,349,351. MACHINE FOR MANUFACTURING COMPOSITE MICA. DONALD WALING, Keene, N. H., assignor to Keene Mica Products Company, Keene, N. H., a Corporation of New Hampshire. Filed Apr. 11, 1919. Serial No. 289,343. 7 Claims. (Cl. 91—18.)



1. In a machine for laying mica, the combination of an endless traveling reticulated bed member, a reticulated drum over which the bed member moves, means for exhausting the air from the interior of the drum, means for supplying mica to the bed member at the area of contact with the suction box, and means for applying a binder to the mica while still on the surface of the bed member.

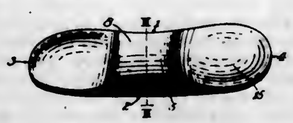
1,349,352. INSULATED RAIL-JOINT. GEORGE W. WHITEMAN, Philadelphia, Pa. Filed May 27, 1920. Serial No. 384,555. 8 Claims. (Cl. 238—158.)

1. The combination, with a pair of rails, of a sheet of insulating material interposed between the meeting ends of said rails, and insulated means for holding said rail ends together and maintaining them in contact with said interposed sheet of insulating material.



1,349,353. ROTARY ENGINE. OSCAR HOWARD WILBER, Jr., Mobile, Ala. Filed July 17, 1918. Serial No. 245,387. 6 Claims. (Cl. 123—17.)

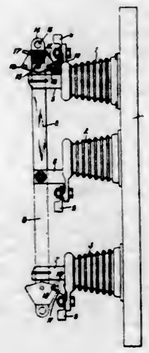
1. In a motor the combination with a stationary casing, a rotary member located rotatably within the said casing and having its axial line in coincidence with that of the casing, a shaft fixed to the said rotary member, a main gas passage leading through a portion of the said shaft, a hinged piston upon the rotary member and pockets in the said member to receive the said pistons, combustion chambers corresponding in number to the pistons located upon the inner wall of the casing, supplemental passages leading from the main gas supply



passage to the respective pockets whereby a quantity of gas is drawn into the said pocket by the outward movement of the piston and means whereby the said quantity of gas is compressed and then admitted between one of the abutting walls of a combustion chamber and the head of a piston to revolve the rotary member.

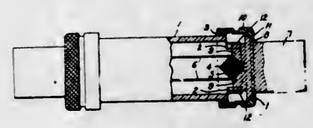
1,349,354. GRAIN-SPOUT MECHANISM. LEONARD E. WRAY, Minneapolis, Minn. Filed Jan. 8, 1919. Serial No. 270,168. 7 Claims. (Cl. 193—38.)

6. The combination with a discharge spout, of an overhead track located below the discharge spout, a traveling truck on the track, a distributing spout carried by the truck and arranged to be transported thereby to and from a position under the discharge spout, a coupling sleeve telescopically connected to the distributing spout, a lever fulcrumed to the truck and independently pivoted to the coupling sleeve, a connection for operating the lever to retract the coupling sleeve, a spring compressed between the truck and lever and tending to move said lever into a position to project the couping sleeve in registration with the discharge spout, and a latch for holding the lever when the coupling sleeve is in a retracted position.



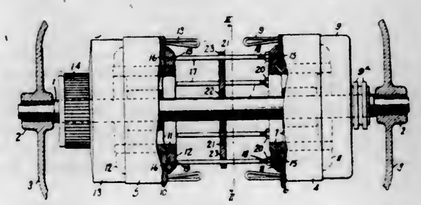
1,349,355. ARCH-SUPPORT. JAMES L. ZINK, Indianapolis, Ind. Filed Oct. 24, 1919. Serial No. 333,097. 4 Claims. (Cl. 36—71.)

1. A flexible foot-arch supporter having a plurality of superimposed layers of fabricated flexible material, each layer having a resilient adhesive substance incorporated therein and extending to one surface of the layer and also to the next adjacent layer of the material.



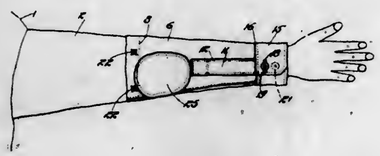
1,349,356. LATCHING DEVICE. ANDREW H. BAKKEN, Wilkinsburg, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed May 3, 1916. Serial No. 95,055. 13 Claims. (Cl. 200—160.)

9. A switch comprising relatively movable contact members, a latching member relatively-movably mounted on one of said contact members, means for normally retaining said latching member at an intermediate position in its



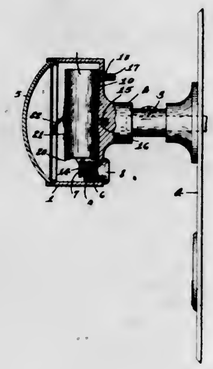
path of movement and a coöperating latching member therefor.

1,349,357. FUSE. ANDREW H. BAKKEN, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 13, 1918. Serial No. 234,133. 9 Claims. (Cl. 200—132.)



1. A fues device comprising a terminal member having a transversely-extending oblique face, and a relatively movable member having a surface conforming to the surface of said terminal member for the purpose of wedging a fusible element against the same.

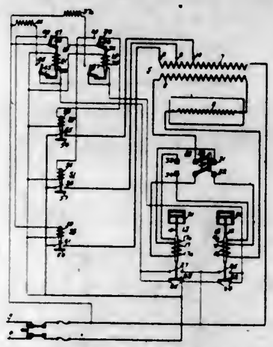
1,349,358. SHAFT-BRACING. DAVID BARCLAY, Conneautville, and ADOLPHUS M. DUDLEY, Oakmont, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 10, 1915. Serial No. 50,104. 4 Claims. (Cl. 171—206.)



1. In a dynamo-electric machine, the combination with a rotatably mounted shaft, a plurality of rotors of separate and electrically independent dynamo-electric machines mounted thereon in spaced relation, of means mounted on said rotor members for bracing said shaft intermediate said rotors.

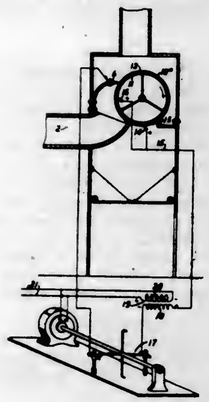
1,349,359. GARMENT. JACOB L. BARNETT, Newton, Mass. Filed Nov. 18, 1918. Serial No. 262,984. 2 Claims. (Cl. 2—94.)

1. A shirt sleeve formed with a cuff having overlapping side edges, one of the overlapping sides being provided with a button on one face of the cuff near its edge, and the other overlapping side being provided with a button on the reverse face of the cuff near its edge, one of said buttons being nearer the outer end of the cuff than is the other button, a buttonhole near each side edge of the cuff, said buttonholes extending entirely through the cuff, one of said buttonholes being nearer the outer end of the cuff than is the other, one of said buttonholes being so located as to engage with one of the buttons when the sleeve is turned one side out, while the other button and buttonhole are both concealed, and said other button and buttonhole being exposed on the outer face and adapted to engage with each other when the cuff and sleeve are turned with the reverse side out, said first button and buttonhole then being concealed.



1,349,360. KEYHOLE-ILLUMINATING DEVICE. GEORGE E. BATES, Syracuse, N. Y. Filed Jan. 24, 1917. Serial No. 144,288. 6 Claims. (Cl. 240—2.)

2. The combination of a door knob provided with a lamp arranged eccentric to the axis of the door knob, a battery mounted on the interior of the knob, and movable about an axis to make and break the connection between it and the lamp, and means exposed on the outside of the door knob for rocking the battery, substantially as and for the purpose described.

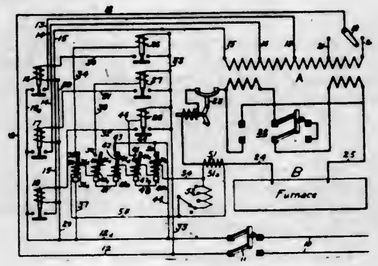


1,349,361. FURNACE-REGULATOR SYSTEM. EDGAR M. BOUTON, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 9, 1919. Serial No. 288,676. 17 Claims. (Cl. 204—64.)

1. In a furnace-regulator system, an electric furnace, a transformer for connecting the furnace to a supply circuit, and means controlled by the value of the current flowing through the furnace for automatically varying the effective

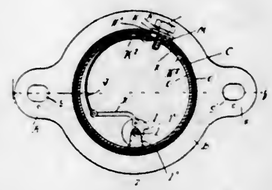
turns of said transformer to maintain a substantially constant current-flow through the furnace.

1,349,362. ELECTRICAL PRECIPITATING SYSTEM. LEWIS W. CHUBB, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 6, 1917. Serial No. 140,940. 11 Claims. (Cl. 183—7.)



1. In a system for electrically precipitating suspended particles from flowing fluid streams and thereafter collecting said particles on a stream boundary, the combination with a casing forming a treating chamber, of a discharge electrode, a coöperating rotatable collecting electrode, means for rotating said collecting electrode and means for impressing electrical potentials of opposite polarity upon said electrodes, said electrodes being so positioned in said treating chamber that permanently active and inactive zones of the electric field extending therebetween are formed.

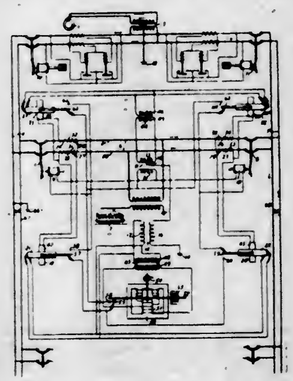
1,349,363. CONTROL SYSTEM FOR ELECTRIC FURNACES. ORA A. COLBY, Larimer, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 15, 1919. Serial No. 277,308. 18 Claims. (Cl. 204—64.)



1. An electrical heating system comprising a main heating element the temperature of which is to be regulated, an auxiliary heating element out of thermal communication with the main heating element and receiving

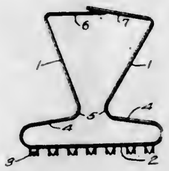
current in proportion to that supplied to the main heating element, means for adjusting the ratio of the currents in the two heating elements, and means actuated in response

to variations of the temperature of the auxiliary heating element for regulating the temperature of the main heating element.



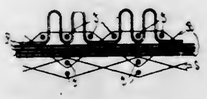
1,349,364. ADJUSTABLE THERMOSTAT. LLOYD GROFF COPEMAN, Flint, Mich., assignor to Copeman Electric Stove Company, Flint, Mich., a Corporation of Michigan. Filed July 29, 1916. Serial No. 112,173. 3 Claims. (Cl. 200—138.)

1. In a thermostatic circuit-closing device, the combination with a casing, of mechanism within the casing comprising a ring co-axial with said casing, thermostatic means in said casing, a pointer actuated by said thermostatic means and adapted to act as one of the terminals of an electric circuit, adjustable supporting means for said thermostatic means, insulation between said ring and said casing, a manually adjustable arm coöperating with said pointer and adapted to act as the other terminal of an electric circuit, and insulation between said arm and said casing.



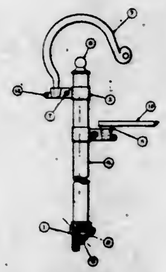
1,349,365. SYSTEM OF DISTRIBUTION FOR RAILWAY FEEDER-CIRCUITS. ALMON W. COPLEY, Wilkinsburg, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 8, 1917. Serial No. 153,293. 9 Claims. (Cl. 175—294.)

1. In a system of distribution, the combination with a load circuit, feeder circuits for supplying power to the ends of said load circuit, and circuit interrupters inserted adjacent to the respective ends thereof, of relays for controlling the operation of said circuit interrupters, a winding connected to said load circuit and having a grounded neutral point, and means controlled by the variation of the potential of said neutral point, upon the occurrence of abnormal conditions in the feeder circuits, for properly



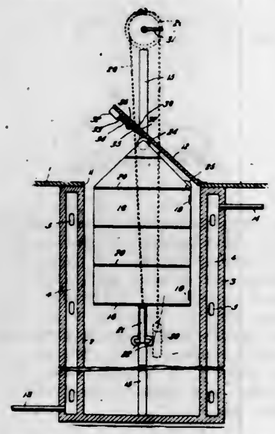
energizing the relays to selectively actuate the said circuit interrupters.

1,349,366. TIRE-ABRADER. FRANK N. CORDELL, St. Louis, Mo. Filed Aug. 28, 1918. Serial No. 251,825. 2 Claims. (Cl. 29—78.)



1. An abrading device for rubber comprising a single piece of metal bent intermediate its length and punched to form an abrading surface, the metal at opposite ends of the abrading surface being inwardly bent and said bent portions being spaced apart and thence bent upwardly to form opposite handles, the metal at the ends of the upwardly bent handles being bent inwardly and overlapped and relatively movable, whereby when the handle portions are squeezed together, the abrading surface is bulged downwardly to stiffen said surface when downward pressure is exerted on the handles.

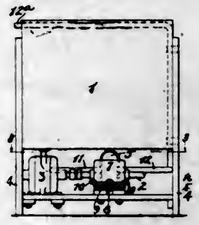
1,349,367. CARPET-WEAVE. GEORGE CROSSLAND, Jessups, Md., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Feb. 19, 1920. Serial No. 359,775. 3 Claims. (Cl. 139—71.)



1. A carpet weave having, in combination, binder warps, stuffer warps, pile warps, and filling threads, three shots of filling threads being inserted above the pile warps and one below said warps at each crossing of the binder warps, and an additional filling shot being inserted between the stuffer warps and outside of the binder warps at each binder warp crossing.

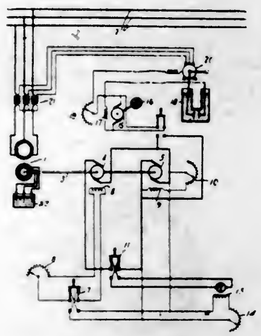
1,349,368. APPLIANCE. PHILIP CROWDER, North Weymouth, Mass. Filed Nov. 24, 1919. Serial No. 340,392. 2 Claims. (Cl. 45—82.)

1. A device of the character described comprising a member to engage one side of a support; a second member slidably mounted on the first member; and a third member movably mounted on the second member and adapted to engage the other side of the support to hold the first member to the support and to hold the second member against sliding along the first member.



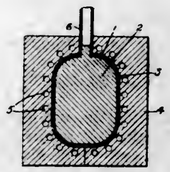
1,349,369. REFRIGERATOR. FREDRICK J. DAHLKE, Damascus, Ohio. Filed June 4, 1919. Serial No. 301,831. 4 Claims. (Cl. 187—3.)

2. A device of the character described comprising a shaft, a hinged door covering said shaft, a spring lock upon said door, a refrigerator within said shaft, means for raising and lowering the refrigerator within the shaft and means for automatically unlocking said spring lock and raising the door as the refrigerator is raised.



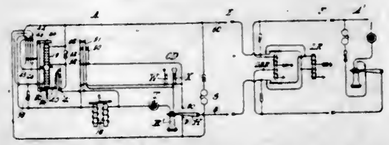
1,349,370. WASHING-MACHINE. WILLIAM G. DAWSON, Mount Vernon, N. Y. Filed Sept. 18, 1919. Serial No. 324,373. 2 Claims. (Cl. 103—79.)

1. In a device of the character described, the combination of a tub, means for supporting the same, a pump supported adjacent said tub, means for driving said pump, a combined filling and emptying pipe connecting said pump and tub, a combined suction and discharge pipe connected to said pump and a reversible clutch mechanism connected to said pump for driving the latter in either direction whereby when the pump is driven in one direction water will flow through said suction and discharge pipe, pump and filling and emptying pipe into the tub for filling the latter and when the pump is driven in



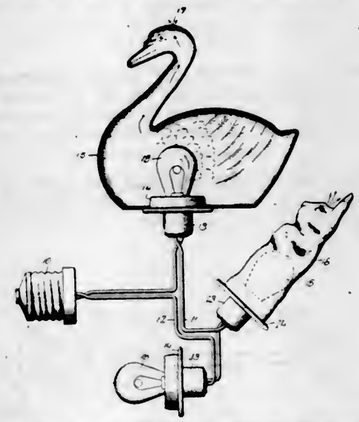
the other direction water will flow through said filling and emptying pipe, pump and suction and discharge pipe from the tub for emptying the latter.

1,349,371. ELECTRICAL SYSTEM. SIEGMUND HANS ECKMANN, Manchester, England, assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed July 14, 1915. Serial No. 39,918. 12 Claims. (Cl. 171—312.)



8. In a motor-control system, the combination with a source of energy, and an electric motor, of means for translating energy from said source to said motor, said means comprising an electric circuit including a plurality of generators, one only of which operates at substantially constant voltage, and means for supplying energy to, or absorbing energy from, said translating means in accordance with the value of the current supplied by said source.

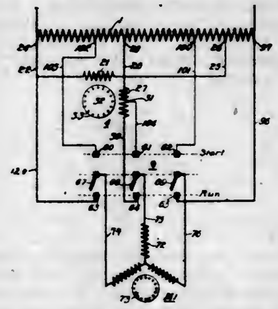
1,349,372. METHOD OF MAKING HOLLOW BODIES. WILLIAM F. EGAN, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 15, 1919. Serial No. 277,218. 5 Claims. (Cl. 18—55.)



3. A method of making hollow bodies that comprises superimposing layers of sheet material impregnated with a binder about a core including a metal having a low fusing point inclosed by a metal covering having a relatively high fusing point, disposing the body in a suitable mold, applying heat to fuse the core and to harden the binder, applying pressure to compact the sheet material simultaneously with the application of heat and removing the fused core from the body after the binder has been hardened.

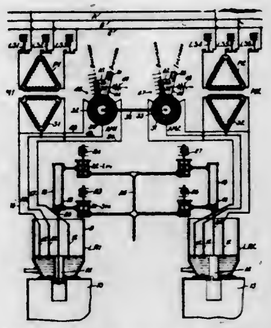
1,349,373. MEASURED-SERVICE TELEPHONE SYSTEM. JOHN ERICKSON, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 15, 1916. Serial No. 137,161. 28 Claims. (Cl. 179—6.5.)

1. In a telephone system, the combination with substation telephone equipment, of a device associated therewith adapted to receive a coin deposited upon the initiation of a call and to collect or refund the same dependent on whether or not the call is successful, said device comprising a coin retaining member movable at both ends, together with automatic means for moving said member at either end separately to collect or refund the coin as occasion demands.



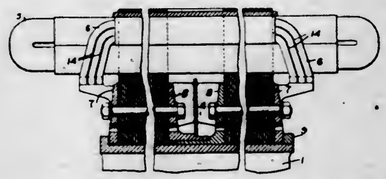
1,349,374. CHRISTMAS-TREE ORNAMENT. JULIUS J. GRUENFELD, Jr., Chicago, Ill., assignor to Associated Engineers Company, Chicago, Ill. Filed Nov. 7, 1917. Serial No. 200,667. 2 Claims. (Cl. 240—10.)

1. A device of the character described comprising an electric lamp socket, a lamp therefor having a screw threaded plug adapted to fit said socket, and an ornament carrier having an ornament supporting ring and an insulating plate contained within said ring, said plate having a screw threaded opening adapted to be engaged by said plug to thereby support said carrier on the lamp.



1,349,375. SYSTEM OF CONTROL. ARTHUR J. HALL, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 5, 1917. Serial No. 178,598. 3 Claims. (Cl. 172—274.)

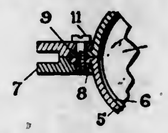
3. In a control system, the combination with a main source of energy, of an auxiliary source of energy having one winding connected to certain points of said source and another winding connected to a different point of the source, a dynamo-electric machine, and means for initially connecting said machine to certain intermediate points of said main source and of said other winding to



start the machine and for subsequently connecting said machine to higher-voltage points of said main source and to the corresponding terminal of said other winding to run the machine.

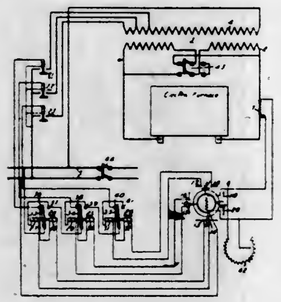
1,349,376. CONTROL SYSTEM. RUDOLF E. HELLMUND, Pittsburgh, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 5, 1916. Serial No. 70,437. 33 Claims. (Cl. 172—274.)

3. In an electrically-propelled vehicle, the combination with a plurality of driving induction motors suitably associated with the vehicle wheels, of means dependent upon predetermined slippage of any wheels for automatically causing the corresponding motor to eliminate said slippage.



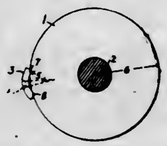
1,349,377. DYNAMO-ELECTRIC MACHINE. RUDOLF E. HELLMUND, Pittsburgh, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 7, 1916. Serial No. 82,693. 12 Claims. (Cl. 172—120.)

1. In a dynamo-electric machine, the combination with a slotted magnetizable core, of a plurality of independent



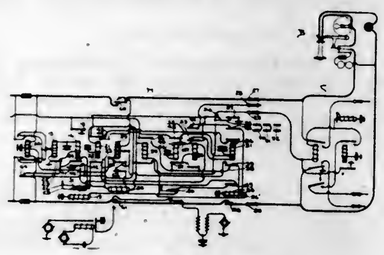
windings of different types disposed within the same slots upon said core, and a plurality of connecting means for one of said windings extending intermediate adjacent coil sides of the straight coil portions of the other winding.

1,349,378. OPHTHALMIC MOUNTING. PITT H. HERBERT, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed July 17, 1919. Serial No. 311,400. 3 Claims. (Cl. 88—47.)



1. A frame of the character described comprising an eye wire bent into shape to receive a lens, and terminating in outwardly deflected parallelly disposed end portions, an end piece member having an outer kerf to receive a temple, and having at its inner portion grooves to receive the outwardly deflected ends of the eye wire, means for securing a temple within the kerf, and means for securing the outwardly deflected eye wire ends in the grooves of the temple end piece member.

1,349,379. CONTROL SYSTEM FOR ELECTRIC FURNACES. EDGAR A. HESTER, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 30, 1918. Serial No. 260,272. 14 Claims. (Cl. 204—64.)



2. The combination with an electric furnace and a source of power supply therefor, of a thermal relay operatively associated therewith, switching means requiring an actuating current larger than can be used with said relay, for varying the amount of power taken by said furnace, and transfer means interposed between said relay and said switching means whereby they may be operatively connected.

1,349,380. CONTROL APPARATUS. OLIVER P. HIPPLE, Wilkins township, Allegheny county, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 6, 1917. Serial No. 140,943. 8 Claims. (Cl. 200—8.)

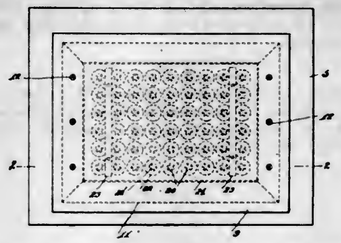
4. A control drum embodying a contact segment located on the cylindrical surface of the drum and having a radius of curvature less than that of the drum.

1,349,381. AUTOMATIC TELEPHONE SYSTEM. EMIL JACOBSEN, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 25, 1918. Serial No. 224,429. 6 Claims. (Cl. 179—18.)

1. In a telephone system, calling and called lines, a plurality of automatic switches for establishing a connection between a calling and a called line, means controlled by the calling subscriber for releasing the connection, means controlled by the called subscriber for preventing the release of the last of said switches in the connection when the connection is released, means for making said switch busy to other calls while the connection is established and means for removing said busy condition while the switch is being held by the called subscriber whereby said switch may be automatically released by another subscriber and used for another call.

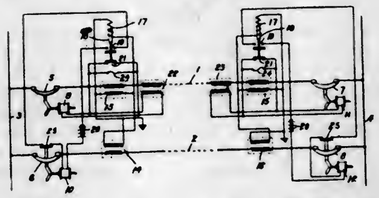
1,349,382. METHOD OF REMOVING LEAD FROM COPPER-SCRAP. JESSE L. JONES, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 16, 1919. Serial No. 271,500. 5 Claims. (Cl. 75—62.)

1. The method of removing certain impurities from copper scrap which comprises melting the copper scrap, adding copper scale thereto to oxidize the impurities and separating the purified copper and the oxidized impurities.



1,349,383. PIPE-CORE MACHINE. HARRY M. S. KLEYENSTEUBER, Birmingham, Ala. Filed Sept. 29, 1919. Serial No. 327,311. 10 Claims. (Cl. 22—12.)

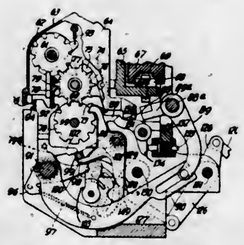
4. In a machine for forming pipe-cores, a bed having forward extensions at its ends, anti-friction supporting elements for a core arbor adjustably mounted on said extensions, a knife support hinged to the frame and having arms projecting over said extensions, adjustable stops which support the free ends of said arms and a knife blade carried by the support and disposed substantially tangential to the sand core being formed on the arbor.



1,349,384. PLATEN. HERVEY H. MCINTIRE, South Bend, Ind. Filed Nov. 12, 1917. Serial No. 201,465. 4 Claims. (Cl. 95—73.)

1. A platen comprising a back plate, a frame supporting a cushion, yielding means interposed between the back plate and the cushion, and yielding means interposed between the cushion frame and the back plate, whereby the

cushion may yield within limits without imparting pressure to its supporting frame.

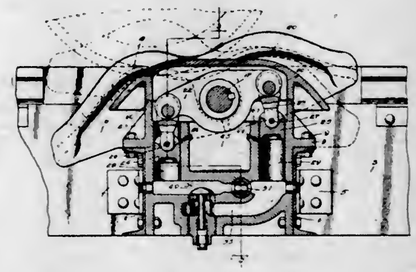


1,349,385. ELECTRICAL PROTECTIVE DEVICE. HERBERT PEARCE, Manchester, England, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 2, 1918. Serial No. 232,153. 10 Claims. (Cl. 175—294.)

1. In a system of distribution, the combination with two parallel-connected feeder conductors and circuit interrupters therefor, of means for tripping the circuit interrupters of one conductor when a fault occurs upon either conductor and means for rendering the circuit interrupter of the other conductor responsive to overload conditions only after the other conductor is disconnected.

1,349,386. COMBINED TYPEWRITING AND COMPUTING MACHINE. HENRY L. PITMAN, Brooklyn, N. Y., assignor to Underwood Computing Machine Company, New York, N. Y., a Corporation of New York. Filed July 19, 1917. Serial No. 181,460. 47 Claims. (Cl. 235—59.)

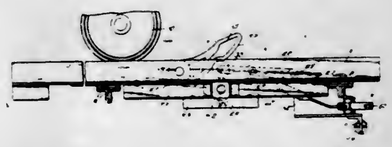
7. The combination with a series of numeral keys of different values, of key levers on each of which is mounted a numeral key, a camming member individual to each key lever and mounted thereon having an effective throw corresponding to the value of its key, a ball individual to each camming member, so as to be operated thereby, and a rock shaft universal to all of said balls secured thereto to be driven an amount corresponding to the particular numeral key actuated at any time.



13. The combination with a driving rack bar, of a pinion driven by said rack bar, a parallel linkage for shifting said driving rack bar into and out of engagement with said pinion, an arm connected to said parallel linkage, a pin on said arm, a plate having a cam slot therein for shifting said pin, and means for swinging said plate.

15. The combination with computing wheels, of carry-over wheels for certain of said computing wheels, detents for said carry-over wheels, spring-actuated dogs for holding said detents in play, an aliner for forcing said detents into action, and springs for yieldingly forcing certain of said detents into engagement with their carry-over wheels.

17. In a combined typewriting and computing machine, the combination of a traveling carriage, an escapement mechanism therefor, numeral-key actuated locking means engaging with said carriage and preventing movement thereof during the down and return strokes of a numeral key, and means for preventing the actuation of said carriage by the actuation of any other key, during the actuation of said numeral key.

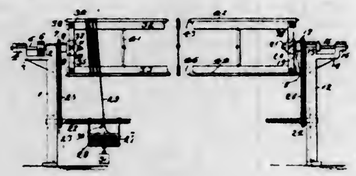


39. In a combined typewriting and computing machine, the combination of alphabet and numeral keys, a totalizer, a truck on which said totalizer is adjustably mounted, feeding mechanism for said truck, numeral-key-actuated locking means for said truck, and means rendered effective by said truck-locking means to lock said alphabet keys.

1,349,387. LIQUID CAR CONTROL. GEORGE N. SIMPSON, Chicago, Ill. Filed Apr. 2, 1919. Serial No. 287,039. 16 Claims. (Cl. 104—253.)

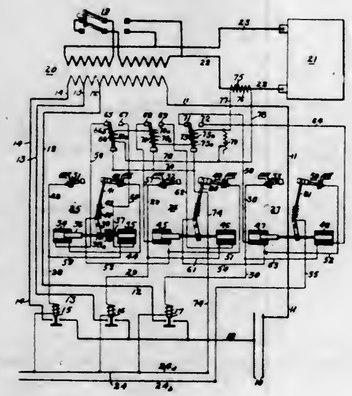
1. In a car control, the combination of a stop adapted to be displaced out of the path of a car wheel by contact of said car wheel and means for controlling the displacement of such stop.

1,349,388. CAR CONTROL. GEORGE N. SIMPSON and ARTHUR M. SIMPSON, Chicago, Ill. Filed Aug. 29, 1919. Serial No. 320,725. 4 Claims. (Cl. 104—252.)



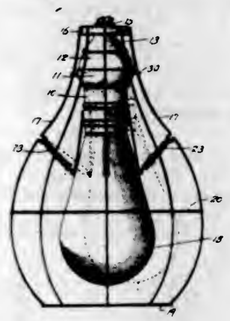
1. In a car control stop adapted to be moved to a position lying in the path of a car, and means for so moving said stop comprising a roller adapted to be forced against said stop.

1,349,389. MANUFACTURE OF TREATED STONE. CHARLES L. STEINROK, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 4, 1916. Serial No. 134,894. 1 Claim. (Cl. 91—70.)



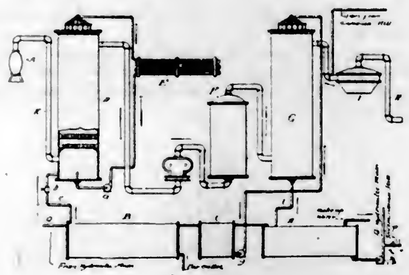
That way of treating natural stone which comprises immersing the stone in a heated solution of anilin dye to thereby impregnate the stone with coloring material, heating the anilin-impregnated stone until freed of the solvent of the dye, and then immersing the dried stone in molten paraffin until saturated therewith, the molten paraffin being maintained at a temperature of 170 to 212 degrees Fahrenheit.

1,349,390. PROCESS OF MAKING ELASTIC VEHICLE-TIRES. JAMES A. SWINEHART, Akron, Ohio. Filed Apr. 17, 1915. Serial No. 21,980. 6 Claims. (Cl. 154—14.)



1. That improvement in methods for making a tire or tire-shoe which consists in forming a flattened tube-like fabric by means of a series of convolutions of cord wrapped helically about a pair of spaced longitudinally-extending parallel tubes containing reinforcing members, shifting one tube longitudinally to cause the convolutions to lie oblique thereto, replacing said reinforcing members by stiffening members and incorporating said fabric in a tire or tire shoe with the stiffened tubes positions in the beads of the tire or tire-shoe and with the convolutions extending across the tread portion thereof.

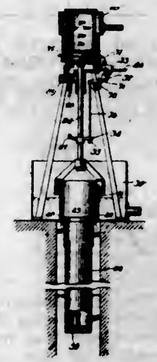
1,349,391. CONTROL SYSTEM FOR ELECTRICAL FURNACES. FRANK THORNTON, Jr., Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 19, 1919. Serial No. 283,624. 15 Claims. (Cl. 204—64.)



1. In an electrical heating system, the combination with a variable source of energy and a heating element having a negative-temperature-resistance coefficient the temperature of which is to be regulated, a supply circuit, a transformer having a plurality of spaced taps on the primary winding, and a plurality of electromagnetically operated switches for controlling the connections of the supply circuit to the primary winding of the transformer, of a plurality of plural-position switches for actuating said electromagnetically operated switches, and a temperature-actuated means for controlling said plural-position switches.

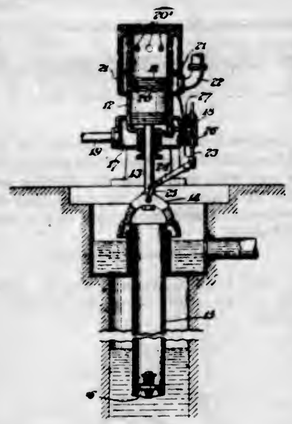
1,349,392. LAMP-GUARD. EDWIN D. TILLSON, Chicago, Ill., assignor to Associated Engineers Company, Chicago, Ill. Filed Feb. 18, 1918. Serial No. 217,872. 12 Claims. (Cl. 240—102.)

10. A lamp holding device comprising a frame, a movable socket within said frame and having frictional contact with the frame so that its movements in the frame are retarded thereby, and springs connecting the socket to the frame and tending to move the socket upwardly in the frame.



1,349,393. PROCESS OF AND APPARATUS FOR RECOVERING THE AMMONIA CONTENT OF COAL-GAS. BATES TORREY, Jr., Syracuse, N. Y., assignor to Semet-Solvay Company, Solvay, N. Y., a Corporation of New York. Filed May 3, 1918. Serial No. 232,257. 5 Claims. (Cl. 23—21.)

1. The process of recovering the ammonia content of coke oven gas, which consists in beating water in the hydraulic main by the initial heat of the gas as it comes from the ovens, washing and cooling the gas to remove tar and fixed ammonia therefrom, reheating the gas by washing it with said heater water and finally passing the gas through an acid bath to form sulfate of ammonia.



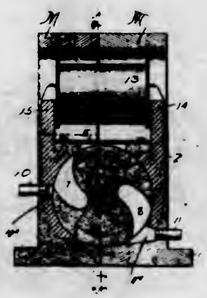
5. In apparatus for recovering the ammonia content of coal gas the combination with a hydraulic main and means for delivering gas from coke ovens thereto, of means for showering the gas in the main with water, whereby the water is heated by the gas, means for drawing off the gas from the main and washing and cooling the gas, means from drawing off from the main water heated by the gas therein and washing and heating the cooled gas therewith and means for returning the heated water to the main.

1,349,394. PUMP. EDWARD N. TRUMP, Syracuse, N. Y., and FRANK FRIEDRICHS, Detroit, Mich., assignors to Humphrey Gas Pump Company, a Corporation of New York. Filed May 3, 1916. Serial No. 95,062. 14 Claims. (Cl. 103—67.)

1. The method of pumping, which consists in reciprocating a tube provided with a suitable valve so as to cause liquid to flow therethrough, said reciprocation being caused by a motor, recovering and utilizing approximately the entire kinetic energy stored as a result of said actuation to coöperate in the functions of the motor.

1,349,395. PUMP. EDWARD N. TRUMP and FRANK FRIEDRICHS, Syracuse, N. Y., assignors to Humphrey Gas Pump Company, a Corporation of New York. Filed Aug. 31, 1918. Serial No. 252,152. 4 Claims. (Cl. 103—67.)

3. A pump comprising a reciprocating tube provided with a suitable valve, actuating means for causing the power stroke in said reciprocating movement of the tube and an auxiliary cylinder and piston operating trerein, in operative relationship with the actuating means and moving with the reciprocating tube for cushioning the return stroke of the reciprocating tube at the end thereof.



1,349,396. LABEL. RAY ALAN VAN CLIEF, Buffalo, N. Y. Filed Oct. 18, 1919. Serial No. 331,648. 1 Claim. (Cl. 40—134.)

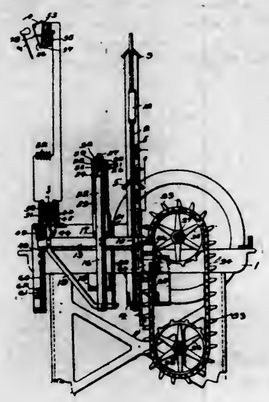
As a new article of manufacture, a relatively thin, light, flexible, and luminous poison label for bottles and the like adapted to be secured to a poison holding container, said label comprising two sheets of celluloid, letters of luminous material located on the outer face of the

inner sheet, and said contacting surfaces of said sheets coalesced confining the material of the lettera and forming in effect a single flexible transparent label.

1,349,397. COMBINED GENERATOR AND PUMP. HARRY RANDOLPH VAN DEVENTER, Sumter, S. C., assignor to Splitdorf Electrical Company, Newark, N. J., a Corporation of New Jersey. Filed May 25, 1916. Serial No. 99,855. 3 Claims. (Cl. 253—176.)

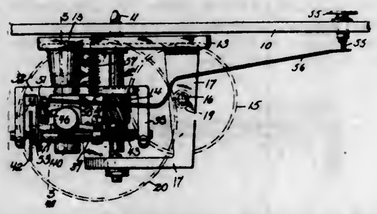
1. A combined dynamo and pump including in composition, a supporting structure, a stationary coil, a rotor for directing flux through said stationary coil, said rotor being inclosed and separated from said coil, inlet and outlet pipes connected to said supporting structure, said rotor being constructed so as to operate as an impeller for taking the oil from the inlet pipe and forcing the same out through the outlet pipe.

1,349,398. FOLDING-DOOR HANGER EQUIPMENT. PAUL BALTHASAR WEIS, Aurora, Ill., assignor to Aurora Door Hanger & Specialty Company, Aurora, Ill., a Corporation of Illinois. Filed Feb. 10, 1919. Serial No. 276,082. 2 Claims. (Cl. 20—20.)



1. In an apparatus of the class described, the combination with a hanger secured to a door, of a horizontal track therefor pivotally supported at its inner end, an antifriction roller mounted on the outer end of said track, and a curved transverse track upon which the roller runs as the horizontal track swings outward when the door is folded and opened.

1,349,399. FOLDING-DOOR HANGER EQUIPMENT. PAUL BALTHASAR WEIS, Aurora, Ill., assignor to Aurora Door Hanger and Specialty Company, Aurora, Ill., a Corporation of Illinois. Filed Aug. 15, 1919. Serial No. 317,662. 6 Claims. (Cl. 20—20.)

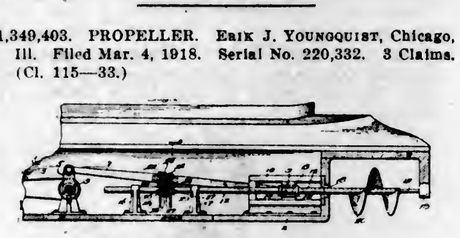


2. In an apparatus of the class described, the combination of a hanger secured to a folding door, of a horizontal track therefor pivotally supported at its inner end by the door frame and standing parallel to the closed door, and a transverse track upon which the outer end of the horizontal track rolls outward without any increased resistance as the door is folded and opened.

1,349,400. BELL-RINGING MECHANISM. HERMANN A. WENDE, Buffalo, N. Y. Filed June 22, 1914, Serial No. 846,491. Renewed Jan. 5, 1920. Serial No. 349,637. 27 Claims. (Cl. 177—288.)

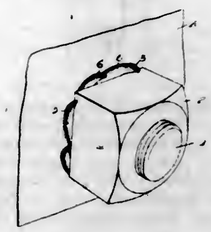
1. A bell ringing mechanism comprising an operating member connected with the bell, an endless power operated shifting member having a plurality of tappets, and means for coupling one or another of said tappets directly with said operating member.

1,349,401. PHONOGRAPH-MOTOR. THOMAS E. WHITE and GEORGE MCINTOSH, Newark, N. J. Filed Mar. 25, 1919. Serial No. 284,923. 6 Claims. (Cl. 74—45.)



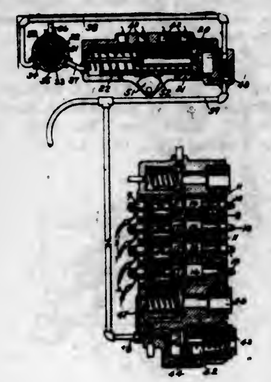
4. A phonograph motor comprising a driving mechanism, a governor, a bracket in which the governor is supported, a worm on the governor, a worm gear in the driving mechanism, a raised socket, a stud on the bracket and fitting in the socket so that the bearing can be swung to adjust the worm relative to the gear, means for fastening the stud against swinging, ears on the bracket, a disk on the governor, a stem in the ears, one of said ears and the stem being threaded, a U-shaped clip with projecting perforated ears, a screw passing through the ears and radially secured in the stem, and means for turning the stem.

1,349,402. FOLDING ARTICLE-HOLDER. ALBERT WIGGERS, Jersey City, N. J. Filed Feb. 5, 1919. Serial No. 275,084. 6 Claims. (Cl. 211—24.)



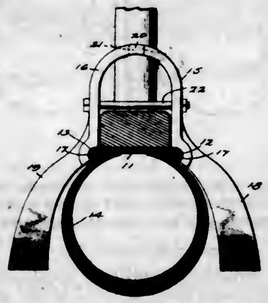
1. A holder of the class described, comprising a front member provided with an opening to receive the article to be held, a bracket extending rearwardly from said member at a point above the upper edge of said opening, and a leg pivoted to the rear portion of said bracket and formed with a portion extending above the pivot and shorter than the least distance of said pivot from said front member, whereby the upper end of the leg will be kept out of contact with the front member in all positions, but will be allowed to come into engagement with said bracket at a point between the front member and said pivot.

1,349,403. PROPELLER. ERIK J. YOUNGQUIST, Chicago, Ill. Filed Mar. 4, 1918. Serial No. 220,332. 3 Claims. (Cl. 115—33.)



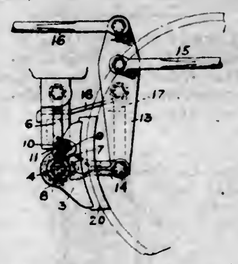
3. The combination with a propeller, of a shaft to which said propeller is secured, a crank and pitman connection for and with said shaft for moving same to and fro along its axis, and means for converting the reciprocating movements of said connection into a rotary movement in said shaft.

1,349,404. NUT-LOCK. ARCHIE BLAKE, New Orleans, La. Filed Oct. 10, 1919. Serial No. 329,824. 2 Claims. (Cl. 151—52.)



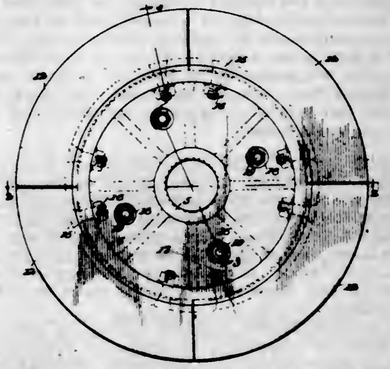
1. A concavo-convex nut washer having a bolt-hole and peripherally arranged fingers, said fingers extending tangentially to a circle concentric with the bolt hole, the ends of the fingers being curved laterally toward the concave face of the washer.

1,349,405. ELECTRIC TRAIN-WIRE COUPLING. THOMAS R. BROWN, Sparkill, N. Y., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Mar. 6, 1917. Serial No. 152,604. 8 Claims. (Cl. 173—332.)



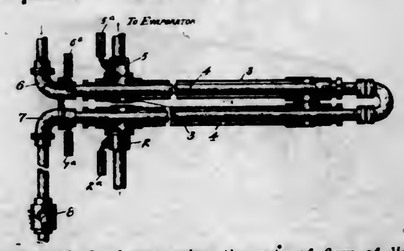
5. In an electric coupling for cars, the combination of a plurality of contact terminals connected to the respective car line circuits and adapted to be electrically connected with corresponding contacts of a counterpart coupler when the cars are coupled together, a switch between said contact terminals and the circuits of each car, said switch having one operative position for directly connecting said circuits in parallel, and another operative position for cross-connecting said circuits, means for normally holding said switch in one of said operative positions, a piston for said switch, and a valve for supplying fluid to said piston to shift said switch to the opposite operative position.

1,349,406. TRACTION-LUG FOR VEHICLES. THOMAS J. BRYSON, New Orleans, La. Filed Aug. 14, 1919. Serial No. 317,489. 4 Claims. (Cl. 21—215.)



1. In a traction lug for drive wheels having an outstanding rim, a pair of plates adapted to be arranged upon opposite sides of the wheel of said plates being provided with a recess adapted to receive said rim, traction lugs secured to each of said plates, and means for securing said plates upon said rim.

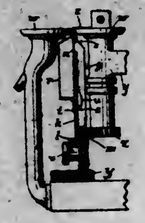
1,349,407. BRAKE-HEAD ADJUSTER. THOMAS L. BURTON, St. Louis, Mo., assignor to The American Brake Company, St. Louis, Mo., a Corporation of Missouri. Filed Apr. 27, 1917. Serial No. 164,846. 4 Claims. (Cl. 188—215.)



1. In a brake shoe adjuster, the combination of a brake-beam, a brake head pivotally mounted on said beam, an arm rigidly attached to turn with said beam, and a frictional connection between said arm and the brake head.

1,349,408. DREDGE-TUMBLER. PHILLIP J. CAHILL, High Bridge, N. J., assignor to Taylor-Wharton Iron and Steel Company, High Bridge, N. J., a Corporation of New Jersey. Filed Oct. 1, 1919. Serial No. 327,822. 1 Claim. (Cl. 64—17.)

A tumbler comprising a drum having a central web and endwise ranging webs and having marginal rims or seats, a spool consisting of segments confined by said rims and bolted to the drum, and cheek plates closing the ends of the drum.

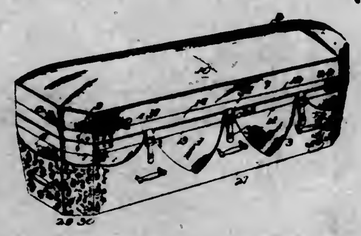


1,349,409. METHOD AND APPARATUS FOR MEASURING THE CAPACITY OF REFRIGERATING PLANTS. GILBERT H. CRAWFORD, Brooklyn, N. Y., assignor to DE LA VERGNE MACHINE COMPANY, New York, N. Y., a Corporation of New York. Filed Sept. 7, 1918. Serial No. 253,060. 8 Claims. (Cl. 73—167.)

1. A method of measuring the rate of flow of liquid refrigerants which consists in bringing into heat-ex-

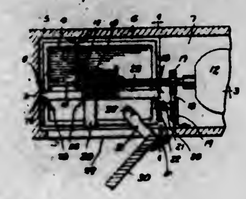
changing relation with the refrigerant a medium of known amount and thermal characteristics, ascertaining the temperature change of such medium and comparing such change with the resulting temperature change of the refrigerant.

1,349,410. HOSIERY-TIPPING PLATE. FRANK CURTIN, Gloversville, N. Y., assignor to Curtin-Hebert Company, Inc., Gloversville, N. Y., a Corporation of New York. Filed Nov. 19, 1919. Serial No. 339,038. 2 Claims. (Cl. 112—19.)



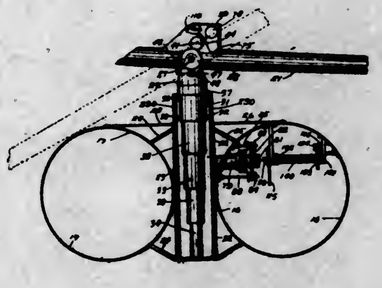
1. The combination with a reciprocable needle, and a traveling plate affording a straight edge movable into operative relation with the needle and over which a fabric may be drawn, of two rows of pins projecting laterally from opposite sides of said plate beneath said straight edge and adapted to engage the fabric and hold it properly positioned and tensioned, one of said rows of pins adapted also to engage a reinforcing piece to afford a definite free length of reinforcing piece extending above the last named row of pins, and a clamp adapted to confine the previously positioned reinforcing piece against that part of the fabric on one side of and adjacent the straight edge.

1,349,411. PROCESS FOR PREVENTING DANGER OF EXPLOSION IN THE PREPARATION AND THE HANDLING OF DANGEROUS EXPLOSIVE SUBSTANCES. GEORGES DARRAS, Chêne, near Geneva, and CHARLES GOUDET, Geneva, Switzerland, assignors to Société D'Etudes Chimiques pour L'Industrie, Geneva, Switzerland. Filed Sept. 14, 1918. Serial No. 254,140. 5 Claims. (Cl. 52—2.)



1. The hereinbefore described process for preventing the danger of explosion in the preparation and manipulation of dangerous explosive substances, consisting in the formation in a suitable material of an explosive substance, by first treating the material with a non-explosive substance and then changing the non-explosive substance by reaction with another substance to an explosive substance, the particles of which are separated from each other by the particles of the said material.

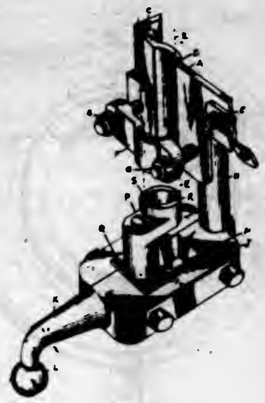
1,349,412. GLASS CASKET AND CARRIER THEREFOR. JAMES W. DE CAMP, Blackwell, Okla. Filed June 17, 1918. Serial No. 240,453. 12 Claims. (Cl. 27—8.)



1. In a casket, a glass body and a glass lid each provided at their abutting edges with a circumscribing seating groove defining a continuous stop shoulder, bands seated in said grooves and bearing against the stop shoulders, said body and lid being provided with transverse sockets formed in the exterior walls of the casket at said seating grooves, bushings fitting within the sockets and having their outer faces disposed substantially flush with the walls of the seating grooves, and securing means carried by the bands and projecting into said bushings, said bands bearing against and forming closures for the bushings.

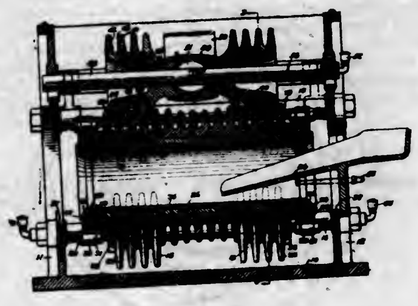
1,349,413. MAIL-BOX AND OTHER DEVICE. DANIEL A. DORAN, Yonkers, N. Y., assignor to Mary I. Doran, Yonkers, N. Y. Filed Sept. 29, 1919. Serial No. 327,169. 10 Claims. (Cl. 187—4.)

1. In a device of the class described, a shaft at the top portion of which is a door opening and at the bottom portion of which is an elongated aperture, a door adapted to close said door opening, a mail-box movable vertically in said shaft, said mail-box being normally in its lowest position, and means whereby the opening of said door will automatically cause said mail box to be raised in said shaft.



1,349,414. SUBMARINE GUN. KENNEDY DOUGAN, Minneapolis, Minn. Filed June 19, 1915. Serial No. 34,969. 16 Claims. (Cl. 89—5.)

4. In combination with a gun and means for controlling the same, a hermetically sealed gunner's casing mounted directly upon the gun and movable therewith.

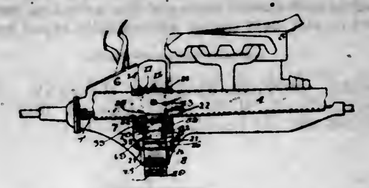


1,349,415. SHOCK-ABSORBING STEERING MECHANISM. CHARLES DYER, Detroit, Mich. Filed Oct. 20, 1919. Serial No. 331,898. 1 Claim. (Cl. 74—79.)

In a shock absorbing steering mechanism, the combination with a steering post, of a clamping plate or member provided with means for securing it to the frame of a machine and having a fixed depending column forming a pivot, an adjustable clamping plate, adjusting means connecting the clamping plates for holding the same in frictional engagement with the steering post to produce a braking action thereon, a longitudinally slotted member pivotally supported at one end by the said fixed column adapted to be connected at the other end with the

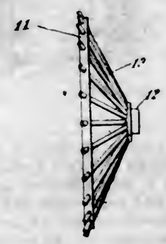
steering wheels of the machine, and a crank element mounted on the steering post and operating in the slot of the pivoted member.

1,349,416. CENTRIFUGAL CASTING METHOD AND APPARATUS. HAROLD GRIFFITH EYNON, Philadelphia, Pa. Filed Sept. 16, 1918. Serial No. 254,329. 10 Claims. (Cl. 22—65.)



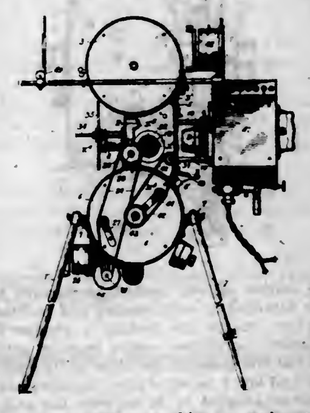
1. In a centrifugal casting machine, a casting drum and a heat conducting removable bushing therefor determining by the length and diameter of the bushing selected the length and diameter of the casting to be made.

1,349,417. PROCESS OF OXIDIZING BARIUM MONOXID TO DIOXID. HERMAN FLECK, Golden, Colo., assignor to The Peroxide Specialty Company, St. Louis, Mo., a Corporation of Missouri. Filed Nov. 5, 1917, Serial No. 200,285. Renewed Oct. 29, 1919. Serial No. 334,324. 8 Claims. (Cl. 23—13.)



1. The method of oxidising barium monoxid to barium dioxid which comprises subjecting the barium monoxid to attrition, and bringing an oxidising gas into contact therewith at an oxidising temperature during the attrition.

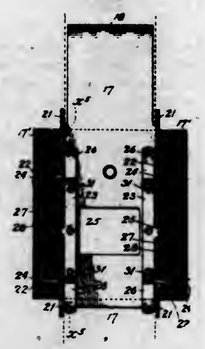
1,349,418. MOTOR-SUPPORT. GEORGE F. FLYNN, Milwaukee, Wis. Filed Aug. 5, 1919. Serial No. 315,438. 6 Claims. (Cl. 180—64.)



1. A crank case support for engines comprising a crank case receiving sling, chassis frame engaging members carried by said sling, and means carried by said members and engageable with the crank case to prevent the movement thereof away from the sling.

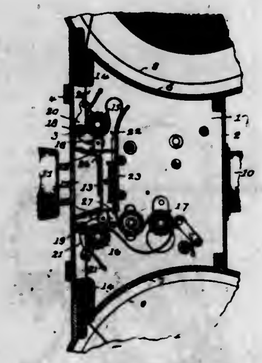
1,349,419. SHIELD FOR CULTIVATORS. STEPHEN H. GARST, Moline, Ill. Filed May 23, 1919. Serial No. 299,178. 1 Claim. (Cl. 97—13.)

A shield for cultivators consisting of a hub, a rim having projections for engaging the soil, the said rim being offset from the hub, and bars uniting the hub and the rim, said bars being on angles due to the rim being offset from the hub, and providing a series of open spaces between the rim and the hub, substantially as specified.



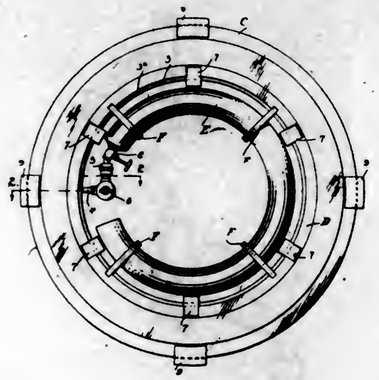
1,349,420. MOTION-PICTURE MACHINE. JOSEPH GRANZ, Duluth, Minn. Filed Mar. 28, 1919. Serial No. 285,758. 6 Claims. (Cl. 88—17.)

6. In a motion picture machine, a main casing of a rectangular box shape open at top and bottom, the side walls of the casing having saddle extensions at their upper and lower ends, upper and lower film magazines having circular walls fitting the aforesaid saddle exten-



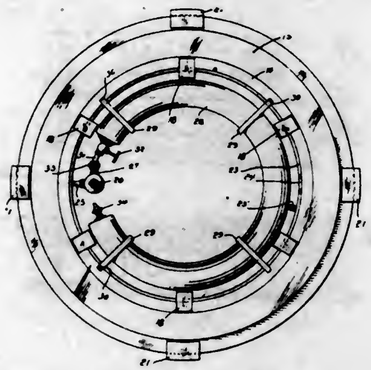
sions of the side walls of the casing and forming closures for the upper and lower open ends of said casing bracket lugs carried on the lower film magazine, tripod legs attached to said bracket lugs, and film actuating means arranged in said main casing, substantially as set forth.

1,349,421. MOTION-PICTURE MACHINE. JOSEPH GRANZ, Duluth, Minn. Filed Mar. 28, 1919. Serial No. 285,759. 14 Claims. (Cl. 88—17.)



1. In a motion picture machine, a main frame or casing, a film guide plate arranged vertically in said frame and provided with a light aperture, means for feeding a picture film along said guide plate and counterpart spring impelled gate members hinged at the vertical sides of said guide plate, substantially as set forth.

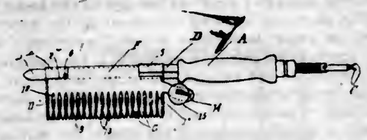
1,349,422. MOTION-PICTURE MACHINE. JOSEPH GRANZ, Duluth, Minn. Filed Apr. 25, 1919. Serial No. 292,573. 9 Claims. (Cl. 88—17.)



1. In a motion picture machine, a machine housing, a film guide arranged in said housing and provided with a light aperture, means for feeding a picture film along said film guide, counterpart spring impelled gate members hinged to the film guide at the sides of its light aperture, and upper and lower movable plate members having vertical extensions adapted to fit between the gate members above and below the light aperture aforesaid, the main portions of said members having an approximately horizontal arrangement to provide a local sub-chamber to the rear of the light aperture aforesaid, substantially as set forth.

1,349,423. METHOD OF MAKING PNEUMATIC-TIRE CASINGS. ERNEST HOPKINSON, New York, N. Y. Filed June 10, 1919. Serial No. 303,136. 8 Claims. (Cl. 18—53.)

1. A method of making pneumatic tire casings which comprises subjecting the interior thereof to the expanding action of plastic material under pressure, compacting the casing by exteriorly and positively limiting said expansion, and vulcanizing the casing while the same is supported interiorly by the plastic material.

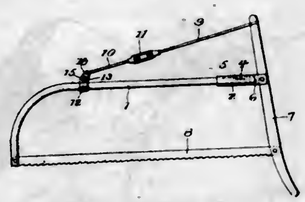


1,349,424. APPARATUS FOR MAKING PNEUMATIC-TIRE CASINGS. ERNEST HOPKINSON, New York, N. Y. Filed Oct. 25, 1919. Serial No. 333,426. 4 Claims. (Cl. 18—38.)

1. In an apparatus for forming and vulcanizing tire casings, means for closing a tire casing adjacent its rim-engaging portions, means whereby the casing may be filled with plastic under pressure, and an individual source of plastic under predetermined pressure disposed adjacent to and adapted to be connected with the casing during vulcanization.

1,349,425. COMB FOR DRYING AND STRAIGHTENING HAIR. OBADIAH D. HOWARD and HARRY W. KEEP, St. Paul, Minn. Filed Feb. 28, 1920. Serial No. 362,166. 4 Claims. (Cl. 132—19.)

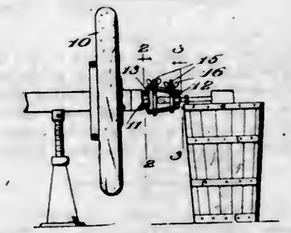
4. In a comb the combination with a rod-like heating unit, two comb members pivotally mounted on said rod-like unit so as to swing like the covers of a book the teeth of said members intermeshing when the latter are folded



against each other, and means for yieldingly holding said members slightly separated.

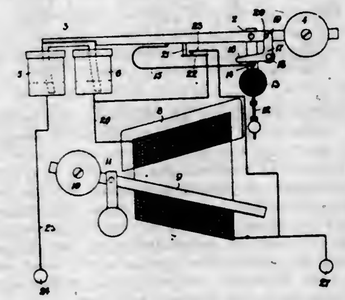
1,349,426. SCAFFOLD. JOHN J. KITSTEINER, Jr., Cleveland, Ohio. Filed Nov. 3, 1917. Serial No. 200,021. 8 Claims. (Cl. 304—30.)

1. In a scaffold of the character set forth, the combination of an upright whereon a bracket is slidably mounted, a member secured to the upper end of the upright and having formed integral with it a pulley block and having a flat face that is provided with a channel adapted to receive a portion of a supporting member, the channel and such portion being so shaped as to prevent turning with respect to each other, and a plate arranged to close the open side of the channel, the aforesaid bracket being adapted to be slid along the upright by a flexible member having connections with the bracket and passing over the pulley of the aforesaid pulley block.



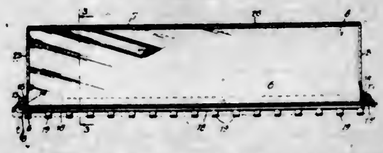
1,349,427. ADJUSTABLE HANDSAW. GALEN MCKENNEY, Bangor, Me. Filed Nov. 3, 1919. Serial No. 335,297. 5 Claims. (Cl. 145—84.)

3. A hand saw comprising a frame including an extensible portion, a handle pivoted thereto, a blade connected to said frame and handle, a member slidable along said frame, and an adjustable connection between said slidable member and said handle, the tightening of which clamps said member on said frame, and further means for locking said member irrespective of said tightening.



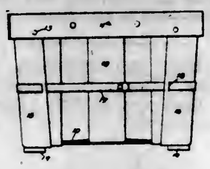
4. A hand saw comprising a frame including an extensible portion, a handle pivoted to said frame, a blade connected to said frame and handle, a slidable member engaging said frame, a lever pivoted intermediate its ends to said member, the inner end of said lever having a backed-off end engaging said frame, and an adjustable connection between said lever and said handle, and means for locking said member to said frame.

1,349,428. POWER-TRANSMISSION DEVICE FOR AUTOMOBILES. HENRY H. MARSHALL, Jr., Garden City, N. Y. Filed Nov. 5, 1918. Serial No. 261,280. 8 Claims. (Cl. 64—89.)



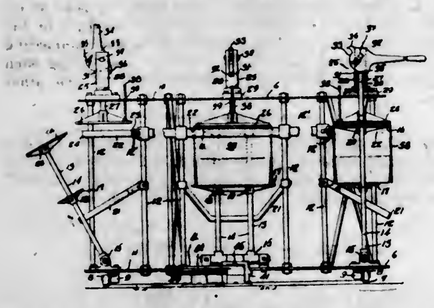
1. A coupling for the purpose specified comprising a pair of spaced members each having clamping jaws at its ends directed toward and in coöperative relation to the jaws of the other member, and separate means connecting the corresponding ends of the members for moving each pair of corresponding jaws independently of the other pair.

1,349,429. ELECTRIC SWITCH. ETHELBERT THOMAS RUTHVEN MURRAY, Hertfordshire, and GEORGE FREDERICK SHOTTER, London, England. Filed May 14, 1919. Serial No. 296,988. 11 Claims. (Cl. 200—90.)



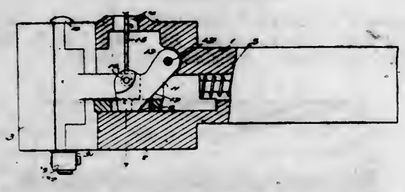
1. In an electric switch the combination of a movable switch arm, contact members operated thereby, resilient means for imparting movement to said arm and means for preventing the operation of said means unless said arm is in a predetermined position.

1,349,430. VEHICLE-WINDSHIELD. JOHN L. NILSON and JOHN PRINCE, Chicago, Ill. Filed Feb. 26, 1919. Serial No. 279,342. 4 Claims. (Cl. 296—95.)



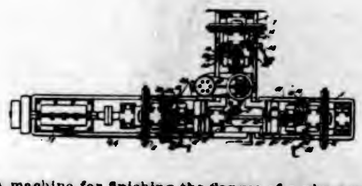
1. The combination with a wind shield, of a hollow roller and frame sides adapted to be folded within said roller, an awning or curtain adapted to be rolled upon said roller, and means for attaching said awning or curtain to said wind shield.

1,349,431. BASKET. GEORGE L. O'DELL, Belding, Mich. Filed Jan. 30, 1919. Serial No. 273,998. 2 Claims. (Cl. 217—122.)



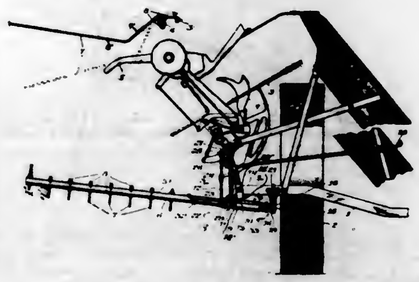
1. A basket having a body of splints or the like, metal corner pieces inturned and overlapping at the bottom beneath the bottom of the body, and retaining cleats on the bottom at the under side extending along opposite edges of the basket and overlying and abutting against the inturned overlapping portions of the corner pieces.

1,349,432. BOX-END-SEALING MACHINE. WILLIAM PEET, Kansas City, Mo. Filed June 18, 1919. Serial No. 305,082. 5 Claims. (Cl. 93—36.)



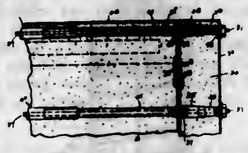
1. A machine for sealing the flaps of boxes comprising a frame, members for supporting boxes to be sealed carried upon the frame, means for moving said frame to present the supporting members one at a time to a point at which an operator is stationed, pressure devices for applying pressure to and sealing the flaps, said supporting members being mounted to swing outwardly away from the frame, in receiving boxes and upon the removal of boxes therefrom, and means to engage the boxes and releasingly hold them and the supporting members in upright position during the sealing operation.

1,349,433. AUTOMATIC COUPLING. WILLIAM W. PHILLIPS, Richmond, Va. Filed Dec. 23, 1918. Serial No. 268,113. 1 Claim. (Cl. 213—10.)



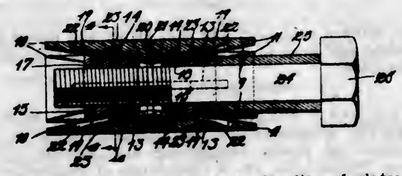
A coupling of the type indicated including a draw-bar having a head formed thereon, the said head provided with a bore communicating with a corresponding bore in the draw bar and further provided with intercommunicating recesses, a knuckle pivoted in the head and provided with a tail portion accommodated in one of the recesses in the head, the tail portion formed with a curved face, a lug on the tail portion, an actuating member in one of the recesses in the head, having a central opening provided with curved edges and receiving the lug on the knuckle for imparting an initial opening movement to the knuckle, a head on the actuating member disposed rearwardly of the central opening and having a curved face for engaging the curved portion of the tail portion of the knuckle to complete the opening movement of the knuckle, a shank on the actuating member received in the bore in the head and draw-bar, a spring embracing the shank for moving the actuating member to place the knuckle in an open position, a catch in one of the recesses in the head received in the central opening in the actuating member and engaging the tail portion of the knuckle to hold the same in a closed position, one of the faces of the catch being inclined and adapted for engagement with the curved face of the head on the actuating member whereby to automatically move the catch to an open position with respect to the knuckle when a coactive coupling is thrown to an open position, and means for manually moving the catch to open the knuckle for the purpose set forth.

1,349,434. PIPE-FLANGE-TURNING MACHINE. CLARENCE K. PRINCE, Westfield, Mass. Filed May 7, 1919. Serial No. 295,412. 17 Claims. (Cl. 82—2.)



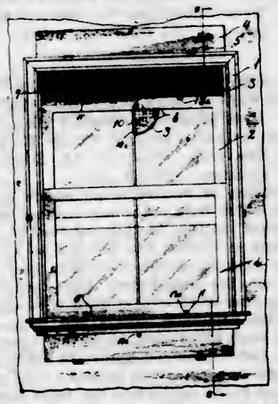
1. A machine for finishing the flanges of a pipe-coupling, and comprising, in combination, a base, a shaft therein, a movable carriage, a revolving cutter on the carriage, means for moving or feeding the cutter across the face of a flange being finished and simultaneously rotating the same, means controlled by the cutter for automatically stopping the feeding movement of the cutter at the termination of the cut, said means serving to permit the continued rotation of the feeding means during the return of the cutter to its initial position.

1,349,435. BUNDLE-CARRIER. CLEMMA R. RANEY, Chicago, Ill., assignor, by mesne assignments, to International Harvester Company, a Corporation of New Jersey. Filed Jan. 31, 1916. Serial No. 75,361. 27 Claims. (Cl. 56—480.)



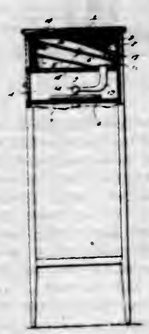
1. In combination, a frame, a laterally extending bundle carrier support, bundle carrying means mounted on said support, said support being pivoted to said frame and movable downwardly from its normal sheaf receiving position in a vertical plane at right angles to the line of draft.

1,349,436. BAKING-OVEN. ALLEN R. ROSS, Seattle, Wash. Filed Jan. 13, 1919. Serial No. 270,959. 2 Claims. (Cl. 107—55.)



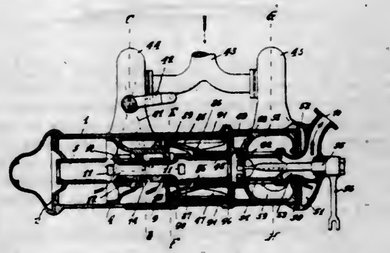
1. An oven, whose walls are heat insulated, embodying one or more demountable walls, telescoping tie-rod protector tubes in said oven walls, and tie rods passing through said protector tubes whereby said demountable wall is held tightly against said oven walls.

1,349,437. EXPANSION-BOLT. EDWIN C. ROYER, Philadelphia, Pa., assignor of one-half to Bernard J. Boyle, Philadelphia, Pa. Filed Apr. 24, 1919. Serial No. 292,456. 1 Claim. (Cl. 85—2.8.)



An expansion bolt including a plurality of plates angular in cross section arranged annularly around the axis thereof and having inwardly extending tapered edges at the sides intersecting their innermost surfaces, said innermost surfaces extending at slants in opposite directions from its opposite ends, said tapered edges of adjacent plates being arranged substantially parallel with each other; an elastic band for holding said plates together; expansion blocks interposed between said plates; and means for moving said expansion blocks whereby the plates are separated and moved outwardly from the axis against the action of said band, said plates having internal grooves extending along their lengths between said tapered edges, said blocks having lugs adapted to move within said grooves, said grooves following the slants of said innermost surfaces; substantially as described.

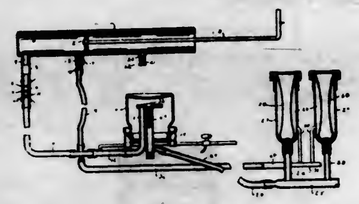
1,349,438. WINDOW-SCREEN. STANISLAW SAMPLAWSKI, Bloomfield, N. J. Filed Jan. 13, 1920. Serial No. 351,228. 2 Claims. (Cl. 156—39.)



2. A device of the class described comprising a window sash, a groove in the upper part thereof extending through the length of said sash, vertical recesses in said sash extending from said groove into said sash, horizontal recesses in the side of said sash communicating with said vertical recesses, T shaped members slidable in said horizontal recesses, the stem of said T extending outward from said recess to provide a handle portion, resilient means in said horizontal recess attached to said T member, a screen adapted to roll upon a drum concealed in the window frame, means on the free end of said screen adapted to set in said groove, and additional means thereon adapted to enter said vertical recesses and to be engaged by the said T members.

1,349,439. PHONOGRAPH-CABINET. EDWARD J. SCHAEFER, Hespeler, Ontario, Canada. Filed Dec. 2, 1916. Serial No. 134,719. 2 Claims. (Cl. 274—2.)

1. A photograph cabinet having an open front, a plurality of walls therein and spaced from each other to provide multiple chambers, the intermediate chambers being in communication with each other and one of the same opening through the open front of said cabinet, one of the other chambers also opening through the open front of the cabinet, while the remaining chamber is closed.



1,349,440. REGULATING DEVICE FOR WATERING-CARTS. GUSTAV SCHLATTER, Steinach, and GUSTAV SEGIN, Arbon, Switzerland, assignors to Firma Adolph Saurer, Arbon, Switzerland, a Firm organized under the laws of Switzerland. Original application filed Apr. 13, 1917, Serial No. 161,875. Divided and this application filed Mar. 27, 1919. Serial No. 285,668. 2 Claims. (Cl. 299—108.)

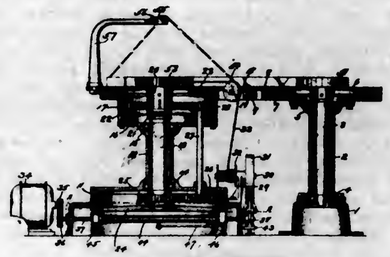
1. In a regulating device for watering carts, the combination with a regulating valve mounted to move lengthwise and to turn in the spraying head and operated by the water pressure, longitudinal movement of the said valve determining the length of the spray and its rotation determining the width of the spray, of a hand operated control device effecting the longitudinal movement, and of another hand operated device effecting the rotation

of the regulating valve, a second valve rotated by the water pressure being arranged in the casing of the regulating valve coaxially with the same, and connected to it so as to allow the regulating valve to move longitudinally independently of the rotary valve, but to participate in its rotation.

1,349,441. MILKING-MACHINE FOR COWS. WARREN A. SHIPPERT, Chicago, Ill. Filed Apr. 19, 1918. Serial No. 229,509. 1 Claim. (Cl. 31—98.)

In a device of the class described, a suction and pressure pump; a milk receiving and discharge chamber; a system of pipes connecting said pump and chamber; an air seal in said pipe system permitting movement of air from said pump to said chamber, under pressure, but preventing movement thereof in the opposite direction; an air seal in said pipe system, permitting movement of air from said chamber to said pump, under suction, and preventing the movement thereof in an opposite direction; a plurality of teat-cups each formed of an outer non-yielding shell and an inner contractible lining spaced apart therefrom and providing a central opening for the passage of milk; a conduit connecting said inner passages with said milk-chamber and provided with a valve at its discharge end; and means of connection between said system of pipes and said teat-cups to provide the same with alternating suction and pressure movements between said shells and inner lining, coincidently with the suction and pressure action of said pump.

1,349,442. SHEET-METAL END STRUCTURE FOR RAILWAY-CARS. VINTON E. SISSON, Chicago, Ill., assignor to Walter P. Murphy, Chicago, Ill. Original application filed Jan. 22, 1915, Serial No. 3,761. Patent No. 1,271,234, dated July 2, 1918. Divided and this application filed June 27, 1918. Serial No. 242,232. 10 Claims. (Cl. 105—410.)



1. An end structure for railway cars comprising a sheet metal panel formed with parallel corrugations each of which comprises a central portion of appreciable length having maximum cross-sectional area, which is uniform throughout said portion, portions at the sides of the central portion having cross-sectional areas which diminish toward the edges of the plate, and terminal portions which die away into the plane of the marginal portions of the panel.

1,349,443. REDUCING-VALVE. REUBEN C. STOKES and JOSHUA C. CONRAD, Cement, Okla. Filed Feb. 2, 1918. Serial No. 215,061. 2 Claims. (Cl. 50—8.)

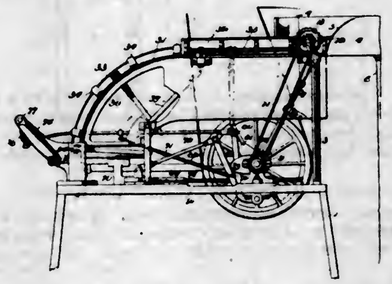
1. A device of the class described comprising a valve casing having a diaphragm provided with a port, high and low pressure valves adapted to control the passageway through said port when moved in opposite directions respectively, means for adjusting said valves relative to each other, a cylinder in open communication with the low pressure side of said casing, a piston in said cylinder and connected to said valves, a cylinder head, a spring interposed between said head and said piston and means for adjusting said head to regulate said spring, substantially as described.

1,349,444. APPARATUS FOR TREATING METAL STRIPS. AUGUST SUNDH, Hastings-upon-Hudson, N. Y., assignor to Sundh Engineering and Machine Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 26, 1919. Serial No. 347,442. 9 Claims. (Cl 153—64.)

1. In a metal-coiling apparatus of the class described, the combination of a coil-receiving member, a separator for separating the wraps of a metal coil coiled upon said receiving member, and means for removing said separator to leave the metal coiled upon the receiving member with the wraps thereof spaced from each other.

1,349,445. PROCESS OF RECOVERING CONSTITUENTS OF VALUE FROM NATURAL ALKALINE DEPOSITS. CARL SUNDSTROM, Detroit, Mich., assignor to The Solvay Process Company, Solvay, N. Y., a Corporation of New York. Filed Oct. 16, 1918. Serial No. 258,459. 3 Claims. (Cl. 23—13.)

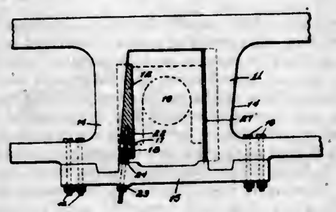
1. The process of recovering potassium chlorid from solutions in which it is contained together with sodium chlorid, sodium sulfate, sodium carbonate and borax, which consists in chilling the solution so as to precipitate sodium sulfate, sodium carbonate and borax and separating out the precipitated salts, evaporating the cleared brine first by solar heat until it is approximately saturated with potassium chlorid and then, after separation from precipitated salts, by artificial heat at a high temperature and without admixture of other salts, until it is saturated with potassium chlorid at the temperature employed, and finally separating the brine from the salts precipitated during the high temperature evaporation and cooling it to crystallize out potassium chlorid.



1,349,446. PROCESS OF RECOVERING BORAX FROM SOLUTIONS CONTAINING SODIUM BORATES. CARL SUNDSTROM, Syracuse, N. Y., assignor to The Solvay Process Company, Solvay, N. Y., a Corporation of New York. Filed Sept. 24, 1919. Serial No. 325,910. 6 Claims. (Cl. 23—22.)

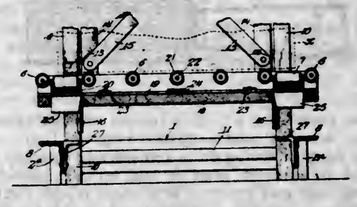
1. The process of removing sodium metaborate from solution which consists in forming carbon dioxid within the solution so as to convert the metaborate into sodium tetraborate and precipitating the tetraborate.

1,349,447. PROCESS OF OBTAINING SODIUM BICARBONATE FROM ALKALINE WATERS. CARL SUNDSTROM, Syracuse, N. Y., assignor to The Solvay Process Company, Solvay, N. Y., a Corporation of New York. Original application filed Oct. 16, 1918, Serial No. 258,459. Divided and this application filed Apr. 3, 1920. Serial No. 370,966. 2 Claims. (Cl. 23—22.)



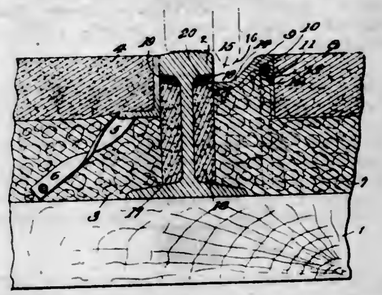
1. The process of recovering sodium bicarbonate from alkaline brines containing sodium carbonate, which consists in chilling the brine to such temperature below zero centigrade as to cause the precipitation of sodium carbonate and separating the precipitated salts from the liquor; warming the precipitated salts so as to melt the sodium carbonate; separating out the unmelted portion of the salts and carbonating the cleared liquor to precipitate sodium bicarbonate and separating out the sodium bicarbonate.

1,349,448. BOBBIN-STRIPPER. GEORGE F. BAHAN and AMASA ST. ONGE, Charlotte, N. C. Filed Oct. 21, 1918. Serial No. 259,004. 14 Claims. (Cl. 19—15.)



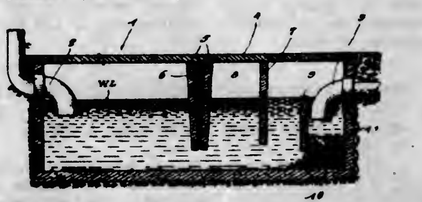
9. In a bobbin stripper, in combination, a trough, a conveyer for moving bobbins along said trough, a member adapted to be projected across the bobbin path to break entangled yarns, cleaning jaws to which bobbins are fed from said trough, and means for causing said jaws to strip the yarn from said bobbins.

1,349,449. BEARING-BOX. HARRY C. FOSTER, Lehighton, Pa., assignor of one-half to Chester G. Setzer, Lehighton, Pa. Filed May 3, 1919. Serial No. 294,426. 5 Claims. (Cl. 64—55.)



1. The combination with a movable bearing box and its supporting frame, of a wedge for taking up lost motion, a follower movable independently of the wedge, means for adjusting the follower in the direction of movement of the wedge, and an expansion cushioning member interposed between the follower and the wedge.

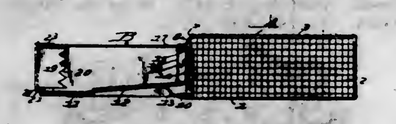
1,349,450. LIFTING DEVICE. GEORGE M. FRENCH and WILLIAM B. PAVEY, Chicago, Ill., assignors to Economy Engineering Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 3, 1918. Serial No. 248,098. 8 Claims. (Cl. 187—1.)



7. A vertically movable platform having, in combination, a base and two sets of rollers mounted on the base, the rollers of one set being mounted for vertical movement relative to the rollers of the other set, and means for automatically moving the first mentioned rollers in the movement of the platform whereby to carry the uppermost surfaces thereof above or below the uppermost surfaces of the second mentioned rollers, said movable rollers being adapted when in their uppermost position to support an article for movement in a direction transverse to the direction of movement of the article upon the other rollers.

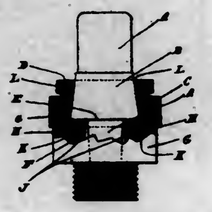
1,349,451. STREET-RAILWAY CONSTRUCTION. WILLIAM S. GODWIN, Cleveland, Ohio. Filed Feb. 14, 1919. Serial No. 277,064. 11 Claims. (Cl. 238—9.)

2. A between rail paving guard that forms in connection with the T-rail, a grooveway, said guard being unattached and free from the rail or rail support, but attached to the paving that is free from the rail.



1,349,452. SEPTIC-TANK. MELVIN JAMES GRIFFITH, Barberton, Ohio. Filed Oct. 2, 1919. Serial No. 327,917. 3 Claims. (Cl. 210—6.)

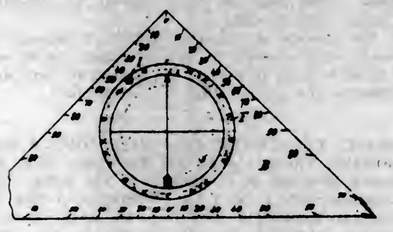
1. A septic tank adapted to contain water including inlet and outlet openings, and a V-shaped bacteria brood-



ing pocket in said tank, said pocket being open at its bottom which is disposed below the normal water line to permit the water to circulate therethrough.

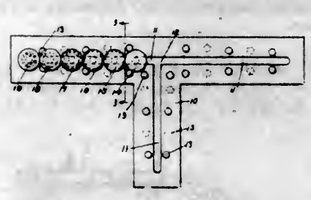
1,349,453. TRAP. JAMES H. HALL, Mountain Grove, Mo. Filed Jan. 9, 1918. Serial No. 211,040. 1 Claim. (Cl. 43—67.)

A trap comprising a cage, a tubular member extending from the cage but communicating with the latter at its point of junction therewith, a transversely disposed shaft journaled in opposite sides of the tubular member adjacent the cage and provided with crank portions exterior to the tubular member, a door attached to said shaft for vertical swinging movement from open to closed position to open and close communication between the tubular member and the cage, vertically disposed rods pivotally mounted on opposite sides of the tubular member at the end remote from the cage, a door secured to each rod member so that the two may swing back into the tubular member to open the end thereof or swing transversely across the tubular member to close the said end, each door being provided with an arm projecting to the opposite side of the axis of the rod member to which it is attached, and connecting rods having their one end pivotally connected to one of the said arms and their remaining ends to the aforesaid crank portion.



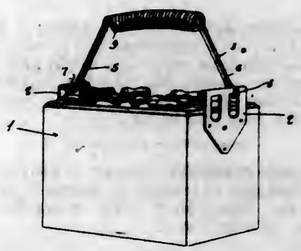
1,349,454. SPARKING-PLUG FOR IGNITION PURPOSES. ARTHUR ERNEST HEATH, London, England. Filed Oct. 24, 1919. Serial No. 332,945. 1 Claim. (Cl. 123—169.)

In sparking plugs for ignition purposes of the class described, an insulator, a gland nut having a tapered bore for engaging the insulator and formed with an extension at the big end of the bore for holding a packing washer; said insulator having tapered outer sides and so formed that the taper portion of the insulator provides a shoulder, a packing washer, a spark plug body formed with a projecting ring of slightly smaller diameter than the bore of the gland nut on its internal shoulder for engaging with the packing washer situated between it and the shoulder on the insulator, substantially as and for the purpose set forth.



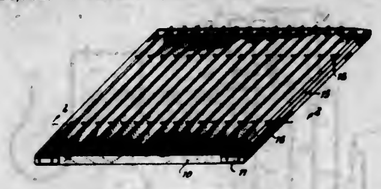
1,349,455. ADJUSTABLE COMPASS-DIAL. HANS THORVALD ZEINER-HENRIKSEN, Christiania, Norway. Filed Mar. 25, 1920. Serial No. 368,713. 8 Claims. (Cl. 33—75.)

1. An adjustable compass dial for determining the direction of a line on a map as indicated by a compass comprising two transparent disks adjustable relatively to each other one of said disks being in the form of a rectangular triangle and having a circular opening while the other disk has a circular shape and is rotatably mounted on the first named disk so as to cover the said opening said circular disk being provided with an arrow or a cross



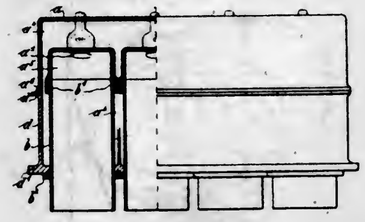
indicating the north-south line or north-south and east-west, while the other disk is provided with a complete set of compass points.

1,349,456. PUZZLE. VATSLAV A. HLASKO, New York, N. Y. Filed Apr. 10, 1919. Serial No. 289,085. 7 Claims. (Cl. 46—41.)



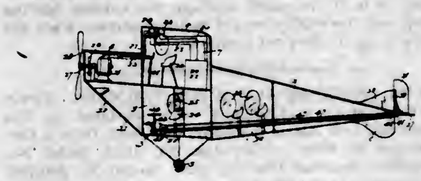
1. A puzzle comprising a member provided with a plurality of slots communicating with each other, elements movable longitudinally of said slots, and means for restricting the movement of said elements in said slots.

1,349,457. LIFTING-HANDLE FOR STORAGE BATTERIES. ENOS A. HURD, Woodward, Okla. Filed Mar. 3, 1917. Serial No. 152,367. 1 Claim. (Cl. 220—95.)



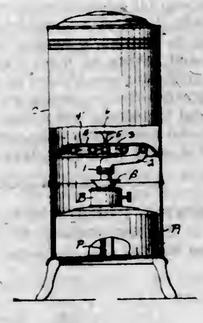
A detachable lifting handle for storage batteries of the class described constructed of a single strand of wire bent back upon itself to form a pair of parallel lengths comprising a pair of spaced arms, said lengths of wire being coiled intermediate said arms to form a cylindrical hand grip, the arms joining the hand grip at the upper portion of the end convolutions of the grip, said arms having their free ends curved outwardly and upwardly in opposite directions to form battery handle gripping hooks, the hand grip also forming an expansion spring for forcing the arms outwardly away from each other to hold the hooks in operative position and in engagement with the battery handle and permits the arms and hooks to engage batteries of various sizes.

1,349,458. DRIER-TRAY. CARL EDWARD JOHNSON, Boundbrook, N. J. Filed Sept. 19, 1919. Serial No. 324,962. 4 Claims. (Cl. 34—17.)



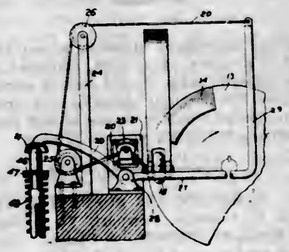
3. A drier tray comprising a plurality of angle strips each arranged with one of its legs vertical, means for fastening said strips together end to end to form a frame, a plurality of parallel channels formed from a single sheet of material, said channels having upright tapering flanges and having their webs arranged in one plane, said flanges of adjacent channels forming a plurality of air passages therebetween, a U-shaped member formed on each end of said metal sheet so as to engage the frame, a plurality of bolts passing through the flanges of the channels and engaging the frame so as to support said channels.

1,349,459. INTERNAL-COMBUSTION ENGINE. HENRI VICTOR JULES JOUFFRET, Paris, France. Filed Aug. 25, 1917. Serial No. 188,203. 2 Claims. (Cl. 123—173.)



1. In an internal combustion engine, the combination of a head piece comprising a combustion chamber and the usual associated parts, for each cylinder, a screw threaded portion at the lower part of the said head piece for each combustion chamber, a cylinder provided with a screw thread and adapted to be screwd to each such screw threaded portion, a projecting portion of the head piece extending beyond each cylinder when in position, a jacket adapted to surround each cylinder with a certain amount of clearance, and having a part at one end adapted to contact with the projecting portion of the head piece, a ring adapted to surround each cylinder and means for securing the said ring to the cylinder so that the lower end of the jacket is held in close contact therewith when the cylinder is in position, all substantially as described.

1,349,460. AEROPLANE. GEORGE N. KASEMATIS and BARTHOLOMUS A. STAMATELOPOULOS, New York, N. Y. Filed Sept. 7, 1918. Serial No. 253,097. 1 Claim. (Cl. 244—29.)



In an aeroplane, a fuselage having stabilizing surfaces at its rear end disposed one in a vertical plane and two in a horizontal plane, a rudder hingedly attached to the vertical stabilising surface, means adjacent the forward end of the fuselage for operating the said rudder, rudders hingedly attached to the horisontally disposed stabilizing surfaces and disposed one on either side of the first said rudder, the two last said rudders being provided with inwardly directed staffs alined with their hinged or pivotal connections, sheaves carried on the inner ends of the staffs, a rock shaft positioned adjacent the operating means of the first said rudder, sheaves carried on opposite ends of said rock shaft, bearing supports for said rock shaft, belts trained over the sheaves on the rock shaft and the sheaves on the staffs, and foot rests mounted on the rock shaft and provided with guards to embrace the feet whereby the rests may be moved in either direction in a plane at right angles to the axis of the rock shaft to effect rocking movement of the latter in either direction for the purpose specified.

1,349,461. AIR-HEATING ATTACHMENT. GEORGE DENIS KENNEDY, Jefferson City, Mo., assignor of one-half to Frank M. Strickland, Springfield, Mo. Filed Dec. 6, 1919. Serial No. 342,966. 3 Claims. (Cl. 126—90.)

1. An air heating device comprising a plate adapted to be supported adjacent a heating medium and provided with an opening, a coil carried by the face of the plate opposed to the heating medium, the inner end of the coil being in communication with the opening in the plate, the opposite end of the coil being in communication with the atmosphere, said plate being provided with additional openings arranged between the convolutions of the coil.

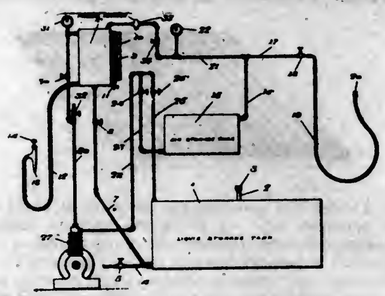
1,349,462. MARKER FOR PLANTERS. OTTO HENRY KOHLHAAS, Calumet, Mich. Filed May 24, 1919. Serial No. 299,640. 3 Claims. (Cl. 111—30.)

1. A marker adapted for use in connection with a planter, including a driven disk provided with an inclined shouldered portion, a rod for actuating the conventional seed droppers used in connection with such planter, a lever

having one of its ends secured to such rod and being provided at its opposite end with a roller adapted to be engaged by the inclined shouldered portion, a marker secured to such planter, a lever provided with a cup-shaped part at its outer end adapted to engage and to depress such marker, pulleys, and a flexible cable having one of its ends secured to the inner end of the latter extending around such pulleys, and having its opposite end secured to the roller end of the first named member.

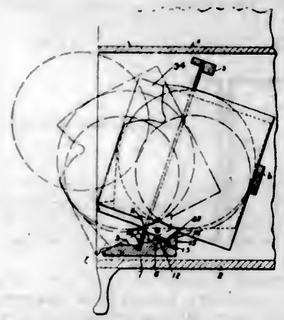
1,349,463. DUST-CAP FOR PNEUMATIC-TIRE VALVES. JOHN WILLIAM LAIRD, Pasadena, Calif. Filed Jan. 5, 1920. Serial No. 349,546. 4 Claims. (Cl. 152—12.)

1. In a dust cap for pneumatic tire valves, the combination with a valve body, of a flanged rim nut for securing the valve body in position, a tubular extension formed on said rim nut and having an inner rigid threaded portion engaging the projecting end portion of said valve body and an outer unthreaded elastic portion surrounding the valve body and spaced therefrom, and a dust cap having an unbroken elastic end portion engaging said tubular extension and abutting the outer face of the flange of said rim nut.



1,349,464. DENTAL INSTRUMENT. LOUIS A. LANCIT and BOYD U. ZERGER, Newark, N. J. Filed June 14, 1919. Serial No. 304,122. 8 Claims. (Cl. 32—10.)

1. A dental instrument including a rest to engage the outer end of a crown on a tooth, clamping members arranged on opposite sides of said rest to engage the sides of the crown for securely gripping the crown between them, and a cutter mounted on one of said clamping members for slitting the crown while so gripped.

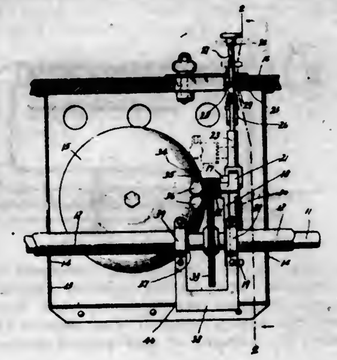


1,349,465. FUEL AND AIR SUPPLYING APPARATUS. WILLIAM C. LINDSAY, Newport, Vt. Filed Dec. 30, 1919. Serial No. 348,427. 8 Claims. (Cl. 221—99.)

1. In an apparatus of the character described, a liquid storage tank, an elevated measuring tank, a pipe connecting said tanks, for the upward flow of liquid from the storage to the measuring tank, a pump, a pipe connecting said pump and upper portion of the measuring tank for exhausting the air therefrom, delivery means leading from the bottom of the measuring tank for delivering the liquid therefrom, an atmospheric valve for the second named

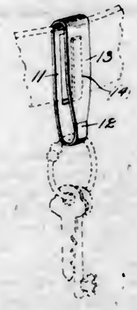
pipe, and means supplied with air from the pump for the delivery of air either to the liquid storage tank or measuring tank for displacing the liquid therefrom.

1,349,466. RECORD-FILING CABINET. ROBERT MCCART, Jr., El Paso, Tex. Filed May 13, 1919. Serial No. 296,776. 2 Claims. (Cl. 211—16.)



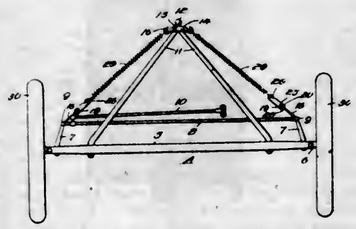
1. A record cabinet including a number of independent containers, blocks provided with openings secured to the lower portion of such containers, a base block positioned below the container blocks, and a rod provided with a pointed end adapted to pass through the latter blocks and to act as a pivot therefor, such blocks being spaced from the base block when the rod is in proper position but being adapted to rest upon the upper face of the base block upon the removal of said rod.

2. A record cabinet, including a base block, the upper surface of such base block having an apex and trough portion, such surface being inclined upwardly adjacent the forward edge of the block, an envelop, a block forming a part of such envelop, and means associated with such block for permitting a rocking of the same, such block being adapted to be positioned above the apex in the upper surface of the base block, and being adapted to project within the trough portion of the base block when the envelop is in its rearmost position, the envelop bearing against such forwardly located inclined surface when the envelop is in its forward position.



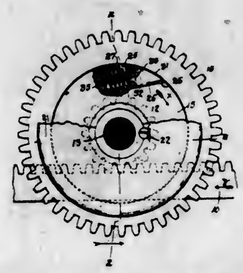
1,349,467. AUDIBLE ALARM FOR VEHICLES. LEWIS HOWELL MORGAN, Cleveland, Ohio, assignor to The American Auto Alarm Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 24, 1918, Serial No. 213,520. Renewed June 22, 1920. Serial No. 390,790. 3 Claims. (Cl. 116—33.)

1. In an alarm for vehicles, the combination with a master gear fixed to a rotating shaft and a gong adjacent thereto, of means coöperating with the gong to ring the same including a pinion adapted to mesh with the master gear and means pivoted to the pinion to swing into engage-



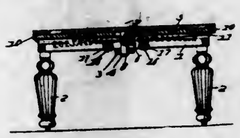
ment with the gong when the pinion rotates, and key controlled means to determine the position of the pinion with respect to the master gear.

1,349,468. KEY-RING HOLDER. WILLIAM N. MORRISON, St. Louis, Mo. Filed Oct. 6, 1919. Serial No. 328,653. 2 Claims. (Cl. 24—3.)



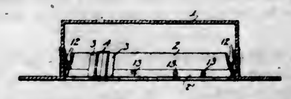
1. A key ring holder formed from a single piece of metal and comprising a back portion, a hook at the lower end thereof, a resilient tongue depending from the upper end of said back portion, the lower end of which tongue bears against the upper edge of the front leg of the hook, and a narrow strip of material secured at its lower end to the lower portion of said back portion and extending upwardly between said back portion and said tongue.

1,349,469. STEERING-ADJUSTER FOR AUTOMOBILES. DUNCAN MOULDER, San Antonio, Tex. Filed Sept. 6, 1919. Serial No. 322,110. 1 Claim. (Cl. 280—94.)



An adjuster of the character described comprising a double hook member adapted to be secured to the front radius rods of an automobile, bolt members adapted to be connected to the spindle arms of a front axle assembly of said automobile, hooks adjustably connected to said bolt members, and coiled tension springs connected with the double hook members and said hooks on the bolt members.

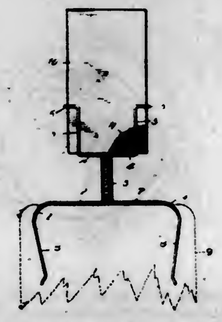
1,349,470. MECHANICAL MOVEMENT. GEBHARD MÜLLER, New York, N. Y. Filed June 6, 1919. Serial No. 302,187. 3 Claims. (Cl. 74—53.)



1. A mechanical movement for converting reciprocating movement into intermittent rotary movement, comprising a driving wheel rotated alternately in opposite directions, a driven wheel, a carrier rotating with the said driven wheel and on which the said driven wheel is mounted to turn, the said carried having a cut-out portion at its peripheral face, the bottom of the cut-out portion forming a portion of a chord, and the side wall of the cut-out portion being approximately at a right angle to the said bottom, and a spring-pressed clamping member mounted to slide and rock in the said cut-out portion and having a roughened segmental peripheral face adapted to engage the inner face of the said driven wheel.

1,349,471. EXTENSION-TABLE. ERNEST T. NOENNIG, Wittenberg, Mo. Filed Mar. 13, 1919. Serial No. 282,408. 1 Claim. (Cl. 45—113.)

An extension table comprising a frame, a top carried by the frame, a supporting member for the top, said supporting member being slidably mounted in the frame for vertical movement therein, a crank rod journaled in the frame and provided with a pair of spaced cranks straddling the supporting member, a U-shaped member having its main portion passing through the supporting member and rockingly connected thereto and the extremities of its legs pivotally connected to the crank portion of the crank rod, means for operating the crank rod, and extension leaves movable from positions below the top to positions in the same plane with the latter, the crank rod serving to elevate and lower the top to permit the extending or retracting of the leaves.



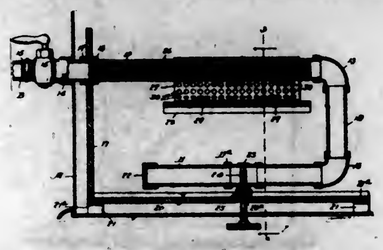
1,349,472. SWEATBAND FOR HATS. JULIUS CHARLES PETERSON, Spokane, Wash. Filed July 15, 1919. Serial No. 310,949. 4 Claims. (Cl. 2—32.)

1. A sweat band for hats, comprising a strip, and straps for attaching said band to a hat, said straps located at the

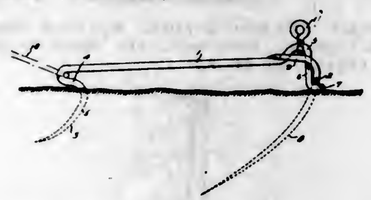
front and rear portions of the sweat band, certain of said straps secured to the lower portion of the sweat band and others of said straps secured to the upper portion of the sweat band.

1,349,473. DRINKING-CUP HOLDER FOR WATER-BOTTLES. CHARLES ROSENTHAL, New York, N. Y. Filed Sept. 9, 1919. Serial No. 322,619. 4 Claims. (Cl. 248—30.)

1. A device of the character stated, comprising a plurality of spring wire members, bottle engaging hooks formed on the lower ends of said members, the upper ends of said members bent forming a carton support, and a coupling device connecting the intermediate portions of the members holding them together and permitting independent movement of the members.



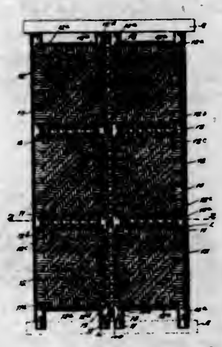
1,349,474. SYRINGE. OSCAR O. R. SCHWIDETZKY, Hasbrouck Heights, N. J., assignor to Beckton, Dickinson & Co., Rutherford, N. J., a Corporation of New Jersey. Filed Nov. 2, 1917. Serial No. 199,906. 2 Claims. (Cl. 128—231.)



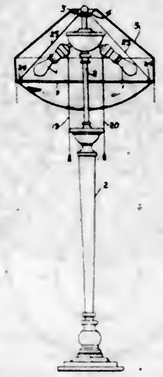
1. A syringe, comprising a barrel provided at one end with a discharge nozzle and at the opposite end with a transverse wall having a minute air aperture open at all times, a nipple formed integrally on the outer face of the wall and into which opens the said minute aperture, the nipple having a bulbous portion, and a rubber bulb having a neck fitting exteriorly on the said nipple, the air in the bulb and the said wall forming a support for a body of liquid held within the barrel and preventing passage of the liquid from the barrel into the nipple and bulb upon inclining the syringe with the nozzle upward.

1,349,475. OIL-BURNING HEATER. DAVID SEINIGER, Middletown, N. Y. Filed Oct. 8, 1919. Serial No. 329,310. 2 Claims. (Cl. 158—63.)

1. A burner of the class described, including a vaporizing element affording a passage for the flow of the fuel and adapted to be connected with a source of fuel supply, a tubular element external of the first element and forming a space between said elements, said external element being perforated, and a jet element beneath said vaporizing element and in communication therewith to receive fuel therefrom, said tubular external element having transversely disposed spreader means rigid therewith at the underside, said jet element being adapted to direct a jet against the underside of said spreader means.

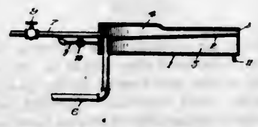


1,349,476. GROUND-ANCHOR. ISAAC SOLBERG, Rice Lake, Wis. Filed Nov. 15, 1919. Serial No. 338,197. 1 Claim. (Cl. 189—90.)



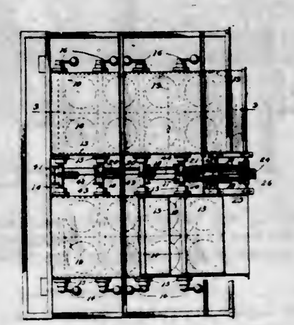
A ground anchor, of the character described, comprising two members, one member constituting a relatively horizontal bar bent at its rear end forming an upwardly projecting hump, a normally vertical post, and an eye at the lower end of the post, the forward end of said bar bent rearwardly and then curved forwardly forming a prong, the other member of said anchor constituting in the main a relatively long prong adapted to be positioned through the eye of the first-mentioned member, and having at its upper end a forwardly projecting loop adapted to receive the hump of the first-mentioned member.

1,349,477. WICKER PANEL. WILLIAM HENRY STOCKER, Philadelphia, Pa. Filed Feb. 10, 1920. Serial No. 357,647. 7 Claims. (Cl. 20—15.)



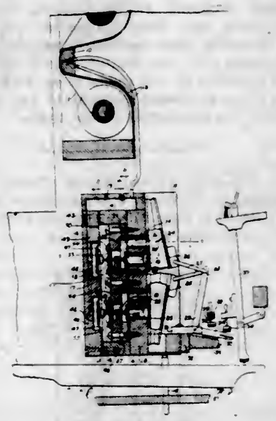
1. A panel of the class described including a plurality of sections, each presenting longitudinal frame bars and transverse frame bars, and woven material forming separate woven areas in each panel section, some of the strands of each section running to and being interwoven with the other areas of the section and other strands of the separate areas of the section running to and being interwoven with the areas of the other section.

1,349,478. INDEPENDENTLY-DETACHABLE UNDERSHADE FOR LIGHT-STANDARDS. MATTHEW Y. SUGIMURA, New York, N. Y. Filed Apr. 29, 1919. Serial No. 293,511. 5 Claims. (Cl. 240—108.)



1. The combination of a supporting standard, lighting fixtures including a source of light, mounted on the upper part of said standard, an upper shade for said fixtures, an undershade comprising a plurality of substantially concentric split frame members and radially extending members rigidly connecting the concentric frame members, and adapted to form a radially extending passage through which the standard may pass, means connecting the end of one of the concentric split frame members, and a means for supporting the undershade on a standard below the lighting fixtures and the upper shade, the said means including connectors extending from the outer concentric frame member to the supporting standard, one end of the connectors being detachably fastened to the undershade, whereby the said undershade may be independently positioned without requiring the removal or disassembly of the lighting fixtures or the uppershade.

1,349,479. OIL-BURNER. ANTONIO T. TIMOSCI, San Jose, Calif. Filed Oct. 22, 1919. Serial No. 332,495. 1 Claim. (Cl. 158—75.)

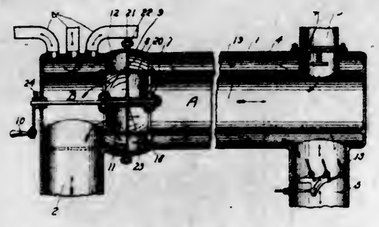


A device of the character described comprising a horizontally disposed casing, an inclined partition within said casing dividing the interior thereof into a lower heating chamber and an upper vaporizing chamber, the side of the casing within the vaporizing chamber at the higher end of the partition being open to provide a discharge, a fuel supply pipe extending vertically into said casing at the opposite side thereof through the partition and discharging into the vaporizing chamber, a steam supply pipe extending horizontally into the vaporizing chamber at the second named side thereof and discharging across the upper end of said fuel pipe and directly toward the open side, and a branch pipe leading from said steam pipe horizontally into said heating chamber to heat said partition plate.

1,349,480. PNEUMATIC DUST-COLLECTING SYSTEM AND APPARATUS THEREFOR. JOHN WILSMORE, Woollahra, near Sydney, New South Wales, Australia. Filed Nov. 13, 1919. Serial No. 337,664. 7 Claims. (Cl. 183—53.)

1. In a pneumatic dust collecting system provided with a series of porous filter hose or tubes, successively directing the dust laden air through certain of said tubes at a high velocity to dislodge the dust particles collected therein to a storage chamber and then leading the air from said chamber at a lower velocity to the remaining tubes closed at their opposite ends whereby it filters through the interstices of the fabric of the tubes.

1,349,481. PLAYER-PIANO ACTION. WALTER JOSEPH WODRASKA, New York, N. Y. Filed May 2, 1919. Serial No. 294,234. 4 Claims. (Cl. 84—50.)

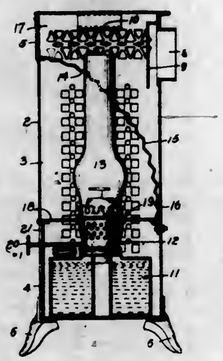


1. In a pneumatic player piano, the combination of a valve casing, a plurality of pneumatics carried thereby, hammer actuating means coöperating with the pneumatics, said casing being provided with a vacuum chest common to a plurality of the pneumatics, a series of valve blocks arranged within the vacuum chest, a plurality of independent valves supported by and within each block and controlling communication between the atmospheric air in the respective pneumatic and the vacuum in the chest, and means to provide pneumatic actuation of each valve.

1,349,482. DEVICE FOR CONSERVING FUEL. WILLIAM OLNEY WOOD, Riverside, R. I. Filed Feb. 19, 1919. Serial No. 277,945. 5 Claims. (Cl. 257—246.)

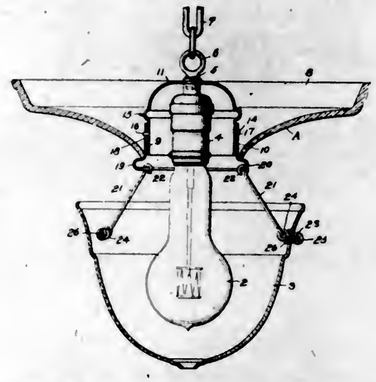
4. In a device of the class described, in combination, a passage for relatively hot gases, a passage for relatively

cold gases, and a drum included within said passages, comprising two sets of fans operating, respectively, in each of said passages and consisting of a single in-



strumentality, the blades of said fans being oppositely pitched the flow of said relatively hot gases through the passage therefor being automatically controlled.

1,349,483. LAMP-FIXTURE. FRANK YOKEL, Pittsburgh, Pa., assignor to Pittsburgh Lamp, Brass & Glass Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Feb. 19, 1917. Serial No. 149,441. 5 Claims. (Cl. 240—73.)



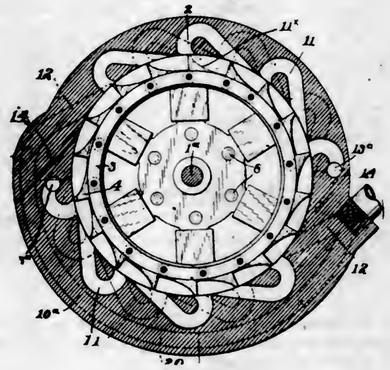
1. A lamp fixture including a shade having a border opening in the rear face thereof, a lamp, exterior and interior shade clamping plates covering the opening, a combined shade and lamp supporting tubular member having a threaded stem portion extending through said clamping plates and into the interior of the shade, locking means mounted on and coöperating with the threaded stem, and a lamp bracket secured to the stem and inclosed within the boundaries of the shade.

1,349,484. OIL-HEATER. FRANK YOKEL, Pittsburgh, Pa., assignor to Pittsburgh Lamp, Brass & Glass Company, Pittsburgh, Pa. Filed Aug. 25, 1917. Serial No. 188,113. 3 Claims. (Cl. 126—97.)

1. In an oil heating stove, the combination with a casing having its front formed with an upper and a lower closed portion and an open intermediate portion, of a removable oil burning structure of the central draft lamp type disposed in the casing including a reservoir, a burner and chimney, an apertured partition plate within the casing above the reservoir, and an apertured heat reflector plate within the casing secured to and extending upwardly from the rear wall of the casing to the upper front portion thereof, said chimney extending through the reflector.

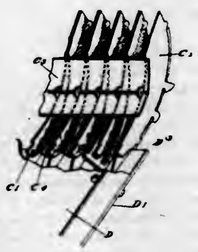
1,349,485. LIGHTING-FIXTURE. FRANK YOKEL, Pittsburgh, Pa., assignor to Pittsburgh Lamp, Brass & Glass Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Nov. 26, 1917. Serial No. 203,891. 2 Claims. (Cl. 240—92.)

1. In a lighting fixture, the combination with an open-top bowl, a glass reflector spaced from the top of the bowl and having a central opening and a concavo-convex reflecting portion extending from the opening with its concave side nearest to and projecting beyond the periphery of the upper end of the bowl, and common supporting means for the bowl and reflector including telescoping members provided with coöperating pins and slots, the outer of said members having an annular flange, the wall of the reflector opening mounted on the flange, and means connecting the flange and bowl.



1,349,486. NECKTIE. ABRAHAM M. BAKERMAN, New York, N. Y. Filed Aug. 22, 1919. Serial No. 319,141. 1 Claim. (Cl. 2—83.)

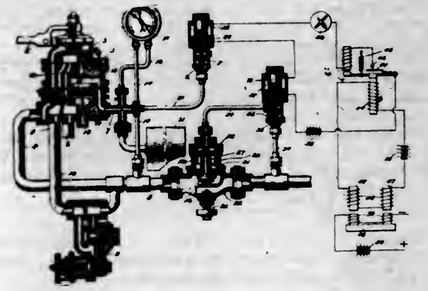
An attachment or accessory for neckties, comprising a straight bar, a transverse piece made on one end thereof, the upper end of the bar turned down in approximately parallel relation with the bar, openings made in the turned-down part, clamp legs with serrated ends pivoted between the bar and turned-down part with the serrations adapted to lie across the openings, a head piece placed adjacent the attachment, said head piece having passages made therethrough and registering with the openings in the turned-down bracket, and the aforesaid transverse bar bent around the head piece to hold the head piece and attachment together.



1,349,487. TURBINE-ENGINE. ERASTUS S. BENNETT, New York, N. Y. Filed May 31, 1917, Serial No. 172,010. Renewed Dec. 29, 1919. Serial No. 348,037. 6 Claims. (Cl. 253—53.)

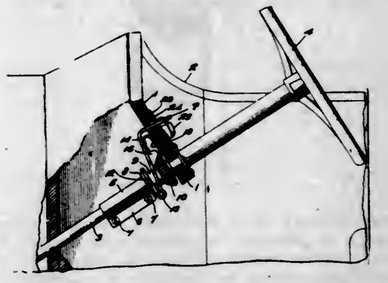
1. A rotary engine comprising a rotor having peripheral pockets, having their front walls converging from the sides toward the center line of the periphery, a casing having inlet and exhaust ports for the steam to and from said pockets and having conduits connecting each pocket with that in advance for the passage of the steam from

pocket to pocket throughout the series, said conduits being arranged in two sets, the conduits of both sets communicating simultaneously with the pockets, substantially as described.



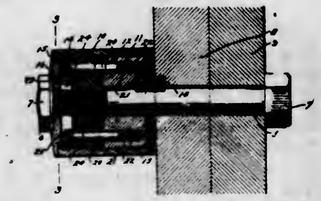
1,349,488. CHANNEL-ENTRANCE FOR TYPOGRAPHICAL MACHINES. ALFRED MARTIN BERRY, Woodhaven, N. Y., assignor to Intertype Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Sept. 23, 1919. Serial No. 325,705. 9 Claims. (Cl. 199—33.)

9. In a typographical machine, a channel entrance for guiding the matrices while passing from the distributer to the magazine, said channel entrance having partitions to form matrix passages between them, and a flat flexible blade fixed toward its upper end to the side of a respective partition and having its lower end projecting into the matrix passage, the lower end of said blade being movable laterally of the matrix passage by a passing matrix.



1,349,489. SAFETY TRAIN-STOP MECHANISM. JOHN W. BINGLEY, Watertown, N. Y. Filed Nov. 22, 1916. Serial No. 132,871. 5 Claims. (Cl. 246—190.)

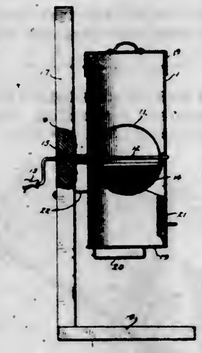
1. The combination with an automatic railway brake system, having a main reservoir and an engineer's brake valve including an equalizing discharge chamber, of an electromagnetic vent valve for releasing air from said chamber; an electromagnetically controlled stop valve for cutting off the supply of air from the main reservoir to the engineer's brake valve; a circuit including both



said electromagnetic valves; and means for controlling said circuit to operate said electromagnetic valves in unison.

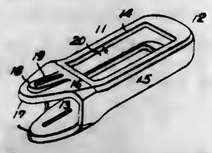
1,349,490. LOCK FOR AUTOMOBILE STEERING-GEAR. HENRY H. BROOMHEAD, Bloomington, Idaho. Filed Jan. 15, 1920. Serial No. 351,573. 3 Claims. (Cl. 70—90.)

1. In a device of the class described the combination of a steering post of a motor vehicle; a toothed means adapted to be rigidly associated with said post; a flat perforated plate surrounding said post; a bent member hinged to said plate provided with a toothed member adapted to engage and disengage said first named toothed means to prevent a movement thereof; spring means rigid with said bent member adapted to normally maintain said toothed means and said bent member out of engagement; and means adapted to positively maintain said first and second named means in engagement against the action of said spring means, substantially as described.



1,349,491. LOCKING DEVICE. GEORGE W. BURTON, Providence, R. I. Filed Nov. 28, 1919. Serial No. 341,130. 5 Claims. (Cl. 151—33.)

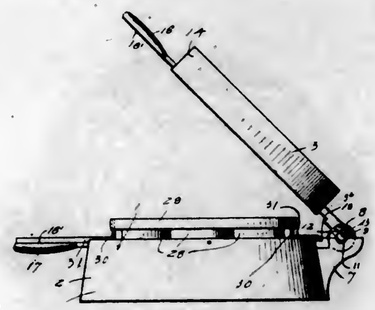
3. In a device of the character described, a casing, rotatable and non rotatable members in said casing having axial bores, the bore of the rotatable member being threaded and made to receive the threaded end of bolt or spindle,



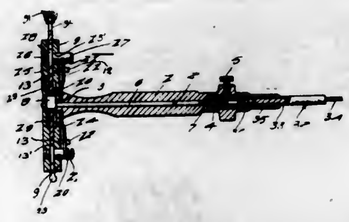
with the spindle passed through the bore in the non rotatable member, means for normally maintaining the casing and the non rotatable member in fixed relation relative to the bolt or spindle, and means for locking the rotatable member to said non rotatable member, comprising recesses in the non rotatable member, pins in said recesses, and recesses in the rotatable member adapted to receive said pins and means for displacing said pins from the recesses in the rotatable member, comprising a series of like pins carried in the recesses of the rotatable member and abutting against the said first mentioned pins, and means detachably engaging the device for manipulating said last mentioned pins to impart a thrust thereto and in turn to said first mentioned pins.

1,349,492. AGITATING DEVICE. PATRICK GEORGE CAMPBELL, Monolith, Calif. Filed Nov. 3, 1919. Serial No. 335,319. 1 Claim. (Cl. 83—60.)

In an agitating device, a revoluble receptacle, a support on which the receptacle is mounted with freedom of rotation, a spring tension catch on the support for automatically maintaining the receptacle in an upright position, a sifter fixed to the support and around which the receptacle is capable of being rotated, an agitator in the receptacle adapted to coact with the sifter, and a cover for one end of the receptacle comprising a container adapted to telescope within the receptacle and receive the material agitated through the sifter.



1,349,493. METHOD OF MAKING DRAFT-GEAR YOKES. ARTHUR J. CANFIELD, Montreal, Quebec, Canada. Filed Mar. 25, 1920. Serial No. 368,509. 6 Claims. (Cl. 29—167.)

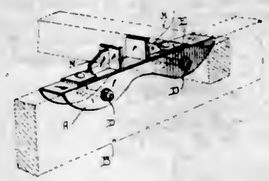


1. A method of making draft gear yokes and the like, which comprises piercing a billet to form a hollow body open at one end and closed at the other end, forming jaws at the open end of the body, and opening the body between said jaws and the closed end of the body for the reception of draft gear.

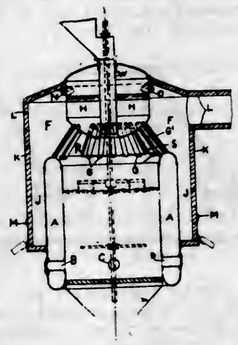
1,349,494. OVEN. HERBERT H. CHAFFEE, San Leandro, Calif. Filed June 25, 1918. Serial No. 241,783. 5 Claims. (Cl. 52—10.)

1. A portable oven comprising a pair of sections, means detachably and pivotally connecting the sections together, false bottoms arranged in each section, means for spacing the bottoms from the upper and lower walls of the sections, the false bottoms being provided with a plurality of perforations, and springs carried by the false bottoms arranged to engage the sections to prevent accidental displacement thereof.

1,349,495. MASSAGE IMPLEMENT. FERNAN CONILL, New York, N. Y. Filed Mar. 21, 1917. Serial No. 156,328. 1 Claim. (Cl. 128—51.)



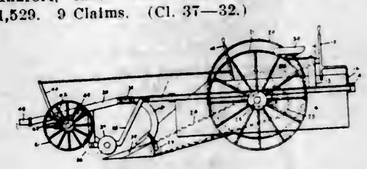
In a device of the character described, an axially bored handle, a head secured on one end of said handle and provided with spaced apertures, a cap piece, studs secured in said cap piece and projecting through the apertures of said head, the studs being provided with notches beyond the head and having guide flanges adjacent the inner face of the cap piece, a shaft rotatably mounted through the handle and provided on its inner end with an eccentric, a plate reciprocable between the head and cap piece provided with slots for reception of the guide flanges and with a central opening receiving said eccentric for reciprocating the plate when the shaft is rotated, and resilient locking arms turnable about the handle into engagement with the notches of said studs, said arms being adapted to be placed under tension when in locking position so as to force the cap piece toward the head for preventing looseness of said plate while permitting reciprocation thereof, said plate being provided with a massage member at one end and a weight member at its other end.



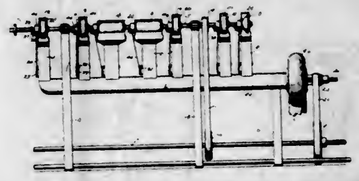
1,349,496. DEVICE FOR HOLDING HAYRACKS. WILLIAM E. CRAWFORD, Chapin, Iowa. Filed Aug. 23, 1919. Serial No. 319,343. 1 Claim. (Cl. 296—9.)

A device for holding hay racks, consisting of a metallic plate having longitudinally extending parallel flanges, adapted to fit against the side piece of a wagon frame, means for securing said plate to the side piece of a wagon frame, a bar disposed upon and extending longitudinally of said plate and having intermediate its end

spaced upward extending flanges, and braces for preventing collapse of said flanges, each of said braces comprising a metallic strip slit transversely intermediate its ends and having upward bent lateral portions, bearing against the outer face of the adjacent flange of the bar.

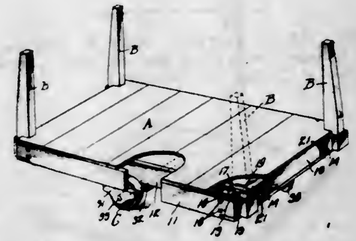


1,349,497. GAS-PRODUCER. ERNEST HOPE CRUSH, Bickley, England. Filed Dec. 29, 1919. Serial No. 348,210. 2 Claims. (Cl. 48—76.)



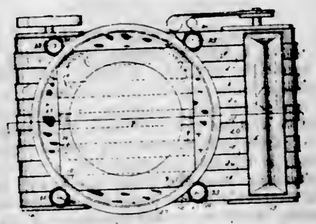
1. A gas producer comprising a producer shaft, an annular water chamber surrounding the shaft, a second annular water chamber placed above the shaft, a casing surrounding both annular chambers, said casing providing a gas chamber, an off-take for producer gas at one side of the upper part of the gas chamber, upwardly and inwardly inclined tubes connecting the two annular water chambers, said tubes being arranged in sets spaced apart, said tubes being so arranged that those sets which are adjacent the gas off-take are closer together than those which are more removed from said off-take, a baffle plate behind each set of tubes, said baffle plate being of the same width as the set with which it is in adjacency, the top of said casing being formed with poke holes, said poke holes being in registry with the spaces between the several sets of tubes.

1,349,498. ROAD-GRADER. ALBERT N. DAYWITT, Frankfort, Ind. Filed July 17, 1919. Serial No. 311,529. 9 Claims. (Cl. 37—32.)



4. A road grading machine comprising a longitudinal beam, a frame fixed to one side thereof and mounted on wheels, the wheel adjacent to said beam being pivoted at a higher level than the other wheel, a receptacle pivotally mounted in said frame, means for dumping said receptacle, a conveyer mounted in said receptacle, means on the wheel adjacent said beam for driving said conveyer, means for disengaging said conveyer from said wheel, means for cutting earth, a set of wheels mounted on the forward end of said beam, and means for raising the forward portion of said beam to raise the cutting means.

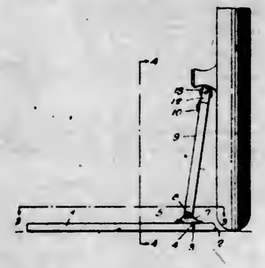
1,349,499. SUCTION-CONTROLLING DEVICE. LOUIS J. DELLERT, Brooklyn, N. Y. Filed Oct. 28, 1919. Serial No. 333,913. 6 Claims. (Cl. 51—17.)



1. In a grinding machine, a plurality of grinding wheels each provided with a hood having a branch pipe connected with a main suction pipe, and suction controlling devices, one for each wheel, and having closing means to normally close the corresponding branch pipe to the main suction pipe, each controlling device having actuating means connected with the said closing means and controlled by the corresponding grinding wheel to move the closing means into open position on applying an article to the grinding wheel.

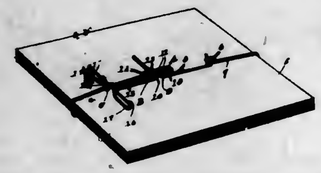
1,349,500. TRUCK. EMIL DIETZ, Indianapolis, Ind. Filed June 11, 1919. Serial No. 303,288. 5 Claims. (Cl. 296—43.)

1. A truck mounted to be supported mainly upon centrally disposed wheels and constructed with a frame the sides of which are each composed of two parallel members spaced a distance apart, corner irons interposed between said side members at each end and formed with sockets to receive the stakes, end members connected with said side members, and securing devices for securing said corner irons, side members and end members together, substantially as set forth.



1,349,501. MAGNETIC SEPARATOR. MYRON DINGS, Milwaukee, Wis. Filed Aug. 2, 1918. Serial No. 247,917. 15 Claims. (Cl. 83—71.)

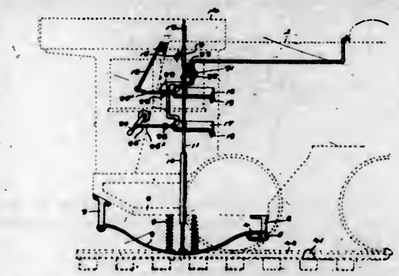
1. In a magnetic separator, an electromagnet having stationary attracting polar projections subdivided into



short sections, disposed in a series transverse to the line along which the material travels, and having each projection in the series also disposed transversely to said line, and separated from the other projections by non-magnetic gaps.

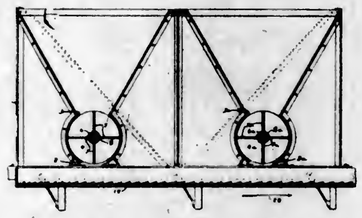
1,349,502. HUB-JACK. JOHN P. DORAU, North Fond du Lac, Wis. Filed Mar. 11, 1920. Serial No. 364,934. 3 Claims. (Cl. 254—123.)

1. A jack comprising a lever having its fulcrum at one end, said lever having thrust means, a plate carrying a pivot and having thrust means offset laterally from the pivotal axis and engageable with the thrust means of said lever, said plate being reversible to locate said pivot at either of two distances from the fulcrum when the aforesaid thrust means are engaged, means for securing said plate to said lever in either of its positions, and a lifting-arm mounted on said pivot.



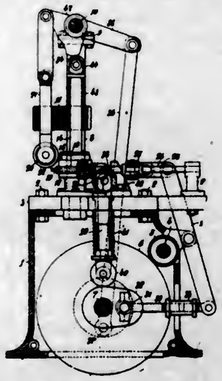
1,349,503. TYING DEVICE. JOHN W. DOWDLE, Mineral Springs, Ark. Filed Dec. 10, 1918. Serial No. 266,075. 2 Claims. (Cl. 24—131.)

1. A device for the purpose set forth, including a spring member having an arched body provided at one of its ends with an offset eye designed to receive therein one end of a tying cord, said body adapted to be centrally bent upon itself to form reversely extending spring jaws to provide a short turn frictional engagement for the free end of said cord, the second end of the body being extended laterally to provide a bridge, the said bridge being arched and being centrally formed with an upstanding cord guide, as and for the purpose set forth.



1,349,504. AUTOMATIC TRAIN-STOPPING MECHANISM. ALVA A. EVANS, Annona, Tex. Filed Aug. 15, 1919. Serial No. 317,736. 1 Claim. (Cl. 246—188.)

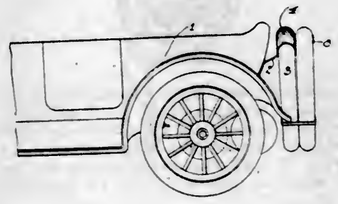
An automatic train-stop mechanism adapted to be carried by a locomotive and comprising in combination with the locomotive and the throttle lever and engineer's valve thereof, a longitudinal downwardly bowed spring, one end of which is movable longitudinally, a rod connected to and extending upwardly from the bowed spring, a ratchet bar connected to the upper end of said rod, a dog for preventing casual downward movement of the ratchet bar, longitudinally disposed cylinders, a conduit intermediate of a source of steam supply and the cylinders and having a rocking valve on which is a lever loosely and directly connected with said rod, and pistons disposed



in said cylinders and connected with the throttle lever and the valve lever.

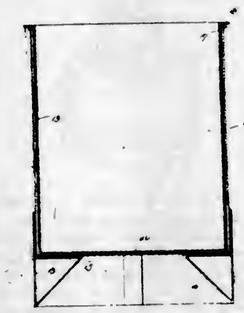
1,349,505. BLENDING-MACHINE. HARRY P. FLEMING, Santa Clara County, Calif. Filed Sept. 2, 1919. Serial No. 321,292. 2 Claims. (Cl. 259—17.)

1. A blending machine comprising a pair of hoppers mounted to receive and discharge material therefrom, revoluble measuring devices operatively mounted to receive from said hoppers, a friction disk operatively mounted to rotate each of said devices, adjustable friction wheels operatively mounted to simultaneously rotate said disks, and means for simultaneously adjusting said friction wheels with relation to the axes of their respective disks whereby the same may be caused to rotate at different speeds.



1,349,506. MACHINE FOR MAKING HORSESHOES. CHARLES FREDERIK VILHELM FLINT, Copenhagen, Denmark, assignor to The Firm of Dansk Staalbeholder Fabrik Akts, Copenhagen, Denmark. Filed Sept. 8, 1919. Serial No. 322,311. 4 Claims. (Cl. 59—37.)

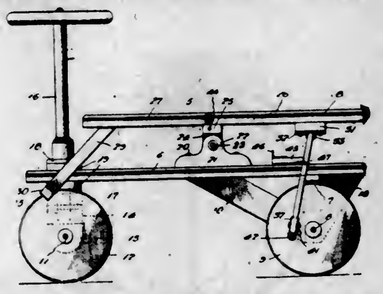
1. A machine for making horse-shoes, comprising means for bending a rod-shaped body into the shape of a horse-



shoe, means for the producing of calks at the ends of said body, means for the producing of a clipping substantially at the middle of said body, and means for retaining the rod-shaped body in one and the same working place while being bent and operated upon for the producing of the said calks and clipping.

1,349,507. TIRE-CARRIER. WALTER R. GREEN, Chicago, Ill. Filed Aug. 13, 1917. Serial No. 185,927. 2 Claims. (Cl. 224—29.)

1. A tire carrier, comprising an elongated bracket curved in substantially semi-circular form to fit the tread of a vertically disposed supporting tire upon opposite sides of its vertical center and reversely hooked to engage a supported tire so that the latter tire is suspended therefrom, said members being provided with plate portions intermediate of and at the outer sides of each tire engaging the lateral walls thereof so that the weight of the supported tire cramps the bracket in engagement with the tires and obviates transverse dislocation.

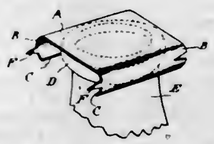


1,349,508. COOKING VESSEL. TILLIE HARRINGTON, Minneapolis, Minn. Filed Aug. 5, 1919. Serial No. 315,489. 2 Claims. (Cl. 53—1.)

1. A device of the character described comprising an outer cylindrical container formed of wire mesh and provided with supporting feet, and a removable inner container slidably disposed within said outer container and formed of wire mesh of finer screen than said outer container.

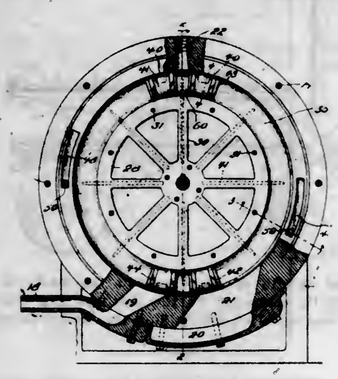
1,349,509. TOY VEHICLE. PERCY H. HERRICK, Pittsburgh, Pa. Filed Oct. 13, 1917. Serial No. 196,452. 2 Claims. (Cl. 208—33.)

1. A device of the class described comprising a wheeled platform, a top having connections with the platform for rocking movement, a bearing block secured to said top, a pitman pivoted in said bearing block and having detachable connection at the extremity thereof with both



the top and certain of the wheels of the platform, and means hingedly connected on the platform and engaging under the bearing block for holding the top stationary.

1,349,510. BOILER-CLOSURE FOR HAND-HOLES. HARRY A. JOCHUMSEN, Wheeling, W. Va. Filed Dec. 26, 1919. Serial No. 347,287. 1 Claim. (Cl. 220—25.)

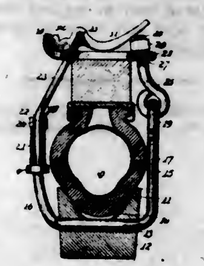


A stand boiler provided with an elliptical perforation near its bottom, an elliptical clamping member fitting said perforation and provided with a shoulder with clearance for a gasket and provided with a bolt extending centrally therethrough, said clamping member conforming in contour to said boiler, a complementary clamping member fitting upon said first clamping member with its inner side conforming in contour to and closely fitting said portion fitting said perforation.

1,349,511. COMBINED COVER AND CLOSURE-REMOVER FOR BOTTLES. EMELIA F. KANDLBINDER, Springfield, Ill. Filed Oct. 30, 1919. Serial No. 334,449. 1 Claim. (Cl. 215—53.)

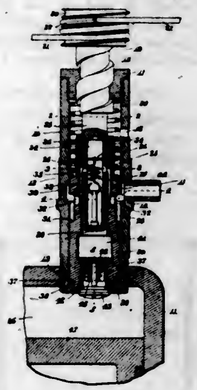
A combined cover and closure remover of metal, comprising a flat rectangular body portion adapted to bear upon the top of a bottle, said body portion being provided with two oppositely disposed marginal depending flanges, curved in transverse cross-section, adapted to frictionally engage the sides of the bottle neck, each flange carrying at one end integral pointed spurs, and at the other end notches of a shape corresponding to said spurs.

1,349,512. ROTARY INTERNAL-COMBUSTION ENGINE. MENNO KLAY, Mount Hope, Ohio. Filed Oct. 26, 1918. Serial No. 259,779. 4 Claims. (Cl. 123—11.)



1. In a device of the class described, a casing, a fly wheel mounted therein and including an annular chamber, a plurality of ring members spaced apart and located within said chamber, a plurality of plungers carried by each ring member, the plungers on each ring being located diametrically opposite each other, means for introducing an explosive fluid between certain of said plungers and means for effecting the exhaust of the exploded gases, a stationary element, a device movable through one of the ring members for connecting the latter and the fly wheel, at a given time, and a device movable through the other ring member for connecting the member last named with the stationary element, said stationary element being interposed between the rings.

1,349,513. PARACHUTE. ZUZANA KOZA, Akron, Ohio. Filed Oct. 23, 1919. Serial No. 332,655. 3 Claims. (Cl. 244—21.)

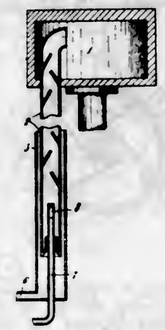


1. A device of the class described comprising a body harness, a parachute therefor, cords connecting the parachute to the body harness, cords carried by the harness adapted to engage the parachute when in folded position, said body harness including a belt section, leg straps carried thereby, loops carried by the ends of said leg straps, leg encircling cords carried by said straps, a crotch strap fixed to the belt at the rear side thereof and detachably connected to the front of said belt, a back and shoulder strap carried by the belt, and cords carried by the shoulder strap adapted to be connected to the belt at the front side thereof.

1,349,514. MUD-SHOE. GEORGE L. LAUER, Beatrice, Nebr. Filed May 3, 1919. Serial No. 294,520. 11 Claims. (Cl. 152—14.)

1. A mudshoe comprising a tire-engaging plate having a traction spur formed integrally with the plate, with a bore extending through the plate from one side to the other, said plate having a concave inner face and a recess countersunk in said face and exposing the bore, and clamping means mounted in the bore for holding the plate against the tire.

1,349,515. INJECTOR FOR INTERNAL-COMBUSTION ENGINES. LEVI W. LOMBARD, Mattapan, Mass., assignor of eleven-twentieths to Wilbert S. Bartlett, Brookline, Mass. Filed July 28, 1919. Serial No. 314,345. 5 Claims. (Cl. 123—25.)

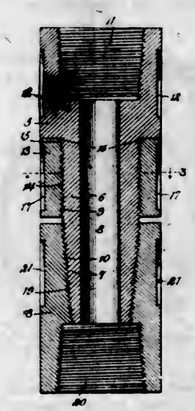


4. In a device of the class described, a cylindrical casing having an annular chamber in its inner wall; a reciprocating piston having an annulad peripheral groove always communicating with said annular chamber and provided with a water chamber communicating by lateral ports with said peripheral groove and a passage at one end communicating with the combustion chamber of an internal combustion engine; a supply pipe leading to said annular chamber; a normally stationary member positioned in a passage in the opposite end of said piston and provided with a water reservoir; a valve normally closing the outlet from said water chamber; means for limiting the movement of said piston in each direction; and means for returning said piston to its normal position.

1,349,516. DEVICE FOR SUPPLYING COOLING LIQUIDS TO PISTONS OF INTERNAL-COMBUSTION ENGINES. GERARD JOHAN LUGT, Amsterdam, Netherlands. Filed May 23, 1919. Serial No. 299,368. 2 Claims. (Cl. 123—176.)

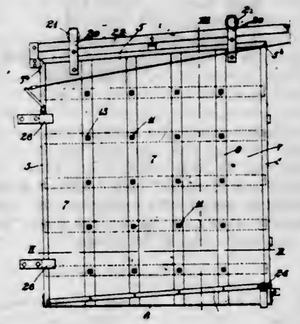
1. In a piston cooling mechanism, the combination of a stationary tube having a water inlet, a reciprocating

hollow piston, a tube carried by said piston, and having an open end discharging into said piston, the lower end of the tube having a vertical flange spaced from the tubular walls to form a pocket, the flange also forming a restricted opening, baffles in said tube between the discharging and restricted ends thereof, and a water inlet



tube loosely telescoping the restricted end of said reciprocating tube, and having a closed end provided with water discharging openings, the water accumulating in the pocket, and the excess thereof passing through the space between the water inlet tube, and the flange, the water in the pocket being vertically lifted by momentum to the baffles, and eventually discharged into the piston.

1,349,517. FOUNTAIN-BRUSH. JOHN LUKASZEWSKI, Chicago, Ill.. Filed Feb. 18, 1920. Serial No. 359,512. 2 Claims. (Cl. 15—50.)

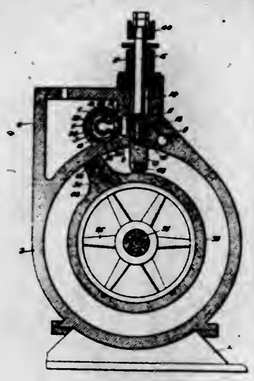


1. A fountain brush of the type described comprising a back, bristles secured to the outer end thereof, said back having a passage communicating with said bristles, a bulbous handle detachably connected to the inner end of said back, and supporting legs for holding the brush in upright position carried by the back.

1,349,518. TOOL-JOINT. HENRY CLAUDE LYLE, Beaumont, Tex. Filed May 11, 1920. Serial No. 380,697. 9 Claims. (Cl. 285—146.)

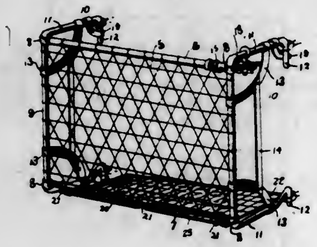
1. In combination, a pin, a box, and a locking collar or nut, the pin having a longitudinal bore, the box and the pin both having pipe coupling connections, the box and the collar both being screw-threadably mounted on said pin with the collar locking the box.

1,349,519. FIRE-RESISTING DOOR. EDWARD H. McCLOUD, Columbus, Ohio, assignor to The Kinnear Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Sept. 6, 1918. Serial No. 252,967. 4 Claims. (Cl. 189—47.)



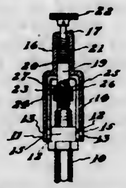
1. A door body comprising in combination a frame and panels or faces in said frame formed of corrugated strips, the corrugations of the strips of one face of the door extending at angles to those of the other face of the door, the strips of one face of the door being of less length than the distance between the frame members, and a strip secured to the frame independently of the corrugated strips closing the gap between the ends of said corrugated strips and the frame.

1,349,520. ENGINE. ORVILLE G. McMILLAN, Alpena, S. D. Filed Jan. 27, 1919. Serial No. 273,442. 2 Claims. (Cl. 121—76.)



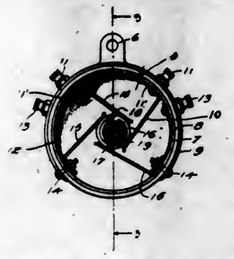
1. An engine of the class described comprising a cylinder having inlet and outlet ports, a rotary piston in said cylinder, a sliding head coöperating with the piston, means for actuating said head, a valve for controlling said ports.

a hand lever connected with the valve for setting the same, a lever adapted to be placed in engagement with



the hand lever and means for actuating said lever by movement of the piston for automatically operating the valve.

1,349,521. WINDOW-GUARD. DENNIS J. MAHONEY, Brooklyn, N. Y. Filed Aug. 30, 1917. Serial No. 188,917. 4 Claims. (Cl. 20—71.)

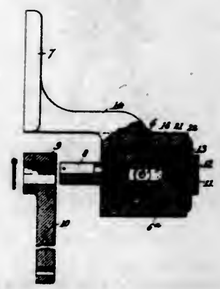


1. In a window guard, the combination of a front open-work panel, bars at the top and bottom of the panel and having eyes at their outer ends, wings at the ends of the panels and journaled in the eyes, a hinged bottom panel, attaching means with keepers at the inner ends of the wings, and a locking bar on the panel and adapted to secure and brace one of the wings.

1,349,522. VALVE-CAP. DANIEL W. MANNHARDT, Washington, Iowa. Filed Oct. 13, 1919. Serial No. 330,175. 1 Claim. (Cl. 152—12.)

The combination with a valve casing, of a nut threadedly engaged on the casing, a yoke having its ends pivotally secured to the nut, a sleeve extending from the yoke, a plunger slidable in the sleeve, a reduced shank extending from the plunger and projected through a restricted opening in the opposite end of the sleeve, the space surrounding the reduced shank defining a chamber whose end walls are formed by the upper end of the sleeve and a shoulder formed at the juncture of the plunger and its reduced shank, a cap carried by the lower end of the plunger for engagement over the end of the valve casing, and a spring located within the chamber to yieldingly hold the cap in such engagement.

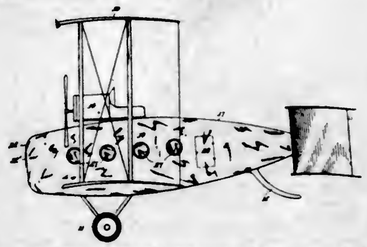
1,349,523. TIMER FOR AUTOMOBILES. LESLIE E. MIDDLEBROOK, Hall, N. Y. Filed Apr. 19, 1919. Serial No. 291,324. 3 Claims. (Cl. 200—26.)



3. A timer including a casing, an annular insulating band secured to the inner side of the casing, a set of binding posts extending through the upper portion of the casing and said insulator, an upper set of contacts secured to certain of the binding posts, a lower set of contacts, fastening devices extending through said casing and supporting the lower set of contacts, a rotary contact within the casing, conductor bars arranged on the inner side of the casing and connecting the lower contacts to certain of said binding posts, said conductor bars being supported by said fastening devices and certain of said binding posts, and an insulating strip extending about the casing and having its ends secured to said fastening devices.

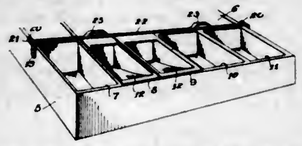
1,349,524. ALIMENTARY PASTE. CARL S. MINER, Chicago, Ill., assignor to Quaker Oats Company, Chicago, Ill., a Corporation of New Jersey. Filed July 9, 1920. Serial No. 394,902. 8 Claims. (Cl. 99—10.)

3. In a food product comprising a cereal, a whole milk powder having a fat constituent and a skim milk powder, the method of preventing rancidity in said product which consists in so proportioning and admixing the various constituents of said product that said fat constituent is substantially covered by said cereal to form a protective envelopment therefor.



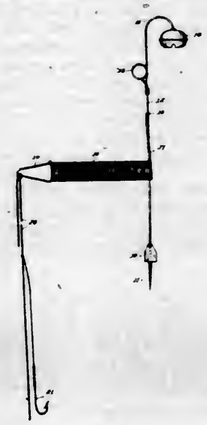
1,349,525. AUTOMATIC TRAIN-STOP. ALBERT L. NEWMAN, Memphis, Tenn. Filed July 22, 1919. Serial No. 312,566. 2 Claims. (Cl. 246—171.)

1. In a valve adapted to be applied to a car truck and to be connected with an air brake, the combination with a bracket supported on said truck, a plug detachably and revolubly mounted on said bracket and having a transverse



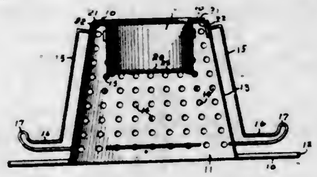
port, said bracket having a pair of ports contiguous to said plug, said pair of ports being brought into and out of communication with the port of said plug by the turning movement of the latter, a perforated plug fitted to the bracket and having its perforation in communication with one of said pair of ports, and of less diameter than the same, a nipple fitted to the other one of said pair of ports, and means connecting the nipple to the train line pipe.

1,349,526. AEROPLANE-FUSELAGE. GREGORY NIEDBALA, Elkhart, Ind. Filed Jan. 27, 1920. Serial No. 354,385. 3 Claims. (Cl. 244—30.)



1. A fuselage for aeroplanes comprising inner and outer walls formed of interlaced wicker, and integrally formed interlaced wicker members extending between the inner and outer walls.

1,349,527. MOVABLE POCKET FOR REGISTERS. WILLIAM RAY OWEN, Utica, N. Y. Filed Oct. 31, 1919. Serial No. 334,805. 5 Claims. (Cl. 133—11.)

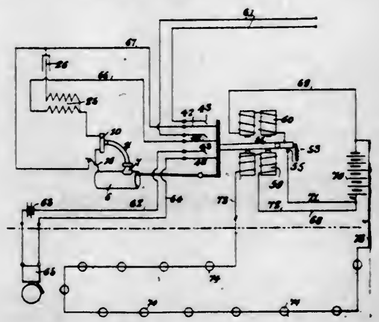


1. A cash drawer attachment comprising a plurality of detachable coin receptacles adapted to be arranged within the coin compartments of the drawer, outwardly directed flanges carried by said coin receptacles, and a retaining strip slidably mounted on the drawer for locking said receptacles in place.

1,349,528. FISHING-SIGNAL. STEPHEN OWSIAK, Chicago, Ill. Filed Nov. 18, 1919. Serial No. 338,911. 3 Claims. (Cl. 43—31.)

1. A fishing device comprising a mounting base, a flexible upright carried thereby, a flexible member upon the free end of the upright, an alarm bell at the free end of the flexible member, and a flexible and extensible fish line holder longitudinally adjustable upon said upright whereby the device may be set for actuating said bell by different strengths of pull exerted upon the line holder.

1,349,529. COMBINED TOASTER AND BOILER-SUPPORT. ABRAHAM C. PATTISON, Cumberland, Wis. Filed July 30, 1917. Serial No. 183,585. 7 Claims. (Cl. 53—5.)

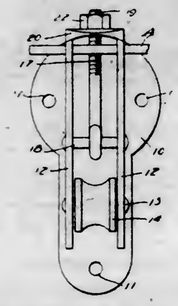


5. In a combined toaster and boiler, the combination of a base plate having a relatively large central opening, a body part mounted on the base plate, and extending upwardly therefrom and provided with perforations, in its sides, racks supported exteriorly upon the body, and a receptacle suspended in said body and projecting downwardly.

1,349,530. TREATMENT OF SOAPY LIQUORS. CHARLES LEE PECK, New York, N. Y., assignor to The Dorr Company, a Corporation of Delaware. Filed July 1, 1919. Serial No. 308,053. 11 Claims. (Cl. 87—6.)

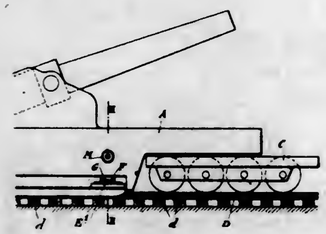
1. The method of treating soapy liquors which comprises coagulating the soapy matter, removing the coagulated matter from the liquid by a flotation treatment, and treating the floated matter for the recovery of organic substances; substantially as described.

2. The method of treating waste liquors containing soapy or soap-making organic matter which comprises converting said matter into coagulated particles having selective attraction for gas bubbles, subjecting the liquor to the action of gas bubbles and entrapping the coagulated matter thereby and causing it to float by the buoyant action thereof, removing the floating matter from the liquid, and treating the floated matter for the recovery of organic substances therefrom; substantially as described.



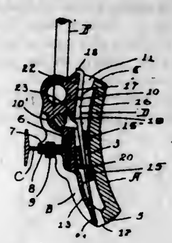
1,349,531. AUTOMATIC FIRE-ALARM. GEORGE B. RATTERMANN, Chicago, Ill., and WALTER W. GARRISON, Birmingham, Ala. Filed Nov. 5, 1917. Serial No. 200,421. 8 Claims. (Cl. 179—5.)

1. In an automatic fire alarm, a telephone unit for inclusion in an installed telephone circuit, phonographic means in constant acoustical connection with the telephone unit, driving means for the phonographic means, normally



closed-circuit electrical means including a switch for controlling the phonographic means and the telephone unit to start the former and couple the latter into the telephone circuit on the rupture of the closed circuit, and other electro-magnetic means in operative relation to the switch, one electro-magnetic means holding the switch in one position when the closed circuit is intact and the other electro-magnetic means holding the switch in another position when the closed circuit is broken.

1,349,532. AWNING-FASTENER. ARCHIE C. ROSS, Atchison, Kans. Filed Apr. 6, 1920. Serial No. 371,570. 1 Claim. (Cl. 156—15.)



An awning fastener comprising a bracket including an attaching plate, a pair of spaced parallel plates extending from the face thereof and provided in their upper ends with alining recesses for the reception of the top rod of an awning, a rivet extending transversely through said plates adjacent their lower ends, a grooved pulley journaled on said rivet, a second rivet extending transversely through said spaced plate at their intermediate portions, a bolt having one end pivotally mounted on said second named rivet and having its other end threaded, a plate disposed upon said bolt and adapted to bridge the upper ends of said spaced plates to form a closure for the recesses therein, and a clamping nut threaded upon the upper end of said bolt and engageable with said last named plate.

1,349,533. CARRIAGE OF LARGE-CALIBER GUNS FIRING FROM RAILWAY-TRACKS. EUGÈNE SCHNEIDER, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint-Stock Company of France. Filed June 16, 1919. Serial No. 304,649. 10 Claims. (Cl. 89—40.)

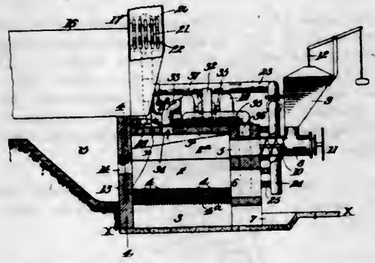
1. A railroad gun carriage provided with trucks for running on a railroad track, a gun mounted on said carriage to be fired therefrom, and a plurality of elongated shoes movably mounted longitudinally of said carriage and movable into position to engage the track sleepers to transmit thereto the forces of the gun recoils by sliding contact with said sleepers to relieve the truck wheels and axles of such forces.

1,349,534. BRAKE-HEAD. DAVID S. SCHWARTZ, St. Paul, Minn. Filed Sept. 13, 1918. Serial No. 253,942. Renewed Jan. 2, 1920. Serial No. 349,132. 1 Claim. (Cl. 188—243.)

A brake head, comprising, in combination, a brake shoe, a block upon which said shoe is adapted to be supported, said shoe and block being formed with projections having substantially alined openings and a key pin having a shank passing through said openings, said block being formed with a head having a flat face and with channels in its upper and lower end, which face each other to receive portions of said shoe, and said key having a body passed through said upper channel and formed with a flat face and forwardly projecting shoulders at the ends of said face which are adapted to engage said head with the faces on said key and head coinciding when said key is fully inserted in position to lock said shoe upon said head, said key having its lower end projecting into said lower channel and the projections on said head being arranged so as to bend the shank of said key to urge the key into tight interlocking engagement with said head.

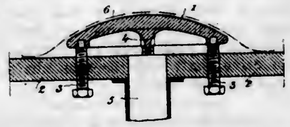
1,349,535. CONE-SACK. HENRY W. SMITH, Washington, D. C. Filed Feb. 4, 1919. Serial No. 274,961. 1 Claim. (Cl. 229—6.)

A device of the class described comprising a paper bag of ordinary shape and a cone holder in the bottom of said bag, said holder comprising a central portion of rectangular shape having a cone receiving opening therein and a pair of frusto conical end members separated from said central member by scored lines, said end members being formed to fit the bottom portion of any ordinary paper bag, both of said end members being pasted to the bottom sides of the bag and said rectangular portion having a central scored line parallel with the first mentioned lines so as to permit the holder to collapse when the bag is in flattened condition.



1,349,536. RULED PRINTING-FORM. ASHTON G. STEVENSON, New York, N. Y., assignor to Chicago Lino-Tabler Company, Chicago, Ill., a Corporation of Illinois. Filed May 6, 1918. Serial No. 232,682. 10 Claims. (Cl. 101—400.)

1. As a new article of manufacture, a type-form rule for application upon the level top surfaces of type-forms,

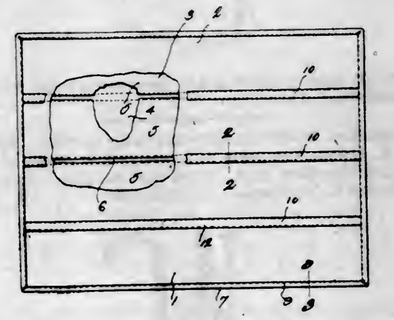


comprising a straight wire-like piece of metal, in cross section substantially as wide as it is high, and tapering at its top to a printing edge, its sides provided with thin knife-like, type-form-penetrating edges.

1,349,537. HEAT-GENERATING FURNACE. WALTER THOMAS and ALBERT EDWARD MAINWARING, Nanaimo, British Columbia, Canada, assignors to Fuel Conservation Company Limited, Vancouver, British Columbia, Canada, a Corporation of British Columbia, Canada. Filed Mar. 9, 1917. Serial No. 153,653. 4 Claims. (Cl. 110—31.)

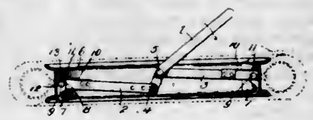
1. In a heat generating furnace, the combination with a combined cooking and combustion chamber having a wider longitudinal lower part and a narrower longitudinal upper part, said parts having at their junction, on each side, an offset, thereby providing longitudinal gas channels along the body of fuel, and said upper part having a gas outlet in its roof, of a secondary combustion chamber, a transverse division wall having ports in line with said channels, flue connections from said gas outlet in the roof to the longitudinal channels, means in said connections for drawing hot gases and vapors from the fresh fuel and discharging them into said channels, and means for feeding fuel to the upper part of said first named chamber.

1,349,538. APPARATUS FOR AIRING OF STORED CORN. GUSTAF TROLLE-BONDE, Trolleholm, Sweden. Filed Nov. 19, 1919. Serial No. 339,171. 1 Claim. (Cl. 98—26.)



The combination with a corn or similar receptacle, having an air admission pipe leading there into, of a hood overlying the end of said pipe within the receptacle and having a cone shaped deflector arranged in line with and wholly beyond the pipe, and a plurality of elements connected with the hood immediately adjacent the free edge thereof and beyond the air pipe, said elements having threaded connection with the receptacle and being operable from beyond the receptacle.

1,349,539. PORTABLE ELECTRIC RIVET-HEATER. LOUIE T. WEIDRICK, Baltimore, Md. Filed Apr. 6, 1920. Serial No. 371,566. 2 Claims. (Cl. 204—64.)

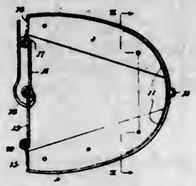


1. In a portable, rivet-heating furnace, having a heating chamber of L-shaped cross section, the bottom arm of the L forming a passage for inserting and removing the rivets, an electric heating means in the upright of the L, well above and out of alinement with said passage.

1,349,540. COMFORTER. FRANCILLA WHITNEY, Dorchester, Mass. Filed Aug. 16, 1918. Serial No. 250,216. 2 Claims. (Cl. 5—3.)

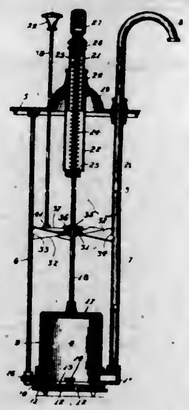
1. In a comforter, a succession of elongated narrow strips of paper placed transversely across the body of the comforter and having the edges thereof spaced apart, a layer of fabric placed beneath said succession of paper strips and being continuous over the entire body of the comforter, said fabric extending across the spaces left between the edges of said paper strips, a second piece of fabric placed in common over the succession of paper strips and passing across the spaces left between such strips, said paper strips adapted to exclude the free passage of air except at the spaces, reinforcing strips secured to the fabric and paper strips and bridging the spaces between said paper strips, and a reinforcement for the edges of the comforter secured alike to the fabric and paper strips for securing the same in assembled relation.

1,349,541. TIRE-RIM TOOL. FRANK L. WILLIS and HERBERT O. THOMAS, Santa Rosa, Calif. Filed June 21, 1919. Serial No. 305,743. 2 Claims. (Cl. 157—1.)



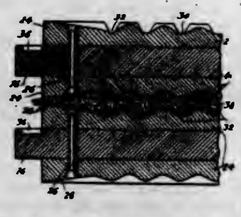
2. A rim spreading and contracting device including a pair of arms, means for moving the arms longitudinally, hooks having rectangular shanks horizontally pivoted to the arms at the outer portions of the same, and provided with bills adapted to be swung downwardly for positioning the upper longitudinal edges of said shanks flush with the outer terminals of the arms for forming wide rim contact surfaces, and flat leaf springs secured to the upper longitudinal edges of said arms and having their forward portions enlarged laterally for engaging the shanks of said hooks whereby the same are secured in position.

1,349,542. ICE-CREEPER. JOHN YANIK, Coplay, Pa. Filed Mar. 1, 1920. Serial No. 362,511. 1 Claim. (Cl. 36—64.)



An ice-creeper comprising a pair of flanged side plates having ground engaging calks and hingedly connected together at their rear ends, means to yieldingly normally separate said plates at their forward ends, and means at

the forward ends of said plates to move the latter toward each other whereby the flanges of said plates are

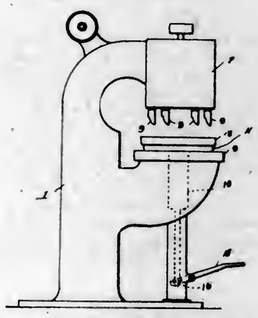


brought and retained firmly into engagement with the periphery of a shoe heel.

1,349,543. DISPENSING-PUMP AND MIXER. EDWARD M. ADAMS, New York, N. Y., assignor to Morris H. Petigor, New York, N. Y. Filed Apr. 29, 1919. Serial No. 293,434. 4 Claims. (Cl. 221—85.)

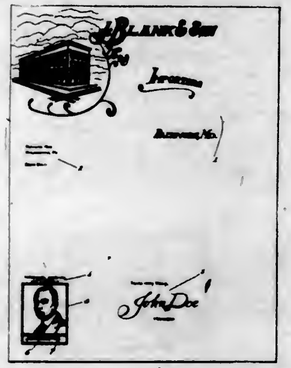
1. In combination with a dispensing pump comprising a cover plate, a pump cylinder, a pair of cylindrical members rigidly supporting the cover elevated some distance above the pump cylinder, a piston working in the pump cylinder, a piston rod for the piston projecting upward through the cover, a mixer guided to slide upon the piston rod up and down and independent of the piston rod movement, and a bar slidable through the cover and fast to said mixer at its lower end, whereby to move the mixer up and down independent of the movement of the piston and piston rod, said mixer being guided by said supporting members.

1,349,544. PRESS-PLATE. JOHN H. ANGEL, Minneapolis, Minn. Filed May 16, 1919. Serial No. 297,628. 3 Claims. (Cl. 100—54.)



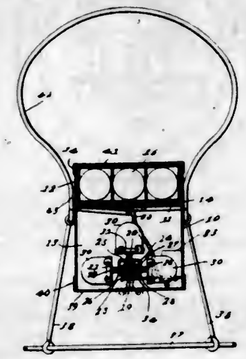
1. A press plate for expressing presses having its opposite faces provided with corrugations and its upper face outside of the corrugations provided with gutters connected by grooves with the depressions of the corrugations.

1,349,545. WASHBOILER ATTACHMENT. EDWARD BAK, East Stanwood, Wash. Filed Feb. 26, 1920. Serial No. 361,523. 3 Claims. (Cl. 68—30.)



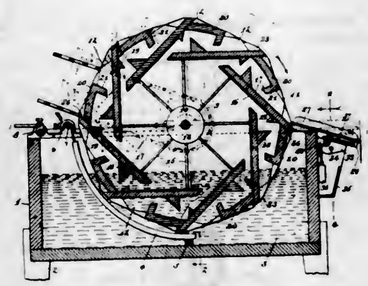
2. An extensible rack for use in wash boilers comprising two sections alike in form and dimensions shaped to fit together the interior of the boiler, means for slidably connecting the meeting ends of the sections for longitudinal adjustment of the rack, a horizontally disposed lever pivotally mounted on one of the sections, a link connecting the lever to the other section, and means for retaining the lever in locked position.

1,349,546. MULTIPLE-CUP MOLD. JAMES BENTON, East Palestine, Ohio. Filed Feb. 25, 1919. Serial No. 279,087. 4 Claims. (Cl. 25—26.)



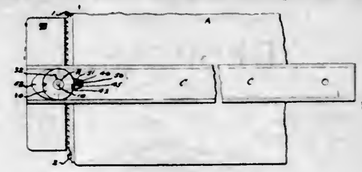
3. In a molding machine, a mold provided with a plurality of circularly arranged molding pockets, a drive shaft, a plurality of stub shafts disposed concentric with the drive shaft and in alinement with the respective pockets, forming tools carried by said stub shafts, the pockets being movable simultaneously into and out of operative relation to said tools, and driving connections between the drive shaft and the stub shafts for simultaneously rotating the latter.

1,349,547. CORRESPONDENCE-BLANK. CHARLES J. BOLGIANO, Baltimore, Md. Filed Apr. 7, 1919. Serial No. 288,431. 3 Claims. (Cl. 283—1.)



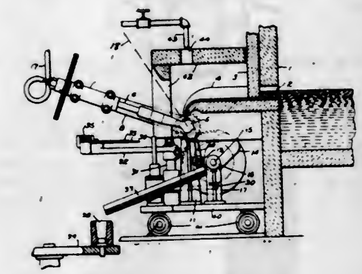
1. A letter-blank for use in business correspondence, advertising, soliciting, collecting and the like, having a suitable letterhead to indicate the nature of the business and a portrait separate from the letter sheet, affixed adjacent the point of signature, with an inscription near the portrait indicating that it is the portrait of the writer.

1,349,548. RAILROAD ELECTRIC LANTERN. HAROLD C. BRECKENRIDGE, Musselshell, Mont. Filed Aug. 16, 1919. Serial No. 318,012. 3 Claims. (Cl. 240—8.5.)



2. A lantern comprising a casing having an opening in one end thereof, a shaft mounted for rotation within the casing and disposed transversely of the opening, electric bulbs carried by and extending radially from the shaft and included in a normally opened circuit, means whereby the shaft may be rotated to project any one of the bulbs through said opening and combined means for closing the circuit when one of the bulbs is thus projected and for yieldingly holding the shaft against rotation.

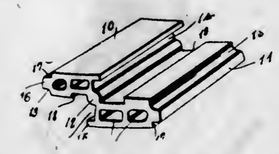
1,349,549. ELECTROPLATING APPARATUS. WILLIAM DIETZEL, Merrick, N. Y. Filed Feb. 18, 1919. Serial No. 277,787. 9 Claims. (Cl. 204—5.)



1. An electro-plating apparatus comprising a vat, an anode extending into said vat, a rotatable barrel arranged to have a part thereof extending into the vat so that the solution in the vat will enter the barrel, said barrel being formed with independent peripheral sections spaced apart for their full length for presenting openings uninterruptedly for the full length of the barrel through which some of said liquid will be scooped up and an equal amount discharged from the opposite side as the barrel is rotated whereby the solution rich in metals is brought into contact with the articles in the barrel, means for preventing articles in the barrel from falling out through said openings as the barrel rotates, and means connecting a source of current to said anode and to the contact members interiorly of the barrel.

1,349,550. DRAFTING INSTRUMENT. ANDREW E. MAGNUSON, New York, N. Y. Filed June 30, 1919. Serial No. 307,711. 12 Claims. (Cl. 33—81.)

1. A drafting implement comprising a T-square combined with a drawing board and including a carrier supported from the head of said T-square, a revoluble element sustained by said carrier, a member attached to said drawing board so as to be engaged by said element in a manner to produce a step by step movement thereof along said board, an index operatively connected with the element, and a graduated dial rotatably mounted on the carrier under said index, the arrangement being such that the index coacts with the graduations on the dial and the latter is adjustable relatively to the former.

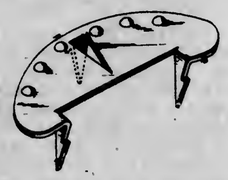


1,349,551. GLASS-FEEDING MACHINE AND PROCESS. KARL E. PEILER, Hartford, Conn., assignor to Hartford-Fairmont Company, Canajoharie, N. Y., a Corporation of New York. Filed Dec. 30, 1916. Serial No. 139,768. Renewed Jan. 2, 1920. Serial No. 349,094. 10 Claims. (Cl. 49—55.)

7. The combination with a container for molten glass having a discharge outlet, of supporting means beneath the outlet adapted to suspend discharged masses of the glass, and means for periodically tilting said supporting means to time the formation of suspended masses.

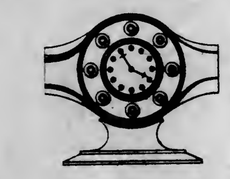
8. The method of separating molten glass into mold charges which consists in flowing the glass onto a support, periodically tilting the support to form successive gathers of the glass suspended from the support, and severing a mold charge from each gather.

1,349,552. SEGMENT-BLOCK. JOHN R. BAUMANN, Red Wing, Minn. Filed Apr. 6, 1918. Serial No. 227,093. 9 Claims. (Cl. 72—38.)



4. A building block having reversely positioned relatively offset members connected by a web, the proximate shoulders formed by the adjacent ends of the members being provided with depressions and the remote ends of the members with tongues to engage the corresponding

depressions of adjoining blocks, and the facing or inner side surfaces of said members having other shoulders facing or opposed to said recessed shoulders for engagement with the corresponding shoulders of said adjoining blocks.

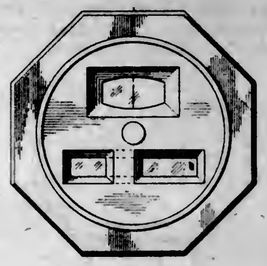


DESIGNS.

55,971. HEEL-PLATE. GEORGE BECHERER, St. Louis, Mo. Filed Dec. 19, 1917. Serial No. 207,977. Term of patent 3½ years.

The ornamental design for a heel plate substantially as shown.

55,972. CLOCK-CASE. PATSY BELOTT, Clarksburg, W. Va. Filed Nov. 13, 1919. Serial No. 337,864. Term of patent 14 years.



The ornamental design for a clock case, as shown and described.

55,973. PLUG-CLUSTER: REUBEN B. BENJAMIN, Chicago, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 2, 1920. Serial No. 355,778. Term of patent 14 years.

The ornamental design for a plug cluster, substantially as shown.

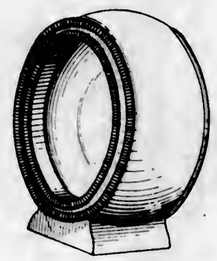
55,974. SPEEDOMETER FACE-PLATE. JOSEPH BERGH, Flint, Mich., assignor to Champion Ignition Company, Flint, Mich., a Corporation of Michigan. Filed Jan. 6, 1919. Serial No. 269,952. Term of patent 14 years.

The ornamental design for a speedometer face plate, as shown.

55,975. AIR-PUMP-NOZZLE CONNECTION. CECIL MURRAY BOYCE, Westcliff-on-Sea, England. Filed Nov. 8, 1919. Serial No. 336,767. Term of patent 7 years.

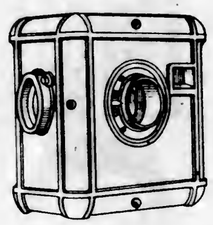
The ornamental design for an air pump nozzle connection as shown.

55,976. MOTION-PICTURE CAMERA OR THE LIKE. LLOYD BROWN, Los Angeles, Calif., assignor to Silent Drama Syndicate, a Trusteeship, Lloyd Brown and Alexander Graydon, trustees. Filed Dec. 1, 1919. Serial No. 341,820. Term of patent 14 years.



The ornamental design for a motion picture camera or the like, as shown.

55,977. SUPPORTING-FRAME FOR MOTION-PICTURE MACHINES. LLOYD BROWN, Los Angeles, Calif., assignor to Silent Drama Syndicate, a Trusteeship, Lloyd Brown and Alexander Graydon, trustees. Filed Dec. 19, 1919. Serial No. 346,189. Term of patent 14 years.



The ornamental design for a supporting frame for motion picture machines, as shown.

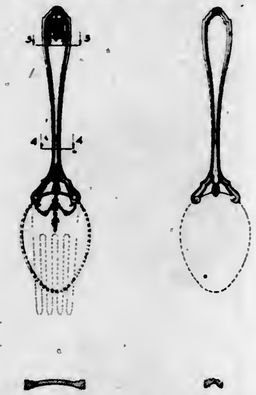
55,978. CAMERA-CASE. LLOYD BROWN, Los Angeles, Calif., assignor to Silent Drama Syndicate, a Trusteeship, Lloyd Brown and Alexander Graydon, trustees. Filed Dec. 19, 1919. Serial No. 346,190. Term of patent 14 years.

The ornamental design for a camera case, as shown.

55,979. MAGAZINE FOR MOTION-PICTURE MACHINES. LLOYD BROWN, Los Angeles, Calif., assignor to Silent Drama Syndicate, a Trusteeship, Lloyd Brown and Alexander Graydon, trustees. Filed Dec. 19, 1919. Serial No. 346,191. Term of patent 14 years.

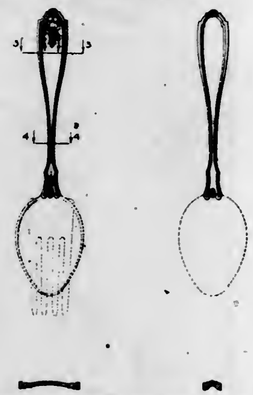
The ornamental design for a magazine for motion picture machines, as shown.

55,980. SWIVEL-CASTER. JOHN LOUCIEN CHESTNUTT, Kansas City, Mo., assignor to The Service Caster & Truck Company, Kansas City, Mo., a Corporation of Missouri. Filed Apr. 12, 1919. Serial No. 289,748. Term of patent 14 years.



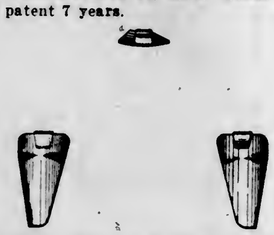
The ornamental design for a swivel caster, as shown.

55,981. ORNAMENTAL FIGURE FOR RADIATOR-CAPS OF AUTOMOBILES. GEORGE F. COLE, Oakland, Calif., assignor of three-eighths to Joseph G. McCall, Oakland, Calif. Filed Dec. 20, 1917. Serial No. 208,184. Term of patent 3½ years.



The ornamental design for an ornamental figure for radiator-caps of automobiles, as shown

55,982. HANDLE FOR A SPOON, FORK, OR SIMILAR ARTICLE. GILBERT L. CROWELL, Jr., Arlington, N. J., assignor to Dominick & Haff, New York, N. Y., a Joint-Stock Company. Filed Jan. 8, 1920. Serial No. 350,222. Term of patent 14 years.

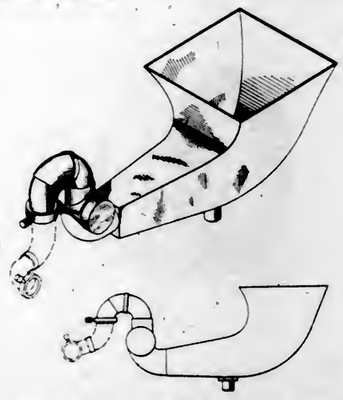


The ornamental design for a handle for a spoon, fork, or similar article as shown.

55,983. HANDLE FOR A SPOON, FORK, OR SIMILAR ARTICLE. GILBERT L. CROWELL, Jr., Arlington, N. J., assignor to Dominick & Haff, New York, N. Y., a Joint-Stock Company. Filed Jan. 8, 1920. Serial No. 350,223. Term of patent 14 years.

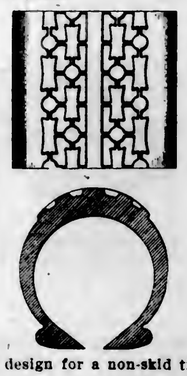
The ornamental design for a handle for a spoon, fork, or similar article as shown.

55,984. CAN-OPENER. WILLIAM R. DELL, Philadelphia, Pa., assignor of one-half to Albert Dell, Philadelphia, Pa. Filed Dec. 23, 1919. Serial No. 347,021. Term of patent 7 years.



The ornamental design for a can opener as shown.

55,985. LABEL FOR POISON-BOTTLES. WILLIAM E. DE RICHELIEU and AUREA D. WAGNER, Philadelphia, Pa. Filed Dec. 9, 1918. Serial No. 266,000. Term of patent 14 years.



The ornamental design for a label for poison-bottles, as shown.

55,986. SOUND-CONDUCTING DEVICE FOR TALKING-MACHINES. DONATO DI CARLO, Philadelphia, Pa. Filed June 17, 1920. Serial No. 389,768. Term of patent 14 years.

The ornamental design for a sound conducting device for talking machines, as shown.

55,987. NON-SKID TIRE. WILLIAM E. DUERSTEN, New Castle, Pa. Filed Dec. 4, 1919. Serial No. 342,560. Term of patent 14 years.

The ornamental design for a non-skid tire as shown.

55,988. BOTTLE. JOHN L. DUNNOCK, Baltimore, Md., assignor to Compania Nacional de Perfumeria, Habana, Cuba. Filed Jan. 12, 1920. Serial No. 351,057. Term of patent 7 years.

The ornamental design for a bottle, as shown.

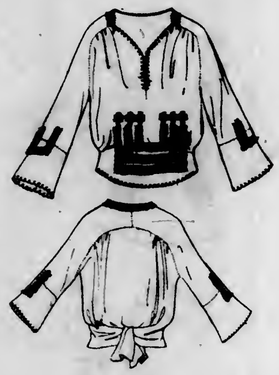
55,989. TALKING-MACHINE CABINET. CHARLES L. ELMQUIST, St. Paul, Minn. Filed June 23, 1919. Serial No. 306,276. Term of patent 14 years.

The ornamental design for a talking machine cabinet as shown.

55,990. WOMAN'S BLOUSE. ALICE H. FLANDERS, Chicago, Ill., assignor to A. H. Flanders Company, Chicago, Ill., a Corporation of Illinois. Filed June 18, 1920. Serial No. 390,026. Term of patent 3½ years.

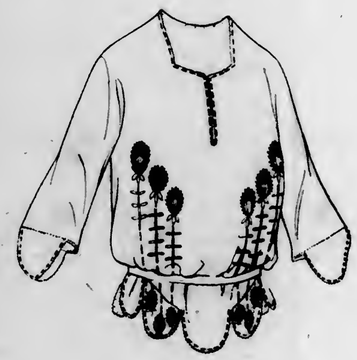
The ornamental design for a woman's blouse, as shown.

55,991. WOMAN'S BLOUSE. ALICE H. FLANDERS, Chicago, Ill., assignor to A. H. Flanders Company, Chicago, Ill., a Corporation of Illinois. Filed June 18, 1920. Serial No. 390,027. Term of patent 3½ years.



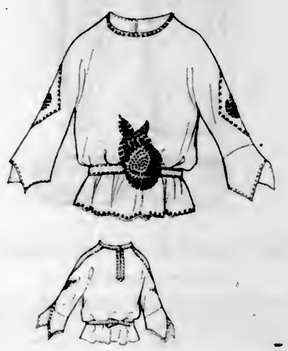
The ornamental design for a woman's blouse, as shown.

55,992. WOMAN'S BLOUSE. ALICE H. FLANDERS, Chicago, Ill., assignor to A. H. Flanders Company, Chicago, Ill., a Corporation of Illinois. Filed June 18, 1920. Serial No. 390,028. Term of patent 3½ years.



The ornamental design for a woman's blouse, as shown.

55,993. WOMAN'S BLOUSE. ALICE H. FLANDERS, Chicago, Ill., assignor to A. H. Flanders Company, Chicago, Ill., a Corporation of Illinois. Filed June 18, 1920. Serial No. 390,029. Term of patent 3½ years.



The ornamental design for a woman's blouse, as shown.

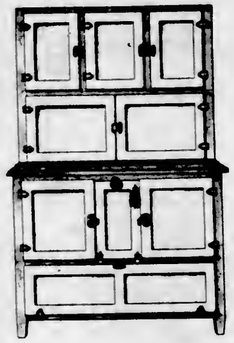
55,994. WOMAN'S BLOUSE. ALICE H. FLANDERS, Chicago, Ill., assignor to A. H. Flanders Company, Chicago, Ill., a Corporation of Illinois. Filed June 18, 1920. Serial No. 390,031. Term of patent 3½ years.

The ornamental design for a woman's blouse, as shown.

55,995. WOMAN'S BLOUSE. ALICE H. FLANDERS, Chicago, Ill., assignor to A. H. Flanders Company, Chicago, Ill., a Corporation of Illinois. Filed June 18, 1920. Serial No. 390,033. Term of patent 3½ years.

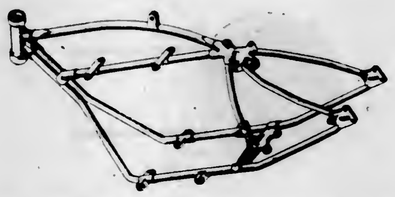
The ornamental design for a woman's blouse, as shown.

55,996. WOMAN'S BLOUSE. ALICE H. FLANDERS, Chicago, Ill., assignor to A. H. Flanders Company, Chicago, Ill., a Corporation of Illinois. Filed June 18, 1920. Serial No. 390,034. Term of patent 3½ years.



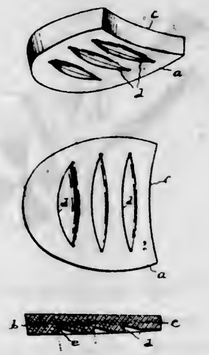
The ornamental design for a woman's blouse, as shown.

55,997. WOMAN'S BLOUSE. ALICE H. FLANDERS, Chicago, Ill., assignor to A. H. Flanders Company, Chicago, Ill., a Corporation of Illinois. Filed June 18, 1920. Serial No. 390,036. Term of patent 3½ years.



The ornamental design for a woman's blouse, as shown.

55,998. COMBINED CABINET AND REFRIGERATOR. THOMAS CHRISTOPHER FLEMING, deceased, Vancouver, British Columbia, Canada, by Cordelia Delphine Fleming, administratrix, Vancouver, Canada. Filed Sept. 20, 1919. Serial No. 325,258. Term of patent 3½ years.

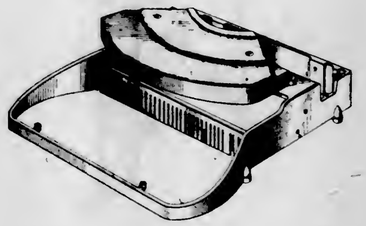


The ornamental design for a combined cabinet and refrigerator, substantially as shown.

55,999. MOTORCYCLE-FRAME. CHARLES BAYLY FRANKLIN, Springfield, Mass., assignor to Hendee Manufacturing Co., Springfield, Mass., a Corporation of Massachusetts. Filed June 21, 1920. Serial No. 390,665. Term of patent 14 years.

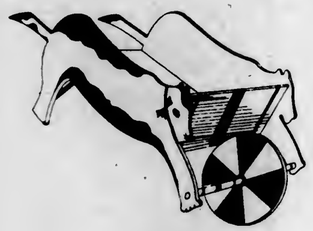
The ornamental design for a motorcycle frame, as shown.

56,000. RUBBER HEEL. SAMUEL B. FREDERICK, Detroit, Mich. Filed Jan. 5, 1920. Serial No. 349,616. Term of patent 14 years.



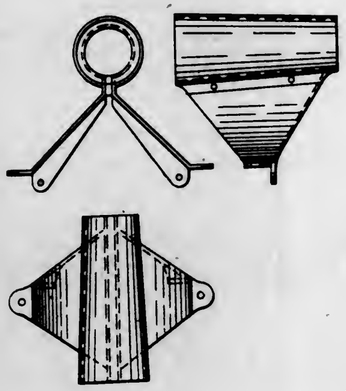
The ornamental design for a rubber heel as shown and described.

56,001. MOVABLE MEMBER OF A TALKING-BOARD. WILLIAM FULD, Baltimore, Md. Filed Apr. 15, 1919. Serial No. 290,344. Term of patent 14 years.



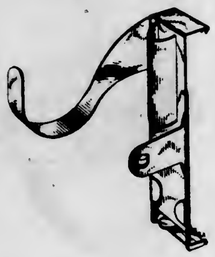
The ornamental design for the movable member of a talking board, as shown.

56,002. FRAME FOR TYPEWRITING-MACHINES. MAX GARBELL, Chicago, Ill. Filed Jan. 19, 1920. Serial No. 352,623. Term of patent 14 years.



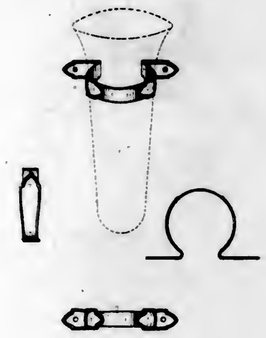
The original design for a frame for typewriting machines, as shown.

56,003. TOY WHEELBARROW. EPHRAIM GILLAM, Columbus, Ohio. Filed June 5, 1919. Serial No. 302,071. Term of patent 3½ years.



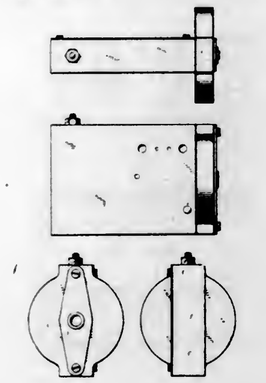
The ornamental design for a toy wheelbarrow, as shown.

56,004. SLEIGH-KNEE. FRANCIS G. HINEGARDNER and DAVID W. BOWMAN, Toledo, Iowa. Filed May 20, 1920. Serial No. 382,990. Term of patent 14 years.



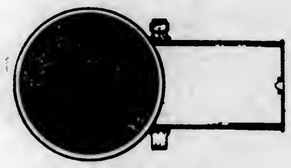
The ornamental design for a sleigh knee, as shown.

56,005. CURTAIN-POLE HOLDER. MARYAN JASIEWSKI, Bethlehem, Pa. Filed Oct. 27, 1919. Serial No. 333,847. Term of patent 7 years.



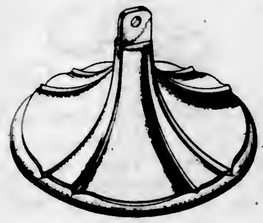
The ornamental design for a curtain pole holder, as shown.

56,006. AUTOMOBILE VASE-HOLDER. WILLIAM KENNER, Seattle, Wash. Filed Oct. 27, 1919. Serial No. 333,853. Term of patent 3½ years.



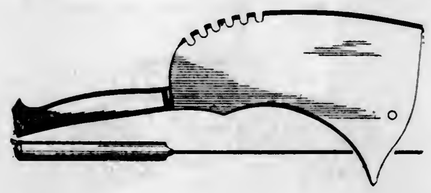
The ornamental design for an automobile vase-holder, as shown.

56,007. CONTROLLER. GEORGE A. KNAAK, Milwaukee, Wis. Filed Nov. 28, 1919. Serial No. 341,318. Term of patent 14 years.



The ornamental design for a controller substantially as shown.

56,008. AUTOMOBILIST'S HAND-SIGNAL. WESLEY W. KUHLMANN, Woodcliff-on-Hudson, N. J. Filed Mar. 29, 1920. Serial No. 369,754. Term of patent 7 years.



The ornamental design for an automobilist's hand signal.

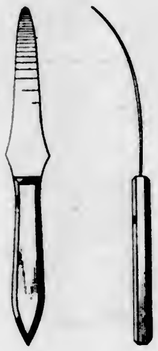
56,009. BASE FOR A STAND OF AN ELECTRIC HEATER. RICHARD G. LEDIG, Philadelphia, Pa., assignor to A. Mecky Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 22, 1919. Serial No. 346,800. Term of patent 7 years.

The ornamental design for the base for a stand of an electric heater, as shown.

56,010. COMBINATION CLEAVER, PERFORATOR, AND ICE-PICK. JOHN H. LICKERT, Evanston, Ill., assignor to Kit-Chin-Kit Corporation, Evanston, Ill., a Corporation of Illinois. Filed Feb. 9, 1920. Serial No. 357,367. Term of patent 14 years.

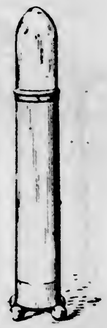
The ornamental design for a combination cleaver, perforator, and ice pick, as shown.

56,011. HOUSEHOLD KNIFE. JOHN H. LICKERT, Evanston, Ill., assignor to Kit-Chin-Kit Corporation, Evanston, Ill., a Corporation of Illinois. Filed Feb. 9, 1920. Serial No. 357,368. Term of patent 14 years.



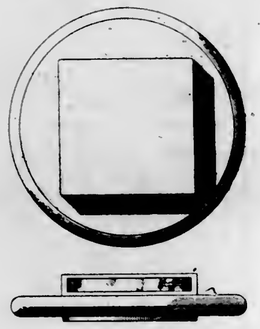
The ornamental design for a household knife, as shown.

56,012. BREAD-KNIFE. JOHN H. LICKERT, Evanston, Ill., assignor to Kit-Chin-Kit Corporation, Evanston, Ill., a Corporation of Illinois. Filed Feb. 9, 1920. Serial No. 357,369. Term of patent 14 years.



The ornamental design for a bread knife, as shown.

56,013. ARCING-KNIFE. JOHN H. LICKERT, Evanston, Ill., assignor to Kit-Chin-Kit Corporation, Evanston, Ill., a Corporation of Illinois. Filed Feb. 9, 1920. Serial No. 357,371. Term of patent 14 years.



The ornamental design for an arcing knife as shown.

56,014. LAMP. WILFRID LUMLEY, Conneaut, Ohio, assignor to Conneaut Metal Works, Conneaut, Ohio, a Partnership consisting of Wilfrid Lumley and Heckert L. Parker. Filed May 4, 1917. Serial No. 166,485. Term of patent 7 years.

The ornamental design for a lamp, substantially as shown.

56,015. MANHOLE-COVER. NEAL J. MCKEON, Oakland, Calif. Filed Aug. 23, 1919. Serial No. 319,500. Term of patent 14 years.

The ornamental design of a manhole cover as shown.

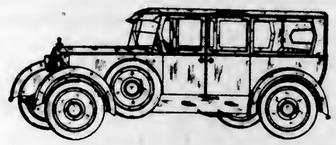
56,016. PACKAGE-TIE. OTTO L. MEATZ, Chicago, Ill., assignor to Jules Herbert Benjamin, Chicago, Ill. Filed Apr. 19, 1920. Serial No. 375,172. Term of patent 14 years.

The ornamental design for a package tie, as shown.

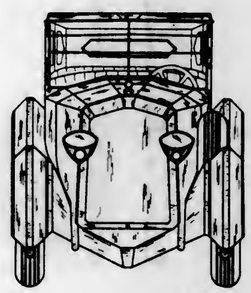
56,017. PACKAGE-TIE. OTTO L. MEETZ, Chicago, Ill., assignor to Jules Herbert Benjamin, Chicago, Ill. Filed Apr. 19, 1920. Serial No. 375,173. Term of patent 14 years.

The ornamental design for a package tie, as shown.

56,018. PACKAGE-TIE. OTTO L. MEETZ, Chicago, Ill., assignor to Jules Herbert Benjamin, Chicago, Ill. Filed Apr. 19, 1920. Serial No. 375,174. Term of patent 14 years.

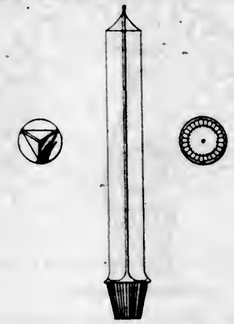


The ornamental design for a package tie, as shown.

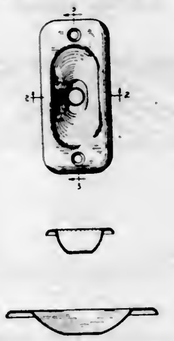


56,019. AUTOMOBILE. DONN H. MONTGOMERY, Denver, Colo. Filed May 10, 1920. Serial No. 380,419. Term of patent 14 years.

The ornamental design for an automobile, as shown.

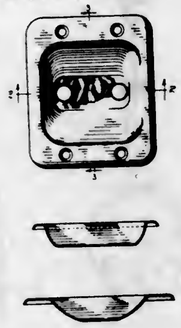


56,020. AUTOMOBILE. DONN H. MONTGOMERY, Denver, Colo. Filed May 10, 1920. Serial No. 380,420. Term of patent 14 years.



The ornamental design for an automobile, as shown.

56,021. CANDLE. GEORGE A. MOYER, Syracuse, N. Y., assignor to The Cleveland Candle Company, Cleveland, N. Y., a Firm. Filed May 18, 1920. Serial No. 382,410. Term of patent 14 years.



The ornamental design for a candle, as shown.

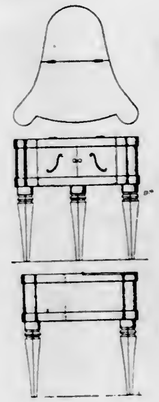
56,022. TOGGLE SWITCH-PLATE. WILLIAM J. NEWTON, Bridgeport, Conn., assignor to Harvey Hubbell, Incorporated, Bridgeport, Conn., a Corporation of Connecticut. Filed Nov. 6, 1919. Serial No. 336,220. Term of patent 14 years.

An ornamental design for a toggle switch plate, as shown.

56,023. DOUBLE-TOGGLE SWITCH-PLATE. WILLIAM J. NEWTON, Bridgeport, Conn., assignor to Harvey Hubbell, Incorporated, Bridgeport, Conn., a Corporation of Connecticut. Filed Nov. 6, 1919. Serial No. 336,221. Term of patent 14 years.

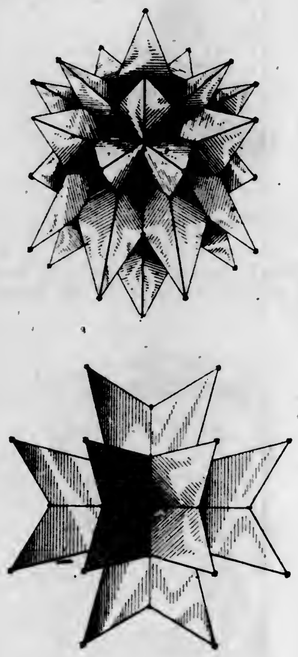
An ornamental design for a double toggle switch plate, as shown.

56,024. PIN. MARIUS NIELSEN, Granville, Ohio. Filed June 19, 1920. Serial No. 390,260. Term of patent 14 years.



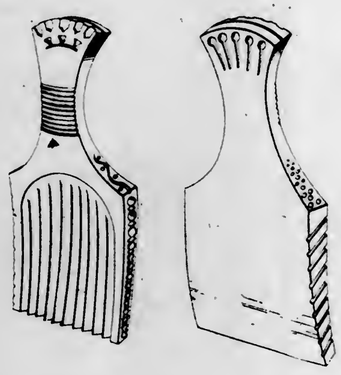
The ornamental design for a pin as shown.

56,025. MIRROR. STANLEY T. NOWACKI, Marlin, Tex. Filed Oct. 29, 1919. Serial No. 334,353. Term of patent 14 years.



The ornamental design for a mirror as shown.

56,026. PHONOGRAPH-CASING. SIGRID L. M. PEARSON, Chicago, Ill. Filed Nov. 17, 1919. Serial No. 338,776. Term of patent 14 years.

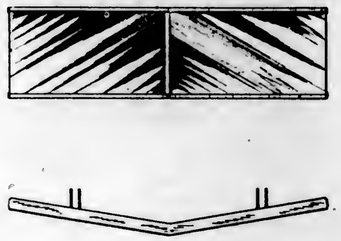


The ornamental design for a phonograph casing, as shown.

56,027. JEWELRY-BOX. WLADYSLAW POLASKY, Detroit, Mich. Filed Apr. 17, 1920. Serial No. 374,763. Term of patent 7 years.

The ornamental design for a jewelry box, as shown.

56,028. COMBINED BUTTER LADLE AND PRINT. GRACE PRICE, Mount Airy, Va. Filed Mar. 27, 1920. Serial No. 369,449. Term of patent 7 years.

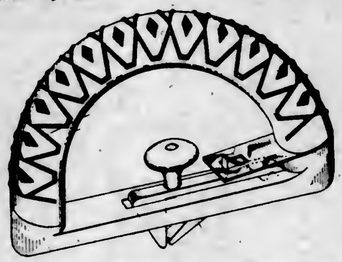


The ornamental design for a combined butter ladle and print, substantially as shown.

56,029. BOTTLE OR SIMILAR ARTICLE. JAMES L. QUIGG, Richmond, Va., assignor to C. F. Sauer Company, Richmond, Va., a Corporation of Virginia. Filed Jan. 17, 1920. Serial No. 352,220. Term of patent 14 years.

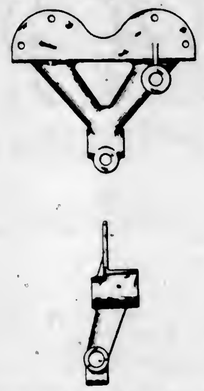
The ornamental design for a bottle or similar article, as shown.

56,030. REAR-SIGHT MIRROR FOR MOTOR-VEHICLES. FRANK W. REES, Seattle, Wash., assignor to Sees-All Manufacturing Company, Seattle, Wash. Filed June 4, 1920. Serial No. 386,604. Term of patent 14 years.



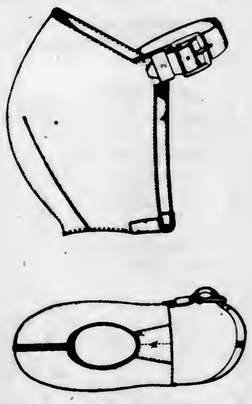
The ornamental design for a rear sight mirror for motor vehicles as shown.

56,031. LIGHTING-FIXTURE. NATHANIEL B. ROGERS, Danbury, Conn. Filed Apr. 19, 1920. Serial No. 375,182. Term of patent 7 years.



The original design for a lighting fixture, as shown.

56,032. SADIRON-HANDLE. FRANK ROSOSCEUK, Albany, N. Y. Filed Feb. 18, 1920. Serial No. 358,397. Term of patent 7 years.

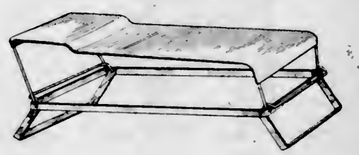


The ornamental design for a sadiron handle, as shown.

56,033. COMBINATION SPRING-HANGER AND RADIUS-ROD BRACKET. FRANK P. SAWDERS and JAMES G. MURRAY, Pittsburgh, Pa. Filed Dec. 2, 1919. Serial No. 342,038. Term of patent 14 years.

The ornamental design for a combination spring hanger and radius rod bracket, as shown.

56,034. SHOE-HEEL PROTECTOR. IDA M. SNYDER, Louisville, Ky. Filed Mar. 23, 1920. Serial No. 368,148. Term of patent 7 years.

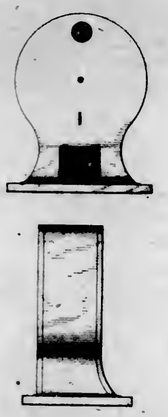


The ornamental design for a shoe heel protector as shown and described.

56,035. COVER FOR A PHONOGRAPH-CASE. FERDINAND L. STEGER, Steger, Ill., assignor to Steger & Sons Piano Manufacturing Company, Steger, Ill., a Corporation of Illinois. Filed Sept. 6, 1919. Serial No. 332,202. Term of patent 7 years.

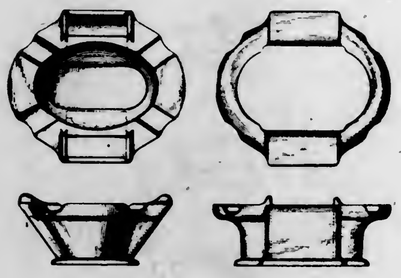
The ornamental design for a cover for a phonograph case substantially as shown.

56,036. INFANT'S BATH-COT. MASAYOSHI TAKEUCHI, Seattle, Wash. Filed Oct. 4, 1919. Serial No. 328,601. Term of patent 14 years.



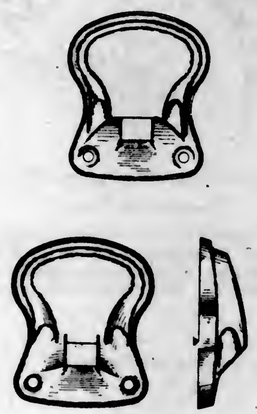
The ornamental design for an infant's bath cot, as shown.

56,037. CAP-COVER. PERLEY G. TILTON, Boston, Mass. Filed Jan. 22, 1920. Serial No. 353,358. Term of patent 14 years.



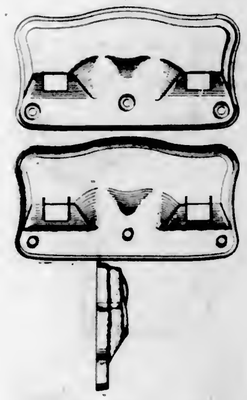
The ornamental design for a cap cover as shown.

56,038. VENDING-MACHINE CASE. HENRY C. TRAUTE, Fairhaven, N. J., assignor to The Diamond Match Company, Chicago, Ill. a Corporation of Illinois. Filed May 10, 1919. Serial No. 296,247. Term of patent 14 years.



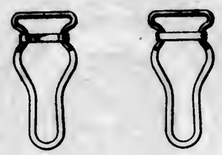
The ornamental design for a vending machine case, substantially as shown.

56,039. COMBINED MATCH-HOLDER AND ASH-RECEPTACLE. HENRY C. TRAUTE, Fairhaven, N. J., assignor to The Diamond Match Company, Chicago, Ill., a Corporation of Illinois. Filed May 29, 1919. Serial No. 300,747. Term of patent 14 years.



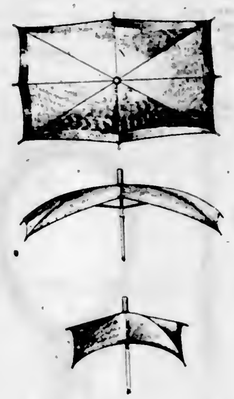
The ornamental design for a combined match-holder and ash-receptacle, substantially as shown

56,040. CASKET-BAR BRACKET OR LUG. BROR A. UTTER, Chicago, Ill. Filed May 12, 1919. Serial No. 296,705. Term of patent 3½ years.



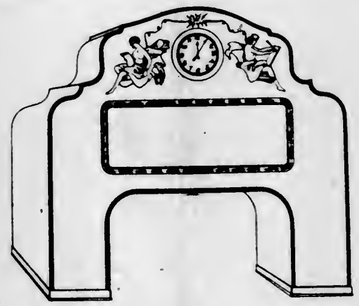
The ornamental design for a casket bar bracket or lug, as shown.

56,041. CASKET-BAR BRACKET OR LUG. BROR A. UTTER, Chicago, Ill. Filed May 12, 1919. Serial No. 296,706. Term of patent 3½ years.



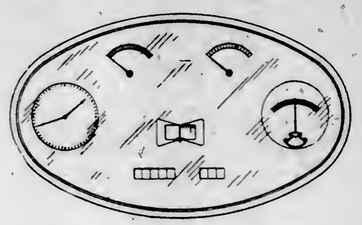
The ornamental design for a casket bar bracket or lug, as shown.

56,042. HOSE-SUPPORTING LOOP. DE VER H. WARNER, Bridgeport, Conn., assignor to The Warner Brothers Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Jan. 13, 1920. Serial No. 351,266. Term of patent 14 years.



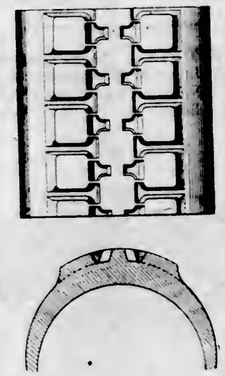
The ornamental design for a hose supporting loop as shown.

56,043. PARASOL OR UMBRELLA. ISAAC H. WEINBERG and CHARLES F. BISBING, New York, N. Y. Filed Apr. 3, 1920. Serial No. 371,165. Term of patent 7 years.



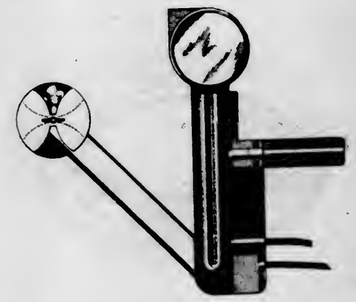
The ornamental design for a parasol or umbrella, as shown.

56,044. BILL-BOARD ARCH. WELLINGTON B. WHEELER, El Segundo, Calif. Filed May 11, 1920. Serial No. 380,669. Term of patent 3½ years.



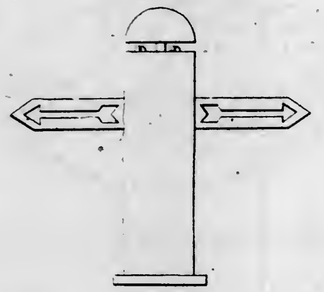
The ornamental design for a bill board arch as shown.

56,045. INSTRUMENT-DIAL. D'ORSAY MCCALL WHITE, Indianapolis, Ind., assignor to La Fayette Motors Company, a Corporation of Delaware. Filed Dec. 13, 1919. Serial No. 344,600. Term of patent 7 years.



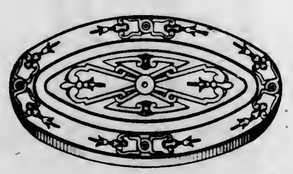
The ornamental design for an instrument dial, as shown.

56,046. TIRE. WILLIAM W. WILDMAN, Detroit, Mich., assignor to The Wildman Rubber Company, Detroit, Mich., a Corporation of Delaware. Filed Apr. 21, 1920. Serial No. 375,629. Term of patent 14 years.



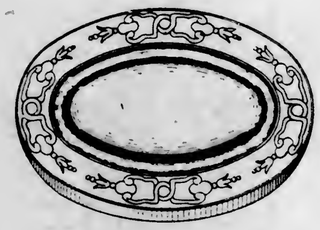
The ornamental design for a tire, as shown.

56,047. AUTOMOBILE DIRECTION-SIGNAL. VICTOR R. WILL, Lodi, Calif., assignor to P-A-T-S Manufacturing Company, Lodi, Calif., a Corporation. Filed Feb. 16, 1920. Serial No. 359,187. Term of patent 14 years.



The ornamental design for an automobile direction signal as shown.

56,048. AUTOMOBILE DIRECTION AND STOP SIGNAL. JOHN F. ANDERSON, San Francisco, Calif. Filed Sept. 30, 1918. Serial No. 327,606. Term of patent 14 years.



The ornamental design for an automobile direction and stop signal as herein shown and described.

56,049. BRACKET-OVAL. HARRY COHN, Brooklyn, N. Y., assignor to Reliance Metal Spinning & Stamping Co., Inc., Brooklyn, N. Y., a Corporation of New York. Filed Apr. 8, 1920. Serial No. 372,355. Term of patent 7 years.

The ornamental design for a bracket oval, as shown.

56,050. LIGHTING-FIXTURE OVAL PLATE. HARRY COHN, Brooklyn, N. Y., assignor to Reliance Metal Spinning & Stamping Co., Inc., Brooklyn, N. Y., a Corporation of New York. Filed Apr. 8, 1920. Serial No. 372,356. Term of patent 7 years.

The ornamental design for a lighting fixture oval plate, as shown.

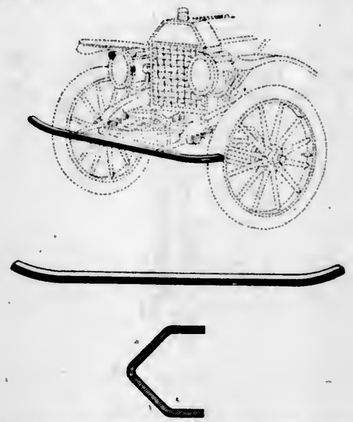
56,051. LIGHTING-FIXTURE SHOWER-PLATE. HARRY COHN, Brooklyn, N. Y., assignor to Reliance Metal Spinning & Stamping Co., Inc., Brooklyn, N. Y., a Corporation of New York. Filed Apr. 8, 1920. Serial No. 372,357. Term of patent 7 years.

The ornamental design for a lighting fixture shower plate, as shown.

56,052. WALL-PLATE FOR LIGHTING-FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Co., Toledo, Ohio, a Corporation of Ohio. Filed Jan. 29, 1920. Serial No. 354,933. Term of patent 7 years.

The ornamental design for a wall plate for lighting fixtures, as shown.

56,053. FURNITURE-LEG. HERMAN E. DE VRIES and CARL C. KUSTERER, Grand Rapids, Mich. Filed Dec. 13, 1919. Serial No. 344,598. Term of patent 3½ years.



The ornamental design for a furniture leg, as shown.

56,054. PICK. ANDREW DLACICH, Columbus, Ohio. Filed Jan. 14, 1920. Serial No. 351,484. Term of patent 7 years.

The ornamental design for a pick, as shown.

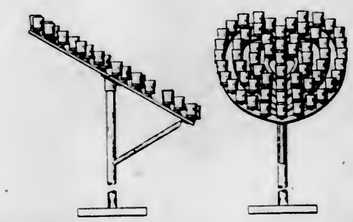
56,055. AUTOMOBILE-BUMPER. FREDERICK R. EAGLESFIELD, Niles, Mich., assignor to Kawneer Manufacturing Company, Niles, Mich., a Corporation of Michigan. Filed Jan. 21, 1916. Serial No. 73,480. Term of patent 14 years.

The ornamental design for an automobile bumper, substantially as shown.

56,056. WOMAN'S BLOUSE. ALICE H. FLANDERS, Chicago, Ill., assignor to A. H. Flanders Company, Chicago, Ill., a Corporation of Illinois. Filed June 18, 1920. Serial No. 390,030. Term of patent 3½ years.

The ornamental design for a woman's blouse, as shown.

56,057. WOMAN'S BLOUSE. ALICE H. FLANDERS, Chicago, Ill., assignor to A. H. Flanders Company, Chicago, Ill., a Corporation of Illinois. Filed June 18, 1920. Serial No. 390,037. Term of patent 3½ years.

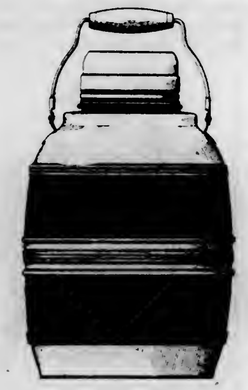


The ornamental design for a woman's blouse, as shown.

56,058. WOMAN'S BLOUSE. ALICE H. FLANDERS, Chicago, Ill., assignor to A. H. Flanders Company, Chicago, Ill., a Corporation of Illinois. Filed June 18, 1920. Serial No. 390,039. Term of patent 3½ years.

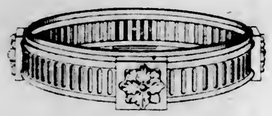
The ornamental design for a woman's blouse, as shown.

56,059. VOTIVE-STAND. MARTIN A. FLANNERY, Boston, Mass., assignor to The Will & Baumer Company, Syracuse, N. Y., a Corporation of New York. Filed Apr. 15, 1920. Serial No. 374,237. Term of patent 14 years.



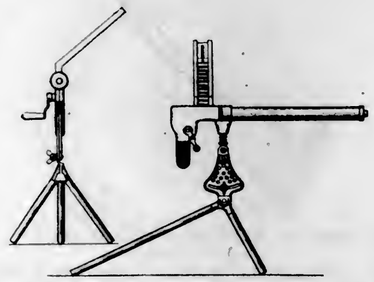
The ornamental design for a votive stand as shown.

56,060. EGG-TESTING APPLIANCE. ELI M. FRENCH, Chicago, Ill. Filed Oct. 24, 1919. Serial No. 338,133. Term of patent 7 years.



The ornamental design for an egg testing appliance, as shown.

56,061. HEAT-INSULATED RECEPTACLE. IRA L. FRENCH, Chicago, Ill., assignor to The Mantle Lamp Company of America, Chicago, Ill. Filed Oct. 29, 1919. Serial No. 334,366. Term of patent 14 years.

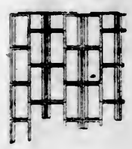


The ornamental design for a heat-insulated receptacle, as shown.

56,062. BAND FOR A LAMP-GLOBE. JOSEPH W. GOSLING, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Apr. 19, 1920. Serial No. 375,181. Term of patent 14 years.

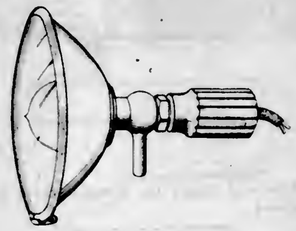
The ornamental design for a band for a lamp globe as shown.

56,063. TOY MAGAZINE-GUN. BENJAMIN M. GRIFFITH, Pittsburgh, Pa., assignor to Pittsburgh Lamp, Brass & Glass Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Apr. 2, 1919. Serial No. 287,081. Term of patent 3½ years.



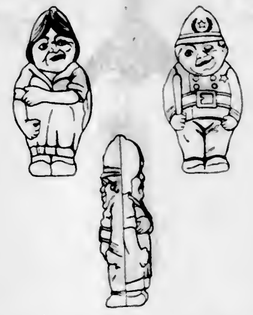
The ornamental design for a toy magazine gun, as shown.

56,064. PEN-HOLDING ATTACHMENT FOR INK-BOTTLES. JAMES J. HARPUR, Pittsburgh, Pa. Filed Dec. 5, 1919. Serial No. 342,853. Term of patent 7 years.



The ornamental design for a pen holding attachment for ink bottles as shown.

56,065. RADIATOR. JOHN A. HINGER, Detroit. Mich. Filed Aug. 22, 1919. Serial No. 319,279. Term of patent 14 years.



The ornamental design for a radiator, substantially as shown.

56,066. SPOT-LIGHT. EARL H. HOWARD, Los Angeles, Calif., assignor to Gilfillan Bros. Smelting & Refining Company, Los Angeles, Calif., a Corporation of California. Filed Jan. 5, 1920. Serial No. 349,612. Term of patent 7 years.

The ornamental design for a spot-light, as shown.

56,067. DOLL. FREDERICK KAUFMANN, Jr., Brooklyn, N. Y., assignor to The Faultless Rubber Company, Ashland, Ohio, a Corporation of Ohio. Filed Jan. 20, 1920. Serial No. 352,897. Term of patent 14 years.

The ornamental design for a doll, as shown.

56,068. SPINDLE FOR LIGHTING-FIXTURES. STEPHEN KOSTSZEWSKI, New York, N. Y., assignor to Robert Findlay Manufacturing Co., New York, N. Y., a Corporation of New York. Filed Apr. 15, 1920. Serial No. 374,241. Term of patent 7 years.

The ornamental design for a spindle for lighting fixtures, as shown.

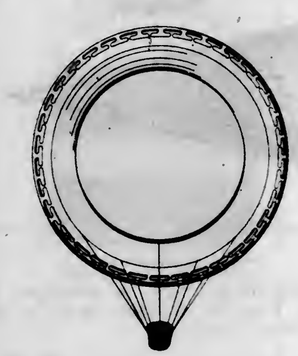
56,069. BODY FOR LIGHTING-FIXTURES. STEPHEN KOSTSZEWSKI, New York, N. Y., assignor to Robert Findlay Manufacturing Co., New York, N. Y., a Corporation of New York. Filed Apr. 15, 1920. Serial No. 374,242. Term of patent 7 years.

The ornamental design for a body for lighting fixtures as shown.

56,070. PENNANT. LANCE S. CORSON, Colorado Springs, Colo. Filed Oct. 16, 1918. Serial No. 258,388. Term of patent 7 years.

The ornamental design for a pennant, as shown.

56,071. TIRE-COVER. PAUL M. LOCKWOOD, Kansas City, Mo. Filed Apr. 17, 1919. Serial No. 290,864. Term of patent 7 years.

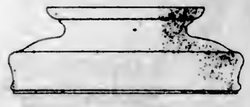


The ornamental design for a tire cover as shown and described.

56,072. PLAYING-CARD. HELENE V. A. LORING, Chicago, Ill. Filed Dec. 29, 1919. Serial No. 348,189. Term of patent 14 years.

The ornamental design for a playing card, as shown.

56,073. ADVERTISING AND TOY BALLOON. WILLIAM M. MADISON, Cleveland, Ohio. Filed Mar. 26, 1918. Serial No. 224,906. Term of patent 14 years.



The ornamental design for an advertising and toy balloon, as shown.

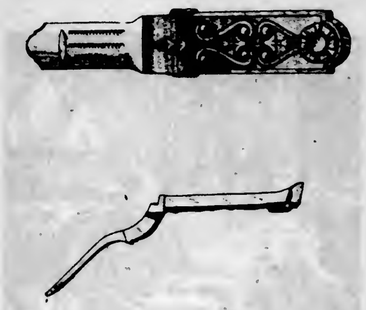
56,074. GLOBE FOR A LIGHTING-FIXTURE. FREDERICK W. MATHIEU, New York, N. Y., assignor to Mitchell Vance Co., Inc., New York, N. Y., a Corporation of New York. Filed Apr. 7, 1920. Serial No. 372,081. Term of patent 7 years.

The ornamental design for a globe for a lighting fixture, as shown.

56,075. HOLDER FOR A LIGHTING-FIXTURE. FREDERICK W. MATHIEU, New York, N. Y., assignor to Mitchell Vance Co., Inc., New York, N. Y., a Corporation of New York. Filed Apr. 7, 1920. Serial No. 372,082. Term of patent 7 years.

The ornamental design for a holder for a lighting fixture, as shown.

56,076. ARM FOR LIGHTING-FIXTURES. ABRAHAM MILLER, New York, N. Y. Filed Apr. 17, 1920. Serial No. 374,758. Term of patent 3½ years.

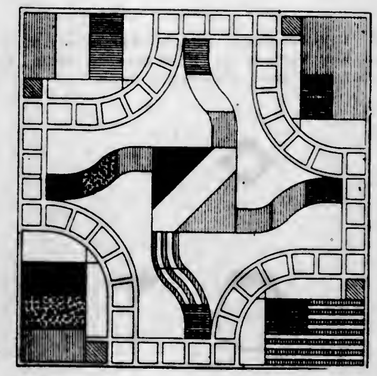


The ornamental design for an arm for lighting fixtures substantially as shown.

56,077. ARM FOR LIGHTING-FIXTURES. SAMUEL MILLER, New York, N. Y. Filed Mar. 31, 1920. Serial No. 370,346. Term of patent 3½ years.

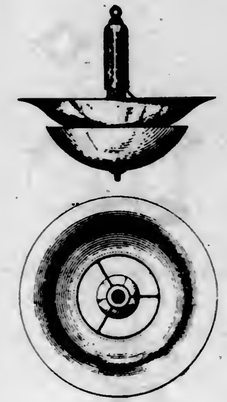
The ornamental design for an arm for lighting fixtures substantially as shown.

56,078. ARM FOR LIGHTING-FIXTURES. SAMUEL MILLER, New York, N. Y. Filed Mar. 31, 1920. Serial No. 370,347. Term of patent 3½ years.



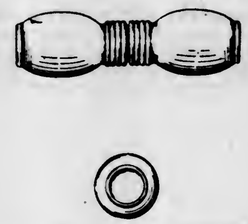
The ornamental design for an arm for lighting fixtures substantially as shown.

56,079. LIQUID-SOAP DISPENSER. EDGAR L. MORRIS, St. Louis, Mo., assignor to United States Sanitary Specialties Corporation, Chicago, Ill., a Corporation of Illinois. Filed Dec. 9, 1919. Serial No. 343,609. Term of patent 14 years.



The ornamental design for a liquid soap dispenser, as shown.

56,080. GAME-BOARD. MAURICE PETERSON, New York, N. Y. Filed Apr. 5, 1920. Serial No. 371,488. Term of patent 7 years.



The ornamental design for a game board, as shown.

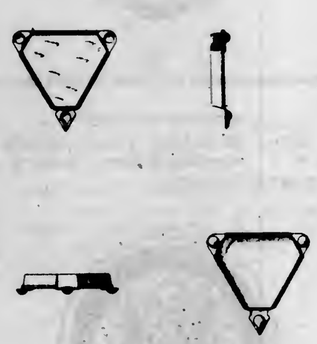
56,081. LIGHTING-FIXTURE. GROSVENOR P. ROBINSON, Summit, N. J. Filed Apr. 2, 1920. Serial No. 370,888. Term of patent 14 years.

The ornamental design for a lighting fixture, as shown.

56,082. DUPLEX CONTAINER. JAMES H. SMITH, Rochester, N. Y., assignor to Smith-Junior Co., Inc., Rochester, N. Y., a Corporation of New York. Filed Apr. 12, 1920. Serial No. 373,395. Term of patent 14 years.

The ornamental design for a duplex container, as shown.

56,083. MEDAL OR BADGE. JENNIE HELLAMS SWEENY, Union, S. C. Filed May 3, 1920. Serial No. 378,698. Term of patent 14 years.



The ornamental design for a medal or badge, as shown.

56,084. OIL-CLOTH-DISPLAY STAND. MAX THOMSEN, Chicago, Ill., assignor to Adolph Copeland, Chicago, Ill. Filed May 13, 1919. Serial No. 296,944. Term of patent 7 years.

The ornamental design for an oil cloth display stand, as shown.

56,085. FINGER-REST AND POINTER FOR A GAME. JOHN VANDERKAMP, Cleveland, Ohio, assignor to The Goldsmith Publishing Company, Cleveland, Ohio. Filed Apr. 19, 1920. Serial No. 375,179. Term of patent 14 years.

The ornamental design for a finger rest and pointer for a game, as shown.

56,086. TEXTILE FABRIC FOR DECORATIVE PURPOSES. COULTON WAUGH, New York, N. Y. Filed Apr. 3, 1920. Serial No. 371,171. Term of patent 3½ years.

The ornamental design for a textile fabric for decorative purposes, as shown.

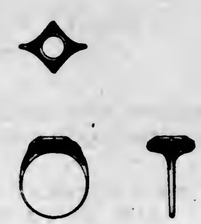
56,087. FINGER-RING. MORRIS WEINER and WILLIAM LOEB, New York, N. Y. Filed Mar. 22, 1920. Serial No. 367,865. Term of patent 3½ years.

The ornamental design for a finger ring, as shown.

56,088. FINGER-RING. MORRIS WEINER and WILLIAM LOEB, New York, N. Y. Filed Mar. 22, 1920. Serial No. 367,866. Term of patent 3½ years.

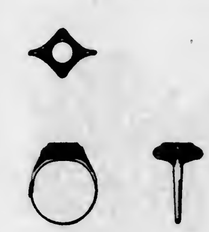
The ornamental design for a finger ring, as shown.

56,089. FINGER-RING. MORRIS WEINER and WILLIAM LOEB, New York, N. Y. Filed Mar. 22, 1920. Serial No. 367,867. Term of patent 3½ years.



The ornamental design for a finger ring, as shown.

56,090. FINGER-RING. MORRIS WEINER and WILLIAM LOEB, New York, N. Y. Filed Mar. 22, 1920. Serial No. 367,868. Term of patent 3½ years.



The ornamental design for a finger ring, as shown.

56,091. FINGER-RING. MORRIS WEINER and WILLIAM LOEB, New York, N. Y. Filed Mar. 22, 1920. Serial No. 367,869. Term of patent 3½ years.

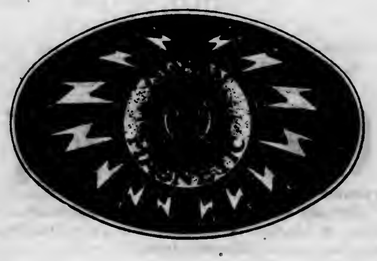
The ornamental design for a finger ring, as shown.

56,092. FINGER-RING. MORRIS WEINER and WILLIAM LOEB, New York, N. Y. Filed Mar. 22, 1920. Serial No. 367,870. Term of patent 3½ years.

The ornamental design for a finger ring, as shown.

TRADE-MARKS

OFFICIAL GAZETTE, AUGUST 10, 1920.



[PUBLISHED AUGUST 11, 1920.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 102,066. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) THE BAKER R. & L. COMPANY, Cleveland Ohio. Filed Mar. 12, 1917.

The outer portion of the figure is surrounded by an elliptical-shaped ring, which is white in color, which in turn surrounds an elliptical field of black. Within the black field the annulus containing the words "Owen Magnetic" is of a golden color, which annulus surrounds a central circular field, which is red in color.

Particular description of goods.—Automobiles.

Claims use since on or about Dec. 1, 1914.

Ser. No. 121,537. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) SIDNEY S. MARX, San Diego, Calif. Filed Aug. 11, 1919.

KOMFY KAMPING

No claim being made to the exclusive use of the word "Kamping" apart from the mark as shown in the drawings.
Particular description of goods.—Camping-Trailers.
Claims use since Feb. 27, 1917.

Ser. No. 121,868. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) LOOSE-WILES BISCUIT COMPANY, Long Island City, N. Y. Filed Aug. 21, 1919.

Particular description of goods.—Cakes, Wafers, and Crackers or Biscuits.
Claims use since Jan. 1, 1906.

Ser. No. 122,329. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) THE BROCKWAY-SMITH CORPORATION, Boston, Mass. Filed Sept. 5, 1919.

JAPROID

The word "Japroid."
Particular description of goods.—Paint in Liquid or Paste Form for Exterior Application, Especially Adapted for Roofs, Metal-Work, Boats, Tanks, and the Like.
Claims use since January, 1916.

Ser. No. 122,356. (CLASS 15. OILS AND GREASES.) HYCO FUEL PRODUCTS CORPORATION, New York, N. Y. Filed Sept. 5, 1919.

The upper division of the design being in green and spiked with two orange projections and the monad therein being in orange and black, the second division showing the word "Hy-Co" upon a black ground, and the third division being in orange spiked with two projections of green, the monad therein being in green and black, no claim being made to the words "Super Gas" and "Motor Fuel" apart from the mark as shown in the drawing.
Particular description of goods.—Fuel-Oils.
Claims use since May, 1919.

Ser. No. 122,496. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) POWELL-MCLEAN SPECIALTY CO., Los Angeles, Calif. Filed Sept. 2, 1919.

"WINGARDS"

Particular description of goods.—Windshields for Automobiles.
Claims use since May 1, 1919.

Ser. No. 122,507. (CLASS 31. FILTERS AND REFRIGERATORS.) AUTOMATIC CARBONIC MACHINE COMPANY, Peoria, Ill. Filed Sept. 10, 1919.

No claim being made to the words "Automatic Evercold" apart from the mark as shown.
Particular description of goods.—Refrigerating-Machines.
Claims use since Aug. 1, 1919.

Ser. No. 122,630. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) RANSOM R. CHAMPLIN, Candia, N. H. Filed Sept. 13, 1919.

C. C. C.

Particular description of goods.—Chemical Carbon-Cleaner.
Claims use since July 30, 1919.

Ser. No. 122,673. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE ABBOTT LABORATORIES, Chicago, Ill. Filed Sept. 15, 1919.

ARGYN

Particular description of goods.—Antiseptic Preparation.
Claims use since on or about Aug. 9, 1919.

Ser. No. 123,116. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) AUG. E. FRAASS, New York, N. Y. Filed Sept. 25, 1919.

FRAASSTRUMENT

Particular description of goods.—Acoumeters, for Testing Hearing; Adenotomes for Removal of Adenoids, Air-Bags for Treatment of the Ears; Applicators for Applying Medicine to Ear, Nose, Throat, and other Cavities of the Human Body; Anesthesia Apparatus, Angiotribes for Clamping Off Blood Vessels; Aspirators for Withdrawing Blood and Secretions from Body During Operations, etc.; Atomizers for Applying Fluid Matter to Patients in Spray Form, Burs for Operating on Any Part of the Human Skeleton, Bistouries for Doing Any Kind of Cutting During Operations, Bougies for Distending Natural Body-Passages; Batteries, Electric, for Therapeutic Purposes and for Illuminating Field of Operation, Also for Lighting Lamps for Diagnostic Purposes; Bronchoscopes for Examining and Operating on Bronchi, Curettes for Cutting and Scraping of Bone and Soft Tissues in Operations, Cannulas for Irrigating Parts of Body for Therapeutical and Diagnostical Purposes; Catheters for Irrigating Parts of Body for Therapeutical and Diagnostical Purposes, Also for Treating Ears by Means of Compressed Air; Compressors for Stopping Flow of Blood During Operations, Chisels for Bone Operations; Clamps for Stopping Hemorrhage, Also for Closing Wounds; Cranioclast for Crushing Skull of Infant in Obstetrics; Condensers for Intensifying Light, for Illuminating Field of Operation, and for Treatment; Dissectors for Separating Tissues and Organs from Their Natural Seats, Drills for Operating on Any Part of the Human Skeleton, Directors for Guiding Knives During Operations, Douches for Irrigating Body-Cavities, Dilators for Distending Natural Body-Passages, Elevators for Separating Tissues and Organs from Their Natural Seats, Eye-Droppers for Applying Fluids to Eyes, Ear-Spouts Used for Irrigating Ears, Evacuators for Drawing Secretions from Any Part of Body, Esophagoscopes for Examining and Operating on Esophagus, Endoscopes for Examining and Operating on Any Body-Cavity; Forceps Used for Dressing, Cutting, Breaking, and Crushing During Operations; Gouges for Operations on Bone; Hooks for Retracting and Engaging Tissues of Body, Foreign Bodies, etc.; Hemostats for Stopping Hemorrhages; Headbands for Fastening Reflectors, Headlights, etc., to Head of Operator; Headlights Used by Operator to Illuminate Field of Operation, Hammers Used for Operating with Chisel or Gouge, Irrigators for Irrigating Body-Cavities; Injection-Needles for Applying Medicine, Vaccination, Anesthetizing, etc.; Inflaters for Applying Air in Treatment of Diseases, Inhalers for Applying Medicine to Air-Passages by Means of Air or Steam, Knives for Doing Any Kind of Cutting During Operations; Lancets for Opening Blood Vessels, Abscesses, etc.; Laryngoscopes for Examining and Operating on Human Larynx; Ligature-Carriers Used in Suturing Wounds, for Tying Off Blood Vessels, etc.; Ligatures, Surgical Sewing Materials, Mouth-Gags for Keeping Mouth Open During Operations Thereon, Magnifiers for Examining Superficial Parts of Body, Mirrors Used for Examining and Reflecting Light into Cavities, Mallets Used for Operating with Chisel or Gouge, Needle-Holders for Holding Surgical Needles in Sewing up Wounds, Nebulizers for Application of Fluids in Vapor Form, Perforators for Opening Body-Cavities, Pumps for Compressing Air for Medical Purposes; Packers for Dressing Wounds, etc.: Probes for Sounding Wounds, Passages, and Cavities; Powder-Blowers for Applying Medications in Powder Form, Retractors for Holding Back Edges of Wounds or Opening Body-Passages to Make Them Accessible to Operator, Reamers for Operating on Any Part of the Human Skeleton, Rongeurs for Cutting Bone, Rasps for Removing Bony Structures, Rheostats for Controlling Electric Current Used for Lighting Diagnostic Apparatus; Surgical Scissors for Cutting Tissues, Bandages, etc.; Spatulas for Depressing Tongue and other Soft Parts in Examining and Operating; Suction-Tubes for Drawing Secretions from Any Part of Body and for Withdrawing Blood and Secretions from Body During Operations, etc.; Supporters, Abdominal; Snares for Removing Organs and Pathological Structures by Means of Wire Loop, Saws for Operations on Bone, Syringes for Irrigating and Injecting Purposes; Suture-Needles, Surgical, for Closing Up Wounds; Splints for Straightening out Deflected and Broken Parts of Body, Sterilizers for Rendering Instruments and Appliances Sterile by Boiling or Placing in Disinfecting Solutions, Stethoscopes for Auscultation Examination of Body, Specula for Holding Back Edges of Wounds or Opening Body-Passages to Make Them Accessible to Operator; Searchers for Sounding Wounds, Passages, and Cavities; Scoops for Cutting and Scraping of Bone and Soft Tissues in Operations; Sounds for Sounding Wounds, Passages, and Cavities; Suction Apparatus Used for Drawing Blood or Secretions from Body, Also Used for Treating Diseases; Spuds for Depressing Tongue and other Soft Parts in Examining and

Operating, Trocars for Making Artificial Openings into Cavities for Purpose of Withdrawing of Fluids and Irrigating, Tongue-Depressors for Holding Down Tongue When Operating in Mouth, Trephines for Operating on Any Part of the Human Skeleton, Tracheotomes for Opening Windpipe from the Outside, Tuckers for Shortening Eye-Muscles; Tenacula for Retracting and Engaging Tissues of Body, Foreign Bodies, etc.; Tonsillotomes for Removing Tonsils, Transformers Used in Connection with Electromedicinal Apparatus, Tracheal Tubes Used After Windpipe Has Been Opened Surgically.

Claims use since Jan. 1, 1919.

Ser. No. 123,753. (CLASS 39. CLOTHING.) EVA E. OWENS, Los Angeles, Calif. Filed Oct. 13, 1919.

POP-ON

Particular description of goods.—Hats for Women and Children and Booties for Infants Made of Knitted Material.

Claims use since Sept. 25, 1919.

Ser. No. 123,863. (CLASS 38. PRINTS AND PUBLICATIONS.) T. A. RANDALL & CO. INC., Indianapolis, Ind. Filed Oct. 16, 1919.

THE CLAY-WORKER

Particular description of goods.—Magazines Issued Monthly.

Claims use since Jan. 1, 1884.

Ser. No. 124,031. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) WESTERN CANNING COMPANY, Oakland, Calif. Filed Oct. 20, 1919.

The lining on the drawing is intended to represent the colors red, gold, and light green.

Particular description of goods.—Canned Vegetables and Canned Fruits.

Claims use since June 15, 1919.

Ser. No. 124,048. (CLASS 39. CLOTHING.) METRO SHIRT CO., New York, N. Y. Filed Oct. 21, 1919.

Maxim

Particular description of goods.—Dress, Negligée, and Work Shirts.

Claims use since Aug. 29, 1919.

Ser. No. 124,068. (CLASS 2. RECEPTACLES.) CEMENT PRODUCTS COMPANY, Wilmington, N. C. Filed Oct. 22, 1919.

SANISEP

Particular description of goods.—Cement Sewage-Disposal Tanks.

Claims use since Apr. 1, 1918.

Ser. No. 124,438. (CLASS 39. CLOTHING.) GOLDSMITH & LERNER, INC., New York, N. Y. Filed Nov. 1, 1919.

Sealect SHIRT

No claim being made to the word "Shirt" apart from the mark shown, nor to the word "Select."

Particular description of goods.—Dress, Negligée, and Work Shirts, Pajamas, Collars and Cuffs, Men's Flat Underwear—viz., Two-Piece and Union Suits.

Claims use since Oct. 1, 1919.

DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS IN PATENT CASES.

COMMISSIONER'S DECISIONS.

EX PARTE HALL.

Decided June 12, 1920.

1. PATENTS—CONTINUING APPLICATION DEFINED.

A continuing application is one filed subsequently to another, while the prior application is pending, disclosing all or a substantial part of the subject-matter of the prior application and containing claims to subject-matter common to both applications, both being filed by the same inventor or his legal representative.

2. SAME—SUBSTITUTE APPLICATION FILED AFTER ABANDONMENT OF ORIGINAL.

Where H. filed an application which was allowed, forfeited, renewed, and again allowed and where after the time within which a second renewal could have been filed he filed a second application for the same subject-matter, *Held* that the second application could not be regarded as a continuation of the first.

ON PETITION.

SPEED-VARYING MECHANISM.

Messrs. Emery, Booth, Janney & Varney for the applicant.

NEWTON, *Commissioner:*

This is a petition from a final holding of the Examiner that application Serial No. 813,311, filed January 20, 1914, may not be designated a "continuation" of application Serial No. 420,900, filed March 13, 1908, and renewed January 5, 1911, as application Serial No. 601,001.

Notice of allowance of the first application, Serial No. 420,900, was mailed June 22, 1910. Said application was forfeited and renewed January 5, 1911, under Serial No. 601,001. Notice of allowance of the last-mentioned application (Serial No. 601,001) was mailed March 28, 1913, and the present application (Serial No. 813,311) was filed January 20, 1914.

Renewed application Serial No. 601,001 therefore became abandoned upon failure to pay the final fee within six months from notice of allowance, (March 28, 1913,) which date would be September 28, 1913, more than two years from the first notice of allowance—June 22, 1910. From September 28, 1913, until the filing of the present case—January 20, 1914—was a period in which there was no continuity of applications before the Office. During this period there was no application pending in the Office of which the present application can be called a continuation.

It is well established that an applicant in order to obtain the benefit of an earlier application must have pending a continuity of applications upon which a patent could issue for an invention disclosed in the earlier application. In the present case no such continuity exists, because during the period between September 28, 1913, when the first application became abandoned, to January 20, 1914, applicant had no application for the invention pending in the Patent Office upon which a valid patent could have been granted.

Hien v. *Pungs* (68 O. G., 657; 1894, C. D., 92) involved a case in which Pungs after his application had become abandoned filed a new application. It was held that there was no continuity in the proceedings, and in *Lindsay* v. *Stein*, (1882, C. D., 245; 20 Blatchf., 370,) in which a somewhat similar question was involved, the court in considering an applicant's right, after his application became abandoned, to file a new application for the same invention said:

> There is nothing to prevent a subsequent application. When made, it can derive no aid, as to time, from the prior abandoned application, and the applicant must stand, as to defenses in suits upon the patent, as if the new application were the first application.

In *Carty* v. *Kellogg* (1895, C. D., 83; 73 O. G., 285) Carty filed a second application approximately one month after his first application had become abandoned, and he urged that this second application should be considered as continuous with the first. Assent to this proposition, however, was refused.

In *Barrett* v. *Hart*, (256 O. G., 224; 1918, C. D., 62,) where an application was allowed, forfeited, renewed, and again allowed and after the time within which a second renewal could have been filed a second application disclosing the same subject-matter was filed it was held that the second application could not be regarded as a continuation of the first.

A continuing application is an application filed subsequently to another application, while the prior application is pending, disclosing all or a substantial part of the subject-matter of the prior application and containing claims to subject-matter common to both applications, both applications being filed by the same inventor or his legal representative. Defining it in a simpler way, a continuing application is a development of an applicant's earlier application and which is entitled to the filing date of his

earlier application for a constructive reduction to practice of the common embodiment of his invention in the two applications.

As petitioner's present application was not filed until the prior application upon which it is based had become abandoned, the present application can not be regarded as a continuation of the prior application.

The petition is denied.

DECISIONS OF THE U. S. COURTS.

Court of Appeals of the District of Columbia.

PEMBROKE *v.* SULZER.

Decided May 3, 1920.

PATENTS—INTERFERENCE—DISCLOSURE BY ONE CONTESTANT TO THE OTHER.

In an interference between S. and P. relating to a process of making stencil-paper for use with a sensitized photographic film and to the article made by such process *Held* the evidence of disclosure by S. to P. only proved disclosure of the result to be accomplished rather than the specific article of the issue and the process of producing the same.

Mr. S. T. Cameron, *Mr. W. B. Kerkam*, and *Mr. Taylor E. Brown* for the appellant.

Mr. F. F. Church and *Mr. G. W. Rich* for the appellee.

ROBB, *J.:*

Appeal from a decision of an Assistant Commissioner of Patents in an interference proceeding reversing the decision of the Examiners-in-Chief and awarding priority to Sulzer, whose application was not filed until more than two years after he claims to have made the invention and two months after a patent had been issued to Pembroke, the appellant. The invention relates to stencil-paper and the process of making it. It is defined in six counts, of which the first and fourth will serve as examples:

1. The process of making flexible opaque stencil paper having an opaque coating which can be removed at a single stroke of the stylus which consists in first making a translucent paper non-absorbent, then coating said paper with an opaque coating that will adhere to said paper without penetrating the fiber of the paper said coating being as flexible as the paper but brittle enough to be practically all removed from the paper by a single stroke of the stylus.

4. An article of manufacture consisting of a translucent paper web made water proof by a translucent coating and then coated on one side thereof with a combination of waxy material and opaque pigment.

Sulzer was general superintendent of film manufacture for the Eastman Kodak Company, to which company the application in interference was assigned by him. That company obtained a license and option to purchase the Gaisman process for marking photographic-film negatives. The film-cartridge used by Gaisman includes, in addition to the film and red-paper back, a strip of carbon-paper interposed between them, with the carbon side toward the backing-paper. In practising the process the operator opens a small door or slide in the back of the camera, thus exposing the backing-paper, upon which he writes the desired notation with a stylus. The pressure of the stylus transfers the carbon to the backing-paper and permits the light to penetrate the stencil-paper and photographically imprint the notation upon the film. Sulzer was directed to produce film-rolls for carrying out this process, but he found that ordinary carbon-paper was unsatisfactory for use in connection therewith. On the evening of February 13, 1914, therefore, Mr. Pembroke, highly skilled in the art and president of the Kee-Lox Company, (large manufacturers of carbon-paper,) was informed by Mr. Haste, manager of the Kodak Park Works of the Eastman Kodak Company, that the company required a special carbon-paper which should have certain properties. To quote from the testimony of Mr. Haste:

It should be opaque and free from defects like pinholes and that it should have the property of the carbon being easily removed when written upon with a pencil or stylus, as distinguished from the ordinary carbon paper of which it was required that as many impressions as possible could be taken.

This was the extent of the information given Pembroke by Haste. He did not tell Pembroke of the Gaisman invention or of the purpose for which the desired carbon-paper was to be used, nor did he inform him that it should be waterproof. In other words, Pembroke was told in very general terms that a carbon-paper was desired possessing some, but not all, of the properties mentioned in the claims of the interference. We fully agree with the Examiners-in-Chief that nothing more was disclosed to Pembroke by Sulzer's agent Haste than a result to be accomplished, and that Pembroke is the real inventor of the subject-matter of these claims. (*Scndelback* v. *Gillette*, 22 App. D. C., 168; *Anderson* v. *Wells*, 27 App. D. C., 115; *Robinson* v. *McCormick*, 29 App. D. C., 98; *McKeen* v. *Jerdone*, 34 App. D. C., 163; *Hart & Barber* v. *Wiig*, 49 App. D. C., ——.)

After the completion of his invention, but before manufacturing paper embodying it for the Eastman Kodak Company, Pembroke required and obtained from that company an agreement not to analyze his coating or "dope." Thereafter large quantities of paper were manufactured and sold by him to that company. Having waited until after the issuance of the Pembroke patent to file his application, the burden is upon Sulzer to establish his case beyond a reasonable doubt. Not only has he failed to do this but, in our view, he has failed to establish by even a preponderance of evidence that he and not Pembroke is the inventor of the claims of the issue. We therefore adopt the carefully-prepared and satisfactory opinion of the Examiners-in-Chief, reverse the decision of the Assistant Commissioner, and award priority to Pembroke.

Reversed.

Court of Appeals of the District of Columbia.

ERBEN *v.* YARDLEY.

Decided June 2, 1920.

1. PATENTS—INTERFERENCE—PRIORITY AWARDED TO FIRST TO CONCEIVE AND REDUCE TO PRACTICE.

In an interference contest a finding that one of the parties was prior to the other in conception and reduction to practice is a sufficient basis for an award of priority to him. In this proceeding it is unnecessary to determine what right either party ultimately might have to a patent, the only question involved being that of priority between the parties to the interference.

2. SAME—SAME—ACCESS TO AFFIDAVITS FILED UNDER RULE 75.

Where claims forming the issue of an interference had been rejected in view of a prior patent and the rejection withdrawn by the Examiner in view of affidavits filed under Rule 75, which were then sealed up, upon motion to dissolve, alleging non-patentability in view of such patent, it was not error for the Patent Office to refuse access by the moving party to such affidavits, since the issue raised by the affidavits—patentability—was one in which the moving party had no interest in the interference proceeding.

3. SAME—SAME—ISSUE THAT OF PRIORITY ONLY.

In an interference contest the only question involved on appeal to the Court of Appeals of the District of Columbia is that of priority of invention between the parties, the losing party having no standing to contend that the issue is not patentable, that a third party was the prior inventor, or that there is a statutory bar to the issuance of a patent.

Mr. A. G. Davis and *Mr. Melville Church* for the appellant.

Mr. W. G. Carr for the appellee.

ROBB, *J:*

Appeal from a Patent Office decision in an interference proceeding awarding priority to the senior party Yardley. The invention relates to synchronous-booster rotary converters and is expressed in two counts, which need not be reproduced here.

The Board of Examiners-in-Chief and the Assistant Commissioner, after a careful analysis of the testimony, reached the conclusion that Yardley was the first to conceive and first to reduce to practice, and we are in accord with those findings. Counsel for appellant contend here, as below, that the mere fact that Yardley was the first to conceive and first to reduce to practice is not sufficient ground upon which to base an award of priority to him. The Assistant Commissioner directed attention in his opinion to the fact that such has been the rule in the Patent Office since 1872, and that the rule has received the approval of this court in *Hubbard* v. *Berg* (40 App. D. C., 577) and *Thompson* v. *Storrie* (46 App. D. C., 324.) We can find no sufficient reason for the overturn of this long-established rule and the decision of this court approving it.

In the Patent Office each party, as frequently happens, urged the non-patentability of the issue to the other party, Erben contending that the French patent to Siemens-Schuckert, dated January 20, 1913, anticipates Yardley, and hence that the interference should be dissolved. The Law Examiner ruled against Erben's contention and declined to dissolve the interference. Yardley had satisfied the Primary Examiner on this point by filing affidavits under Rule 75 of the Patent Office, for the purpose of overcoming this reference. Erben contended below, as here, that he should have been permitted to inspect those affidavits.

In *Gueniffet* v. *Wictorsohn* (30 App. D. C., 432) we ruled that it was unnecessary to determine what right either party to an interference ultimately might have to a patent, the only question involved being that of priority between the parties to the interference. In *Lecroix* v. *Tiberg* (33 App. D. C., 586) and in *Gammeter* v. *Thropp* (42 App. D. C., 564) we held, following our decision in *Burson* v. *Vogel*, (29 App. D. C., 388,) that the possible existence of a statutory bar of public use to the issuance of a patent to one of the parties to an interference, is not an issue in that interference. We have repeatedly held that the question of patentability is not before us in an interference proceeding. (*Sobey* v. *Holsclaw*, 28 App. D. C., 65; *Mell* v. *Midgley*, 31 App. D. C., 534, and *Norling* v. *Hayes*, 37 App. D. C., 169.)

The issue here is between the parties to the interference, and the losing party has no standing to contend that a third party really is the prior inventor. That such was the contention in the Patent Office is apparent from the Assistant Commissioner's decision, wherein it is stated:

Erben contends that the issue is not patentable to Yardley since the showing made by him to establish that he made the invention prior to the date of a certain French patent was not sufficient, and Yardley contends that what Erben did was in view of the state of the art not patentable over the disclosure made in what is known as the "Power" article. * * * Neither of these questions is properly to be considered on an appeal on priority.

The Assistant Commissioner clearly was right, for Yardley, even assuming that he was anticipated by the French patent, still would be prior to Erben. Since the issue raised by the affidavits filed by Yardley was one in which Erben had no interest in the interference proceeding, the Patent Office did not err in denying Erben's motion to inspect them.

The decision is affirmed.

Affirmed.

ADJUDICATED PATENTS.

(U. S. C. C. A. Tenn.) The Allison and Pinkney patent, No. 1,112,184, for a cracker-cutting machine, claims 1 and 2, for "pan-skipping" mechanism, *Held* void because the patentees were not the original and first inventors. *J. H. Day Co.* v. *Mountain City Mill Co. et al.*, 264 Fed. Rep., 963.

(U. S. C. C. A. Tenn.) The Ward patent, No. 865,461, for means for moving the cutting mechanism of cracker-cutting machines during the cutting operation in line with and at the same rate of speed as the moving sheet of dough to be cut and for means for removing the scrap from the cut sheet, *Held* void for want of invention over the prior art and not infringed, even if valid, as to the specific mechanical means devised. *J. H. Day Co.* v. *Mountain City Mill Co. et al.*, 264 Fed. Rep., 963.

(U. S. C. C. A. N. Y.) The Nathan patent, No. 873,775, for an innersole for shoes having variously-located pockets for the insertion of filling to correct abnormal tendencies of the foot, *Held* void for lack of invention and anticipation in the prior art. *Nathan Anklet Support Co. Inc. et al.* v. *Cammeyer, Inc.*, 264 Fed. Rep., 968.

(U. S. C. C. A. Calif.) The Bode patent, No. 762,980, issued June 21, 1904, for a soil-pipe connection for closet-bowls, *Held* anticipated by the Dellamore patent, No. 699,497, issued May 6, 1902, and also not infringed by the device sold by defendant. *W. F. Schultheiss Co. et al.* v. *Philips et al.*, 264 Fed. Rep., 971.

(U. S. C. C. A. N. Y.) The Nisbet patent, No. 1,238,803, for a windshield for protecting the tonneau-seats in passenger-cars, claims 2 and 4 *Held* not anticipated, valid, and infringed. *Nisbet* v. *Perkins*, 264 Fed. Rep., 974.

(U. S. C. C. A. Mich.) The Harbeck patent, No. 1,062,002, claim 1, for a vessel having walls made of layers of paper united to each other by a fused cement, *Held* void for anticipation. *American Can Co.* v. *Mulkey Salt Co.*, 264 Fed. Rep., 977.

(U. S. D. C. D. N. J.) The Bayley design patent, No. 49,593, for a lighting-fixture, *Held* valid and not anticipated and also infringed. *Bayley & Sons, Inc.*, v. *Krich*, 264 Fed. Rep., 978.

(U. S. D. C. S. D. N. Y.) The Lindemann patent, No. 1,127,652, for a stove adapted to burn both solid fuel and gas, *Held* not anticipated, valid, and in a somewhat narrow field a pioneer; also *Held* infringed. *A. J. Lindemann & Hoverson Co., Inc.*, v. *J. Rose & Co., Inc.*, 264 Fed. Rep., 983.

Disclaimers.

1,228,790.—*Eric Lambert*, Kansas City, Mo. APPARATUS FOR DRYING WOOD VENEER. Patent dated June 5, 1917. Disclaimer filed July 23, 1920, by the patentee.

Enters this disclaimer—

"To that part of the claim in said specification which is in the following words, to wit:

"2. A dry kiln comprising a rectangular shaped housing, a radiator located in one end of said housing forming an end way thereof and provided with openings through which air may be drawn, the opposite end of said housing closed by an end wall, and an exhaust fan connecting with the interior of said housing through said wall."

1,325,719.—*Jason H. Greenstreet*, Indianapolis, Ind. BOX-BLANK MACHINE. Patent dated December 23, 1919. Disclaimer filed July 28, 1920, by the assignee, by mesne assignments, *Wirebounds Patents Company*.

Enters this disclaimer—

"To claims 13, 14, and 43 of said patent, which are in the following words, to wit:

"13. A machine of the class described comprising, in combination, mechanism for fastening together the cleats and side material of assembled box or crate sections and to secure binding wire thereto; and means for presenting such sections thereto with the parts in proper relationship, comprising separate and independent cleat and sheet forwarding devices, and a common actuating means for synchronously advancing said cleat and sheet forwarding devices.

"14. A machine of the class described having, in combination, cleat-feeding means; separate and independent feeding means for side material associated with cleats; and a common actuating means for operating them synchronously.

"43. In a box blank machine, the combination of a cleat guide, spacing blocks for insertion between cleats, separate and independent sheet-spacing devices, and a common means for advancing said blocks, devices and associated work."

Amendment of Trade-Mark Rules.

(ORDER No. 2,597.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., August 3, 1920.

Acting under the provisions of section 483 of the Revised Statutes and with the approval of the Assistant Secretary of the Interior, Rules 16, 17, 19, 20, 22, 27, 32, 33, 38, 39, 40, 47, 51, 56, 58, 59, 60, 62, 68, 70, and 73 of the rules of the Patent Office relating to the registration of trade-marks, edition of March 1, 1913, reprinted October 1, 1916, have been amended, and Rules 56 (*a*) and 56 (*b*) have been added, effective July 26, 1920, the amended and added rules reading as follows:

16. A trade-mark may be registered under the act of February 20, 1905, as amended, by any person, firm, corporation, or association domiciled within the territory of the United States, or residing in or located in any foreign country which, by treaty, convention, or law, affords similar privileges to the citizens of the United States, and who is the owner of such trade-mark, and uses the same in commerce with foreign nations, or among the several States, or with Indian tribes, upon payment of the fee required by law and other due proceedings had. (See rules 17 and 20.)

Act of Feb. 20, 1905, sec. 1.

17. Except as provided by section 3 of the act of May 4, 1906, no trade-mark will be registered under the act of February 20, 1905, as amended, to an applicant residing or located in a foreign country unless such country, by treaty, convention, or law, affords similar privileges to the citizens of the United States, nor unless the trade-mark has been registered by the applicant in the foreign country in which he resides or is located, nor until such applicant has filed in this Office a certified copy of the certificate of registration of his trade-mark in the country where he resides or is located. In such cases it is not necessary to state in the application that the trade-mark has been used in commerce with the United States or among the several States thereof.

Act of Feb. 20, 1905, secs. 1, 2, and 4. Act of May 4, 1906, sec. 3.

19. No trade-mark will be registered to an owner domiciled within the territory of the United States unless it shall be made to appear that the same is used as such by said owner in commerce among the several States, or between the United States and some foreign nation, or Indian tribe; no trade-mark, except as provided by section 3 of the act of May 4, 1906, and the act of March 19, 1920, will be registered to an owner residing in or located in a foreign country, unless said country, by treaty, convention, or law, affords similar privileges to the citizens of the United States; no trade-mark will be registered which consists of or comprises immoral or scandalous matter, or which consists of or comprises the flag or coat-of-arms or other insignia of the United States, or any simulation thereof, or of any State or municipality, or of any foreign nation, or which consists of or comprises any design or picture that has been adopted by any fraternal society as its emblem, unless it shall be shown to the satisfaction of the Commissioner of Patents that the mark was adopted and used as a trade-mark by the applicant or applicant's predecessors, from whom title is derived, at a date prior to the date of its adoption by such fraternal society as its emblem and no mark will be registered which is identical with a registered or known trade-mark owned and in use by another, and appropriated to merchandise of the same descriptive properties, or which so nearly resembles a registered or known trade-mark owned and in use by another, and appropriated to merchandise of the same descriptive properties as to be likely to cause confusion or mistake in the mind of the public, or to deceive purchasers, or, under the act of February 20, 1905, which consists merely in the name of an individual, firm, corporation, or association, not written, printed, impressed, or woven in some particular or distinctive manner or in association with a portrait of the individual, or merely in words or devices which are descriptive of the goods with which they are used, or of the character or quality of such goods, or merely a geographical name or term; no portrait of a living individual will be registered as a trade-mark, except by consent of such individual evidenced by an instrument in writing; and no trade-mark will be registered which is used in unlawful business, or upon any article injurious in itself, or which has been used with the design of deceiving the public in the purchase of merchandise, or which has been abandoned. No trade-mark will be registered under section 1 (*b*), act of March 19, 1920, which is registrable under the act of February 20, 1905, as amended, or which has not been in *bona fide* use for one year in international or interstate commerce or commerce with Indian tribes.

Act of Feb. 20, 1905, sec. 5. Act of Feb. 18, 1911. Act of Mar. 19, 1920, sec. 9.

20. Any mark, used in commerce with foreign nations or among the several States or with Indian tribes, may be registered if it has been in actual and exclusive use as a trade-mark of the applicant, or his predecessors from whom he derived title, for ten years next preceding February 20, 1905. Or if it has been registered under the ten-years' proviso for one class of goods, it may be registered for other classes, as provided in section 9 of the act of March 19, 1920.

Act of Feb. 20, 1905, sec. 1. Act of Feb. 18, 1909, sec. 1. Act of Mar. 19, 1920.

22. A complete application comprises:

(*a*) A petition, requesting registration, and if under act of March 19, 1920, so specifying, signed by the applicant. (See Forms 1, 1ª, and 1ᵇ.) An application for registration under the act of February 20, 1905, as amended, may be changed to an application for registration under section 1 (*b*) of the act of March 19, 1920, and no additional fee will be required, but the petition must be correspondingly amended. (See Form 1ª.)

(*b*) A statement specifying the name, domicile, location, and citizenship of the party applying, and if the applicant be a corporation or association, the State or nation under the laws of which organized; the class of merchandise (according to the official classification), and the particular description of goods comprised in such class upon which the trade-mark has actually been used; a statement of the mode in which the same is applied and affixed to the goods, and the length of time during which the trade-mark has been used upon the goods specified. A description of the trade-mark itself shall be included, if desired by the applicant or required by the Commissioner, provided such description is of a character to meet the approval of the Commissioner. (See sec. 29 of the act of February 20, 1905, and Forms 2, 4, 6, and 10.)

(*c*) A declaration complying with section 2 of the act of February 20, 1905, as amended by the act of February 18, 1909, or sections 1 (*b*) or 9 of the act of March 19, 1920. (See Forms 3, 3ª, 5, 7, 8, 8ª, 9, and 11.)

(*d*) A drawing of the trade-mark, signed by the applicant, or his attorney, which shall be a facsimile of the same as actually used upon the goods. (See Rules 36 and 37 and specimen drawing.)

(*e*) Five specimens (*or facsimiles, when from the mode of applying or affixing the trade-mark to the goods, specimens cannot be furnished*) of the trade-mark as actually used upon the goods.

(*f*) A fee of ten dollars.

Act of Feb. 20, 1905, sec. 4.

27. An application for registration of a trade-mark, under the act of February 20, 1905, as amended, filed in this country by any person who has previously regularly filed in any foreign country which, by treaty, convention, or law, affords similar privileges to the citizens of the United States an application for registration of the same trade-mark, shall be accorded the same force and effect as would be accorded to the same application if filed in this country on the date on which application for registration of the same trade-mark was first filed in such foreign country: *Provided*, That such application be filed in this country within four months from the date on which the application was first filed in such foreign country.

Act of Feb. 18, 1911. Act of Mar. 19, 1920, sec. 9.

32. Where application is made under section 5 of the act of February 20, 1905, on the ground that the mark has been in actual and exclusive use as a trade-mark by the applicant, or his predecessors from whom he derived title, for ten years next preceding February 20, 1905, the applicant shall, in addition to the requirements of section 2 of said act, make oath to such actual use of the mark as a trade-mark by himself or his predecessors, or by those from whom title to the same is derived, for the period specified, and that, to the best of his knowledge and belief, such use has been exclusive. (See Form 8.) Or if the application is made under section 9 of the act of March 19, 1920, the same must be correspondingly changed. (See Form 8ª.)

Act of Feb. 20, 1905, sec. 2.

33. If the applicant for registration under the act of February 20, 1905, as amended, resides or is located in a foreign country, the declaration required, unless the application be presented under the provisions of section 3 of the act of May 4, 1906, shall also set forth that the trade-mark has been registered by the applicant, or that an application for the registration thereof has been filed by him in the foreign country in which he resides or is located, and shall give the date of such registration, or of the application therefor, as the case may be. In such cases it shall not be necessary to state that the mark has been used in commerce with the United States or among the States thereof.

Act of May 4, 1906, sec. 3.

If the application be presented under the provisions of section 3 of the act of May 4, 1906, the declaration, in addition to the requirements of Rule 31, must state that the applicant has a manufacturing establishment within the territory of the United States and that the goods upon which the trade-mark is used are the product of such establishment.

Act of Feb. 20, 1905, sec. 6.

38. All complete applications for registration shall be considered, in the first instance, by the Examiner in Charge of Trade-Marks, as if filed under the act of February 20, 1905, as amended, unless otherwise specified in the application. Whenever, on examination of an application, registration is refused for any reason whatever, the applicant will be notified thereof. The reasons for such refusal will be stated, and such information and references will be given as may be useful in aiding the applicant to judge of the propriety of further prosecuting his application. If the Examiner shall find the application unregistrable under the act of 1905, but registrable under the act of 1920, he shall so advise the applicant; and the applicant shall then notify the Office whether he will prosecute such application under the 1905 act, or will accept registration under the 1920 act. Such notification shall be entered on the file and further proceedings governed accordingly.

39. The examination of an application and the actions thereon will be directed throughout to the merits, and in each letter the Examiner shall state or refer to all his objections.

Act of Feb. 20, 1905, sec. 6.

40. If, on examination of an application for the registration of a trade-mark under the act of February 20, 1905, as amended, it shall appear that the applicant is entitled to have his trade-mark registered under the provisions of that law, the mark will be published in the OFFICIAL GAZETTE at least once. Such publication shall be at least thirty days prior to the date of passing the application to registration.

If no notice of opposition be filed within thirty days after such publication, the applicant or his attorney will be duly notified of the allowance of his application, and a certificate of registration will be issued as provided in Rule 58. Marks registered under section 1 (*b*) of the act approved March 19, 1920, may be published when registered.

The weekly issue closes on Thursday, and the certificates of registration of that issue bear date as of the fourth Tuesday thereafter.

47. Before the declaration of interference, all preliminary questions must have been settled by the Examiner in Charge of Trade-Marks, and the trade-mark which is to form the subject-matter of the controversy must have been decided to be registrable, and must have been published at least once in the OFFICIAL GAZETTE of the Patent Office.

Whenever two or more applicants are found to be claiming substantially the same registrable trade-mark, and the application of one of the applicants is ready for publication, or allowance, the Examiner in Charge of Trade-Marks may require the other applicants to put their applications in condition for publication or allowance, within a time specified, in order that an interference may be declared. If any party fail to put his application in condition for publication or allowance within the time specified, the declaration of interference will not be delayed, but after final judgment the application of such party will be held for revision and restriction, subject to interference with other applications or registered trade-marks.

Act of Feb. 20, 1905, secs. 6 and 11. Act of Mar. 2, 1907, sec. 2.

51. Any person who believes he would be damaged by the registration of a mark applied for under the act of February 20, 1905, as amended, may oppose the opposition stating the grounds therefor, within thirty days after the publication of the mark sought to be registered, which notice of opposition shall be accompanied by the fee required by law and shall be verified by the person filing the same before one of the officers mentioned in section 2 of the act of February 20, 1905. An opposition may be filed by a duly authorized attorney, but such opposition shall be null and void unless duly verified by the opposer, within a reasonable time after such filing. A duplicate copy of the notice of opposition must be filed, either with the notice of opposition or within a reasonable time after the filing of the same.

Act of Feb. 20, 1905, sec. 6.

56. Every applicant under the act of February 20, 1905, as amended, whose mark has been twice refused registration by the Examiner of Trade-Marks for the same reasons, upon grounds involving the merits of the application, may appeal to the Commissioner in person upon payment of the fee required by law. Such refusal may be considered by the Examiner of Trade-Marks as final.

There must have been two refusals to register the mark as originally filed, or, if amended in matter of substance, the amended mark, and, except in cases of division, all

preliminary and intermediate questions relating to matters not affecting the merits of the application must have been settled before the case can be appealed to the Commissioner.

56 (*a*). Upon receiving a petition stating concisely and clearly any proper question which has been acted upon by the Examiner in Charge of Trade-Marks which does not involve the merits of a trade-mark claimed under the act of February 20, 1905, as amended, the refusal of registration of such trade-mark, or a requirement for division, and also stating the facts involved and the point or points to be reviewed, an order will be made fixing a time for hearing such petition by the Commissioner, and directing the Examiner to furnish a written statement of the grounds of his decision upon the matters averred in such petition within five days after being notified of the order fixing the day of hearing. The Examiner shall, at the time of making such statement, furnish a copy thereof to the petitioner. No fee is required for such a petition.

56 (*b*). Petition may be taken to the Commissioner from a refusal by the Examiner of Trade-Marks to register a mark under section 1 of the act of March 19, 1920, without a fee.

58. When the requirements of the law and of the rules have been complied with, and the Office has adjudged a trade-mark registrable under the act of February 20, 1905, as amended, and section 1 (*b*) of the act of March 19, 1920, a certificate will be issued, signed by the Commissioner, under the seal of the Patent Office, to the effect that the applicant has complied with the law and that he is entitled to registration of his trade-mark. The certificate shall state the date on which the application for registration was received in the Patent Office and the act under which the mark is registered. Attached to the certificate will be a photolithographed copy of the drawing of the trade-mark and a printed copy of the statement and of the declaration.

Act of Feb. 20, 1905, sec. 11.
Act of Mar. 19, 1920, sec. 1 (b).

59. A certificate of registration under the act of February 20, 1905, as amended, shall remain in force twenty years from its date, except that, in case a trade-mark be previously registered in a foreign country, such certificate shall cease to be in force on the day on which the trade-mark ceases to be protected in such foreign country, and shall in no case remain in force more than twenty years unless renewed.

Act of Feb. 20, 1905, sec. 12.

60. A certificate of registration under the act of February 20, 1905, as amended, may be, from time to time, renewed for like periods on payment of the renewal fees required, upon request by the registrant, his legal representatives, or transferees of record in the Patent Office, and such request may be made at any time not more than six months prior to the expiration of the period for which the certificate of registration was issued or renewed.

Act of Feb. 20, 1905, secs. 12 and 14.

62. A certificate of registration under the act of February 20, 1905, as amended, shall not be issued to an applicant located in a foreign country for any trade-mark, for registration of which he has filed an application in such foreign country, until such mark has been actually registered by him in the country in which he is located.

Act of Feb. 20, 1905, sec. 4.

68. The OFFICIAL GAZETTE of the Patent Office will contain a list of all trade-marks registered, giving, in each case, a statement of the goods to which the trade-mark is applied, the name and address of the applicant, the date of filing and serial number of the application, and when published (see Rule 40), the date of the publication of the trade-mark in the OFFICIAL GAZETTE.

70. All payments of money required for Office fees must be made in specie, Treasury notes, national-bank notes, post-office money-orders, bank-drafts, or certified checks. Money-orders and checks should be made payable to the "Commissioner of Patents."

Rev. Stat. 4935.

73. It shall be the duty of the registrant under the act of February 20, 1905, as amended, and under section 1 (*b*) of the act of March 19, 1920, to give notice to the public that a trade-mark is registered, either by affixing thereon the words "Registered in U. S. Patent Office," or "Reg. U. S. Pat. Off.," or, when from the character and size of the trade-mark, or from its manner of attachment to the article to which it is appropriated, this cannot be done, then by affixing a label containing a like notice to the package or receptacle wherein the article or articles are inclosed; otherwise, on a suit for infringement, no damages shall be recovered except on proof that the defendant was duly notified of infringement, and continued the same after such notice.

Act of Feb. 20, 1905, sec. 28.
Act of Mar. 19, 1920, sec. 1.

R. F. WHITEHEAD,
Acting Commissioner.

Patents Nos. 1,349,553 to 1,350,289.

THE
OFFICIAL GAZETTE
OF THE
United States Patent Office.

Vol. 277—No. 3. TUESDAY, AUGUST 17, 1920. Price—$5 per year.
[PUBLISHED AUGUST 18, 1920.]

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

Printed copies of patents are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

Interference Notice.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., August 11, 1920.

Peter S. Maroosis, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of William S. Maroosis, corner of Washington avenue southeast and Oak street, Minneapolis, Minn., for registration of a trade-mark and trade-mark registered January 28, 1902, No. 37,688, to Peter S. Maroosis, 257 and 259 First avenue south, Minneapolis, Minn., and a notice of such declaration sent by registered mail to said Peter S. Maroosis at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said Peter S. Maroosis, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

M. H COULSTON,
First Assistant Commissioner.

Notice of Cancelation.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., August 2, 1920.

Ampere Manufacturing Co., its assigns or legal representatives, take notice:

A cancelation proceeding having been instituted by this Office upon the application of Diamond Electric Specialties Corporation, 103 South Orange avenue, Newark, N. J., to effect the cancelation of the trade-mark registration of Ampere Manufacturing Co., Nos. 408–412 West Thirteenth street, New York, N. Y., No. 65,605, dated October 8, 1907, and the notice of such proceeding sent by registered mail to the said Ampere Manufacturing Co. at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said Ampere Manufacturing Co., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the cancelation will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

R. F. WHITEHEAD,
First Assistant Commissioner.

Adverse Decisions in Interference.

PATENT NO. 1,208,455.

On July 12, 1920, a decision was rendered that George Bedford was not the first inventor of the subject-matter covered by claims 1, 2, 3, 8, and 10 of his Patent No. 1,208,455, subject, "Automatic winding device for phonographs," and no appeal having been taken within the time allowed such decision has become final.

PATENT NO. 1,223,582.

On July 13, 1920, a decision was rendered that William C. Hedgcock was not the first inventor of the subject-matter covered by claims 1, 2, and 6 of his Patent No. 1,223,582, subject, "Brake," and no appeal having been taken within the time allowed such decision has become final.

Drawings.

PRECAUTIONS TO BE OBSERVED IN FORWARDING DRAWINGS TO THE UNITED STATES PATENT OFFICE.

Where drawings are to be filed in connection with an application for Letters Patent in the United States Patent Office, each sheet, before it can be accepted by the Office as a part of the application, must be signed in the name of the inventor at the lower right-hand corner, either by him or by an attorney whose written authorization from the applicant is filed in connection with the application. The signatures should never be written on a line parallel with the longer edges of the sheet, one of the shorter edges being always regarded, for the purpose of locating the signatures, as the lower edge of the sheet. The signatures must all be within the margin-lines of the sheet and below the lines of the drawing. The title of the invention should be written with pencil on the back of each sheet of drawings.

When there are filed on the same day two or more applications by the same inventor, each of the documents and drawings belonging to the same application should have placed thereon the same letter or number, which should be different from the letter or number placed upon those of any other of the applications.

It is desirable that all parts of the complete application, including the drawings, be deposited in the Office at the same time. Should, however, the other parts of the application be filed before the drawings are sent, the latter when forwarded should be accompanied by a letter stating the number of sheets inclosed, and that the drawings are to be filed with the other parts of the application, giving the date at which such other parts were filed in the Office, the name of the inventor, and title of the invention. If the application has received a serial number, that should also be given, and it should be indorsed with pencil on the back of each sheet of drawings. The letter should also state; if such be the case, that the new drawings are to be substituted for those previously filed.

APPLICATIONS UNDER EXAMINATION.

Condition at Close of Business August 7, 1920.

Room No.	Divisions and subjects of invention.	Oldest new application and oldest action by applicant awaiting office action.		No. of applications awaiting action.
		New.	Amended.	
314	1. Closure Operators; Fences; Gates; Harrows and Diggers; Plows; Planting; Scattering Unloaders; Trees, Plants, and Flowers.	Feb. 24	Mar. 1	594
128	2. Bee Culture; Curtains, Shades, and Screens; Dairy; Medicines; Pneumatics; Preserving; Presses; Tents, Canopies, Umbrellas, and Canes; Tobacco.	Dec. 15	Feb. 21	961
175	3. Electric Heating and Rheostats; Electrochemistry; Heating; Metal-Founding; Metallurgical Apparatus; Metallurgy; Metal Treatment; Plastic Metal Working.	Feb. 13	Mar. 18	388
234	4. Conveyers; Conveyers, Fluid-Current; Elevators; Excavating; Handling—Hand and Hoist-Line Implements; Hoisting; Material or Article Handling; Pneumatic Despatch; Pushing and Pulling Implements; Railway Mail Delivery; Store-Service; Traversing Hoists.	Nov. 17	May 15	1,506
167	5. Book-Making; Books, Strips and Leaves; Harvesters; Jewelry; Manifolding; Music; Printed Matter; Tying Cords or Strands.	Apr. 1	May 6	473
318	6. Bleaching and Dyeing; Chemicals; Explosives; Fertilizers; Liquid Coating Compositions; Plastic Compositions; Substance Preparation.	Mar. 4	June 7	538
312	7. Games and Toys; Optics; Photography; Velocipedes	Apr. 3	May 10	904
131	8. Beds; Chairs and Seats; Flexible-Sheet Securing Devices; Furniture; Kitchen and Table Articles; Store Furniture; Supports.	May 17	June 7	379
221	9. Air and Gas Pumps; Hydraulic Motors; Injectors and Ejectors; Motors, Fluid; Motors, Fluid-Current; Pumps.	Feb. 12	Mar. 24	571
235	10. Carriages and Wagons; Land-Vehicles; Land-Vehicles—Bodies and Tops; Land-Vehicles—Dumping; Land-Vehicles, Wheel Substitutes; Motor Vehicles.	Feb. 16	June 18	929
154	11. Boot and Shoe Making; Boots, Shoes, and Leggings; Button, Eyelet, and Rivet Setting; Harness; Leather Manufactures; Nailing and Stapling; Spring Devices; Whips and Whip Apparatus.	Mar. 20	Apr. 2	825
222	12. Machine Elements	Dec. 3	May 10	1,162
329	13. Bolt, Nail, Nut, Rivet, and Screw Making; Button Making; Chain, Staple, and Horseshoe Making; Driven, Headed, and Screw-Threaded Fastenings; Gear Cutting, Milling, and Planing; Metal Drawing; Metal Forging and Welding; Metal Rolling, Metal Tools and Implements, Making; Metal Working; Needle and Pin Making; Turning.	Nov. 18	June 3	1,197
323	14. Compound Tools; Cutting and Punching Sheets and Bars; Farriery; Metal-Bending; Sheet-Metal Ware, Making; Tools; Wire Fabrics and Structure; Wire-Working.	Jan. 12	June 15	680
308	15. Bread, Pastry, and Confection Making; Coating; Glass; Laminated Fabrics and Analogous Manufac-	Nov. 17	Apr. 20	1,207
111	16. tures; Paper-Making and Fiber Liberation; Plastic Block and Earthenware Apparatus; Plastics. Radiant Energy; Telegraphy; Telephony	Dec. 17	Dec. 11	895
307	Label Pasting and Paper Hanging; Nut and Bolt Locks; Ornamentation; Paper Manufactures; 17. Printing; Type Casting; Sheet Material Associating or Folding; Sheet Feeding or Delivering; Type Setting.	May 28	June 21	238
229	18. Liquid Heaters and Vaporizers; Motors, Expansible Chamber Type; Power Plants; Speed Responsive Devices; Steam and Vacuum Pumps.	Jan. 23	Apr. 19	1,180
236	19. Automatic Temperature and Humidity Regulation; Furnaces; Heating Systems; Stoves and Furnaces; Domestic Cooking Vessels; Thermostats and Humidostats.	Dec. 12	Feb. 14	656
179	20. Artificial Body Members; Builders' Hardware; Closure-Fasteners; Cutlery; Dentistry; Locks and Latches; Safes; Undertaking.	May 3	May 10	657
212	21. Brakes and Gins; Carding; Cloth-Finishing; Continuous-Strip Feeding; Cordage; Felt and Fur; Knitting and Netting; Silk; Spinning; Weaving; Winding and Reeling.	Dec. 9	June 18	526
249	22. Aeronautics; Firearms; Ordnance	May 18	June 7	278
217	23. Acoustics; Coin-Handling; Horology; Recorders; Registers; Sound Recording and Reproducing; Time-Controlling Mechanism.	Jan. 13	May 11	732
144	24. Apparel; Apparel Apparatus; Garment Supporters; Sewing-Machines	Feb. 21	May 1	610
315	25. Agitating; Butchering; Centrifugal Bowl Separators; Mills; Threshing; Vegetable Cutters and Crushers; Gas Separation.	June 28	July 3	194
105	26. Electricity, Generation; Motive Power; Prime Mover Dynamo Plants	Dec. 10	Jan. 17	767
214	27. Abrading; Brushing and Scrubbing; Laundry; Washing Apparatus	Apr. 3	May 11	582
225	28. Internal-Combustion Engines	Feb. 16	Apr. 9	765
147	29. Boring and Drilling; Chucks or Sockets; Coopering; Rod Joints or Couplings; Wheelwright-Machines; Wood-Sawing; Wood-Turning; Woodworking; Woodworking Tools.	Feb. 12	June 4	610
152	30. Illuminating-Burners; Illumination; Liquid and Gaseous Fuel Burners; Type-Writing Machines	Jan. 19	June 19	1,126
172	31. Alcohol; Ammonia, Water, and Wood Distillation; Charcoal and Coke; Fuel and Igniting Devices; Gas, Heating and Illuminating; Hides, Skins, and Leather; Hydraulic Cement and Lime; Mineral Oils; Oils, Fats, and Glue; Sugar and Salt.	Nov. 24	Feb. 16	1,252
278	32. Gas and Liquid Contact Apparatus; Heat Exchange; Refrigeration	Nov. 13	Apr. 29	1,226
70	33. Bridges; Hydraulic and Earth Engineering; Masonry and Concrete Structures; Metallic Building Structures; Roads and Pavements; Roofs.	Mar. 3	Apr. 20	518
304	34. Electricity-Transmission to Vehicles; Railways; Railway Rolling Stock; Railway Switches and Signals; Railways, Surface Track; Railway Wheels and Axles; Track-Sanders; Vehicle-Fenders.	Mar. 30	July 8	263
57	35. Buckles, Buttons, Clasps, Etc.; Card, Picture, and Sign Exhibiting; Signals and Indicators; Toilet	June 21	June 18	481
204	36. Automatic Weighers; Dryers; Geometrical Instruments; Measuring Instruments; Force Measuring	Feb. 11	Feb. 27	1,205
107	37. Electric Lamps; Electricity, Circuit Makers and Breakers; Electricity, General Applications	Mar. 6	Mar. 18	1,362
378	38. Animal Husbandry; Earth Boring; Fishing, Trapping and Vermin Destroying; Mining, Quarrying, and Ice-Harvesting; Stationery; Stone-Working; Wells.	Mar. 20	Apr. 24	812
220	39. Fluid Pressure Regulators; Joint Packings; Multiple Valves; Packed Shaft or Rod Joints; Pipe Joints or Couplings; Valved Pipe Joints or Couplings; Valves; Water Distribution.	Oct. 15	Nov. 14	1,279
273	40. Baggage; Bottles and Jars; Check-Controlled Apparatus; Cloth, Leather, and Rubber Receptacles; Deposit and Collection Receptacles; Metallic Receptacles; Package and Article Carriers; Paper Receptacles; Special Receptacles and Packages; Wooden Receptacles.	Jan. 5	Feb. 25	876
125	41. Land Vehicles, Wheels and Axles; Resilient Tires and Wheels	Dec. 19	May 3	844
114	42. Electricity, Conductors; Electrical Conduits and Housings; Electric Signaling	Feb. 12	Mar. 11	1,050
382	43. Baths and Closets; Dispensing; Dispensing Beverages; Electricity, Medical and Surgical; Fire-Extinguishers; Sewerage; Surgery; Water Separation or Purification.	Dec. 13	Mar. 16	990
253	44. Air-Guns, Catapults, and Targets; Ammunition and Explosive Devices; Ammunition and Explosive Charge Making; Boats and Buoys; Filling and Closing Portable Receptacles; Marine Propulsion; Railway Draft Appliances; Ships.	Apr. 17	May 15	316
379	45. Journal-Boxes, Pulleys, and Shafting; Lubrication; Motors	Feb. 2	May 11	701
264	46. Educational Appliances; Fire-Escapes; Ladders; Fluid Sprinkling, Spraying, and Diffusing; Paper Files and Binders; Wooden Buildings; Scaffolds.	Jan. 6	Apr. 19	526
332	47. Brakes; Clutches; Fluid Pressure Brake and Analogous Systems	Dec. 3	Feb. 17	903

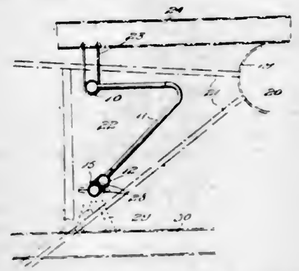
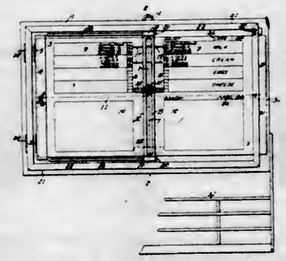
PATENTS



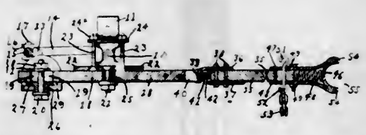
GRANTED AUGUST 17, 1920.

1,349,553. HAND-TOOL. JOSEPH RENÉ AYOTTE, Chicago, Ill. Filed Oct. 1, 1919. Serial No. 327,741. 5 Claims. (Cl. 81—177.)



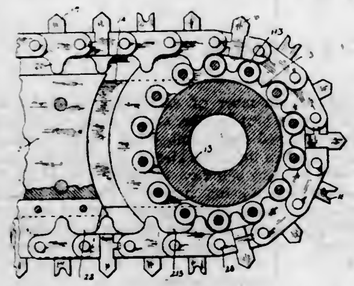
1. A tool of the character described, having in combination a tubular non-rotatable jacket; a bit holder in one end of the jacket; a two-part telescoping, rotatable tube, consisting of an inner and an outer member within said jacket; one member connected to the bit holder; a handle rotatable on the outer end of the extendable tube member, outside of the jacket and a ratchet between the handle and the outer end of the extendable tube member.

1,349,554. SUPERHEATER. JOHN P. BADENHAUSEN, Philadelphia, Pa. Filed May 27, 1916. Serial No. 100,266. 1 Claim. (Cl. 122—476.)



In a superheater for steam boilers, the combination of a pair of vertically spaced relatively long headers of substantially equal and uniform diameters extending transversely of the boiler space, said headers being open at one end thereof and closed at the other end thereof, one of said headers being provided with a pair of alined chambers and the other of said headers having a single chamber, a third relatively short header of substantially the same diameter as said long headers and independent of said long headers and located in parallel relation to said last mentioned long header and secured thereto, said third header being closed at both ends and having a single chamber, a plurality of laterally extending V-shaped tubes connecting the chamber of said third header with the chambers of said first header, and a plurality of laterally extending V-shaped tubes connecting the first and second mentioned headers near the closed ends thereof, the open ends of said headers being on the same side of the boiler, said V-shaped tubes being located in the first pass of the boiler whereby the hot gases may successively contact with the lower and upper portions thereof and whereby the steam flowing therethrough has a travel transversely of the boiler.

1,349,555. SYSTEM FOR INDICATING AND RECORDING ORDERS. WILLIAM H. BELL, Mount Vernon, N. Y. Filed Dec. 17, 1919. Serial No. 345,468. 13 Claims. (Cl. 101—113.)



12. A device of the class described having means adapted to receive a sheet carrying duplicate item columns, of a marking device mounted between said columns and adapted to move between and along said columns for therewith marking any pair of duplicate items in said columns.

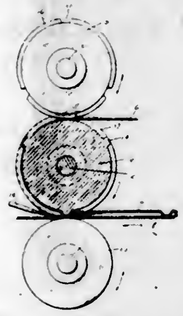
1,349,556. TOWING DEVICE. ALFRED LEONARD BLOMQUIST, Gowrie, Iowa. Filed Aug. 11, 1919. Serial No. 316,897. 1 Claim. (Cl. 280—33.5.)

In a device of the class described, a tongue having a slot formed adjacent to one end thereof, and an opening intermediate of its ends, a pin extended through and pivotally mounted within said opening, a clamping device mounted on said pin adapted to receive the front axle of a vehicle, a bolt extended through the slot and adapted to slide from one end thereof to the other, a sleeve mounted on said bolt, having an annular, outwardly extending flange at one end adapted to engage the surface of said tongue adjacent to said slot, whereby tightening of the bolt may draw the flange against the tongue to hold the bolt from movement within the slot, and a clamping device rotatably mounted on said sleeve and adapted to engage the steering rod, whereby the distance between the bolt and pin may be selectively adjusted to correspond to the length of a steering arm on a vehicle axle.

1,349,557. CHAIN SAW. GEORGE G. F. BOSWELL, Indianapolis, Ind., assignor of one-eighth to Virgil H. Lockwood and one-eighth to Ralph G. Lockwood, Indianapolis, Ind. Filed Sept. 14, 1914, Serial No. 861,604. Renewed Dec. 20, 1918. Serial No. 267,714. 8 Claims. (Cl. 143—32.)

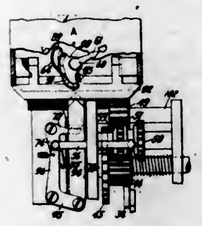
7. A chain saw machine including a plurality of tooth carrying chains, and means for moving said chains lengthwise and arranged to cause them to be spread apart during the cutting movement and brought together during the return movement through the kerf.

1,349,558. REFLECTING DEVICE. ALAN CALVERT Philadelphia, Pa. Filed Oct. 7, 1919. Serial No. 329,108. 6 Claims. (Cl. 45—99.)



1. A reflecting device consisting of a combination of mirrors, and a supporting and connecting member therefor adapting the mirrors to be longitudinally adjusted as to distance to and from each other by said member, and means on the support and mirrors adapting the latter to be automatically angularly adjusted relatively to each other by the motions of said member.

1,349,559. WHEEL AND AXLE CONSTRUCTION. JAMES A. CARTER, St. Louis, Mo. Filed Dec. 27, 1918. Serial No. 268,483. 2 Claims. (Cl. 152—28.)

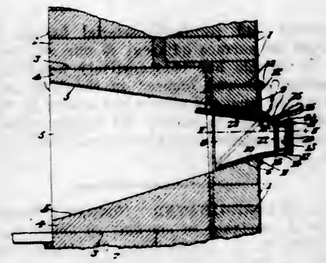


1. In an axle and wheel construction, a main axle, an axle-extension, a joint connecting the main axle and the axle-extension, whereby the axle-extension is movable both with and universally relatively to the main axle, an inner wheel-portion mounted upon the main axle and including a hub-member and an annular cushion, and an outer wheel-portion mounted upon the axle extension and including a hub-member and an annular rim, said hub-members being adapted to complementingly house said joint and the cushion of the inner wheel-portion being disposed within the rim of the outer wheel-portion.

1,349,560. PROCESS AND APPARATUS FOR PRODUCING A HOLLOW RUBBER BISCUIT. HENRY Z. COBB, New York, N. Y., assignor to The Mechanical Rubber Company, a Corporation of New Jersey. Filed Sept. 23, 1919. Serial No. 325,654. 11 Claims. (Cl. 18—19.)

1. In a machine for making hollow rubber biscuits from sheet stock, means for forming one sheet with a series of depressions connected and surrounded by flat portions of the sheet, and means for joining a second sheet under pressure to said flat portions.

1,349,561. COMPUTING-MACHINE. CLIFTON B. CORELL, New York, N. Y., assignor to Underwood Computing Machine Company, New York, N. Y., a Corporation of New York. Filed Sept. 14, 1918. Serial No. 254,078. 26 Claims. (Cl. 235—59.)



1. In a typewriting machine, the combination with a traveling carriage and a totalizer settable thereon, of a master wheel for effecting computations in said totalizer, typewriter numeral keys for causing the master wheel to effect such computations, connections whereby said keys cause the turning of said master wheel in either direction, and a device mounted in said totalizer adapted to be set to cause said connections to be effective additively or subtractively.

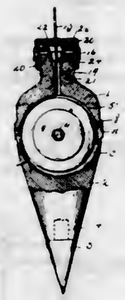
5. In a typewriting machine, the combination with a traveling carriage and a totalizer adapted to be set on said carriage, of a master wheel for effecting computations in said totalizer, a plurality of cam bars mounted in said totalizer, a plurality of followers adapted to control the master wheel, and a finger-piece on the totalizer for selectively projecting said cam bars to operate the followers.

19. In a typewriting machine, the combination with a traveling carriage and a totalizer settable thereon, of a master wheel for effecting computations in said totalizer, a cam in said totalizer, a bichrome mechanism for said typewriter, a finger-piece for making said cam effective or ineffective, a follower for said cam, a second finger-piece, and means controlled by said second finger-piece to connect the bichrome mechanism to the follower to vary the color of the printing.

1,349,562. OBSERVATION-WINDOW FOR FURNACES. MALCOLM CURRY, Scarsdale, N. Y., assignor of one-half to Starr H. Barnum, New Haven, Conn. Filed July 17, 1919. Serial No. 311,634. 14 Claims. (Cl. 126—200.)

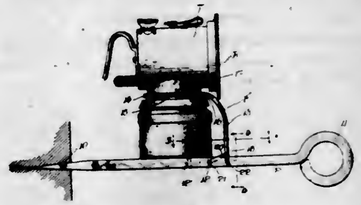
1. The combination with a furnace provided with a peep opening communicating with the fire-box thereof, of an observation window fixed to the furnace in position to close the peep opening at all times and having an inner panel of transparent heat-resisting material and an outer panel of transparent glare-eliminating material arranged in spaced relation and registering at all times with the peep opening, both of said panels being supported in the window-frame at points distant from the furnace wall so as to be accessible for renewal without dismantling the apparatus.

1,349,563. WIRE-STRIPPER. CHARLES T. DAY, Oceanport, N. J. Filed Dec. 2, 1919. Serial No. 341,972. 2 Claims. (Cl. 81—9.5.)



3. A wire stripper comprising opposed pivoted jaws with faces adapted to abut, cutting edges adapted to engage an element to sever it, and stripping edges of material length and substantially parallel and set back from the abutting faces so that the stripping edges are spaced apart when the jaws are shut, said abutting faces, cutting edges and stripping edges being substantially alined in a plane parallel to the axis of the pivot of the jaws.

1,349,564. WRENCH. CHARLES EVITS and CHARLES BENNER, Benton Harbor, Mich. Filed May 28, 1919. Serial No. 300,441. 1 Claim. (Cl. 81—164.)

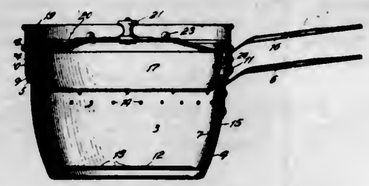


In a pipe wrench, a head having a long arm, the end of said arm formed at a right angle therewith forming a permanent jaw, a short arm parallel with the long arm and integral therewith, a sliding jaw mounted between the two arms, a tubular arm securely connected with the head of the wrench and extending backwardly therefrom opposite from the arms, a screw threaded bolt passing through said tubular arm and revolubly connected with the sliding jaw, and a tubular guard upon the outer end of the threaded bolt and passing over the tubular arm as a guard.

1,349,565. PLUMB-BOB. JAMES A. EWING, Springdale, and EDWARD J. MCGOWAN, Tarentum, Pa. Filed Mar. 5, 1919. Serial No. 280,690. 2 Claims. (Cl. 33—217.)

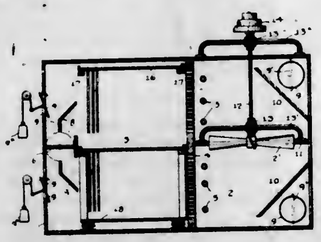
2. A plumb-bob having a centrally-located recess, a spring-actuated winding drum arranged in said recess, a plumb-line attached to said drum, said recess having an axially-located opening leading therefrom, a perforated screw-cap closing said opening, clamps engaging with said plumb-line and operated by the contact pressure of said screw-cap, and a means comprising a washer or nut for confining said clamps in position.

1,349,566. LAMP-HOLDER. WILLIAM J. FRISBIE, Chicago, Ill., assignor to Justrite Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed May 3, 1920. Serial No. 378,414. 7 Claims. (Cl. 248—20.)



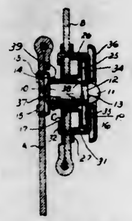
1. In a lamp holder of the class described, the combination of a pin having a hole therein, a frame having a laterally extending end section and a laterally extending intermediate section for engaging respectively in said hole and on said pin, the upper end of said frame being formed to span a lamp at an intermediate part thereof to thereby hold said lamp on said pin.

1,349,567. COOKING UTENSIL. KARL GAMMEL, Cleveland, Ohio, assignor to The Cleveland Macaroni Company, Cleveland, Ohio. Filed Mar. 3, 1916. Serial No. 81,814. 2 Claims. (Cl. 53—8.)



1. An open top cooking utensil including a body portion and an upper portion enlarged from the body portion to form an internal annular seat below the upper edge of the utensil, handles mounted on the outside of the utensil, rivets for fastening the handles in place, portions of said rivets extending into the enlarged upper portion of the utensil and spaced a short distance above said internal

annular seat to form stops for resisting the unseating movement of any cover fitted on the seat and a cover supported from said seat and fitted within the enlarged



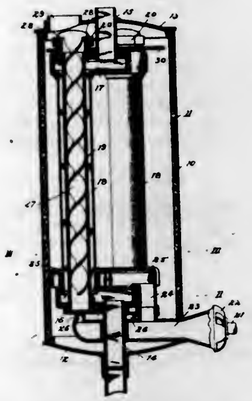
portion of the utensil, said cover adapted to engage the stop portions of said rivets to spring the sides of the utensils thereby to permit the withdrawal of the cover.

1,349,568. PROCESS OF DRYING MACARONI AND OTHER EDIBLE PASTES. KARL GAMMEL, Cleveland, Ohio. Filed Nov. 5, 1917. Serial No. 200,305. 2 Claims. (Cl. 34—24.)

1. The process of drying macaroni which consist in subjecting the same to an air current of a relatively high velocity at normal atmospheric humidity, then decreasing the velocity of the air current and increasing its humidity, again increasing the velocity of the air current and subsequently decreasing the velocity of the air current and lowering its humidity to atmospheric conditions.

1,349,569. CURTAIN-FASTENER. FRANKLIN H. HART, New Haven, Conn. Filed Jan. 15, 1920. Serial No. 351,607. 8 Claims. (Cl. 24— 218.)

2. As an article of manufacture, a snap fastener consisting of a stud and socket, said stud having a circumferential shoulder, and said socket comprising a tubular portion having triangular holes therein, a curved spring having parallel ends, said parallel ends resting against the outer walls of said triangular holes, and means carrying said tubular portion and spring.



1,349,570. LAUNDRY-MARKING CLIP. RAY HOFFMAN, Newport, Ky., assignor to National Marking Machine Company, Cincinnati, Ohio. Filed Oct. 6, 1919. Serial No. 328,892. 8 Claims. (Cl. 40—23.)

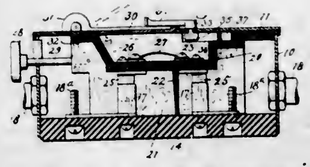
5. In a laundry holding clip adapted to be detachably mounted upon laundry articles, a body member of comparatively stiff resilient material, and a flap member of flexible but comparatively non-resilient material, having one end secured to the body member whereby articles may be selectively engaged and released by the clip by moving the free end of the flap member toward and from the body member, and means formed integral with the body member adapted to receive a laundry supporting hook fixed in a laundry marking clip, a body member of

comparatively stiff resilient material having a tongue raised from its surface adjacent to one end, and a flap member of flexible but comparatively non-resilient material having one end secured to the body member in position spaced from the tongue and having an opening in the second adapted to receive the tongue when the free end of the flap member is in position substantially parallel with the body member.

1,349,571. WATER-HEATER. NORMAN HUBBARD, Elizabeth, N. J., assignor of one-half to Perez M. Stewart, New York, N. Y. Filed June 30, 1917. Serial No. 177,949. 4 Claims. (Cl. 122—348.)

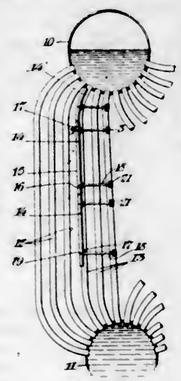
1. A water heater comprising in combination, a water inlet below and a water outlet above, means for subdividing the water on its way from inlet to outlet into a plurality of upright annular columns, means for locally producing a heating flame within the lower portion of the space inclosed by each of said annular columns, and an annular burner surrounding the lower portion of each annular column for locally producing a ring of heating flame in proximity to the outer surface thereof.

1,349,572. BOOT. CLARENCE W. HUBBELL, Naugatuk, Conn., assignor to The Goodyear's India Rubber Glove Manufacturing Company, a Corporation of Connecticut. Filed Nov. 7, 1919. Serial No. 336,371. 4 Claims. (Cl. 36—4.)



2. As an article of manufacture, a boot having a foot portion and a skirt extending up over the leg, the foot portion having a continuous tubular upper formed by quarters joined together at the front by a foldable placket member covering the instep and the lower portion of the leg immediately adjacent the ankle, lacing flies on said foot

portion at the junctions of said quarters and placket member, the skirt being continuous or tubular and having



only a single longitudinal lap seam, the foot portion being made of reinforced material and the skirt being made of more flexible material than the foot portion.

1,349,573. ELECTRIC SWITCH. ELMER G. KERMODE, Cleveland, Ohio. Filed Jan. 25, 1916. Serial No. 74,121. 4 Claims. (Cl. 200—50.)

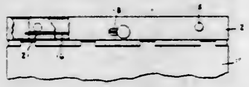
2. An electric switch comprising stationary contacts, a movable switch member having a pair of contacts and a fuse normally connecting the same, an inclosure for the switch forming with the movable switch member a fuse compartment, and a swinging door hinged to said inclosure and controlling access to said fuse compartment, said door having a part arranged to engage the switch member when the latter is in "on" position, whereby the door is held locked in closed position by said member.

1,349,574. BAFFLE FOR WATER-TUBE BOILERS. EDGAR KIDWELL, Milwaukee, Wis. Filed Aug. 5, 1919. Serial No. 315,401. 3 Claims. (Cl. 110—98.)

2. In a boiler of the series drum and tube type, the combination with the rearward bank of water-tubes, of a series of baffle sections arranged within the spaces between adjacent pairs of inner tubes of the bank, each of said sections comprising an elongated plate having longitudinally-extending inclined marginal flanges, and having a transverse recess, and an elongated opening intersecting the recess, the inclination of the flanges adapting the plate to be seated against two tubes and to extend therebetween, a clamping bolt having its head adapted to be passed through said opening and seated in said recess, a clip on said bolt bearing against two adjacent tubes, and a nut on said bolt coöperating with the clip.

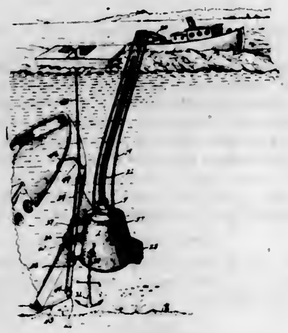
1,349,575. METAL FENCEPOST. EDGAR SPENCER LACHMANN, Chicago, Ill. Filed Sept. 18, 1919. Serial No. 324,585. 1 Claim. (Cl. 189—29.)

An anchored metal fence post of which the main post member consists of a metal bar having a plurality of longitudinally extending flanges angularly disposed with respect to each other; anchoring elements consisting of bars secured to opposite surfaces of certain of said flanges and bent divergently upward and outward at a wide angle, and a cross-tie-bar connecting the upper and wide spread ends of said anchor elements secured to another flange or web of the post member, the dimensions of the parts being such as to produce relatively large triangular apertures between the post member and the tie-bar.



1,349,576. ADJUSTABLE JACK OR SHORE. CHARLES M. MARKHAM, Milwaukee, Wis. Filed May 1, 1918. Serial No. 231,882. 13 Claims. (Cl. 254—106.)

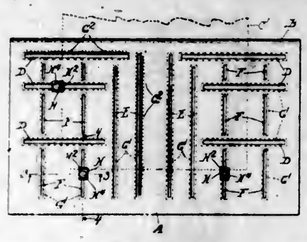
1. An adjustable support comprising a pedestal, a column mounted upon said pedestal and adapted to move



longitudinally thereof, a part adjustable longitudinally of said pedestal, a collar rotatably mounted upon said pedestal adjacent said part for controlling the position of said part, means for locking said collar against rotation upon said pedestal and a pair of dogs mounted upon said part adapted to engage said column to control the longitudinal position of the column upon the pedestal, in combination with means for adjusting the longitudinal position of said column upon the pedestal.

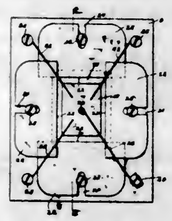
1,349,577. LOOSE-LEAF LEDGER. CHARLES T. NANKERVIS, Indianapolis, Ind. Filed May 20, 1919. Serial No. 298,485. 3 Claims. (Cl. 129—12.)

1. A binder for loose leaf ledgers including a pair of binding members, binding post secured to one member and projecting through the other member, a locking bar slidably mounted in said last mentioned member, locking balls actuated by said locking bar, and inclined bearings upon which said balls are actuated for forcing them into and out of locking position.



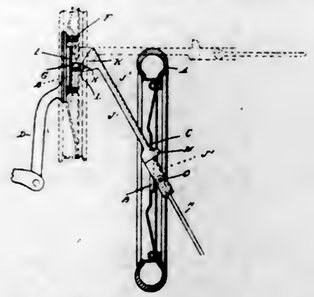
1,349,578. WRECK-SALVAGING APPARATUS. WILLIAM M. NEEPER, Capac, Mich. Filed Feb. 8, 1919. Serial No. 275,728. 11 Claims. (Cl. 61—69.)

1. In wreck salvaging apparatus, a suspended diving bell having the usual air and electric conduits leading to the interior, means for varying the position of the bell in a vertical plane in the water, means controllable from the interior for altering the position of the bell in horizontal plane, an electro-magnetic device, and a grapple comprising a beam member and an adjustable grapple device thereon, guides for positioning the beam on the bell, the magnetic device securing the beam to the bell, and a pontoon with which the beam is connected.



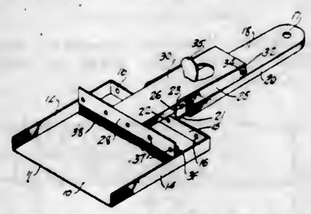
1,349,579. EMBOSSING-GAGE. GEORGE NEUMANN, Chicago, Ill. Filed Oct. 1, 1919. Serial No. 327,808. 6 Claims. (Cl. 101—413.)

3. An embossing gage adapted to be removably and adjustably attached to an embossing press adjacent the embossing stamp, comprising a flat plate and means for securing it to the press, the side adjacent the stamp being beveled, said plate pierced by a plurality of slots, and stops adapted to be adjusted along said slots, each comprising an upper stop member, a longitudinal lug on the bottom of said member adapted to penetrate the slot, a



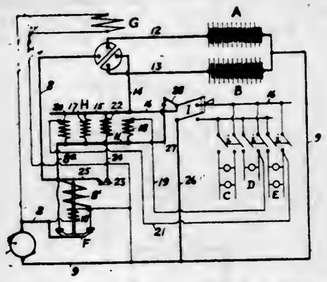
nut engaging the bottom of the plate and means engaging the bottom of the plate and means to lock the stop and nut together against the plate.

1,349,580. PICTURE-SCREEN-FRAME PROJECTOR. ROBERT F. PARADIS, Milwaukee, Wis. Filed Nov. 24, 1919. Serial No. 340,276. 4 Claims. (Cl. 88—24.)



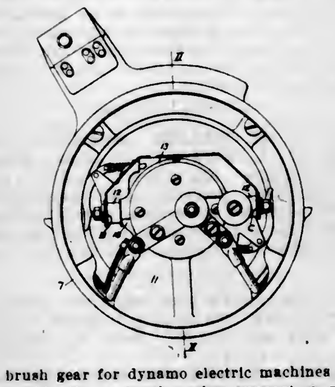
1. A device for projecting a frame about a picture screen field comprising a slide plate having an opening therein, a center plate positioned within said opening with its edges spaced from the adjacent sides of the opening, a securing member having one end secured to the center plate and its other end secured to the slide plate, and means spaced from the securing member and extending from the center plate to the slide plate whereby the frame will be substantially uniform.

1,349,581. DEMOUNTABLE-WHEEL-LIFTING DEVICE. AUGUST O. PELTIER, Detroit, Mich., assignor, by mesne assignments, to Detroit Pressed Steel Company, Detroit, Mich., a Corporation of Delaware. Filed Oct. 3, 1919. Serial No. 328,282. 5 Claims. (Cl. 254—120.)



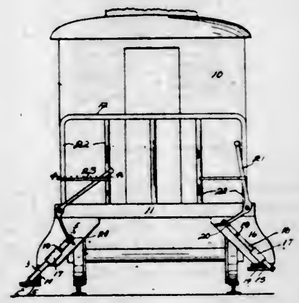
1. A demountable wheel lifting tool comprising a bar adapted to be inserted obliquely through the hub aperture in the wheel, means at the upper end of said bar for forming the fulcrum engagement with the tire holder, and a bearing on said bar for engaging the wheel, whereby said bar may be actuated as a lever of the second class to lift the wheel into alinement with the holder.

1,349,582. CRUMB PAN AND BRUSH. PER A. PETERSON, New York, N. Y. Filed Nov. 13, 1919. Serial No. 337,640. 5 Claims. (Cl. 65—62.)



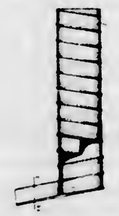
1. In a device of the class described, the combination with a pan and a handle integral therewith, of a reinforcement engaging said pan and handle, a pair of spaced vertical lugs formed with said pan at the rear, a trough shaped link pivoted between said lugs, an arm pivoted to the free end of said link, a frame formed with said arm, said frame extending the full width of said pan, a brush carried at the lower edge of said frame, means for attaching said brush, and means formed with said arm for manipulating the brush.

1,349,583. FRAME FOR LAMP RESISTANCES. HARRY D. ROHMAN, New York, N. Y., assignor, by mesne assignments, to J. Stone & Company, Limited, Deptford, England. Filed Mar. 20, 1917. Serial No. 155,968. 12 Claims. (Cl. 219—63.)



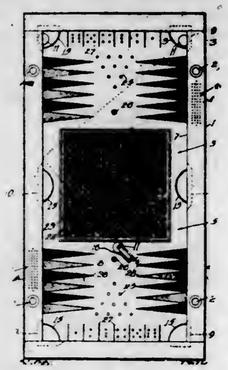
1. A resistance frame for car lighting systems comprising a pair of spaced bus-bars having means whereby a plurality of resistance tubes may be removably supported by and between the bus-bars.

1,349,584. REVERSING BRUSH-GEAR FOR DYNAMO-ELECTRIC MACHINES. HARRY D. ROHMAN, New York, N. Y., assignor, by mesne assignments, to J. Stone & Company, Limited, Deptford, England. Filed Oct. 9, 1917. Serial No. 195,510. 3 Claims. (Cl. 171—318.)



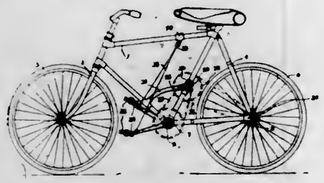
1. A brush gear for dynamo electric machines comprising in combination a brush rocker support, a reversible brush rocker mounted thereon, brushes on the rocker, a bearing interposed between said support and said brush rocker, a locking armature independent of the brushes non-rotatably but slidably associated with said brush rocker, and means coöperating therewith to lock the brush rocker including a winding adapted to attract said armature.

1,349,585. FOLDING EXTENSION-STEP. VONNIE O. SAUER and WILLIAM B. REEVE, Des Moines, Iowa. Filed Oct. 28, 1919. Serial No. 334,063. 1 Claim. (Cl. 105—448.)



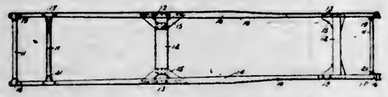
A folding extension step comprising a step member, hinged along one edge; a second step member hinged to said first step member; a controlling bar pivoted to said second step member; a guide for said bar; a stop on said bar for engagement with said guide for limiting the opening movement of said step; a loop on said bar; a lever having a curved arm extending through said loop; and means for holding said lever at the opposite limits of its movement.

1,349,586. METHOD AND MEANS FOR CONNECTING PIPE-COUPLINGS. SAMUEL SIEGEL, Brooklyn, N. Y., assignor to Atlantic Metal Hose Company, Inc., New York, N. Y., a Corporation of New York. Filed July 23, 1918. Serial No. 246,383. Renewed June 21, 1920. Serial No. 390,670. 4 Claims. (Cl. 285—72.)



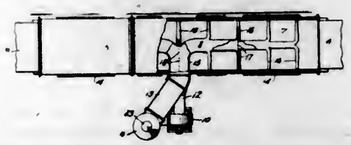
1. A method of connecting a member having a resilient outer winding and exterior resilient jacket firmly secured thereto to a member having an inner winding of a different pitch which consists in forcing the member having the inner winding over the said jacket with a revolving motion relative to said outer winding and jacket, to compress and elongate said outer winding, and cause it to firmly press the jacket against said inner winding when the revolving motion ceases.

1,349,587. GAME-TABLE. ANDREW SMITH and ROBERT R. SHENK, Chicago, Ill. Filed Sept. 18, 1917. Serial No. 191,959. 10 Claims. (Cl. 46—61.)



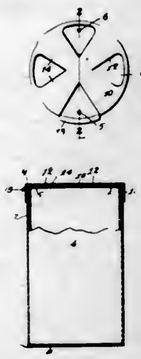
2. A game board for use with disk-like playing devices, a raised marginal rim or wall on the board, the wall having inwardly tapered slot-like pockets for receiving the disks and wedgingly engaging same.

1,349,588. PEDIMOTIVE PROPELLING-GEAR FOR BICYCLES, VELOCIPEDES, AND THE LIKE. WILFRED BANKS SMITH, Hobart, Tasmania, Australia. Filed Aug. 21, 1917. Serial No. 187,496. 1 Claim. (Cl. 208—21.)



In a propelling gear for bicycles and the like, an axle rotatively mounted in a bearing in the frame, circular blocks detachably secured to the ends of the axle, a sprocket wheel connected to one of the blocks, spring actuated pawls pivotally mounted in an annular recess in the blocks, rings revolubly mounted on the circular blocks, said blocks and rings being arranged to constitute races for balls, ratchet teeth on the inner periphery of the rings, pedal levers fixed to the rings, a second bearing in a bracket on the frame of the bicycle, an axle in said bearing, a small and a large sprocket on opposite ends of the axle, a chain connecting the small sprocket to the sprocket on the axle carrying the pedal levers, and a chain connecting the large sprocket to a sprocket on the axle or hub of the driving wheel, as and for the purpose specified.

1,349,589. MOTOR-VEHICLE. ERNEST E. SWEET, Detroit, Mich., assignor to Cadillac Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 20, 1916. Serial No. 132,328. 7 Claims. (Cl. 280—106.)

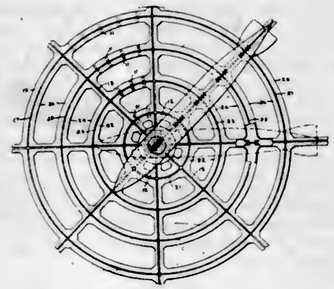


2. The combination with a pair of vehicle frame side members, each provided with an internally-splined boss, of a transverse non-distortion member provided with externally-splined portions at its opposite ends which are adapted to be fitted into said bosses.

1,349,590. DRIER. JOHN O. TENSFELDT, Ridgewood, N. J. Filed Nov. 18, 1919. Serial No. 338,833. 9 Claims. (Cl. 34—12.)

3. A drier comprising a chamber having mounted therein: a drying chamber, a distributer of heated air, and a chamber beneath said drying chamber adapted to receive moistened air from the same, said drier having means connected therewith for circulating the air through said chamber, extracting the moisture from the air, and heating the air, said distributer comprising a longitudinal channel and a plurality of side channels arranged at intervals and provided with perforations in the bottom thereof whereby the heated air is delivered at intervals and in a downward direction.

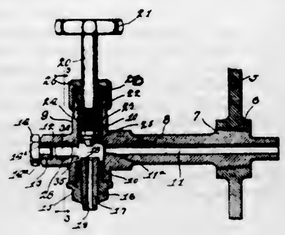
1,349,591. COVERING FOR CONDENSED-MILK CANS. KATHERINE M. TIEFENBRUN, St. Louis, Mo. Filed Apr. 7, 1919. Serial No. 288,120. 1 Claim. (Cl. 65—45.)



A covering for a condensed milk can comprising a cylindrical holder closed at one end and formed of flexible non-absorbent material, a lid having radial openings in its face and a depending peripheral flange formed of light material, a pouring lip formed integral with the lid by bending a portion of the top adjacent one of the openings outward and downward.

1,349,592. TOOTH-FILLING. WILLIAM G. TURNER, Brooklyn, N. Y. Filed Sept. 29, 1919. Serial No. 327,233. 9 Claims. (Cl. 106—6.)

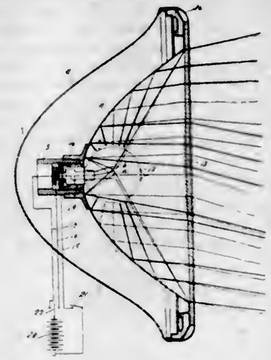
1. A tooth filling, consisting of an absorbent fibrous filling, and a liquefied cementitious material with which the fibrous filling is saturated, said filling being adapted to solidify and harden when subjected to water.



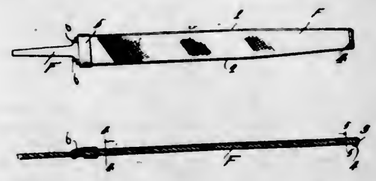
1,349,593. APPARATUS FOR MOORING DIRIGIBLES AND THE LIKE. EMANUEL S. ULLMANN, New York, N. Y. Filed Aug. 2, 1919. Serial No. 314,830. 14 Claims. (Cl. 244—1.)

1. In an apparatus for mooring dirigibles and the like, the combination with a series of movable mooring devices located below a dirigible and means adapted to connect such dirigible to said mooring devices; of means adapted to secure all of said mooring devices against upward

movement, comprising members arranged radially under which all of said mooring devices are adapted to pass radially, and members arranged circularly under which one of such mooring devices is adapted to pass circularly.



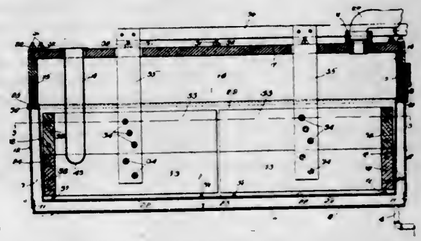
1,349,594. GAGE OR TRY-COCK. WILLIAM H. WAFER and JOHN MURRIN, Chicago, Ill. Filed Nov. 20, 1919. Serial No. 339,432. 4 Claims. (Cl. 277—66.)



3. A gage or try-cock consisting of a casing having a channel adapted to communicate with a boiler and provided with a passage located transversely with respect to said channel and intersecting the same and also provided with a passage in alinement with said channel, a removable plug located in the last named passage and having a longitudinal bore and a transverse opening communicating with said bore, an orificed valve seat removably located in the transverse passage on one side of said channel, a stem adjustably mounted in the opposite portion of said transverse passage, a valve removably mounted on the inner end of said stem and adapted to close said valve seat, a rotary valve transversely located in the casing between the inner end of said plug and said transverse passage, said channel having at its inner end a valve seat, an elongated member adapted to be extended into the passage in which said plug is located after the same has been removed from its passage and through a passage in said rotary valve and having a sleeve movably mounted thereon to engage in the passage from which said plug shall have been removed, said elongated member having on its inner end a valve to close the valve seat on the inner end of said channel.

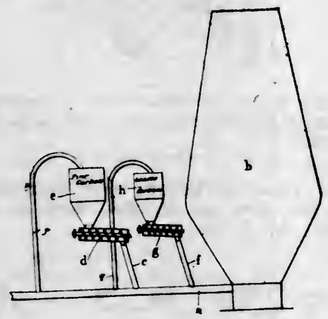
1,349,595. HEADLIGHT. OVERTON WINSTON, Minneapolis, Minn. Filed Mar. 2, 1917. Serial No. 151,931. 4 Claims. (Cl. 240—48.4.)

1. A lens for headlights having parallel prisms beveled in the same general direction, said prisms having, in respect to the basal surface of the lens, bevels, the angles of which, as among the successively adjacent prisms, decrease, step by step, in reverse order, in opposite directions from an intermediate prism located at the diameter of the lens.



1,349,596. FILE-PROTECTOR. JOHN WOSIEWSKI, Nanticoke, Pa. Filed Apr. 22, 1919. Serial No. 292,000. 1 Claim. (Cl. 29—80.)

A file protector or guard comprising a single piece of sheet metal shaped to conform to the file in connection with which it is to be used, right angular flanges on the side edges of said guard, one end of the guard having a flange with an inturned lip, a band extending transversely around the other end of the guard, and hooks carried by said band and extending longitudinally of the guard to engage the shoulders of a file.

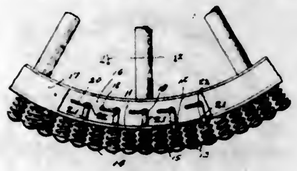


1,349,597. ELECTROLYTIC CELL. HERBERT I. ALLEN and KENT R. FOX, Portland, Me., assignors to Electron Chemical Company, Portland, Me., a Corporation of Maine. Filed Apr. 2, 1919. Serial No. 286,950. 15 Claims. (Cl. 204—59.)

15. An electrolytic cell comprising an upper closed free-board section, a metallic basket-like cathode attached to and suspended therefrom by a substantially liquid-tight joint and having perforated side, bottom and end walls furnishing active faces, a porous diaphragm cover-

ing the inner faces of the cathode, a tubular anode occupying the space within the cathode and spaced from the inner faces of the end, bottom and side walls thereof with its upper edges free to permit the electrolyte to flow thereover, a tank on which the free-board section rests with the cathode suspended therein and spaced from the walls thereof, and means for withdrawing the effluent from said tank to prevent the submergence of the cathode therein, said parts being so arranged that the level of the electrolyte in the free-board section may be above the top of the tank to increase the hydrostatic pressure.

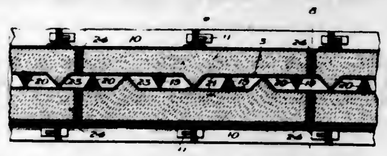
1,349,598. PROCESS FOR TREATING ORES IN BLAST-FURNACES. LUCIEN PAUL BASSET, Paris, France. Filed Oct. 12, 1917. Serial No. 196,274. 3 Claims. (Cl. 75—14.)



1. A process of treating minerals in a blast furnace, in which the carbon used as combustible is projected in the form of impalpable flour in the lower part of the furnace by superheated air, the carbon being used in such proportion that this carbon-dust by reason of its extreme tenuity is instantly and completely burned, producing therein only carbonic oxid.

2. A process which comprises injecting carbon in the form of a fine powder, and also carbon in a coarser form, into the lower part of an iron reducing blast furnace, together with a blast of air, said blast of air being in amount sufficient to convert at least the major part of the finely powdered carbon into carbon monoxid without burning any considerable amount of the relatively coarser carbon so introduced, whereby such coarser carbon is enabled to act in the furnace as a carburizing agent.

3. A process of treating iron ores for the production at will of either wrought iron, or steel, or cast iron, which comprises injecting the carbon used as fuel in the form of a very finely divided powder, and also injecting carbon used for carburization in the form of a coarser pulverulent mass, both of said forms of carbon being introduced with an air blast of such volume as to burn substantially all of the finely powdered carbon to carbon monoxid, but insufficient to also burn any considerable amount of the coarser carbon, and regulating the amount of such finer carbon in such amount as to produce substantially complete reduction in the furnace, and regulating the amount of such coarser carbon according to whether wrought iron, steel or cast iron is to be produced, whereby the coarser carbon unites with the free iron produced with the production of carburized iron of the desired carbon content.

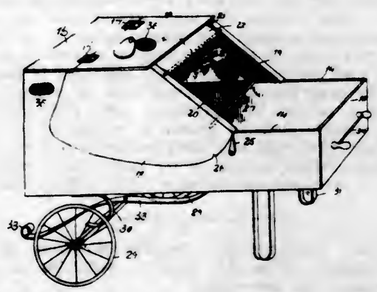


1,349,599. RESILIENT WHEEL. JOHN A. BRAESE, Mound, N. D. Filed July 28, 1919. Serial No. 313,684. 1 Claim. (Cl. 152—8.)

A resilient wheel including a felly, a rim secured to the felly and extending on opposite sides thereof, said extending portions of the rim being formed with openings, headed pins, disposed slidably through the openings, springs mounted on the pins between the rim and the heads thereof, parallel flanges on the inner face of the rim and receiving the inner ends of the pins therebetween,

the inner of the flanges having openings disposed at points between the pins, and substantially Z-shaped members having one of their ends disposed through the inner ends of the pins and the other ends within the openings of the inner flanges.

1,349,600. CONCRETE CONSTRUCTION. LEWIS BRANDT, Pittsburgh, Pa. Filed July 15, 1915. Serial No. 40,033. 1 Claim. (Cl. 72—48.)

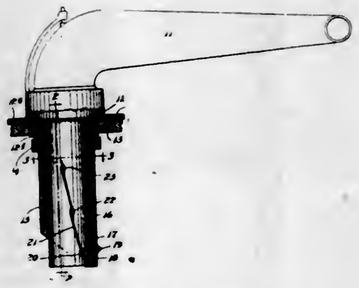


A wall structure comprising opposed layers of cementitious material, an interposed reinforcing and ventilating frame formed of two opposed sheets having integral spaced apart V-shaped bracing ribs opening exteriorly of the wall to receive the cementitious material, said ribs making contact with the opposed sheet and solid V-shaped bracing ribs adapted to be inserted when desired alternately of said sheets intermediate said first mentioned ribs whereby the same frame may be utilized under varying strains and readily strengthened when necessary.

1,349,601. WATERPROOFING COMPOSITION FOR FIBROUS MATERIALS. HARRY L. BUCKNER, Worcester, Mass., and EDMUND BURKE, Portland, Me. Filed Dec. 18, 1919. Serial No. 345,835. 3 Claims. (Cl. 134—13.)

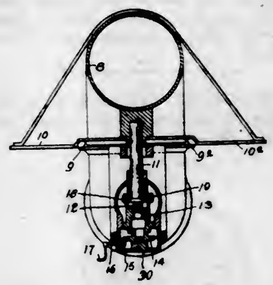
1. A composition for treating fibrous and other materials comprising hard asphalt blended with petroleum grease.

1,349,602. SLUMBER-WAGON. GEORGE A. CONGDON, Somerville, Mass. Filed Dec. 26, 1919. Serial No. 347,513. 5 Claims. (Cl. 5—14.)



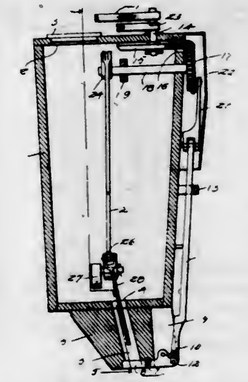
1. In combination, a slumber-wagon body comprising a box-like crib having a relatively low foot end member, a higher head end member, side members of varying height, conforming to the foot and head end members, and a top member attached to the head end member and to the higher portions of the side members, said side, head, and top members forming a fixed hood, open at one side and located at the head end portion of the crib, and a displaceable hood-extension comprising a top member hinged to the top member of the fixed hood, side members attached to the top member and arranged to overlap portions of the side members, the top and side members of said extension being rigidly connected and defining a front opening in the extension, permitting access to the open side of the fixed hood, and a movable closure for opening and closing said front opening, the said hood and extension constituting a chamber over the head end portion of the crib, adapted to be opened by the displacement of the extension.

1,349,603. HEATING-STOVE. DEWITT C. CONKLIN, Mount Arlington, N. J. Filed Aug. 28, 1917. Serial No. 188,639. 1 Claim. (Cl. 126—96.)



A heating stove comprising a reservoir and burner, an open work frame structure surrounding the reservoir, a horizontal bowl shaped reflector, a depending sleeve formed centrally of the bowl to surround the burner, an annular rim formed upon the periphery of the reflector, a casing comprising spaced rings one of which rest within the rim of the reflector, strips connecting said rings, the upper terminals of the strips being extended beyond the upper ring and bent toward each other, a ring connecting said terminals of the strips transparent panes held between the strips, a substantially conical flue held within the ring, a flange on the lower end of the flue disposed above the burner the lower edge of the flange and the top edge of the rim lying in the same horizontal plane, and a perforated drum mounted upon the upper end of the flue.

1,349,604. TONE-MODIFIER FOR TALKING-MACHINES. FRED W. COOLEY, Minneapolis, Minn. Filed June 12, 1919. Serial No. 303,711. 6 Claims. (Cl. 274—27.)



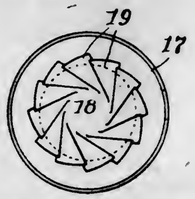
1. The combination with a tone arm for talking machines, of a resonant tube spaced therefrom and located where the sound waves will pass therethrough on their way from the tone arm into the sounding chamber, and a tension device putting said resonant tube normally under stress.

1,349,605. VALVE. HARRY N. CUPP, Mars, Pa., assignor of one-half to Thomas G. Monahan, Pittsburgh, Pa. Filed June 2, 1919. Serial No. 301,285. 5 Claims. (Cl. 251—84.)

1. A valve structure for conduits subject to wide variations in temperature, which includes a valve casing arranged between adjacent sections of the conduit, two valve seats arranged in planes parallel with and laterally remote from the general axis of the conduit sections, and a valve member movable to and from said valve seats, substantially as described.

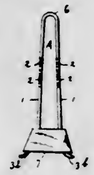
1,349,606. SANDING DEVICE. MIKE DANDY, Burdine, Ky., Filed May 15, 1920. Serial No. 381,703. 2 Claims. (Cl. 291—28.)

1. A sanding device comprising a hopper, a discharge nozzle for said hopper, a pivotally mounted valve for said discharge nozzle, an operating shaft journaled in the hopper, a second shaft journaled in the hopper and extending exteriorly thereof, gears connecting said shafts, a handle for the operating shaft, means connecting one of the gears to the valve, a casing secured to the hopper and overlying a portion of said means and the gears, and tension means connected to said means and to the hopper.



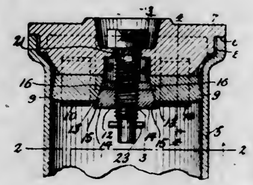
1,349,607. RAILROAD-RAIL COUPLING. LUTHER C. DEAVER, Culberson, N. C. Filed Dec. 12, 1919. Serial No. 344,446. 1 Claim. (Cl. 238—253.)

A railroad coupler including a joint having bolts provided with openings, a locking plate, means detachably



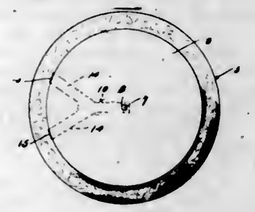
securing the locking plate to the joint, said locking plate having a series of notches in its lower edge to form horizontally disposed locking elements adapted to extend through the openings of some of the bolts, and a locking element formed on the end of the locking plate and in alinement with the first named locking elements and adapted to extend through the openings in the end bolt of the series of bolts.

1,349,608. AIR-WASHER. WILLIAM H. L. DONALDSON, St. Paul, Minn. Filed Nov. 3, 1919. Serial No. 335,324. 2 Claims. (Cl. 183—24.)



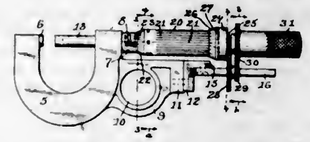
1. An air washer for internal combustion engines comprising a casing adapted to hold liquid in its base, an annular sleeve surrounding the lower part of the casing and adapted to receive liquid, a series of ports in the casing within said sleeve, a series of curved tangential guides formed in the casing and adapted to direct the liquid in the casing centrifugally and an air conduit opening from the top of the casing to the intake of a carbureter.

1,349,609. HAIR-WAVER. CHARLES O. ELLERT, Brooklyn, N. Y. Filed July 26, 1919. Serial No. 313,557. 4 Claims. (Cl. 132—19.)



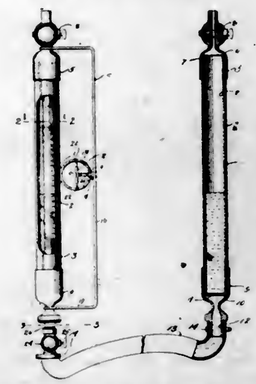
1. A hair waver comprising a hair pin having spaced parallel limbs provided with flared portions, integral holding means provided in said flared portions, and a separable locking means provided with co-acting means to engage with said holding means.

1,349,610. COVER FOR SERVICE-BOXES. JAMES W. GIBNEY, Buffalo, N. Y., assignor to W. P. Taylor Company, Buffalo, N. Y., a Corporation of New York. Filed Feb. 27, 1919. Serial No. 279,558. 4 Claims. (Cl. 220—55.)



1. A service box cover comprising a plate adapted to engage the end of a service box, guides mounted on the underside of said plate on opposite sides of its center and each being previously constructed of U-form independently of the plate and having its legs embedded in said plate by casting the latter on said legs, jaws sliding in said guides and adapted to engage their outer ends with the side of a service box, and means for spreading said jaws engaging with their inner ends of the same.

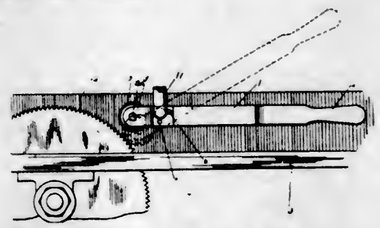
1,349,611. RECORD-PLACER. LLOYD N. HOST, Grand Rapids, Mich. Filed May 7, 1919. Serial No. 295,255. 5 Claims. (Cl. 274—1.)



1. A disk record placer for phonographs including, an arm adapted to be mounted radially on the turn-table of a talking machine, outwardly diverging arms secured to said first named arm and extending to the periphery of a record, and upwardly extending shoulders carried by said outwardly diverging arms adapted to be engaged by the periphery of a record to dispose the record in a position where the opening therein will be in alinement with the pin of the turn table.

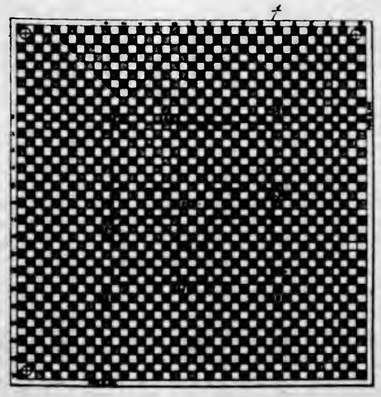
1,349,612. MICROMETER-CALIPER. FERNANDO OSCAR JAQUES, Sr., Providence, R. I., assignor to Fernando Oscar Jaques, Jr., Providence, R. I. Filed Jan. 20, 1920. Serial No. 352,718. 6 Claims. (Cl. 33—166.)

1. A micrometer caliper having a handle, a barrel on the handle, provided with graduations for indicating units of measurement, a spindle screw-threaded through the barrel, a thimble fixed to the spindle, and means on the thimble for indicating division of units of measurement, a second thimble sleeved on to the first thimble, and means on the second thimble for indicating sub-divisions of units of measurement, means for rotatably supporting the second thimble and means for rotating the second thimble co-incidently with and at a greater speed than the first thimble.



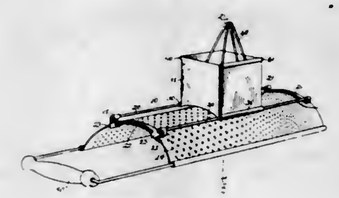
1,349,613. WATER-LEVEL. JOHN KASPAR and RUD F. BERAN, Moulton, Tex. Filed Nov. 6, 1916. Serial No. 129,851. 1 Claim. (Cl. 33—209.)

The combination with a pair of gages adapted to contain liquid, and a flexible tube connecting the gages of a



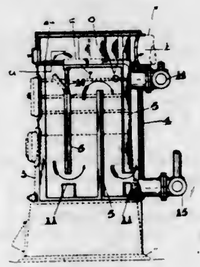
frame having its ends engaged with one of the gages, an annular member carried by the frame and disposed between the same and the gage and having gradustions thereon forming a scale, an arm extending from the annular member toward its center, a pointer pivoted to the arm and having its extremities movable over the scale and a spirit level within the pointer and exposed centrally thereof.

1,349,614. TOOL FOR SETTING THE TEETH OF CIRCULAR SAWS. SAMUEL P. KAY, Rochester, N. Y., assignor of one-third to Rufus P. Wolf, one-third to Annie K. Rownd, and one-third to Arethusa Kay, Rochester, N. Y. Filed Sept. 8, 1919. Serial No. 322,447. 2 Claims. (Cl. 76—59.)



1. In a tool for setting circular saws, the combination of an arm, a roller having a beveled edge on each side of the periphery thereof mounted to rotate loosely on one end of said arm, a pivot pin passing through said arm and projecting out on each side thereof, said pivot pin being loosely mounted in said arm, means to hold said pin in place in said arm, and means to clamp said pin against a stationary member to allow said arm to rock around said pivot pin as the center.

1,349,615. GAME. BERNARD A. KOELLHOFFER, Newark, N. J. Filed June 20, 1919. Serial No. 305,458. 2 Claims. (Cl. 46—64.)

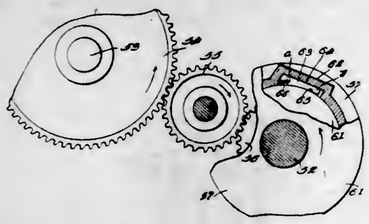


1. A game apparatus comprising a board divided into small squares, and indicated by different colors, a boundary line of a distinguishing color forming a square outline indicating the walls of a dwelling at the center of the board, similar lines within the boundary inclosing squares with the corners of said dwelling boundary so as to allow corridors within the dwelling, said lines being broken away so as to allow entrance from the rooms to the corridors and to the exterior of said boundary, and characters marked on the corners of the board and indicating gates for entrances to the grounds surrounding the dwelling, and game pieces indicating a burglar and officers adapted to be moved in the squares of the board.

1,349,616. GRATER ATTACHMENT. JOSEPHINE C. KOTTMAN, Brooklyn, N. Y. Filed Oct. 21, 1919. Serial No. 332,149. 2 Claims. (Cl. 146—15.)

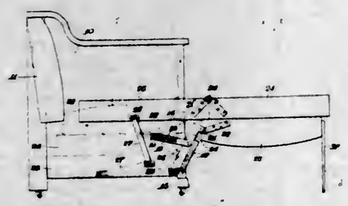
1. A grater attachment, comprising a frame having parallel guide rods and end members overlying the ends of the grating body of a grater, the end members having means supporting the said guide rods and the end members having means adapted to engage the under surface of the ends of the grater body, a reversible hopper having top and bottom bearings either of which is adapted to slidably engage the said guide rods, and a reversible follower slidably fitting into the said hopper and having a handle made in reversible parts projecting out of the hopper.

1,349,617. HEATING APPARATUS. ARTHUR JOSEPH LA FAY, Toronto, Ontario, Canada. Filed Oct. 25, 1919. Serial No. 333,152. 3 Claims. (Cl. 122—494.)



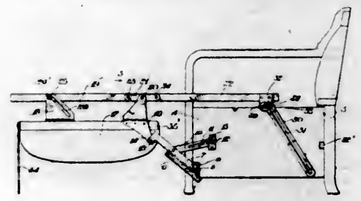
1. The combination with a fluid heating furnace of the vertical type provided with internal flues for the products of combustion and spaces for the fluid to be heated externally bounded by the casing of the furnace and surrounding the internal flues, fuel and ashpit doors at one side and a single smoke exit in the top, of an external casing spaced from the sides of the casing but leaving the front of the casing with the fuel and ashpit doors exposed; a smoke outlet at the top of the external casing; depending baffles, one at each side of the furnace, dividing the space between the casing into a plurality of vertical flues; vertical walls, extending between the top of the furnace casing and the top of the external casing, and from the sides of the smoke exit of the furnace to the wall of the said casing, said walls forming a flue, the smoke exit of the furnace, the smoke outlet of the external casing and the space between the two casings all communicating with said flue; a damper in said flue adapted to cut off direct communication between the said smoke exit and the said smoke outlet; and horizontal baffles adapted to direct products of combustion from the smoke exit to the space between the two casings at the side of the vertical baffles remote from the smoke outlet of the external casing.

1,349,618. PULLEY. HUGO C. LA GANKE, Cleveland, Ohio, assignor to The Osborn Crew Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 10, 1919. Serial No. 322,786. 2 Claims. (Cl. 254—192.)



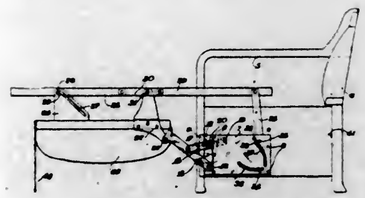
1. An integral sheet metal pulley housing comprising opposite sides connected by a web at the lower end and shaped at the upper end to form opposite eye members one of which forms a connecting eyelet between said members.

1,349,619. SYNCHRONIZING AND REGULATING MECHANISM FOR COMBINATION STEAM AND EXPLOSION ENGINES. CHARLES T. LITCHFIELD, Spokane, Wash., assignor to William B. Gerard and George C. Jackman, Spokane, Wash. Filed Feb. 5, 1918. Serial No. 215,503. 7 Claims. (Cl. 60—14.)



1. The combination with a steam and an explosion engine, of a vehicle shaft in positive driven relation with said explosion engine, characterized by mechanism for coupling the steam engine with said shaft when the steam engine is running at the same or at a greater speed than the explosion engine and releasing said steam engine when the latter slows down with respect to the explosion engine, and a governor means operated by said shaft for synchronizing the speeds of said steam and explosion engines.

1,349,620. BED-DAVENPORT. CHARLES W. MEVES and FREDERICK G. HERRMANN, Sheboygan, Wis. Filed Dec. 4, 1918. Serial No. 265,306. 2 Claims. (Cl. 5—51.)

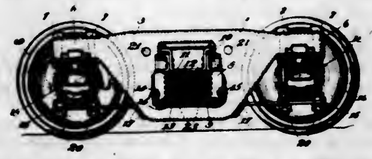


1. In a bed davenport, the combination of a fixed back, a seat member, forwardly swinging arms on which the seat member is pivotally mounted, means for limiting the movement of said arms, a bed section on the bottom of the seat member, a second bed section hingedly connected with the first bed section, and swinging arms on which the second bed section is swingingly mounted, the connection between the first named arms and the seat member being below the end of the second bed section and the set of arms being inclined in opposite directions when the sections are extended, whereby both sets of arms serve to support the second bed section.

1,349,621. BED-DAVENPORT. CHARLES W. MEVES and FREDERICK G. HERRMANN, Sheboygan, Wis., assignors to Sheboygan Couch Company, Sheboygan, Wis., a Corporation of Wisconsin. Filed June 16, 1919. Serial No. 304,674. 4 Claims. (Cl. 5—51.)

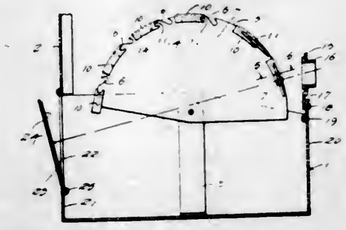
1. In a bed davenport, the combination of a frame, a pair of swinging arms mounted on said frame, a front rail mounted on said arms, means for limiting the swinging movement of said arms, a seat member swingingly mounted on the outer ends of said arms, hinge links pivotally connected to the seat member at its forward end, guide and supporting brackets fixedly secured to the seat member at its rear end, a bed section connected to said hinge links and supported by and slidable with respect to said brackets, a second bed section connected to said hinge links at one end, and slotted guide and supporting members secured to said frame and connected with the other end of said second bed section.

1,349,622. BED-DAVENPORT. CHARLES W. MEVES and FREDERICK G. HERRMANN, Sheboygan, Wis., assignors to Sheboygan Couch Company, Sheboygan, Wis., a Corporation of Wisconsin. Filed Feb. 20, 1920. Serial No. 360,231. 2 Claims. (Cl. 5—51.)



1. In a bed davenport, the combination, with a frame having end walls and a front rail, of a plate secured to each end wall and the end of the front rail adjacent thereto and offset to form with said end wall and front rail a pocket, forwardly swinging arms pivotally supported on the end walls and movable in said pockets, a seat member pivotally mounted on the outer ends of said arms, bed sections operatively connected with said seat section, and mechanism for raising the bed sections to extended position upon inversion of the seat.

1,349,623. PLOW. ASBURY MOORE, Seneca, S. C. Filed July 11, 1919. Serial No. 310,013. 1 Claim. (Cl. 97—10.)



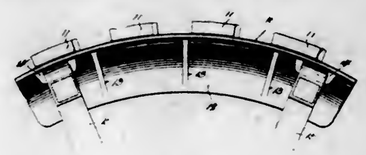
In a plow, a beam, a cultivator shank mounted adjacent one side of said beam and detachably secured thereto adjacent its rearward end, said shank being provided with a depending standard and a cultivator shovel carried thereby, a block positioned at one side of the beam adjacent said shank and having the end portion of its inner face recessed to receive the forward end portion of the cultivator shank, a cultivator shank mounted on the outer face of said block and provided with a depending standard carrying a cultivator shovel, and securing bolts inserted through the shank carried by the block and through said block and the beam, one of said bolts passing through the forward end of the first mentioned cultivator shank.

1,349,624. SIDE FRAME. FREDELLIA H. MOYER, Westmont borough, Pa. Filed Nov. 15, 1919. Serial No. 338,401. 8 Claims. (Cl. 105—205.)

1. A truck-frame formed of two plates of metal with integral flanges projecting from the edges thereof, the edges of said flanges being abutted and welded together.

1,349,625. EYE-TESTER. HENRY E. MYERS, Bowman, N. D. Filed Feb. 14, 1920. Serial No. 358,627. 5 Claims. (Cl. 88—20.)

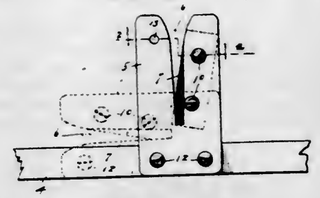
1. An eye tester comprising a support, plates pivoted to said support and having notches to receive eyeglasses, means locking the eyeglasses into certain notches, and a reading chart carried by the support and associated with the eyeglasses.



2. An eye tester comprising a support, plates adjustable on said support and having notches to receive eyeglasses, means locking the eyeglasses in said notches, and a reading chart carried by the support.

3. An eye tester including a support, plates carried by said support and having notches therein to receive eyeglass frames, and locking elements slidable on said plates for closing the notches.

4. An eye tester including a support, plates carried by said support and having notches to receive eyeglass frames, sleeves slidable on said plates for closing the notches and having notches therein to coöperate with the first named notches in receiving the eyeglass frames, and means holding the sleeves against accidental movement.

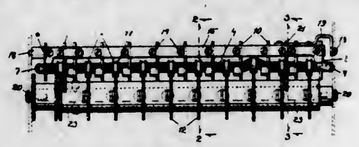


5. An eye tester including a support, plates carried by said support and having notches to receive eyeglass frames, sleeves having notches slidable on said plates for closing the first named notches, and tension tongues on said plates for engagement with the sleeves.

1,349,626. TIRE-TREAD ATTACHMENT. WALTER R. PETERSEN, Milwaukee, Wis. Filed June 14, 1919. Serial No. 304,143. 1 Claim. (Cl. 152—116.)

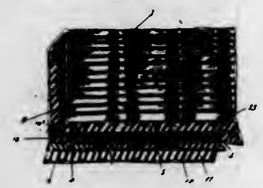
A tire tread attachment comprising an elongated tread section which is transversely flat and longitudinally curved to correspond to the circumferential curvature of a minor segment of a tire, said tread section having a substantially greater width than the width of the tire, a trough-shaped tire seating section substantially curved both longitudinally and transversely to conform to the curvatures of the tire surface and connected longitudinally along its medial portion with the medial portion of the tread section, said tire seating section having its trough substantially equal in depth to one-half the cross sectional diameter of the tire whereby to fit against the sides of the tire, said tire seating section having its trough of sufficient length to procure interlocking relation with the tire portion disposed therein to prevent slipping movement of the device transversely about the tire upon application of stresses tending to procure such slipping movement, a gripping and retaining strap secured at its opposite ends to the tread section and adapted to embrace the felly and tire of a wheel, said strap being in engagement with the longitudinal edge portion of the tire seating section and close to the adjacent portion of the tire when drawn tightly thereabout and about the felly, whereby when the attachment tends to turn transversely of the tire, the edge portion of the tire seating section in the direction of its movement will be wedged between the strap and the adjacent surface of the tire wall to limit or retard movement of the attachment, said strap being moved more closely toward the tire wall under such conditions.

1,349,627. CORD-CUTTER. VICTOR E. PETERSON, Minneapolis, Minn. Filed July 10, 1918. Serial No. 244,215. 1 Claim. (Cl. 30—14.)



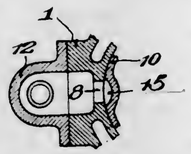
A cord cutter comprising a pair of bifurcated clamping members arranged the one upon the other to bring their bifurcations into coincident relation to afford a single notch, a rectangular blade having on one of its longitudinal edges a straight cutting edge and also having a pair of bores, and fastening devices arranged to enter the bores in said blade to connect the same to the clamping members, said fastening devices arranged to hold the blade with its cutting edge extending obliquely across said notch and with both of the end portions of its cutting edge covered by said members.

1,349,628. OVER-ROTATION CHECK FOR CALCULATING-MACHINE GEARS. EDGAR E. PHINNEY, West Orange, N. J., assignor to Monroe Calculating Machine Company, Orange, N. J., a Corporation of New York. Filed July 23, 1919. Serial No. 312,788. 7 Claims. (Cl. 235—131.)



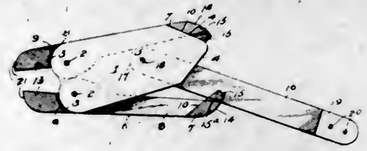
1. A yieldable check device adapted to prevent overrotation of gear wheels of calculating machines, consist-

ing of a coiled spring extending parallel to the shaft or said gear wheels, and at intervals bearing against the teeth of said wheels, and means located midway between



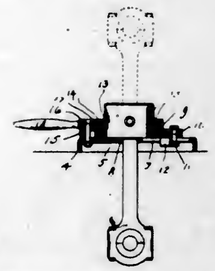
said wheels and externally of said spring to hold certain of the coils of the spring against displacement and to localize the spring action of certain other coils of the spring with respect to said gear wheels.

1,349,629. UPHOLSTERING. ARTHUR TINDALL REYNOLDS, New York, N. Y. Filed Jan. 6, 1919. Serial No. 269,830. 1 Claim. (Cl. 5—13.)



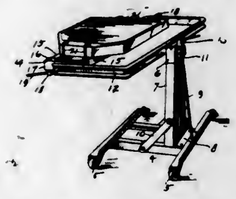
In upholstering, a padding receptacle of substantially mattress shape and having one of its side edges cut away forming an opening for the insertion of padding, said receptacle being divided into a plurality of compartments common to said opening, a flap projecting from one of the sides of said receptacles and adapted to fold over said opening, a flap secured to the opposite side of said receptacle and adapted to fold over the aforesaid flap and to be secured thereto, end flaps adapted to be secured to the last mentioned flap and an inclosing flap secured to one of the sides of said receptacle and folding over all of the aforesaid flaps and adapted to be secured to the second mentioned flap.

1,349,630. STARTING-PORT FOR VALVELESS TWO-CYCLE INTERNAL-COMBUSTION ENGINES. CHARLES H. SHEASLEY, Franklin, Pa., assignor to Franklin Valveless Engine Company, Franklin, Pa., a Corporation of Pennsylvania. Filed Dec. 10, 1919. Serial No. 343,969. 2 Claims. (Cl. 123—74.)



1. In a valveless two-cycle internal combustion engine, a cylinder providing pump and combustion chambers, said engine having an air inlet, a fuel admission port and a transfer port, a piston reciprocating in said cylinder and coacting with said admission and transfer ports to time the admission of fuel to the pump chamber and its transfer to the combustion chamber, a starting port in the wall of said piston communicating with said pump chamber and co-acting with said admission port at an intermediate point in the stroke of the piston whereby said piston may be manipulated to admit a starting charge to the pump chamber without moving the piston to its normal fuel-admitting position, and an air-valve for admitting air to said starting port when starting the engine.

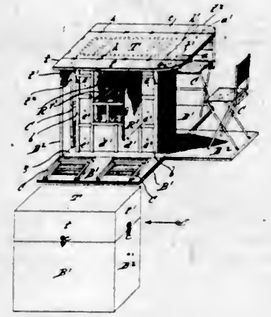
1,349,631. WRENCH. WALDEMAR H. SPANIER, Devils Lake, N. D. Filed Jan. 28, 1920. Serial No. 354,685. 2 Claims. (Cl. 81—91.)



1. A wrench comprising a single base plate, a pair of substantially identical jaws pivotally mounted on the opposite side edges of the base plate in opposed relation to each other and arranged longitudinally thereof, the pivots of said jaws being located at the forward end of said plate, and said jaws having their active ends projecting beyond said plate, the rear ends of said jaws normally surrounding the rear end of the plate and having inwardly directed lugs in spaced relation, an actuating hand lever longitudinally slotted so as to lie flat against the opposite sides of the base plate, said slot forming a guideway for said lugs, said lever being fulcrumed at its forward end along the median line of the base plate between the jaws and adapted to contact with the rear ends of the jaws to force the active end of one of the jaws toward the other, one of the said lugs riding in the slot of the hand lever when that jaw is actuated by the same.

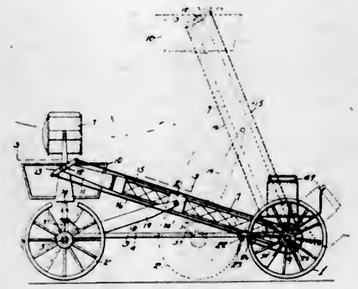
1,349,632. AUTO-PISTON-CLAMPING VISE. JOSEPH H. STALEY, Columbus, Ind. Filed Nov. 24, 1919. Serial No. 340,376. 2 Claims. (Cl. 81—19.)

1. In a piston-vise, a base having a diametrical slot, a clamping-head mounted on the base and having a lug entering said slot, means for holding the clamping-head in a given position, a second clamping-head on the base diametrically opposite the first clamping-head, having a curved flange and also having a slot in alinement with the slot of the base, a cam on the last clamping-head acting against said curved flange, and a bolt pivoting the cam and passing through the slot in the second clamping-head and securing the cam and second clamping-head to the base.



1,349,633. RADIATOR-STAND. JOSEPH H. STALEY, Columbus, Ind. Filed Nov. 24, 1919. Serial No. 340,378. 4 Claims. (Cl. 29—89.)

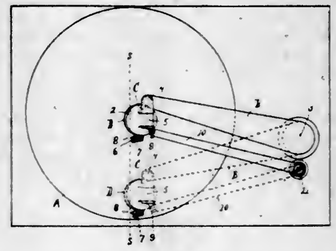
1. In a stand for repairing automobile radiators, a standard, a three-sided frame pivoted at one side to the



standard, a second frame to which the radiator is fastened said second frame being pivoted to the first frame for complete rotation, and means for holding a given adjustment of both frames.

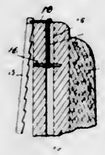
1,349,634. FOOD-SERVICE CABINET. MORRIS J. STERN, Brooklyn, N. Y. Filed Mar. 3, 1920. Serial No. 363,025. 2 Claims. (Cl. 45—31.)

1. A compartment, a top board therefor, side and end leaves hinged thereto, members hinged to the base of said compartment, and chairs hinged to said members and foldable with the latter parallel with the sides and ends of the compartment, the free edges of said leaves and members abutting each other when in closed position.



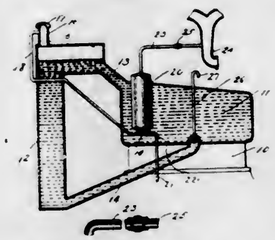
1,349,635. RECONNOITERING APPARATUS. JOSEPH B. STRAUSS, Chicago, Ill. Filed Aug. 14, 1916. Serial No. 114,932. 8 Claims. (Cl. 189—15.)

1. A portable reconnoitering device comprising two pairs of wheels, a movable arm movably connected with one pair of wheels, a controlling connection between said arm and the other pair of wheels, and means for moving said pairs of wheels toward and from each other while the said arm and controlling connection are connected therewith so as to raise and lower said arm.



1,349,636. TONE-ARM APPARATUS FOR TALKING-MACHINES. ALFRED J. SWING, Cincinnati, Ohio. Filed Nov. 15, 1915. Serial No. 61,668. 2 Claims. (Cl. 274—23.)

1. In a sound recording and reproducing machine having a horizontally disposed disk record, a tone arm rotatably movable upon a fixed substantially vertical axis, a sound box having a stylus to engage the record and pivotally connected to the free end of said tone arm upon a substantially vertical axis, and a link member substantially parallel to said tone arm pivotally connected near the fixed end of the tone arm upon a fixed axis and pivotally connected at its opposite end to said sound box, to



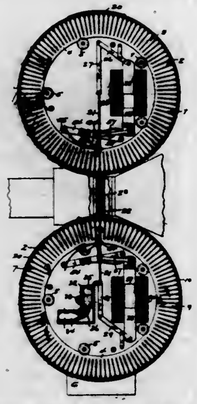
cause the sound box to move pivotally relative to the tone arm in proportion to the movement of the tone arm upon its fixed axis.

1,349,637. ADJUSTABLE HEADREST FOR BARBERS' CHAIRS. WILLIAM T. SWITZER, Birmingham, Ala. Filed Jan. 15, 1920. Serial No. 351,543. 2 Claims. (Cl. 155—177.)

1. In a barber's chair, a head rest, a guiding member, bars connected to the head rest and movable in the guiding member, said bars being spaced apart, said guiding member having a slot therein for the passage of the bars, links pivotally connected to the ends of the bars and in length equaling approximately the thickness of that portion of the guide between the slot and the rear side thereof, a stud anchored transversely of the guide-way, and a yoke connected to the links, the length of the yoke being approximately equal to the distance between the stud and the top of the guide-way.

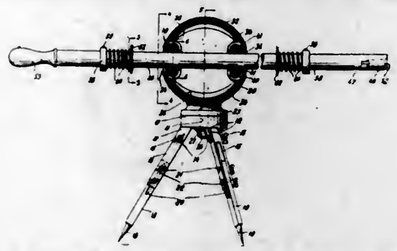
1,349,638. VACUUM WATER-CIRCULATOR. ARLES C. TAYLOR, Clay Center, Kans. Filed Jan. 17, 1920. Serial No. 352,034. 3 Claims. (Cl. 123—175.)

3. In a water circulation system for an explosive engine the combination with the water jacket and radiator and the connections therebetween and the intake manifold of the engine, of a tank located between the radiator and the manifold, a conduit connecting the radiator above its water line to the bottom of the tank, a valved extension in the conduit at the point of connection with the tank, the valve of said connection being arranged to open normally to discharge water from the tank and to close under



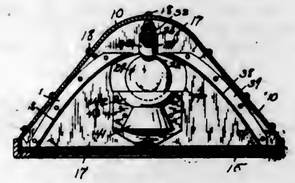
the influence of suction in the tank, a conduit connecting the upper end of the tank and the manifold for creating suction in the tank under the influence of the gases passing through the manifold, and a pipe connecting the water jacket with the atmosphere in which is disposed a valve normally closed by the water in the jacket and arranged to open to permit air to enter upon suction being produced in the system.

1,349,639. CRUTCH. DONALD ROBERT NAPIER TAYLOR, Drummoyne, near Sydney, and DAVID MARKS, Sydney, New South Wales, Australia. Filed June 2, 1920. Serial No. 386,091. 4 Claims. (Cl. 135—50.)



4. A crutch comprising a pair of staff members having fitted thereto an armpit cross-piece and a hand grip, said staff members being connected together by ferrules and grooved at their lower portions to form a recess, a rod freely slidable within said recess and provided at its foot with a pad, a coiled spring mounted on the upper end of said rod, a collar on said rod acting as an abutment for one end of said spring, a pair of brackets secured to said staff members supporting between them a guide piece for said rod and arranged in such manner that one of said brackets will act as an abutment for the other end of said spring, and a wedge block secured between said staff members, and acting as an abutment for the lower face of said collar and as a bearing for said rod.

1,349,640. PROJECTING APPARATUS. GEORGE L. TRUEBLOOD, Berkeley, Calif. Filed July 18, 1917. Serial No. 181,255. 41 Claims. (Cl. 88—27.)



41. In an apparatus of the character described, two movable magazines separated by an intervening display space, means for presenting slides from said magazines alternately in said display space, and means for moving the magazines.

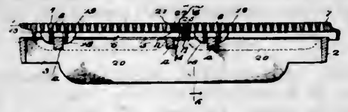
1,349,641. MINING IMPLEMENT. IVAN B. WATHEN, Strattonville, Pa., assignor to Inez M. Wathen, Showers, Pa. Filed Oct. 31, 1918. Serial No. 260,511. 4 Claims. (Cl. 255—42.)

1. A mining implement comprising a support, a head rotatable on a vertical axis therein, a spider movable on a horizontal axis in said head, a bar revoluble and slidable in said spider.

1,349,642. HEAD-LAMP. CHESTER N. WEEMS, Irvington, N. J. Filed June 19, 1919. Serial No. 305,292. 4 Claims. (Cl. 240—41.)

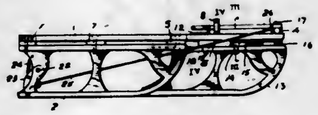
1. A headlamp comprising a horizontal support with an opening therein, a reflector above the support, a reflector below the support, both reflectors being secured to and supported by the support, and a source of light secured on the support and extending into the opening.

1,349,643. RETAINING DEVICE FOR LAUNDRIED COLLARS. ISAAC F. WILLEY, Philadelphia, Pa. Filed Apr. 12, 1918. Serial No. 228,074. 1 Claim. (Cl. 206—46.)



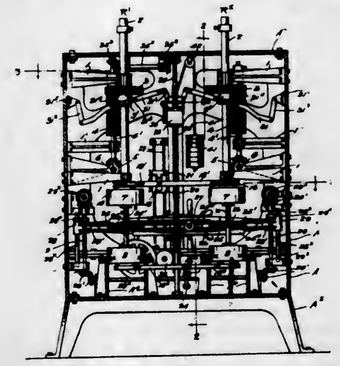
The combination with a single coiled or rolled up collar of the turn-over type, having its free ends near each other, of an annular relatively narrow band surrounding the exterior coiled portion of said collar at approximately midway of its height to prevent its uncoiling and to cause the fold of the collar to be set in spaced relationship to the neckband of the collar and thereby provide for the ready slipping of a necktie during the tying between said neckband and fold.

1,349,644. GRATE. JAMES S. WILSON, Scranton, Pa. Filed Apr. 24, 1917. Serial No. 164,140. 6 Claims. (Cl. 126—168.)



1. In a grate, sections assembled end to end and having draft perforations distributed throughout their area,

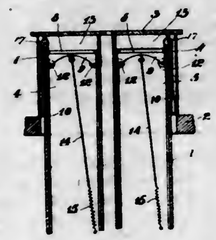
the meeting ends of the sections being constructed to provide between them a tortuous draft passage, and means



for holding the said ends of the sections separated to permanently maintain said passage.

1,349,645. SLED. WILMER H. YERKES, Pittsburgh, Pa. Filed May 22, 1920. Serial No. 383,391. 1 Claim. (Cl. 280—21.)

A sled comprising a body portion, a front runner, means for detachably connecting said runner with the body portion, said means providing a pivot for the runner and including a plug and a socket for the plug, said plug having lateral lugs and said socket having its wall grooved, means below the body portion for shifting the runner, and a lever above the body portion for actuating said shifting means.



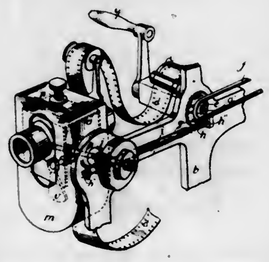
1,349,646. PIPE-THREADING MACHINE. LEOPOLD ZAJAC, Seattle, Wash. Filed Jan. 3, 1919. Serial No. 269,405. 9 Claims. (Cl. 10—92.)

1. In a pipe threading machine, the combination of a non-rotatable die, a rotatable die arranged for axial movements, and means for holding the work against rotation during the early part of the thread-cutting operation by the rotatable die, and means to disengage said means from the work whereby the same is rotated by said rotatable die while being threaded by both of said dies.

1,349,647. RESTAURANT-SERVICE DEVICE. ABRAHAM ABELSON, Brooklyn, N. Y. Filed Oct. 23, 1918. Serial No. 259,382. 4 Claims. (Cl. 187—3.)

1. The combination of a table, a transparent top providing means for examining the contents of a conveyer below the top, a conveyer below the table, an opening in the side of the table adjacent the top and affording access to the conveyer, a rope below the conveyer and attached thereto, and shock absorbing means on the rope to serve to absorb the shock of sudden stoppage of the conveyer, substantially as shown and described.

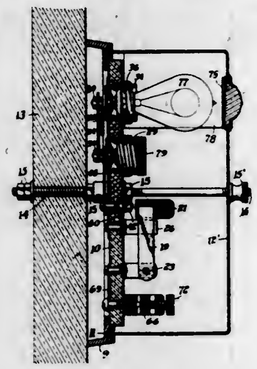
1,349,648. COMPOSITION OF MATTER FOR FILLING CRACKS IN METAL. CARL F. ALLISON, Woodlawn, Pa. Filed May 22, 1919. Serial No. 298,979. 2 Claims. (Cl. 75—1.)



1. A composition of matter for filling cracks in metal, comprising a major portion by weight of sulfur and a minor portion by weight of powdered aluminum and powdered zinc.

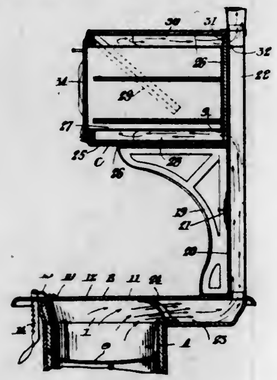
1,349,649. ADJUSTABLE AND SEPARABLE STUD OR BUTTON. KEMP B. ARTHUR, Norfolk, Va. Filed Dec. 10, 1919. Serial No. 343,768. 5 Claims. (Cl. 24—91.)

1. An adjustable fastener of the character described comprising two sections, one having a cylindrical stem and the other having a cylindrical sleeve fitting over the stem, the stem being formed with a plurality of longitudinally extending grooves and with a plurality of circumferential grooves extending circumferentially from the longitudinal grooves, the sleeve having inwardly projecting studs engaging said grooves.



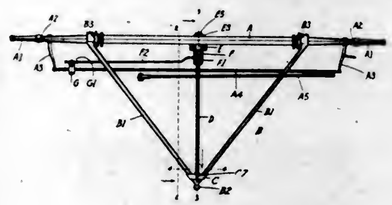
1,349,650. PORTABLE CINEMATOGRAPHIC APPARATUS. CHARLES BANCAREL, Levallois-Perret, France. Filed Jan. 13, 1919. Serial No. 270,963. 1 Claim. (Cl. 88—17.)

In a cinematographic apparatus, driving mechanism comprising a manually rotatable shaft having limited longitudinal movement carrying a worm engaging the gear on the manually operated shaft, a cross-shaft for



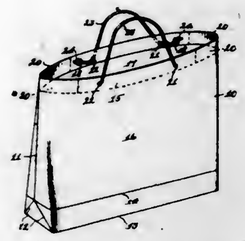
actuating operative parts of the device and helicoidal gears on the intermediate shaft and the cross-shaft, the rotation of the manually operated shaft in one direction operating through the worm and gear connection to position the intermediate shaft to engage the helicoidal gears to drive the cross-shaft, and the rotation of the manually operated shaft in the opposite direction operating through the worm and gear connection to move the intermediate shaft to separate said gears to prevent the drive of the cross-shaft.

1,349,651. INDICATING AND TESTING SUPPLY SWITCH-BOX. PERCY H. BARTLETT, Philadelphia, Pa., assignor of one-third to Joseph B. Seaman and one-third to Burleigh Currier, Philadelphia, Pa. Filed Jan. 23, 1915. Serial No. 3,906. 1 Claim. (Cl. 240—11.)



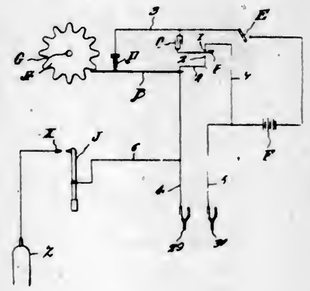
In a device of the character stated, a base, two pilot lights thereon, a circuit having two pnases across which the two lights are respectively connected, a cover protecting from unauthorized interference with the lights and means for distinguishing at a distance between the lights when one is lighted and the other is not.

1,349,652. COMBINED HEATING, COOKING, AND BAKING STOVE. BENSON CLOTHIER BEACH and JOHN HENRY BEEBY, Ottawa, Ontario,, Canada. Filed Aug. 17, 1918. Serial No. 250,352. 1 Claim. (Cl. 126—17.)



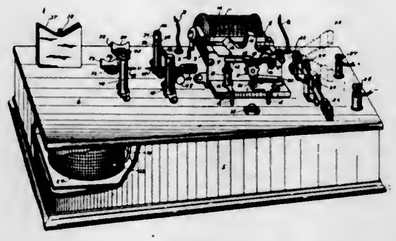
The combination with a stove of a flue, an elevated oven having spaced walls on the top, bottom and sides, a space between the walls at the top and bottom communicating with the flue baffles extending forwardly below the oven, diagonally extending baffle walls in the spaces at the side of the oven extending from the uppermost front corner diagonally toward and nearly to the lower rear corner, and baffle walls in the space between the walls at the top of the oven extending forwardly from the rear end of the oven and adapted to cause the products of combustion to pass forwardly before passing into the flue.

1,349,653. AUTOMOBILE STEERING MECHANISM. JESSE M. BENSON, Concord, Tenn. Filed Jan. 3, 1916. Serial No. 69,861. 2 Claims. (Cl. 280—94.)



1. In a vehicle, the combination with an axle and spindles on said axle and a radius rod comprising arms secured to said axle, of an auxiliary rod having one end secured to the radius rod at the angle of the latter and having its other end joined to the axle, a rocking member supported by said auxiliary rod, means placing said rocking member in operative relation with said spindles for synchronous movement, said rocking member being in the upright position when the spindles are parallel to the axle, substantially as described.

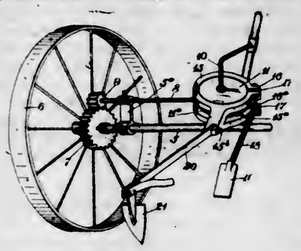
1,349,654. BAG. JOHN C. BERGEN, New Brunswick, N. J. Filed Apr. 20, 1920. Serial No. 375,210. 4 Claims. (Cl. 229—54.)



4. A bag comprising flexible side walls and a bottom, each of said side walls having a set of two perforations, an inturned upper edge formed on the side walls at the open end of the bag and having four sets of two perforations each, a strengthening strip interposed between the said inturned edge and side walls on opposite sides of the bag, each of said strengthening strips secured to the inner side of said inturned edge and having two sets of two perforations each, one set of said perforations registering with the corresponding perforations in the inturned edge and the other set of said perforations registering with other perforations in said inturned edge and side walls, handles laced through the registering perforations of said side walls, interposed strips and inturned edge from the outside of the bag and through the registering perforations in said inturned edge and strengthening strips from the inside of the bag and knots on the free ends of the handles for securing them against withdrawal through the perforations in said inturned edge, strengthening strips and side walls.

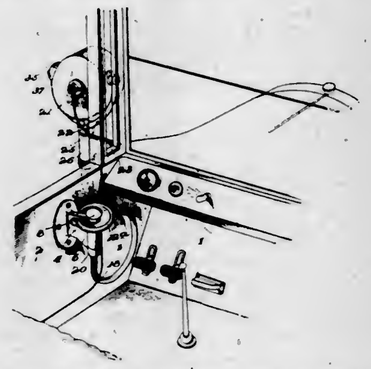
1,349,655. ELECTRICAL TESTING DEVICE. RICHARD C. BIERBOWER, San Antonio, Tex., assignor to Testall Electric Manufacturing Co., San Antonio, Tex., a Corporation of Texas. Filed June 11, 1918. Serial No. 239,454. 4 Claims. (Cl. 175—183.)

1. An electrical testing device of the character described including a primary circuit containing a source of energy, an interrupter and terminals whereby to connect the primary circuit to a device to be tested, a condenser normally in multiple with the primary circuit, and means whereby said condenser may be switched into multiple with said interrupter and disconnected from the multiple connection with the interrupter whenever desired, substantially as described.



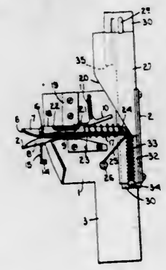
1,349,656. ELECTRICAL TESTING DEVICE. RICHARD C. BIERBOWER, San Antonio, Tex., assignor to Testall Electric Manufacturing Co., San Antonio, Tex., a Corporation of Texas. Filed Oct. 2, 1919. Serial No. 327,923. 14 Claims. (Cl. 175—183.)

1. An electrical testing device of the character set forth embodying a switch connected with one pole of electrical exciting means; a circuit interrupter and means for actuating the same; a circuit line adapted to include the primary winding of an induction coil, said switch, said interrupter and the other pole of said exciting means; a high tension circuit line adapted to include the secondary winding of said induction coil; test indicating means disposed in said high tension line; test terminals for said circuit lines; and a condenser circuit line including regulable means connecting its condenser across said interrupter, substantially as described.



1,349,657. CULTIVATOR. HENRY A. BLAUSER, Pickerington, Ohio. Filed Apr. 14, 1920. Serial No. 373,706. 3 Claims. (Cl. 97—34.)

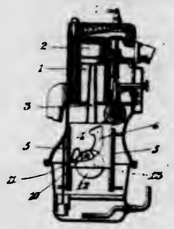
1. In a cultivator, a cultivator blade and its beam, a reversing clutch mechanism for the beam interposed between the beam and a carrying wheel of the cultivator for shifting the blade to the right or the left, and a lever



operable by the driver for controlling the operation of said reversing clutch mechanism to shift the blade to the right or left.

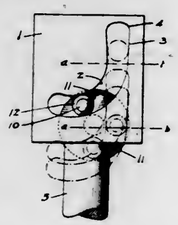
1,349,658. DIRIGIBLE LIGHT. HERBERT G. BLEY, Waterloo, Iowa. Filed July 11, 1919. Serial No. 310,120. 7 Claims. (Cl. 240—61.)

1. In combination, a pivoted light, a rotatable shaft adapted to shift the light in one plane, a second rotatable shaft extending through said first mentioned shaft and beyond the end thereof and adapted to shift the light in another plane, means for manually actuating one shaft and independent means for manually actuating the other shaft, and mechanism located between said means whereby the interior shaft is yieldingly held against undesired rotation.



1,349,659. KNOTTER. SHEPHERD F. BROWN, Malden, Mass. Filed May 15, 1919. Serial No. 297,241. 6 Claims. (Cl. 289—12.)

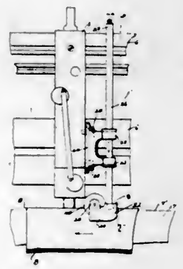
1. A knotter comprising a frame having a rigid clamping and cutting member adapted to form and support the



bight of parallel strands of yarn to be tied, coöperating clamping and cutting members movable relatively thereto, a looper, means for imparting to said looper a combined rotary and longitudinal movement acting to cause said looper to engage one lead of the parallel strands, carry the same across the other lead and into the path of the movable clamping and cutting members to form the knot loop, and means for actuating said movable members to cause the same to cut said strands and to hold the ends thereof adjacent the loop while the loop is tightened to form a knot by tension applied to the parallel strands.

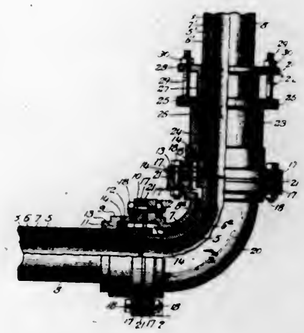
1,349,660. CONNECTION BETWEEN PISTON-RODS AND CRANK-SHAFTS. WILLIAM BUHL, Flushing, N. Y., assignor to Bulkrug Machine Corporation, a Corporation of New York. Filed Nov. 26, 1918. Serial No. 264,135. 3 Claims. (Cl. 74—5.)

1. In engine construction, the combination of a piston, a piston rod having connection therewith, said piston rod being provided adjacent its outer end with an arcuate slot, a crank pin in engagement with the said slot, reciprocations of the said piston rod being adapted to effect revoluble movement of the said crank pin in either direction, the power of the said piston through the said piston rod acting upon the crank pin during approximately three-fourths of a revolution thereof when the latter is revolved in one direction and acting upon the same through approximately only one-fourth of a revolution when the said pin revolves in the opposite direction.



1,349,661. CAM. WILLIAM BUHL, Flushing, N. Y., assignor to Bulkrug Machine Corporation, a Corporation of New York. Filed Sept. 12, 1919. Serial No. 323,332. 6 Claims. (Cl. 74—1.)

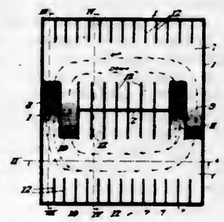
1. A cam member provided with a cam contour, said cam contour consisting of an arcuate part adapted to convert uniform rotary motion into rectilinear quick-return motion, and a straight part adjoining one end of the said arcuate part and constituting a continuation of said cam contour.



1,349,662. SIGNATURE-FOLD-CENTERING DEVICE. MARTIN CHRISTENSEN, Racine, Wis., assignor to Christensen Machine Co., Racine, Wis., a Corporation of Wisconsin. Filed Dec. 13, 1919. Serial No. 344,698. 4 Claims. (Cl. 1—7.)

2. In a book-stitching machine, the combination with a stitcher and an inverted substantially V-shaped signature saddle traversing the stitcher, of a rod vertically slidably mounted above the saddle, an inverted substantially V-shaped signature guide and fold centering member carried by the lower end of said rod and disposed over the

saddle to engage the folds of signatures passing along the saddle, means on the forward end of said member for guiding signatures therebeneath, and means for at all times retaining the apex of said member in longitudinal alinement with the apex of the saddle.

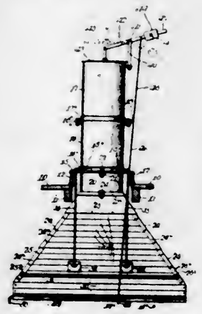


1,349,663. PIPE-FITTING. HARRY A. CUMFER, Chicago, Ill. Filed Apr. 3, 1918. Serial No. 226,376. 2 Claims. (Cl. 285—22.)

1. A flanged pipe coupling having in combination a member provided with two spaced apart threaded openings, for insertion of threaded inner and outer pipes and another member having a threaded opening for insertion of the other end of the inner pipe and having an axial extension to overlie the other end of the outer pipe; a gland coöperating with said extension and said outer pipe to provide a packing joint between the extension and the outer pipe and bolts to hold the joint members together.

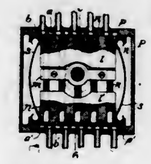
1,349,664. STORAGE BUILDING. FERNAND E. D'HUMY, Englewood, N. J., assignor to Ramp Buildings Corporation, New York, N. Y., a Corporation of Delaware. Filed Aug. 8, 1919. Serial No. 316,183. 10 Claims. (Cl. 20—1.13.)

1. A building structure comprising outer walls, a series of superposed floors overlying a part of the ground area within the outer walls, a second series of superposed floors lying in planes intermediate the planes of the first series of floors and overlying another part of the ground area within the outer walls, a pair of ramps connecting each floor of the first series with the next higher floor of the



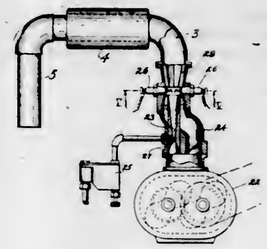
second series, and a pair of ramps connecting each floor of the first series with the next lower floor of the second series.

1,349,665. SHEEP-PROTECTOR AND COYOTE-EXTERMINATOR. JOSEPH DUNCOMBE, Salt Lake City, Utah. Filed Feb. 19, 1920. Serial No. 359,919. 1 Claim. (Cl. 119—106.)



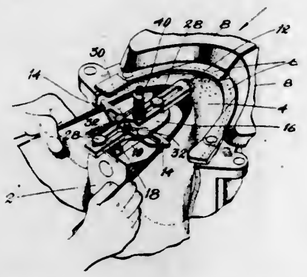
A sheep protector and animal exterminator comprising a collar to be worn on the neck of the sheep; having a plurality of poison carrying syringes secured thereto and adapted to be worn at the throat of the sheep, each of said syringes having a sharpened nozzle, and adapted to discharge said poison by pushing downwardly on the nozzles.

1,349,666. SMOKEJACK. ARTHUR J. FILKINS, Chicago, Ill. Filed Mar. 7, 1919. Serial No. 281,120. 12 Claims. (Cl. 104—52.)



1. In a smoke-jack or chimney for round houses and the like, the combination with a vent pipe adapted to extend through the roof of the building and being designed to form substantially a continuation of the smoke pipe or stack of a locomotive and leading from the interior of the building to the exterior thereof, of means collecting and conveying the exhaust of a locomotive to the lower extremity of the pipe on the interior of the building, an integral cover for the outer and discharge end of the said pipe, and a counterbalance device by which said cover is supported in position to normally close the outer or discharge end of the pipe.

1,349,667. PUMP. JOHN A. GOGOLINSKI, Drissa, Russia. Filed May 24, 1918. Serial No. 236,292. 6 Claims. (Cl. 103—17.)

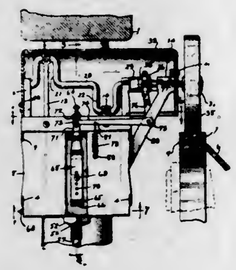


6. In a pump, in combination, a series of slidably mounted cylinders, another slidably mounted series arranged inversely and in axial alinement with the first series and pistons within said cylinders, rods connecting said pistons, a cross member connected with said rods, and means imparting to said rod both longitudinal and lateral movement whereby the pistons are moved longitudinally and the cylinders laterally, the casing containing inlet and outlet ports coöperating with openings in said cylinders and means for regulating the stroke of the pistons and the quantity of oil expulsed.

1,349,668. HEATING APPARATUS. JOHN GOOD, Brooklyn, N. Y., assignor to Good Inventions Co., Brooklyn, N. Y., a Corporation of New York. Filed May 2, 1916. Serial No. 94,865. 9 Claims. (Cl. 158—28.)

1. Heating apparatus comprising a single source of air pressure, a Venturi tube receiving a portion of the air flow therefrom and provided with a liquid fuel nozzle and adapted to produce an atomized spray of the liquid and air, said nozzle being organized in the apparatus to supply a liquid delivery to the Venturi tube which is automatically maintained in constant proportion of the air flow therethrough and suited for ignition by a spark of moderate value, an electric igniter to provide such spark intercepting said spray and stationed therein to ignite the same, and a passage for delivering the remaining portion of the air flow from said source adjacent the outlet of said Venturi tube and spark gap and for mixture with the spray from said tube, whereby, on ignition, the combustion proceeds non-explosively.

1,349,669. WORK-POSITIONING MEANS FOR UPPER-FORMING MACHINES. GEORGE J. GORSUCH, Rochester, N. Y., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed July 14, 1919. Serial No. 310,787. 35 Claims. (Cl. 12—97.)

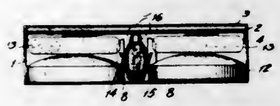


8. In a machine of the class described, the combination with a shoe form, of means mounted on said form for gaging the extent of projection of an upper beyond the plane of the bottom face of said form in different locations at the end and the opposite sides of the form, said means being movable inwardly over the form to an inoperative position, and means subject to the operator's control for retaining said gaging means in its inoperatove position.

1,349,670. SIGN CHARACTER. EDWARD HOLMES, St. Louis, Mo. Filed Feb. 12, 1919. Serial No. 276,673. 7 Claims. (Cl. 40—140.)

1. A sign character having a size receiving surface for adhering the character to glass, and a depressed border flange for the character adapted to form a pocket between the flange and the glass when the character is applied to a glass surface.

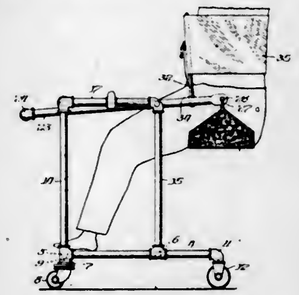
1,349,671. PUMP FOR INFLATING PNEUMATIC TIRES. ENOCH P. HULTIN, Flint, Mich. Filed Dec. 22, 1917. Serial No. 208,365. 2 Claims. (Cl. 152—11.)



1. In a device of the class described, a wheel; a pair of air pump cylinders mounted upon the wheel; pistons operative in said cylinders; a crank shaft; rods operatively connecting the pump pistons with the cranks on said crank shaft; a clutch rigidly mounted upon said crank shaft; a driving shaft; a clutch splined to said driving shaft and normally spring pressed into engagement with said crank shaft clutch; means for rotating said crank shaft; a governor cylinder provided with a lateral opening; a piston movable in said cylinder and spring seated therein; an expansible governor bulb engaging said piston, said bulb being connected with the tire air pressure, whereby said piston is actuated when said bulb is pneumatically expanded in excess of a predetermined pressure; an arm operatively connected with said piston through said governor cylinder lateral opening; and devices connecting said arm and said sliding clutch whereby the clutches are disengaged when said governor piston is actuated by the expansion of the governor bulb.

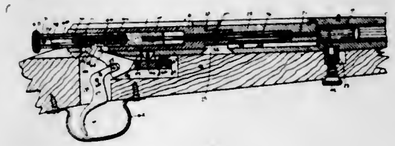
1,349,672. VANITY-BOX. FRANK S. HYATT, Brooklyn, N. Y. Filed Oct. 31, 1919. Serial No. 334,764. 4 Claims. (Cl. 206—15.6.)

4. A vanity box holding a plurality of rouge or powder holding pads therein and a retainer comprising a single strip of flat sheet metal the ends of which are folded over on itself to form a double thickness of metal and then turned upwardly to form vertical flanges adapted to removably hold a cosmetically useful article, said retainer fitting within the vanity box with the ends of the double thickness of metal thereof engaging the opposite side walls of the vanity box whereby spaces are left between the opposite side walls and the vertical flanges of the retainer.



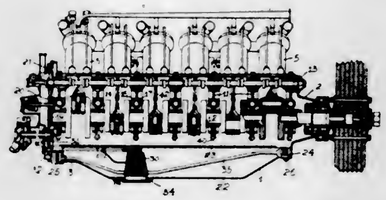
1,349,673. VANITY-BOX. FRANK S. HYATT, Brooklyn, N. Y. Filed Apr. 6, 1920. Serial No. 371,635. 5 Claims. (Cl. 206—15.6.)

3. A vanity box holding a plurality of rouge or powder holding pads therein, a retainer fitting within said box and having outwardly flaring walls extending over the rouge or powder holding pads and adapted to prevent displacement thereof and having upwardly extending vertical arms, and a removable cosmetically useful article fitting in said retainer intermediate its side walls and arms and provided with grippping means whereby said cosmetically useful article may be withdrawn.



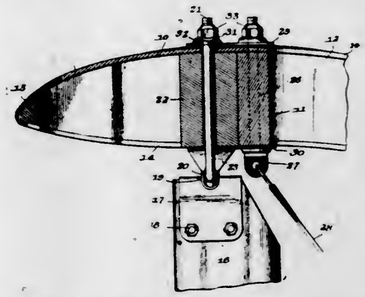
1,349,674. MEANS FOR LIFTING AND TRANSPORTING INVALIDS. STANLEY S. JENKINS, Chicago, Ill. Filed May 18, 1918. Serial No. 235,227. 4 Claims. (Cl. 5—44.)

1. In a device of the character described, the combination of a portable frame comprising a base portion provided with caster wheels, an upright portion consisting of a pair of upwardly extending posts at each side of the base portion, each pair of posts being united at their top by longitudinally extending members, and two of said posts being connected together by a transversely extending member, a pair of lever arms fulcrumed on the two unconnected posts, said arms being connected together at their forward ends but unconnected at their rear ends, the arms extending beneath said transverse post connecting member whereby upward movement of the forward ends of the arms is limited, and means pivtoally mounted on one of said longitudinal extending post connecting



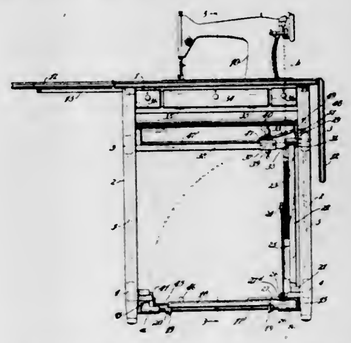
members and detachably connected to the other of said members to provide a transverse brace between said members.

1,349,675. BOLT-ACTION FIREARM. THOMAS C. JOHNSON, New Haven, Conn., assignor to Winchester Repeating Arms Co., New Haven, Conn., a Corporation. Filed May 24, 1919. Serial No. 299,412. 16 Claims. (Cl. 42—16.)



1. A bolt-action firearm having a bolt, a trigger, a sear and a rebounding firing-pin having a cocking-slot and a safety-shoulder, the said firing-pin comprising a cylindrical body mounting in its forward end a long, cylindrical, slender, resilient, blunt-ended striker, and the said sear being engaged with the cocking-slot of the firing-pin upon the manual retraction thereof and being engaged with the safety-shoulder of the firing-pin upon the closing of the bolt.

1,349,676. LUBRICATION OF INTERNAL-COMBUSTION ENGINES. CHARLES B. KIRKHAM, Garden City, N. Y., assignor to Curtiss Aeroplane and Motor Corporation, a Corporation of New York. Original application filed May 18, 1916, Serial No. 98,336. Divided and this application filed Apr. 24, 1918. Serial No. 230,452. 12 Claims. (Cl. 184—6.)

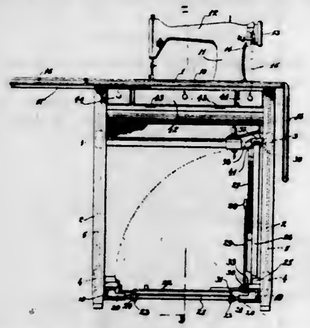


4. In an internal combustion engine, in combination, a crank case having in the lower part thereof an oil sump, a well at each end thereof, said wells being arranged above the level of the oil sump, a drip pan disposed above said pump and conducting the used lubricant to said wells, an oil screen in each of said wells, drain conduits leading downwardly from said wells to said sump, a third screen in the bottom of said sump and means for withdrawing the oil from said sump through said last-named screen and forcing same upwardly to the moving parts of the motor.

1,349,677. STRUT-FITTING. HENRY KLECKLER, Garden City, N. Y., assignor, by mesne assignments, to Curtiss Aeroplane and Motor Corporation, Buffalo, N. Y., a Corporation of New York. Filed Nov. 3, 1919. Serial No. 335,280. 7 Claims. (Cl. 244—31.)

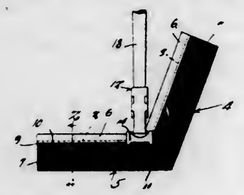
1. An airplane strut fitting comprising a U-bolt having its bight portion in bearing contact with one end of a strut and a compression member having a portion thereof in bearing contact with the bight portion of the U-bolt.

1,349,678. ELECTRIC SEWING-MACHINE CABINET. EMIL A. KOPF, Newark, and MARTIN HEMLEB, Elizabeth, N. J., assignors to The Singer Manufacturing Company, a Corporation of New Jersey. Filed Sept. 14, 1917. Serial No. 191,495. 12 Claims. (Cl. 172—179.)



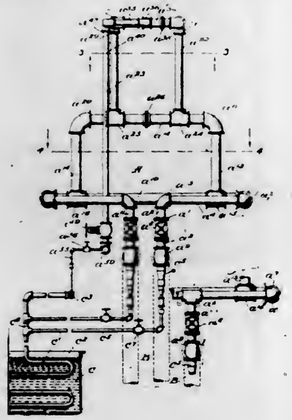
1. An electric sewing machine cabinet adapted to sustain a sewing head and a driving motor therefor, said cabinet comprising a table including supporting legs, a treadle sustained by said legs, a motor circuit including a motor-controller and an operative connection between said treadle and controller, said connection being readily broken and reëstablished by movement of the foot of the operator.

1,349,679. SEWING-MACHINE CABINET. EMIL A. KOPF, Newark, and MARTIN HEMLEB, Elizabeth, N. J., assignors to The Singer Manufacturing Company, a Corporation of New Jersey. Original application filed Sept. 14, 1917, Serial No. 191,495. Divided and this application filed Aug. 12, 1919. Serial No. 316,970. 1 Claim. (Cl. 45—27.)



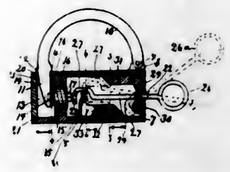
A sewing machine cabinet comprising a table-top, supporting means at the opposite ends of said table-top, a

leaf forming a shelf carried by said supporting means below the table-top, a treadle mounted below and concealed by said leaf, said leaf being pivotally sustained at



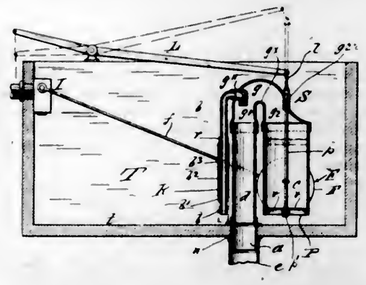
one end of the table and adapted to be swung to an upright or open position at said end of the table to expose said treadle, and a drive-wheel mounted on said leaf and adapted for operative connection with said treadle.

1,349,680. MOP. ANTON LINK, Chicago, Ill. Filed Mar. 4, 1920. Serial No. 363,226. 1 Claim. (Cl. 15—13.)



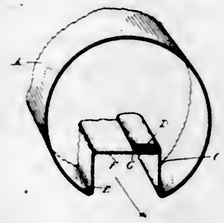
In a device of the class described, a frame comprising parts defining an angle; heads removably mounted on the parts of the frame; and a handle having means for gripping both heads at the angle defined by the parts of the frame.

1,349,681. AERIAL CONDENSER. LEWIS P. LITZINGER and PATRICK F. CONERTY, Butler, and WILLIAM SNODGRASS, Bruin, Pa. Filed June 19, 1919. Serial No. 305,387. 3 Claims. (Cl. 257—30.)



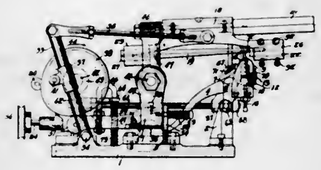
3. In a fractionating apparatus the combination of a plurality of laterally disposed and superposed receivers providing expansion chambers of relatively different capacities, pipes connecting said receivers to communicate in series, a pipe connecting the lowermost of said receivers with a still, a condenser, and independent and separately controlled communicating connections between the lower-most and upper-most of said receivers respectively with the condenser, substantially as set forth.

1,349,682. PADLOCK. GUSTAV A. LUND, Stillwater, Minn. Filed Oct. 27, 1919. Serial No. 333,839. 2 Claims. (Cl. 70—105.)



1. A padlock comprising an elongated hollow body with a slit-shaped key-hole in one end and an aperture in one side near the other end of the body, a shackle pivoted to the shell and having its free end provided with a recess and arranged to swing into the aperture, said shell having near the aperture a partition, a screw threaded in the partition and provided at one end with a round stem adapted to enter the recess in the shackle, the other end being polygonal and adapted to be engaged by a key fitting the polygonal form of the stem, a radial arm fixed in the shell and having at its end a disk spaced a short distance from and coaxially with the polygonal stem so as to guard the latter, a key adapted to be inserted into the lock through the key-hole and having a laterally arched end portion, the front leg of the arch being flat and extended across the axis of the bar of the key, and at said axial point provided with an aperture adapted to fit the polygonal end of the screw.

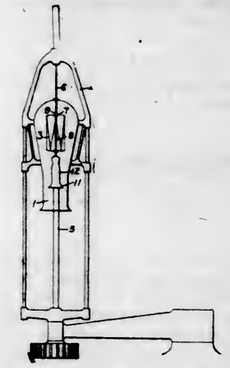
1,349,683. SIPHONIC FLUSHING APPARATUS. MICHAEL J. MCCLOUD, New York, N. Y. Filed Oct. 17, 1919. Serial No. 331,328. 4 Claims. (Cl. 4—3.)



1. In siphonic flushing apparatus of the character designated, in combination with the starter cylinder and piston, discharge pipe, and siphonic air break tube and regulator sleeve, a goose neck interposed between the started cylinder and the discharge pipe and formed with an inverted trumpet shaped mouth portion inclosing the upper end of the starter cylinder and depending air break inlet between such mouth and the siphonic air break tube, said trumpet shaped mouth portion being formed with a cylindrical bearing sleeve for the piston rod in axial alinement with the center of the starter cylinder, for the purpose described.

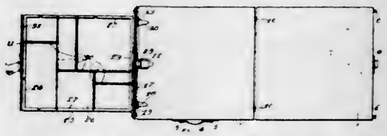
1,349,684. CHANNEL-TUBING. JAMES A. MCINTOSH, Detroit, Mich., assignor, by mesne assignments, to Standard Tool & Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Apr. 17, 1914. Serial No. 832,543. 2 Claims. (Cl. 189—77.)

1. A channel windshield tubing, comprising a fashioned sheet metal blank having an integral channel portion and an outer surrounding portion, the opposite edge portions of said blank meeting at the intersection of one side and the bottom of said channel section, and being bent to form a lock seam of lesser width than said channel, the thickness of said steam being located in the space between said channel portion and outer tubing, and the depth of said channel being materially less than the depth of the outer surrounding portion so as to form a comparatively rigid brace between the side walls thereof.



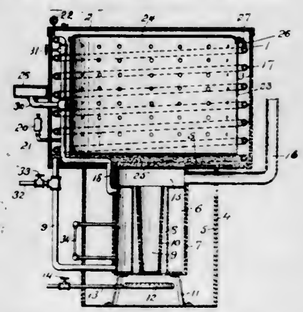
1,349,685. BAND-SAW-FILING MACHINE. ANGUS MCMILLAN, San Francisco, Calif. Filed Dec. 9, 1918. Serial No. 265,842. 12 Claims. (Cl. 76—35.)

1. In a band saw filing machine a vise for holding the saw, a pivotally mounted rocker adjacent the vise, a file-holding frame slidably mounted on said rocker above said vise, means for reciprocating said frame, the motion being more rapid during the recovery stroke than during the working stroke, means operative during the recovery stroke of the frame for pivotally moving said rocker, and means operative during the recovery stroke of the frame for advancing the saw in said vise.



1,349,686. MANUFACTURE OF INCANDESCENT ELECTRIC LAMPS. HARRY D. MADDEN, Irvington, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed July 11, 1916. Serial No. 108,629. 10 Claims. (Cl. 49—78.)

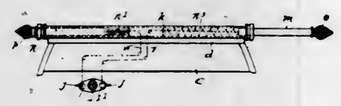
1. The method of assembling incandescent electric lamps that comprises introducing a previously axially alined filament-carrying mount within a globe, rotating the said parts in the presence of a flame to unite them by a fused joint, moving the mount longitudinally toward its joint with the globe to compact the said joint, annealing the said



joint, and positively maintaining the said mount and the said globe in centered relation throughout the fusing, compacting and annealing operations.

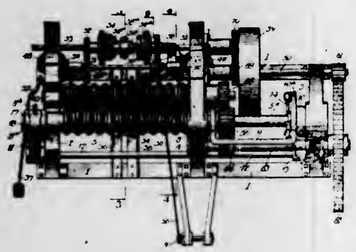
1,349,687. FOLDING TABLE. EUGENE F. MITCHELL, Spokane, Wash. Filed June 9, 1919. Serial No. 302,869. 5 Claims. (Cl. 190—12.)

1. In a folding table, hollow housing sections for inclosing the structure when folded and said sections being hingedly connected to support said sections from buckling between their ends from a horizontal position, legs for the ends of said sections for supporting said sections horizontally to form a table with the open portions of said sections downwardly disposed, a container having an open top and hinged to one end of one of said housing sections and proportioned to fit in and be inclosed by said housing sections when the latter are folded into a closed position, a container lid device hinged to that end of said container opposite the points of hinge connection of said container with its housing section and adapted to be adjusted downwardly to form a leg to support the free end of the container in a horizontal position.



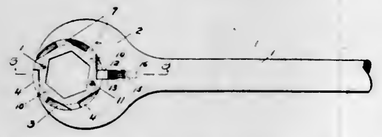
1,349,688. TIRE AND TUBE VULCANIZER. OLIVER NICHOLS, Mound Valley, Kans. Filed Jan. 12, 1920. Serial No. 350,770. 5 Claims. (Cl. 18—6.)

1. In a vulcanizer, a tire heating chamber, a casing supporting said chamber, a boiler located in said casing, means



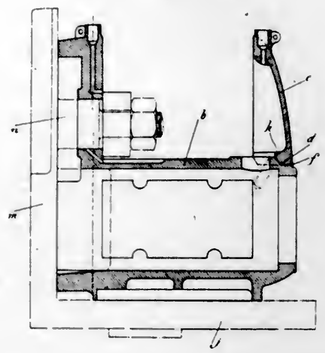
in said casing for heating said boiler and said chamber, and a steam pipe connected with said boiler and having a coil located in said chamber.

1,349,689. TRAFFIC-SIGNAL FOR AUTOMOBILES. SYLVESTER OLSZEWSKI, Detroit, Mich. Filed May 18, 1917. Serial No. 169,398. 2 Claims. (Cl. 116—50.)



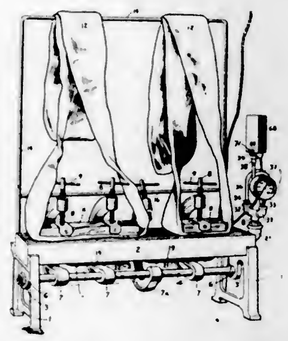
1. In an apparatus of the kind described, a reciprocating signal part, a spring acting to force said signal part to its effective position, a tube secured adjacent to the steering post and approximately parallel and having a longitudinal slot through its wall, said slot turning at right angles at one end, a piston adapted to reciprocate in said tube and having a laterally extending pin extending through said slot, said piston being connected to said part so that when it is moved toward the end of said tube at which is the lateral extension of said slot, it shall retract said signal part against the action of its spring, said piston being adapted to turn to permit said pin to extend in the laterally extending part of said slot and secure the parts in the retracted position of said signal part, substantially as and for the purpose described.

1,349,690. BENDING-ROLLS. PAUL PARCELLS, Chicago, Ill., assignor to Geo. Whiting Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 30, 1915. Serial No. 48,108. 18 Claims. (Cl. 153—73.)



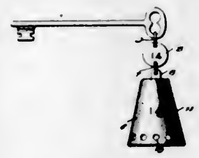
1. In a machine of the class described, the combination of bending rolls, and a removable bearing for one end of one of said rolls and arranged to swing in a plane at right angles to the axis of rotation of said roll, said latter roll having a free polygonal bearing bushing and said removable bearing having a corresponding polygonal seat adapted to engage said bushing adapted to be engaged by said removable bearing.

1,349,691. WRENCH. RALPH W. PAYNE, Irvington, N. J., assignor of one-half to Victor C. Armstrong, Hackensack, N. J. Filed Mar. 17, 1916. Serial No. 84,962. 1 Claim. (Cl. 81—60.)



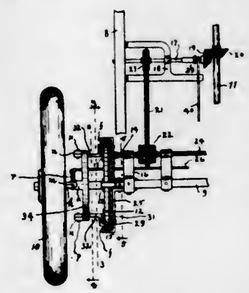
A nut wrench of the class described comprising a handle carrying a head having an eccentric aperture and a rib within the same and lying in a plane between the opposite faces of the head, and a rotatable ratchet nut-engaging unit journaled in said aperture and comprising duplicate members separably connected and having complemental teeth disposed in the same direction, the tooth portions of the two members respectively lying on opposite sides of said rib, and said nut engaging unit having its center located on the longitudinal axis of the handle and between the center of said head and one extreme end of the tool, and a pawl engaging said complemental teeth.

1,349,692. MAGNETO-FRAME. PIERRE JEAN RENÉ POSTEL-VINAY, Paris, France, assignor to Societe Des Moteurs Salmson (Systeme Canton-Unne), Paris, Seine, France. Filed Oct. 13, 1919. Serial No. 330,472. 3 Claims. (Cl. 171—209.)



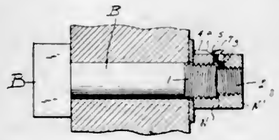
1. The combination of a magneto frame provided with an arcuated plane bearing surface and an arcuated conical bearing surface, a removable lid having corresponding bearing surfaces adapted to engage the bearing surfaces on the magneto frame respectively, and means for securing the lid to the frame.

1,349,693. VULCANIZING APPARATUS. WINFIELD S. ROBINETT, Oakland, Calif. Filed Dec. 1, 1917. Serial No. 204,927. 4 Claims. (Cl. 18—18.)



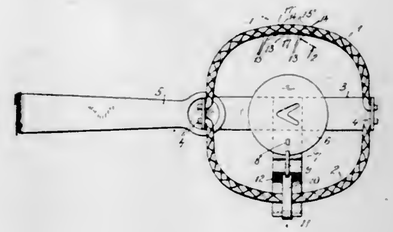
1. A vulcanizing apparatus comprising a horizontally disposed heating unit, the horizontal supporting member arranged beneath said unit and substantially co-extensive therewith, a plurality of substantially semi-circular yoke members, each having one end pivotally and slidably mounted on said supporting member and adapted to have their opposite ends lie over the upper surface of the heating unit when in operative position, and clamping elements carried by said opposite ends of said yokes to cooperate with the upper surface of the heating unit to clamp work therebetween.

1,349,694. BELL. ALEXANDER ROY, Huntington, N. Y. Filed Nov. 10, 1919. Serial No. 336,925. 1 Claim. (Cl. 116—80.)



A device of the character specified comprising a flaring casing closed at one end and open at the other, a clapper within the casing near the open end and resiliently connected with the closed end, and an inclosing casing for the first named casing, said inclosing casing being secured to the closed end of the first named casing and having its walls substantially parallel with those of the said casing, and having openings near the large end of the first named casing.

1,349,695. DRIVING-GEAR FOR AUTOMOBILES. MATTHEW C. SHARPNACK and CHARLES A. CRISMAN, Omaha, Nebr., assignors of one-third to Arthur E. Agee, Omaha, Nebr. Filed Jan. 7, 1919. Serial No. 269,997. 3 Claims. (Cl. 74—101.)



1. In driving mechanism for vehicle wheels, a vehicle axle, a gear case stationary with and traversed at its axis by the axle, a plurality of pinions equi-distant from the axle having journaled bearings on the gear case, a revoluble ring gear engaging the pinions of the gear case, a vehicle wheel journaled on the axle, and a coupling ring between and having pivotal connections with the vehicle wheel and said ring gear.

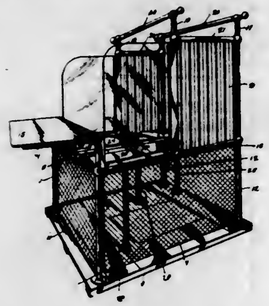
1,349,696. NUT-LOCK. CLOUGH W. SHELTON, Floyd County, Ga. Filed Apr. 17, 1920. Serial No. 374,607. 4 Claims. (Cl. 151—17.)

1. In combination with the shank and a pair of superposed nuts engaged thereon, the opposed faces of the nuts being provided with grooves adapted to register, the outer ends of the grooves being open, a key substantially snugly fitting within the registering grooves and one of said nuts being provided with means for coaction with the key to hold the same against displacement, each of the grooves in the nuts being dove-tailed, the side walls of the key being correspondingly recessed.

1,349,697. JAW-TRAP. GERARD WAYLAND SMITH, Oneida, N. Y., assignor to Oneida Community, Limited, Oneida, N. Y., a Corporation of New York. Filed Apr. 20, 1918. Serial No. 229,712. 3 Claims. (Cl. 43—90.)

1. In jaw traps, a frame, jaws loosely pivoted to said frame, a spring coöperating with said jaws and normally tending to force their coöperating faces toward each other, said coöperating jaw faces being wide and substantially flat and formed with gripping corrugations comprising a check pattern of intersecting gripping V-sectioned grooves which are deeper adjacent the inner sides of said jaws, substantially sharp projecting ridges being formed in said jaw faces adjacent said gripping grooves.

1,349,698. SAWING APPARATUS. EDWARD DE VOE TOMPKINS, New York, N. Y. Filed June 11, 1918. Serial No. 239,355. 18 Claims. (Cl. 143—68.)

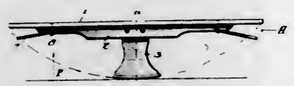


1. The combination with a plurality of reciprocating saw blades adapted to work in the same kerf, of substantially pressure-balanced mechanism connected to said blades, and means for directing an unbalanced pressure to said pressure-balanced mechanism to cause said blades to move simultaneously in opposite directions.

1,349,699. MARKING, LISTING, AND ASSORTING BOOTH. RICHARD H. TYNER, Cincinnati, Ohio. Filed Oct. 28, 1919. Serial No. 334,057. 2 Claims. (Cl. 211—36.)

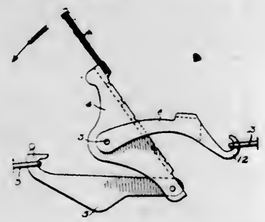
1. In a laundry marking, counting, listing and assorting booth, a base, a substantially rectangular booth open at one end, a shelf disposed substantially breast-high and extending outwardly from the booth at the end opposite the open end, a work box disposed intermediate of the ends of one side with its upper edges disposed substan-

tially waist-high, machine supporting shelves at either end of the work box, a third machine supporting shelf disposed in the end adjacent to the first described shelf



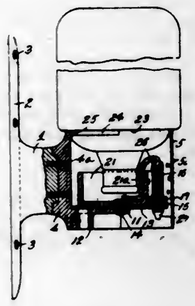
and the side opposite the work box, and a hook rack disposed on the second side of the booth adjacent to the open end thereof.

1,349,700. FREE SOUNDING-BOARD. GIOVANNI VIRZI, New York, N. Y., assignor of one-half to Joseph Virzi, New York, N. Y. Filed Feb. 13, 1919. Serial No. 276,824. 3 Claims. (Cl. 84—194.)



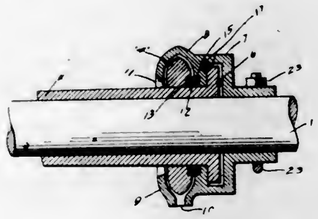
3. In a musical instrument, two closely adjacent and parallel sounding boards and spaced ribs therebetween secured throughout their lengths to one sounding board but secured to the other sounding board only at spaced points and cut away and spaced therefrom between such points.

1,349,701. TEETER-TOTTER. THOMAS WALLACE, Wabash, Ind. Filed Oct. 10, 1917. Serial No. 195,730. 2 Claims. (Cl. 46—22.)



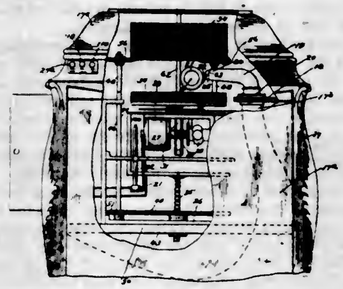
1. A fulcrum rocking support adapted for attachment at its top end to a teeter totter board, and its lower end terminating in an unbroken boarded rocking base.

1,349,702. CHAIN CLAMP AND TIGHTENER. GEORGE J. WIEDEMAN, Lewistown, and JAMES H. HUGHES, Welter, Mont. Filed Oct. 4, 1918. Serial No. 256,803. 1 Claim. (Cl. 24—69.)



A device of the character specified comprising a central section and two end sections, the central section being channeled and one end section being pivoted at one end thereto to fold within the channel, the other member being stirrup shaped, and consisting of a body and arms, the arms fitting on opposite sides of the central section and being pivoted thereto, and the body being adapted to engage that face of the central section remote from the first named end section to limit the closing movement of the said last named section, the pivotal connection between the arms of the stirrup shaped section and the central section being offset laterally with respect to the pivotal connection of the first named section with the central section and in the opposite direction from the body of the stirrup-shaped section.

1,349,703. DISINFECTING OR DEODORIZING DEVICE. EDWARD R. WILLIAMS, Sharpsburg, Pa. Filed Sept. 7, 1917. Serial No. 190,164. 13 Claims. (Cl. 299—22.)

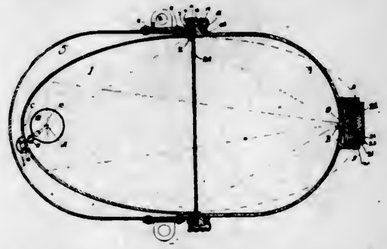


1. A disinfecting or deodorizing device, comprising a body adapted for connection to a support and carrying a casing, a cup within said casing, a receptacle for liquid supported directly by said casing and having a bottom outlet in said cup, a wick carrying member movably connected to the casing, and a wick therein for discharging liquid from said cup, said wick by movement of said member being adjustable to different positions circumferentially of said casing to discharge the liquid at different points.

1,349,704. SAND-BOX. JERRY H. WONSER, Eureka, Wash. Filed Feb. 11, 1919. Serial No. 276,294. 4 Claims. (Cl. 21—30.)

4. The combination with an axle, of a sand-box, comprised of channeled sections, one of said sections having an orifice in the bottom thereof, said section having an interior recess to accommodate a gasket, a gasket in said recess, a sleeve having a peripheral flange, a loose flange adapted to be attached to the sleeve and to register with the channeled sections, a recess in the loose flange to register with and receive the above mentioned gasket, and a means for binding the sections together, rigidly about the axle, and revolubly upon the flanges.

1,349,705. SELF-OPERATING TALKING-MACHINE. GARRETT W. WOODWARD, Chicago, Ill., assignor, by mesne assignments, to American Automatic Products Corporation, a Corporation of Illinois. Filed Jan. 20, 1919. Serial No. 272,112. 43 Claims. (Cl. 274—10.)

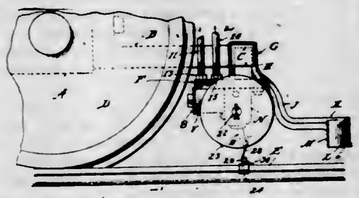


1. In a talking machine, the combination of record-driving mechanism, sound-reproducing mechanism cooperating therewith, a series of rotatable record-supporting and feeding disks each presenting a peripheral opening with portions of the disk at said opening being spaced apart vertically a distance substantially equal to the thickness of a record, the upper portions of the disks at said openings moving, in the rotation of said disks, in a plane substantially parallel with the plane of the records and entering between the lowermost record supported on said disks and the records above it, to separate them in the rotation of the disks, while the records are supported on the lower portions of said disks, the lowermost record thus separated discharging through the said openings to the record-driving mechanism, and means for causing the supported records to move, in the rotation of the disks, from a position in which they are supported on said upper portions of said disks, to a position in which they are supported on said lower portions thereof.

10. In a talking machine, the combination of record-driving means, means for feeding records, in succession, to said record-driving means, sound-reproducing mechanism coöperating with said record-driving means, means, operating automatically, to lift said sound-reproducing mechanism from the record and move it to a position in which it is out of the path of movement of the record being fed to the record-driving means, and after said second-named means have operated to feed a record to the record-driving means, to move said sound-reproducing mechanism into engagement with the record last fed to the record-driving means, and means operating automatically to discontinue the operation of the machine after the playing of a plurality of the records.

32. In a talking machine, the combination of record-driving mechanism, sound-reproducing mechanism coöperating therewith, means, operating automatically, to move said sound-reproducing mechanism into and out of playing position, means for feeding records in succession to said record-driving mechanism, means intermittently engaging said last-named means to effect intermittent feed of the records to said record-driving means, and means, operating automatically, to lock said second-named means against movement when not engaged by said third-named means, to prevent accidental feeding of a record to the record-driving mechanism during the playing of a record and to unlock said second-named means for movement to permit another record to be fed to the record-driving mechanism.

1,349,706. LIGHT-PROJECTING LANTERN. IRA DWIGHT WORCESTER, Pittsburgh, Pa. Filed Sept. 26, 1914. Serial No. 863,701. 11 Claims. (Cl. 240—41.)

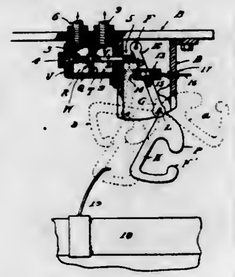


1. In a lantern the combination of an ellipsoidal mirror, a source of light arranged at the proximate focus of said mirror and an incomplete and sector-shaped lens arranged adjacent the remote focus of said mirror and there subtending the rays on one side of the axis of the emanated pencil of light, the construction permitting the free emanation of the rays on the other side of the axis of the pencil.

1,349,707. METHOD OF MAKING LEAD ARSENATE. EDWIN O. BARSTOW, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a Corporation of Michigan. Filed June 28, 1918. Serial No. 242,336. 3 Claims. (Cl. 23—13.)

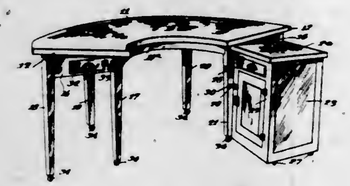
1. In a method of making lead arsenate, the steps which consist in maintaining a mixture of lead oxid and lead acetate, the former being present in excess; continuously separating out the basic lead acetate thus formed; and continuously mixing such basic lead acetate solution with arsenic acid, whereby lead arsenate is precipitated.

1,349,708. AUTOMATIC SIGNALING DEVICE FOR TRAINS. CHARLES E. BECKWITH, Peoria, Ill.; Mame L. BECKWITH administratrix of said Charles E. Beckwith, deceased. Filed July 24, 1916. Serial No. 110,817. 6 Claims. (Cl. 246—190.)



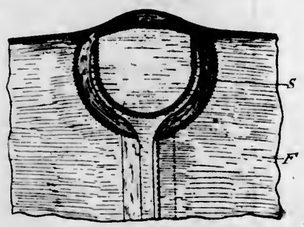
1. A device for the purposes described for trains including in its construction a portion for suspension above one of the track rails and a valve casing, said casing having a diaphragm separating it into two compartments and provided with an opening, an elastically held valve normally seated upon and closing said opening including a stem extending outside the casing, a pivotally mounted lever in position to engage the stem and depending in position to engage an obstruction on said rail, a housing inclosing a portion of the lever and having a slot through and out of which said lever extends, the latter having a covering plate for said slot.

1,349,709. SIGNALING MECHANISM FOR TRAINS. CHARLES E. BECKWITH, Peoria, Ill.; Mame L. Beckwith administratrix of said Charles E. Beckwith, deceased. Filed Oct. 26, 1916. Serial No. 127,872. 10 Claims. (Cl. 246—190.)



1. A signaling apparatus for trains including in its construction a depending pivotally mounted lever, a chamber for a fluid under pressure having a pair of conduits connected into it and having a dividing diaphragm between said conduits provided with an aperture, a valve normally and elastically seated upon and closing the ap-

erture and having a stem lying in the path of the lever, means to hold the lever elastically in one of its extreme

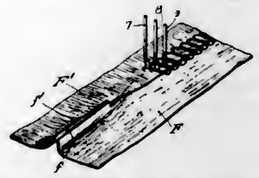


positions, and means coöperating with the lever to retard the closing movement of said valve when it has been unseated by said lever.

1,349,710. BOOKKEEPER'S WORK-TABLE. BYRON PALMER BEESON, Sapulpa, Okla., assignor of one-half to Thomas W. Mace, Sapulpa, Okla. Filed July 9, 1919. Serial No. 309,581. 2 Claims. (Cl. 45—31.)

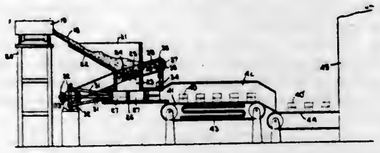
1. A device as herein characterized, comprising a semicircular table having a continuous arc shaped outer edge defining a semicircle, the inner edge including a pair of spaced apart straight alining portions and intermediate semicircular cutout portion forming a well between said alining portions, the arc of said well being concentric with the aforesaid outer edge of the table, upper surface of the table inclined downwardly and radially from the said outer edge, and carrying a receiving cabinet detachably connected to the table frame at one end with its top surfaces disposed below the plane of the lowest point in the top surface of the semicircular table, said cabinet forming an extension of said table to receive and support books.

1,349,711. METHOD OF UNITING FABRIC SECTIONS. JOSEPH BERGER, Jr., Utica, N. Y., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 27, 1916. Serial No. 139,097. 3 Claims. (Cl. 112—262.)



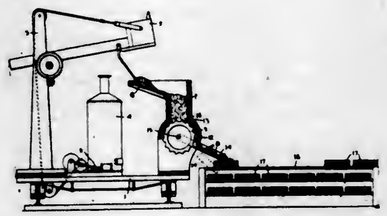
1. The method of forming a covered lapped seam consisting in uniting the edge portions of fabric sections to form the seam by a stitching mechanism forming parallel rows of needle thread loops connected above and below the fabric sections to form covering stitches and trimming both edge portions in advance of and simultaneously with the stitching of the seam, so that said edge portions will terminate in overlapped relation and within the limits of the concatenated stitching threads, whereby the overlapped edge portions will be joined and the trimmed edges thereof will be covered by said threads.

2. The method of uniting fabric sections consisting in turning the edge portions of the fabric sections to be united out of the plane of the fabric sections, trimming said edge portions, shifting one of said sections relative to the point of trimming for shaping said section, returning the trimmed edge portions into the plane of the fabric sections, and uniting said edge portions by stitching which covers the trimmed edges of the fabric sections.



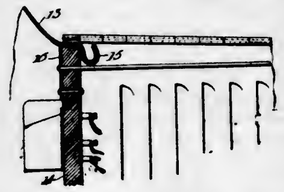
3. The method of stitching a collarette strip to the neck of a garment consisting in superposing the edge portions of the collarette strip, turning the edge portion of the neck of the garment and the superposed edge portions of the collarette strip out of the plane of the garment and the collarette strip, trimming said edge portions, shifting the collarette strip only relative to the trimming point at the beginning and ending of the the stitching operation for tapering the ends of said collarette strip, returning said edge portions to their normal plane as they are trimmed and uniting said edge portions by stitching which cover said trimmed edge.

1,349,712. METHOD OF UNITING FABRIC SECTIONS. JOSEPH BERGER, Jr., Utica, N. Y., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 30, 1916. Serial No. 139,822. 1 Claim. (Cl. 112—262.)



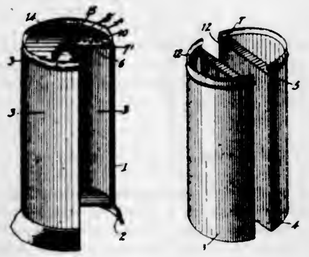
The method of forming a covered lapped seam consisting in uniting the edge portions of fabric sections to form the seam by a stitching mechanism forming three parallel rows of needle thread loops connected above and below the fabric sections to form covering stitches and trimming both edges in advance of and simultaneously with the stitching of the seam, so that said edge portions will terminate in overlapped relation and within the limits of the outer rows of needle thread loops and be penetrated by the central row of needle thread loops, whereby the overlapped edge portions will be joined and the trimmed edges thereof will be covered by said threads.

1,349,713. METHOD OF TREATING PEAT. WESLEY W. BLAIR, Newtonville, Mass. Filed June 20, 1918. Serial No. 240,888. 6 Claims. (Cl. 44—1.)



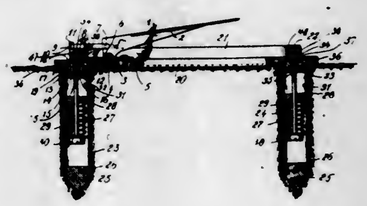
1. The method of treating peat which consists in macerating the freshly dug peat mass, pressing the same into blocks, drying the blocks and then impregnating the blocks with a fuel oil.

1,349,714. METHOD OF TREATING PEAT. WESLEY W. BLAIR, Newtonville, Mass. Filed Dec. 14, 1916, Serial No. 137,027. Renewed May 13, 1919. Serial No. 296,912. 8 Claims. (Cl. 44—1.)



1. The method of treating peat which consists in pressing the unmacerated peat into blocks, drying the blocks and then impregnating the blocks with a fuel-oil.

1,349,715. AUTOMOBILE-COWL ATTACHMENT. JOSEPH H. COFFMAN, Americus, Ga. Filed Mar. 25, 1919. Serial No. 284,909. 1 Claim. (Cl. 180—90.)



In automobile body construction, the combination with the cowl, of a gutter formed integrally upon the cowl by bending the same upon itself to provide a portion engaging upon the top edge of the dash, and a gutter member located adjacent the front face of the dash in position to receive water leaking between the cowl and the hood, and the end portion of the cowl being again bent to lie flat against and be secured to the rear face of the dash.

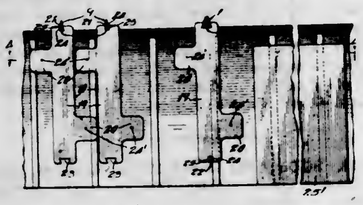
1,349,716. SALT AND PEPPER BOX. WILLIAM RITCHIE ELLIOT, Riverhead, N. Y. Filed Aug. 5, 1919. Serial No. 315,493. 3 Claims. (Cl. 65—45.)

2. A salt and pepper shaker comprising a plurality of identical boxes, each box having an open upper end provided with a groove adjacent the upper end and a turned-over flange acting as a stop, said flange being positioned adjacent said groove, a holder for said boxes, means positioned in said groove having a series of openings for each box, and a single rotatable cover having its edges positioned between the means in said groove and said stop, said cover having a solid section covering all of said series of openings except one.

1,349,717. GAME-TRAP. FERRAND F. ELLIS, Oneida, N. Y., assignor to Oneida Community, Limited, Oneida, N. Y., a Corporation of New York. Filed Oct. 30, 1917. Serial No. 199,285. 15 Claims. (Cl. 43—88.)

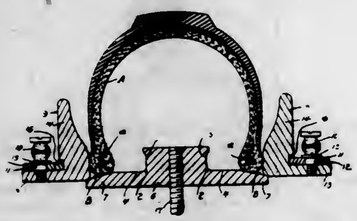
1. In game traps, a frame member, a pair of depending tubular substantially water-tight spring holders having their upper ends projecting within and secured to said frame member and having piercing points to facilitate insertion in the ground, compression spiral springs mounted within said holders and operating against stops therein, spring bolts on which said springs act, closing plungers mounted within the upper ends of said holders and adjustably connected to said spring bolts and having reduced pivot ears projecting through closely fitting apertures in said frame member, trap jaws pivoted to said ears and extending above said frame member, a pan and connected pan shank pivoted to said frame member, a setting detent connected to said pan and a setting catch formed on one of said pivot ears to hold said trap jaws in open position when said detent engages said catch.

1,349,718. SOUNDING APPARATUS. ERNST G. FISCHER, Washington, D. C. Filed Jan. 11, 1919. Serial No. 270,714. 4 Claims. (Cl. 73—5.)



1. In a sounder of the class described wherein is provided, a sounding tube of definite volume adapted to receive water, when the sounder is immersed, and having provision for retaining the water under the pressure of immersion until the sounding tube has been drawn up; a rod of definite volume adapted to be inserted into the sounding tube, when opened, to displace the water to a given extent, and an indicator slidable on the rod and adapted to be set by contact with the end of the sounder tube as the rod is inserted in said tube, and a separate scale bar adapted to receive said rod and coöperate with said indicator to give the necessary reading of the depth of immersion.

1,349,719. TRANSMISSION-GEARING. LOU M. GARDINER, San Francisco, Calif., assignor to The Iron Horse Tractor Company, a Corporation of Delaware. Filed Nov. 4, 1918. Serial No. 261,013. 1 Claim. (Cl. 74—86.)

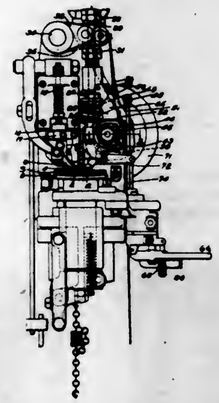


The combination of a driving shaft, a driven shaft, a worm gear on said driving shaft, and a driven gear on said driven shaft, the driven gear embodying two separable disk like sections having frusto-conical bearing sockets in the meeting faces thereof, rotatable gear teeth having frusto-conical base portions working in said sockets, and a conical series of anti-friction rollers surrounding the base portion of each tooth within the respective bearing socket.

1,349,720. RULED LINOTYPE-FORM AND MEANS FOR PRODUCING SAME. WILLIAM C. HOLLISTER, Chicago, Ill. Filed Jan. 29, 1918. Serial No. 214,379. 8 Claims. (Cl. 101—400.)

1. A ruled type form comprising a type form composed of type-bars which are provided on one side with horizontal spaced, vertical fitting ribs, said form having a level top surface below the printing face thereof, rules arranged transversely with respect to the type bars resting on and supported by said top surface, rule anchors of a width greater than the distance apart of said fitting ribs engaging said rules and formed with transversely overlapping parts adapting them to be nested together to hold rules more closely spaced than said ribs, said anchors depending between adjacent type-bars and adapted, when the type bars are pressed toward each other, to hold said rules upon the form.

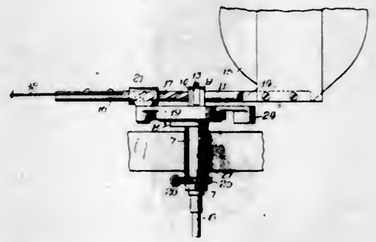
1,349,721. APPARATUS FOR USE IN VULCANIZING PNEUMATIC-TIRE CASINGS FOR VEHICLES. ERNEST HOPKINSON, New York, N. Y. Filed Mar. 12, 1919. Serial No. 282,097. 12 Claims. (Cl. 18—42.)



1. Apparatus for use in vulcanizing a tire casing having inner circumferential edges providing an opening therebetween, comprising a closure for the opening adapted to form with the inner wall of the casing a fluid receiving chamber, said closure having oppositely disposed non-yielding walls adapted to directly engage the inner sides of the edges, and angular extensions rigid with said walls having circumferences equal to the inner circumference of the finished casing adapted to directly engage the inner circumferences of the edges to define their size in the finished casing, and means for introducing fluid to the chamber.

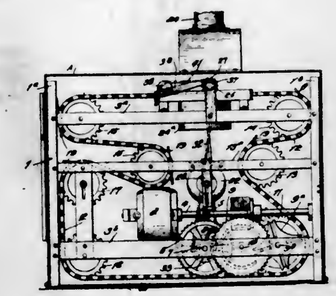
1,349,722. MUSICAL WIND INSTRUMENT. FRANK JAGGER and RICHARD CARLILE JAGGER, Oldham, England. Filed Mar. 23, 1920. Serial No. 368,139. 3 Claims. (Cl. 84—397.)

1. In combination with a musical wind instrument, a receptacle on the bell of the instrument for receiving the moisture accumulating in the interior, means for securing said receptacle to the bell and means for discharging the moisture from said receptacle, for the purpose specified.



1,349,723. SOLE-FITTING MACHINE. ALBERT E. JOHNSON, Beverly, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 8, 1916. Serial No. 96,170. 24 Claims. (Cl. 12—27.)

24. In a machine of the character described, the combination with means for supporting and feeding a shoe sole and two knives to form channel and edge lips in the margin of the sole, of a knife arranged to slash the lip material transversely, and means for throwing said knife into and out of operation at will during the continued operation of said feeding means.

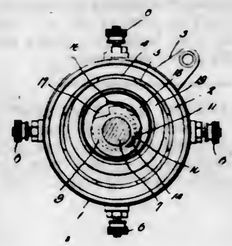


1,349,724. MECHANICAL MOVEMENT. EDWARD P. JOHNSON, Chicago, Ill. Filed Mar. 13, 1918. Serial No. 222,079. 4 Claims. (Cl. 170—154.)

1. In a device of the character set forth, the combination of a driving shaft, an eccentric through which the shaft passes, means for rotatably adjusting the eccentric, a ring around said eccentric, a bearing pivotally mounted at one side of the ring, a counterweight at the opposite side of the ring, a transverse bearing at the end of the driving shaft, a driven shaft rotatably mounted in said

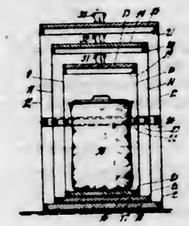
bearing, means for holding the driven shaft against longitudinal movement, said driven shaft passing through the bearing on said eccentric, threads on said driven shaft, and threads in the bearing engaging with the threads on said shaft.

1,349,725. STEREOPTICON APPARATUS. MAXIMILIAN KLAIBER, Brooklyn, N. Y., assignor, by direct and mesne assignments, to Auto Slyde & Moving Picture Machine Co., Inc., a Corporation of New York. Filed Aug. 7, 1916. Serial No. 113,464. 13 Claims. (Cl. 88—28.)



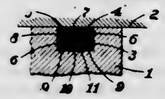
1. In a stereopticon apparatus the combination of a flexible continuous slide carrier, a slide frame carried thereby, means for imparting rotary motion to said slide frame when in its position of exposure and means for feeding said slide carrier to move the slide frame past its position of exposure.

5. In a stereopticon apparatus the combination of a flexible continuous slide carrier, a plurality of slide frames carried thereby, means for imparting rotary motion to a slide frame when in its position of exposure, means for imparting oscillating motion to another slide frame when in its position of exposure, and means for feeding said slide carrier to move the slide frames successively past the position of exposure.



1,349,726. ROLLER-DISTRIBUTER. BRUNO LOPEZ, San Antonio, Tex. Filed Oct. 27, 1919. Serial No. 333,648. 4 Claims. (Cl. 200—26.)

1. In a device of the class described, a casing having contacts; a shaft; a collar on the shaft; inner and outer members about the collar; anti-friction devices between said members; and a spring arm extended circumferentially of the collar, the inner end of the arm being attached to the collar, and the outer end of the arm co-

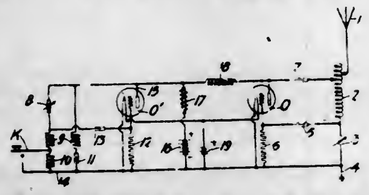


operating with the inner member to hold the outer member yieldably in eccentric relation to the shaft for co-operation with the contacts.

1,349,727. HEAT-INSULATING DEVICE. HUGO MOCK, New York, N. Y. Filed Oct. 8, 1918. Serial No. 257,325. 6 Claims. (Cl. 150—52.)

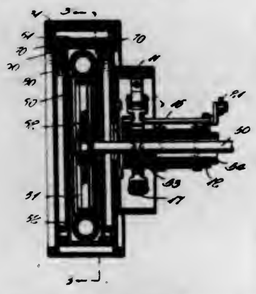
1. A heat insulating unit comprising an air-tight and waterproof cylindrical collapsible hood adapted to cover a cooking vessel when in an expanded condition, means for keeping the bottom and center of said hood in an expanded condition, and means for closing the bottom of said hood.

1,349,728. PISTON PACKING-RING. SAMUEL WILSON MORROW, Baltimore, Md., assignor to The Reus Bros. Company, a Corporation of Maryland. Filed Apr. 21, 1919. Serial No. 291,565. 2 Claims. (Cl. 74—109.)



1. A piston packing consisting of three ring-shaped members, one having a recess at its inner corner open peripherally and laterally and having an inner frusto-conical surface extending from the inner corner of the recess toward the axis of the ring, a second member having a rib overlapping into said recess and having an inner frusto-conical surface extending from the base of the rib toward the axis of the ring, said frusto-conical surfaces meeting at substantially the center of the ring and co-operating to form a V shaped groove, and a spring ring bearing on said frusto-conical surfaces said spring ring being of a width greater than half the width of the piston ring groove.

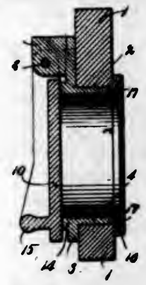
2. A piston packing consisting of three ring-shaped members, one having a recess at its inner corner open peripherally and laterally and having an inner frusto-conical surface extending from the plane of the inner corner of the recess toward the axis of the ring, a second member having a rib overlapping into said recess and hav-



ing an innner frusto-conical surface, extending from the plane of the base of the rib toward the axis of the ring, said frusto-conical surfaces meeting at substantially the center of the ring and coöperating to form a V shaped groove, and a spring ring bearing on said frusto-conical surfaces, said spring ring being of a width greater than half the width of the piston ring groove.

1,349,729. MODULATING AND TRANSMITTING SYSTEM. EDWARD L. NELSON, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 8, 1918. Serial No. 221,341. 13 Claims. (Cl. 250—17.)

1. In a transmitting system, an oscillation circuit including an antenna, a three-electrode vacuum tube associated with said circuit to generate oscillations therein, a second three-electrode vacuum tube, an associated with said first mentioned tube, an oscillation circuit for said second mentioned tube, a source of anode-cathode current for said tubes, a circuit through which the current is supplied, and means in said circuit for maintaining the sum of the currents through said tubes constant.

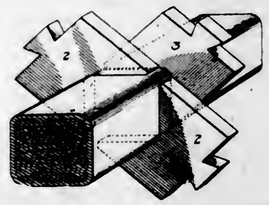


1,349,730. VEHICLE-WHEEL. WILLIAM M. PARHAM, Spring Hill, Tenn. Filed Aug. 1, 1918. Serial No. 247,814. 4 Claims. (Cl. 305—7.)

1. The combination in a vehicle supporting mechanism, of an axle, a wheel having a peripheral shoulder thereon, and a second wheel of greater diameter than the first said wheel and having an annular shoulder of less diameter than the said peripheral shoulder, the shoulder of greater diameter being supported on the shoulder of less diameter at a point of contact above said axle, a support on said axle, a rocker on said support, an arm on said support, a pair of levers pivotally mounted on said arm and extending on opposite sides of said axle, means connecting the free ends of said levers with said rocker in a relation to enable them to be actuated by the rocker, and means carried by the wheel of greater diameter and operable by said levers to shift said point of contact relative to the vertical plane that coincides with the axis of said wheel of greater diameter.

1,349,731. COMBINED MAIL-OPENING AND DOOR-KNOCKER. THOMAS H. PEGNAM, Brockton, Mass. Filed Feb. 6, 1919. Serial No. 275,289. 1 Claim. (Cl. 20—39.)

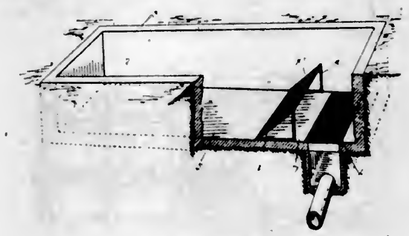
A combined letter opening and door knocker comprising a plate having a circular opening therethrough and adapted to register with a circular hole in a door or the like, an outwardly projecting rim on the plate defining an extension of the circular opening, a combined cover and



knocker pivotally mounted on the plate above the circular opening and coöperating with the projecting rim to act as a cover for the circular opening as a door knocker.

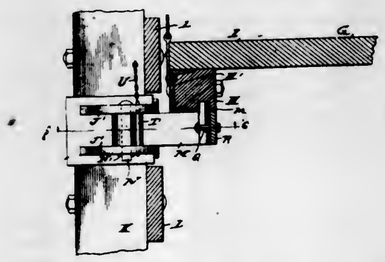
1,349,732. STOVE. NOEL PEMBERTON-BILLING, Hertford, England. Filed July 23, 1919. Serial No. 312,854. 19 Claims. (Cl. 126—4.)

1. For a domestic heating stove which is to be used for heating a plurality of receptacles, the combination of a fire-chamber, a flue communicating between the upper interior of the fire-chamber and a port in a member outside the fire-chamber, another flue communicating between the lower end of the fire-chamber and another port in a member outside the fire-chamber, and a single distributing device for the flue gases issuing through the said ports, said device being adapted to direct the main draft to any one or all of the receptacles to be heated.



1,349,733. METHOD OF TREATING STEEL INGOTS. CHARLES H. READ, Pittsburgh, Pa. Filed Aug. 5, 1916. Serial No. 113,296. 5 Claims. (Cl. 29—148.)

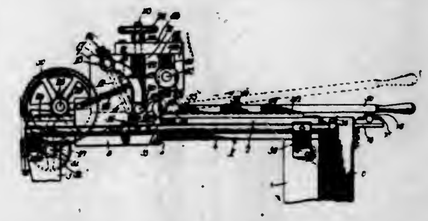
1. The method of treating ingots, consisting in removing them from the casting molds and applying successive



localized pressures to different successive portions thereof from opposite sides in successive passes before the interior is completely set and while a portion thereof is still in a liquid condition, to thereby disseminate the central liquid portion of the ingot throughout the mass of the ingot and distribute the segregated impurities.

1,349,734. PROTECTOR FOR SEWERS OF ENGINE CINDER-PITS. THOMAS RILEY, Oelwein, Iowa. Filed Nov. 5, 1919. Serial No. 335,919. 1 Claim. (Cl. 182—10.)

The combination with an engine cinder pit, having side and end walls, and a sewer opening at one end thereof, of a horizontal grating located over the mouth of the sewer and on a level with the floor of the pit, and an inclined grating of finer mesh than said horizontal grating and located transversely of the pit at one side of said horizontal grating, the latter having a space thereover adapted for a workman to take place unobstructed by said inclined grating.

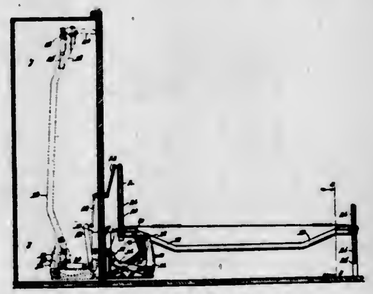


1,349,735. ADJUSTABLE DECK-SUPPORT FOR CARS. JOHN BELL SHELTON, San Francisco, Calif. Filed Oct. 8, 1919. Serial No. 329,219. 6 Claims. (Cl. 105—370.)

1. In a car of the character described, an adjustable platform, means for raising and lowering said platform, means for supporting said platform when raised, comprising a plurality of castings adapted to be secured to spaced upright members of the car frame, a horizontally swinging bracket arm pivoted to each of said castings adapted to swing beneath the platform to support the latter, and also between the upright members of the car frame and out of the path of the platform, that the latter may be lowered to the floor of the car and slats connected with the free ends of a plurality of said swinging bracket arms, whereby they may be operated simultaneously.

1,349,736. SAFETY PLATE-HOLDER FOR ELECTROTYPE AND STEREOTYPE SHAVING MACHINES. CHRISTIAN N. SMITH, Elgin, Ill. Filed July 29, 1918. Serial No. 247,277. 15 Claims. (Cl. 90—27.)

1. In an electrotype and stereotype shaving machine, the combination of a plate-supporting bed, a knife-supporting carriage extending transversely with respect to and adapted to travel over the bed, a knife mounted on and movable with the carriage in position to engage and shave a plate supported upon the bed, a plate-holder mem-

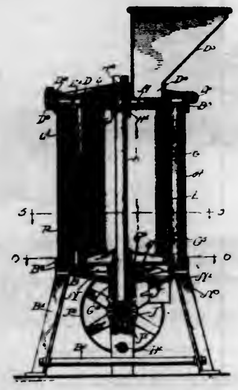


ber pivotally connected with the carriage and extending forward in advance of the same and over the bed and acting to operatively engage and hold down a plate supported by the bed and engaged by the knife, and means for operating the knife-supporting carriage.

1,349,737. PACKING MATERIAL. ALBERT A. SOMERVILLE, Flushing, N. Y., assignor to New York Belting & Packing Company, a Corporation of New York. Filed Nov. 15, 1917. Serial No. 202,183. 3 Claims. (Cl. 106—8.)

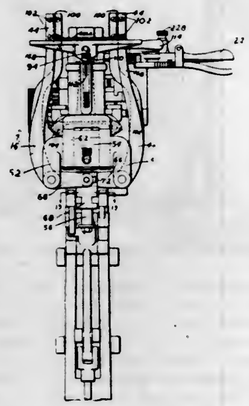
1. Packing material comprising fibrous material saturated or impregnated with shellac dissolved in alcohol and containing an unctuous material.

1,349,738. WALL-BED. JOHN SORENSEN, Chicago, Ill. Filed Aug. 10, 1916. Serial No. 114,134. 2 Claims. (Cl. 5—54.)



1. The combination of a support; and a bed construction pivoted for folding upwardly against said support, said bed construction being pivotally mounted on two swinging members to cause the arcs of swing of the pivotal mountings of the bed construction to cross each other; and a spring operatively connected with one of said swinging members and arranged to operate to yieldingly hold said bed construction in both its folded and unfolded condition, substantially as described.

1,349,739. FRUIT AND VEGETABLE PULPING MACHINE. CLARENCE E. STEERE, Milwaukee, Wis., assignor to Henry Scarborough, Milwaukee, Wis. Filed Feb. 21, 1917. Serial No. 149,991. 17 Claims. (Cl. 146—9.)



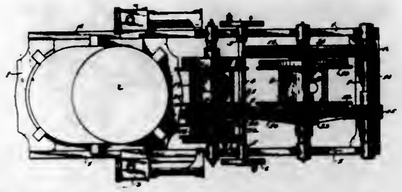
6. A machine for separating the juices and pulp of crushed food products comprising a cylindrical screen, a rotary cylinder disposed within and concentric with respect to the screen to provide an annular space between its periphery and the screen, the opposed surfaces of the cylinder and screen being longitudinally straight, means

for feeding said material to said annular space, and longitudinally extending means on the periphery of the cylinder adapted to retain work material on the periphery of the cylinder against relative rotation whereby the ma-

terial is bodily rotated with the cylinder to impart centrifugal force thereto for causing portions of the material to pass through the screen, said centrifugal force being uniform throughout the extent of the cylinder.

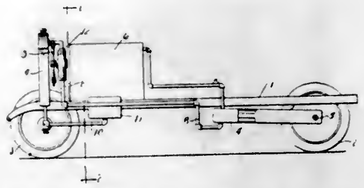
1,349,740. SOLE-PREPARING MACHINE. WILLIAM C. STEWART, Swampscott, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed June 9, 1915. Serial No. 33,040. 25 Claims. (Cl. 33—4.)

24. A sole preparing machine having, in combination, a support for the sole, a ball line marker, a breast line marker, means for effecting a relative adjustment of said markers for soles of different sizes, and means to actuate said markers to form notches extending completely across the edge of the sole to indicate the location of the ball and breast lines.



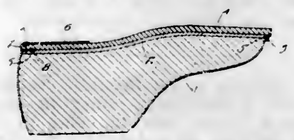
1,349,741. TATTING-SHUTTLE. WILLIAM T. THORP, Hillsboro, Ill. Filed June 13, 1919. Serial No. 303,870. 2 Claims. (Cl. 66—10.)

1. A device of the class described comprising a body having side walls tapering together at each end and connected together at said ends, a reel rotatably mounted in said body, said reel having a tubular journal engaging



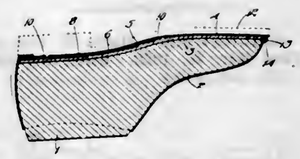
with one side of the body and a handle hingedly connected to said journal and adapted to be swung into the said journal when not in use.

1,349,742. TWO-SPEED LOGGING-ENGINE. HARRY L. TURNEY, Portland, Oreg. Filed Nov. 11, 1918. Serial No. 262,071. 6 Claims. (Cl. 74—59.)



1. In a two speed logging engine, in combination, a support, a direct drive shaft mounted therein, a driving gear thereon, a drum shaft with drum thereon, drum-driving gears on said drum shaft, means for clutch-locking either of said drum-driving gears and said drum together at will, one of said drum-driving gears being in mesh with the driving gear on said direct drive shaft, an indirect drive shaft, and gears on said indirect drive shaft in mesh, respectively, with the drum-driving gears on said drum shaft.

1,349,743. MOTOR-VEHICLE. ALEXANDER G. VAIR, Ravenna, Ohio. Filed Dec. 31, 1917. Serial No. 209,809. 2 Claims. (Cl. 60—96.)

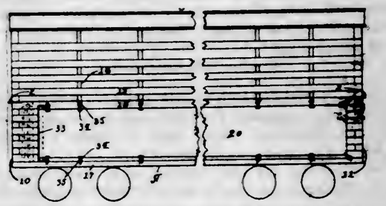


1. In an automobile, the combination of a water reservoir of medium size, a boiler, an engine for propelling the vehicle, a condenser near the front of the vehicle, an exhaust passage leading from said engine to said condenser, a fan for cooling said condenser and placed in back thereof, a motor operated by the exhaust steam from the engine for driving the fan, and a conduit leading the condensate from the condenser to the water reservoir.

1,349,744. SHOE. HERMAN WESTLING, Hudson, Mass., assignor to Apsley Rubber Company, Hudson, Mass., a Corporation of Massachusetts. Filed Nov. 24, 1919. Serial No. 340,165. 4 Claims. (Cl. 36—14.)

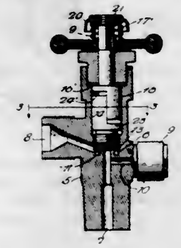
1. A rubber-soled canvas shoe having a canvas upper, an inner sole, and a welt all united together, the welt extending around the forepart and the shank and terminating at points substantially opposite the breast of the heel and outer sole, the rubber sole secured to the inner sole throughout the forepart and shank, a layer of canvas attached to the outer face of the heel portion of the outer sole, and fastening nails which pass through said canvas layer and through the outer and inner soles, the nails having heads which bear against the outer face of said canvas layer.

1,349,745. SHOE. HERMAN WESTLING, Hudson, Mass., assignor to Apsley Rubber Company, Hudson, Mass., a Corporation of Massachusetts. Filed Nov. 24, 1919. Serial No. 340,166. 4 Claims. (Cl. 36—76.)



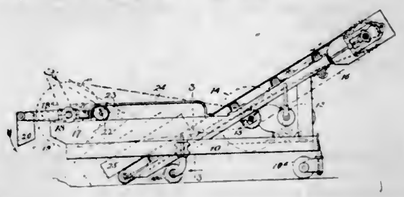
1. A rubber-soled shoe having an inner sole, a covering layer of thin flexible material on the bottom of the inner sole, said covering layer having a transverse slit therein at the forward part of the shank portion thereof, a metal shank member which extends through said slit, the forward end portion of the metal shank lying between said covering layer and the inner sole, the other portion of said shank member extending rearwardly over the outer face of the shank portion of the inner sole, a leveling member extending from the heel portion forward over the shank portion of the inner sole to a point forward of said metal shank, said leveling member having a recess therein which receives the said metal shank member, and an outer sole for the bottom of the shoe.

1,349,746. CONDENSER-TANK FOR REFRIGERATING AND ICE-MAKING MACHINES. WILLIAM YOUNG Tacoma, Wash. Filed Feb. 1, 1919. Serial No. 274,403. 3 Claims. (Cl. 257—224.)



1. In a refrigerating condenser tank having vertical water tubes therethrough, an outlet discharge pipe from said tank, an upright pipe having upper and lower openings connected with said outlet discharge pipe, an ammonia gas supply pipe with an outlet in said tank below said connection, of a vent into said supply pipe at its top end to equalize the gas pressure within said tank.

1,349,747. STOCK-CAR. OSCAR A. ACKERMANN, St. Paul, Minn. Filed Jan. 28, 1919. Serial No. 273,682. 3 Claims. (Cl. 119—8.)

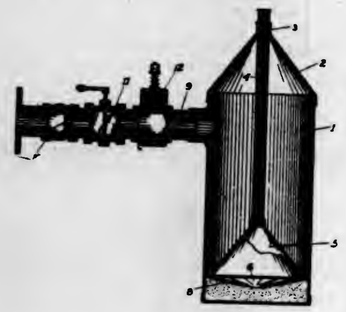


1. In combination with a stock car body having an open-work side, a magazine arranged in one corner adjacent one side of the car body, a roller journaled in said magazine, said side having an opening adjoining said magazine, a curtain secured by one end to said roller and its other end being adapted to be drawn through said opening in said side and moved longitudinally over the outer surface of the lower portion of said side substantially from end to end of the car, means for detachably coupling said curtain in said outstretched condition over and to said side and means for turning said roll to wind said curtain in said magazine.

1,349,748. DRUM-VALVE. CHARLES L. BASTIAN, Chicago, Ill. Filed Oct. 30, 1919. Serial No. 334,442. 5 Claims. (Cl. 251—48.)

5. A valve comprising a casing having a chamber and a passage leading thereto, a nipple relatively and longitudinally movable in said chamber to close and open communication between said passage and the chamber, a rotatable stem mounted in the casing against longitudinal movement, and means for rotating the stem, said nipple and stem having heads located in said chamber and each comprising a cylindrical portion and a semi-cylindrical portion, said semi-cylindrical portions being arranged with their flat faces in engagement, and each head having a semi-cylindrical shoulder on its cylindrical portion to be engaged by the end of the semi-cylindrical portion of the other head.

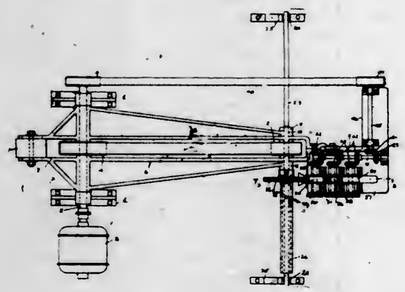
1,349,749. LOADING-MACHINE. FRANK BILLINGS, Cleveland, Ohio. Filed Aug. 24, 1916. Serial No. 116,588. 6 Claims. (Cl. 193—49.)



1. In a loading machine, a frame having a conveyer, a digging member having a blade for moving material

onto the conveyer, a crank for actuating said member and connected thereto adjacent the blade, the said member being substantially horizontal when the crank is in its forward horizontal position, and the frame having a guide member with respect to which the rear part of said digging member has a straight line motion during the rotation of the crank.

1,349,750. PURIFICATION OF DISTILLATION-GASES OF COAL. EDGARD CISELET and CAMILLE DEGUIDE, Brussels, Belgium. Filed July 6, 1915. Serial No. 39,382. 12 Claims. (Cl. 23—13.)

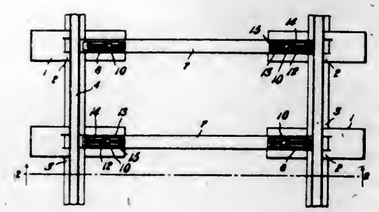


1. In a process for the purification of distillation gases of coal, treating the gases with a liquid containing ammonia in solution and a basic oxy-compound in a suspended condition.

1,349,751. DUST-FUEL CARBURETER. HARRY N. CROSS, Stockton, Calif. Filed Feb. 12, 1919. Serial No. 276,497. 5 Claims. (Cl. 302—52.)

1. A nozzle for dust fuel carbureters comprising a hollow cone adapted to rest on the fuel, the top of the cone having free communication with the atmosphere, and means in the bottom of the cone whereby when air is drawn through the same by the force of an exterior suction a cloud of fuel dust will be caused to arise thereabout.

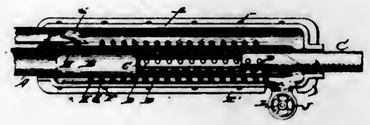
1,349,752. APPARATUS FOR RECOVERING RUBBER FROM ARMORED HOSE AND THE LIKE. CLARENCE F. ERB, Youngstown, Ohio. Filed July 21, 1919. Serial No. 312,184. 10 Claims. (Cl. 154—5.)



1. In apparatus of the character described, the combination of a rotatable and longitudinally movable hose carrying mandrel, cutting means mounted above said mandrel and adapted to be moved into contact with the hose thereon and means for pulling the armor loose from the hose.

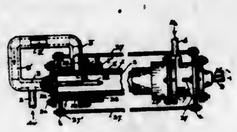
1,349,753. FOOD PRODUCT. NATHANIEL C. FOWLER, Jr., Boston, Mass.; Fannie A. Fowler administratrix of said Nathaniel C. Fowler, deceased. Filed Oct. 4, 1915, Serial No. 53,878. Renewed Jan. 7, 1920. Serial No. 350,062. 4 Claims. (Cl. 99—11.)

1. A food product comprising a body of cooked material having cereal flour as its basis and having intermingled therewith the ground solids of nuts from which oil has been removed, and nut oil, the nut oil being separate from the nut cellular structure in which it was originally found.



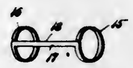
4. A food product, comprising the cooked product of a mixture containing nut materials, including constituent solids from which the oily elements have been separated, finely ground, and nut oil dissociated from the cellular structure originally containing it.

1,349,754. RAILWAY-TIE. ELMER E. FOX, Massillon, Ohio. Filed Mar. 19, 1920. Serial No. 367,035. 6 Claims. (Cl. 238—112.)



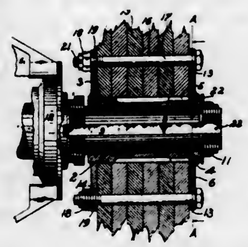
1. A railway tie comprising two rail supporting plates each having integral tangs stamped therefrom to engage the base flange of a rail, a tie bar connecting said plates and provided with angular portions to engage the base flanges of the rails, a bolt located through each supporting plate and through the tie bar and means upon said bolt for drawing the tie bar and the supporting plate tightly together to clamp the base flange of the rail therebetween.

1,349,755. COMBINED MUFFLER, VAPORIZER, AND MIXING-CHAMBER FOR GAS-ENGINES. PERRY J. GARRISON, Oxford, Mich., assignor of one-half to William Reed, Oxford, Mich. Filed Mar. 20, 1919. Serial No. 283,809. 1 Claim. (Cl. 48—107.)



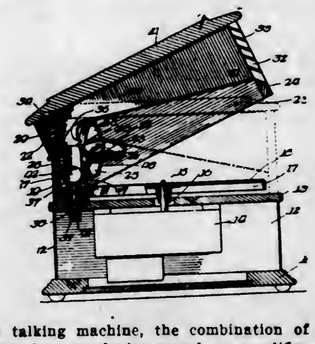
A carbureting device for internal combustion engines having an exhaust pipe leading therefrom comprising a chamber of but slightly greater diameter than said exhaust pipe and into one end of which the exhaust pipe feeds, an outlet from said chamber comprising a perforated tube adapted to impede the gases in the chamber to effect a greater distribution of heat and to muffle the explosion of the engine, a fuel tube for one grade of fuel and a second tube for another grade of fuel coiled about the exterior of said enlarged chamber, an air heating means formed of separable sections of comparatively large diameter between the ends but having openings in the ends which fit the exterior of said chamber, a mixing chamber extending into the air heating means and into which the fuel tubes open, and means for admitting air to the air heating means.

1,349,756. PROCESS OF FORMING A MIXTURE OF HYDROGEN AND NITROGEN FOR AMMONIA SYNTHESIS. GEORGE P. GERFIN and MAX MAURAN, Niagara Falls, N. Y., assignors to The Nitrogen Corporation, Providence, R. I., a Corporation of Rhode Island. Filed Nov. 15, 1918. Serial No. 262,716. 6 Claims. (Cl. 23—10.)



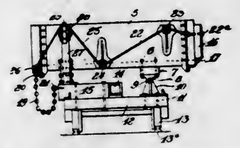
1. A process of producing substantially pure, mixed hydrogen and nitrogen which comprises forming a mixture of air and hydrogen, in which, per unit of volume, the hydrogen is present in excess of the amount thereof which would completely unite with the oxygen content of such volume, in the form of water, causing said mixture to flow through a conduit the walls of which are substantially incapable of deleteriously affecting the product to be formed, igniting said mixture in said conduit and maintaining the temperature of the flame thereby formed, sufficiently high to insure substantially complete elimination of free oxygen from the mixture, cooling the reaction products, separating the water therein from the gases present, compressing said gases and purifying them preparatory to the effectuation of ammonia synthesis therefrom.

1,349,757. CARBON-SHEARING AND COMPRESSION DEVICE FOR INTERNAL-COMBUSTION ENGINES. HENRY H. GOVE, Biddeford, Me., assignor to Gove Motor Company, Biddeford, Me., a Corporation of Maine. Original application filed Apr. 10, 1914, Serial No. 830,906. Divided and this application filed Dec. 28, 1917. Serial No. 209,216. 3 Claims. (Cl. 123—190.)



2. A carbon shearing device for internal combustion engines, comprising an expansible split ring, a bar attached thereto at right angles therewith, one side of said bar being in alinement with the split in said ring and a carbon shearing edge in the side of the bar in alinement with the split and in alinement with the periphery of said ring, whereby the shearing edge is forced outwardly tangentially of the split ring to hold said edge in operative position.

1,349,758. PROPELLER-MOUNTING. ELBERT J. HALL, Berkeley, Calif. Filed Dec. 28, 1915. Serial No. 69,085. 5 Claims. (Cl. 170—173.)



1. A mounting for an aeroplane propeller comprising, in combination, a hub having a fixed flange and a removable flange each of said flanges being provided with a plurality of circumferentially disposed holes, the holes in said fixed flange being materially larger than those in said removable flange, an air screw arranged upon said hub between said flanges, a plurality of bolts passing through the said flanges and through said air screw, said bolts forming a tight drive fit in said air screw and clearing the edges of the holes in said fixed flange, and a nut on each of said bolts having an extension adapted to bush the bolt in the fixed flange, said nut and extension being adapted to be unscrewed from the bolt whereby the air screw with the bolts therein may be withdrawn bodily from said fixed flange.

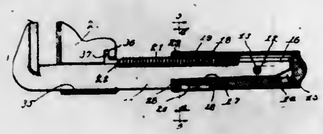
1,349,759. TALKING-MACHINE. WILLIAM M. HOLLOWAY, Maywood, Ill., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed July 31, 1915. Serial No. 42,972. 1 Claim. (Cl. 274—2.)

In a talking machine, the combination of mechanism and parts for reproducing sound, an amplifier, and a tube for conveying sound from said reproducing mechanism and parts to said amplifier, the communication between said tube and amplifier being open and loose without contacting parts, and pivotal supports for said tube and amplifier respectively whereby they have independent movements while the tonic connection is maintained.

1,349,760. DUMPING-VEHICLE. GEORGE L. HANCOCK, Geneva, N. Y. Filed Nov. 12, 1919. Serial No. 337,456. 8 Claims. (Cl. 105—274.)

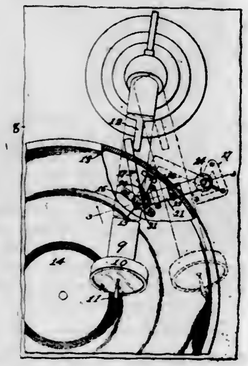
2. In a dumping container, the combination with supporting means, of a body movable thereon from carrying to dumping position, a portion on said body movable relative thereto to permit dumping of the material upon movement of said body to dumping position, controlling means for said movable portion secured thereto and to said body, and actuating means on said supporting means disengaged from said controlling means when said body is in dumping position but coöperating therewith upon return of said body to carrying position to restore said movable portion to corresponding position.

1,349,761. BUTTON. HERMAN H. HELWIG, Philadelphia, Pa., assignor to The Pivot Button Company, Inc., Philadelphia, Pa., a Corporation of New Jersey. Filed Apr. 7, 1919. Serial No. 287,984. 11 Claims. (Cl. 24—105.)



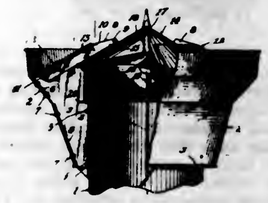
1. In a button, the combination of a shell having a shouldered rear portion, a stud adapted to be inserted

into said shell, a holding device for said stud arranged in said shell in engagement with said shouldered portion,



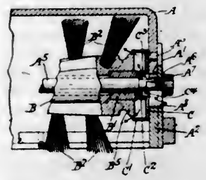
and an annular bead formed in said shell by means of which the holding device is held in place against said shouldered portion.

1,349,762. WRENCH. DANIEL HERLIHY and MILAN H. FISHER, Chicago, Ill.; said Fisher assignor to said Herlihy. Filed Oct. 17, 1919. Serial No. 331,448. 3 Claims. (Cl. 81—160.)



1. In a wrench, the combination with a shank having a jaw at one of its ends, of a handle mounted on the other end of the shank and having a longitudinally extended opening for the latter and provided with a longitudinally extended recess communicating with said opening, means to secure the handle and shank together, a rack bar mounted longitudinally and slidably on the shank and extended into said recess of the handle, a jaw carried by the rack bar, said rack bar having at one of its edges a part overhanging the shank and provided with transversely disposed teeth extended from one of its edges to the other edge thereof, a nut rotatably mounted on the handle and having segmental screw-threads to engage the teeth of the rack bar, the ends of each screw-thread being sufficiently spaced apart to permit of the free movement of the rack bar there-between, one end of each of said segmental threads being inwardly beveled and having a knife-like edge presented toward the teeth of the rack bar.

1,349,763. PHONOGRAPH CONTROL. JOSEPH HOFFAY, New York, N. Y. Filed June 26, 1916. Serial No. 105,908. 14 Claims. (Cl. 74—46.)

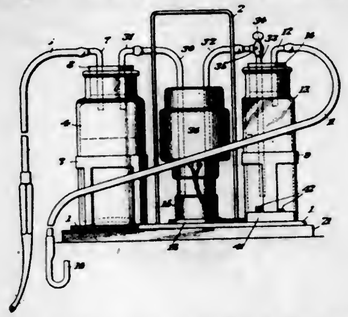


1. The combination with a turntable and a member traveling thereover as said turntable rotates, of mechanism for automatically stopping the rotation of said turntable after a selected movement of said member thereover, said mechanism comprising an element arranged to follow the movements of said member when the turntable is at rest, and means for automatically locking said element in any position into which it has been moved by said member when said mechanism is rendered inoperative to permit the turntable to rotate, thereby to set said mechanism for the selected movement.

1,349,764. VENTILATOR. CHARLES HOFSTETTER, Peoria, Ill. Filed Oct. 4, 1918. Serial No. 256,892. 5 Claims. (Cl. 98—4.)

4. In a ventilator, in combination, an eduction pipe having an open upper end, a skirt surrounding the said pipe at said upper end and extending above the opening thereof, braces connecting the skirt and pipe, a cap supported in spaced relation above said opening, a valve suspended beneath the same adapted for closing the said opening but normally spaced therefrom, a ring having its inner marginal edge spaced above the marginal edge of the cap and its outer marginal edge overhanging the space between the skirt and the pipe, means for securing the ring to the cap in spaced relation and detachably secured to the braces, the said cap and ring and said valve being bodily removable from said braces.

1,349,765. METHOD OF AND APPARATUS FOR PROTECTING THE BEARINGS OF SUCTION-CLEANERS. HERBERT W. HOOVER, New Berlin, Ohio, assignor to The Hoover Suction Sweeper Company, New Berlin, Ohio, a Corporation of Ohio. Filed July 26, 1917. Serial No. 182,827. 11 Claims. (Cl. 15—60.)

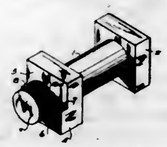


1. The process of protecting the end parts of a rotating device which is mounted in a casing through which dust laden air passes, from the accumulation of matter carried by the air between the end of such rotating part and the adjacent wall portion of the casing, which consists in directing a protecting current of air through the space between the end of the rotating part and the adjacent wall of the casing in opposition to the current of dust laden air, to deflect the same away from such space.

1,349,766. BLOOD-REMOVING AND ETHERIZING APPARATUS. ALMA C. HUNT, New York, N. Y. Filed Dec. 11, 1919. Serial No. 344,072. 4 Claims. (Cl. 128—278.)

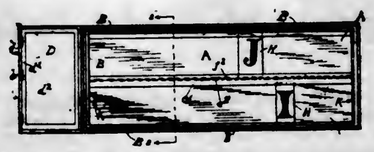
1. An apparatus of the class described comprising a receiving container, a suction tip connected thereto, an ether container, an etherizing tip connected thereto, a rotary air pump provided with a vertical shaft and a horizontally moving rotor, a pipe connecting the air

pump intake to the receiving container, a pipe connecting the air pump outlet to the ether container, an electric motor supported directly upon the upper end of the air



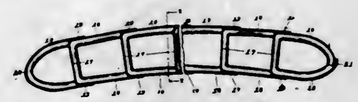
pump and provided with a vertical motor shaft, and means for slidably connecting together the lower end of the motor shaft and the upper end of the air pump shaft.

1,349,767. RUBBER-DAM-CLAMP FORCEPS. JAMES W. IVORY, Philadelphia, Pa. Filed Sept. 23, 1919. Serial No. 325,683. 5 Claims. (Cl. 32—20.)



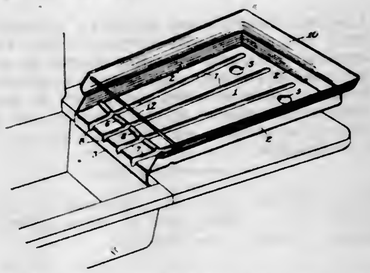
1. A forceps for a rubber dam clamp having on the outer terminals of the jaws a plurality of beaks extending angularly therefrom, the central beak being adapted to enter an opening in the clamp and the other beaks adapted to contact with the adjacent portions of said clamp to steady the latter and limit the degree of penetration of said central beak.

1,349,768. NUT-LOCK. GUSTAF JOHNSON and EIGNAR NELSON, Seattle, Wash. Filed Apr. 16, 1920. Serial No. 374,336. 1 Claim. (Cl. 151—25.)



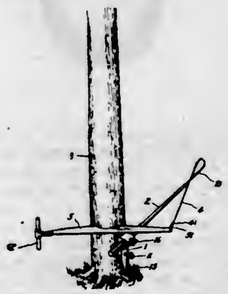
In a nut lock, a bolt, a nut having one of its faces formed with a raised and a depressed portion, said portions being separated by a straight and a beveled shoulder, and a spring stop having one pointed end and one non-pointed end and adapted to partially encircle said bolt and for engagement terminally with either of the said shoulders and with the bolt threads.

1,349,769. CHANGEABLE SIGN. HERMAN KAHN, Chicago, Ill. Filed May 12, 1919. Serial No. 296,377. 2 Claims. (Cl. 40—140.)



1. A grouping frame comprising, in combination, a U-shaped longitudinally extending member, a plurality of additional longitudinally extending members, and means to hold said plurality of members parallel to each other and parallel to and in spaced relation to said U-shaped member, whereby bases provided with characters thereon may be inserted between said plurality of members and moved transversely thereto and toward said U-shaped member, to seat said character base in said U-shaped member.

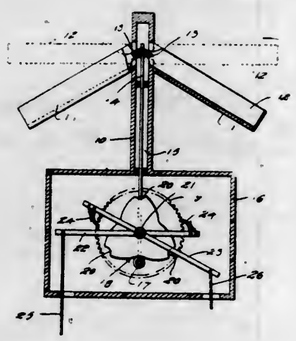
1,349,770. WING CONSTRUCTION FOR FLYING-MACHINES. THOMAS J. KEHOE, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Nov. 22, 1917. Serial No. 203,320. 17 Claims. (Cl. 244—31.)



1. A flying machine provided with wings of sheet metal construction formed of a plurality of channel-shaped members telescoped with reference to each other and secured together, providing passages extending longitudinally of the wing structure within the same.

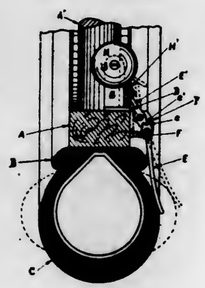
1,349,771. DISH-DRAINER. ROBERT KLINE, Cleveland, Ohio. Filed Nov. 29, 1918. Serial No. 264,665. 1 Claim. (Cl. 141—9.)

A dish drainer comprising a straight edged tray, one of the edges being turned downwardly to constitute a discharge side and the remaining edges being turned upwardly to form dish-receiving walls, the margin of said first side being bent around substantially parallel with the bottom of the tray so as to form a hook adapted to embrace the end of the sinkboard.



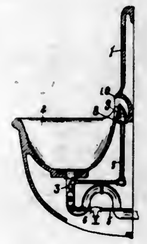
1,349,772. TREE-SAWING MACHINE. GIKICHI KUSUTANI, Seattle, Wash. Filed Aug. 19, 1919. Serial No. 318,514. 3 Claims. (Cl. 143—62.)

1. A tree-sawing machine comprising a boom, means for securing said boom to a tree trunk to project laterally



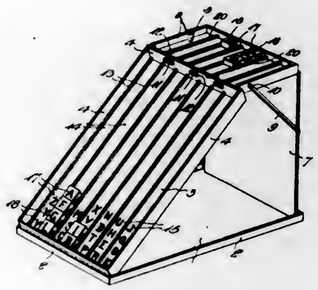
therefrom, a saw, a flexible whiparm secured in the outer end of said boom, and a link connecting the free end of said whiparm to an end of the saw to permit relative movement of the saw transversely of the boom.

1,349,773. RAILWAY-SIGNAL. ROBERT S. LA MERE, Dresser Junction, Wis. Filed Dec. 29, 1919. Serial No. 347,907. 4 Claims. (Cl. 246—294.)



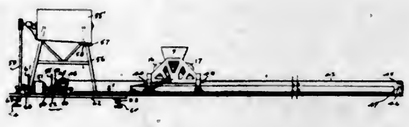
4. A railway crossing signal including a vertically movable signal arm, a signal post carrying the arm, a signal rod connected to the arm, a rotating member for controlling movement of said rod by its rotation continuously in one direction, a pair of levers having dogs for engaging and rotating said member in one direction, and a pair of actuating mechanisms, each connected to one of said levers, as described.

1,349,774. SIGNAL DEVICE. THEODORE G. LEMPGES, Dunkirk, N. Y. Filed Oct. 11, 1919. Serial No. 330,015. 1 Claim. (Cl. 116—34.)



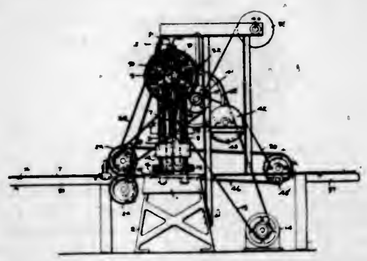
In a device of the class described, a vehicle wheel having a pneumatic tire thereon, an angle-iron secured on the felly of said wheel, a bracket-arm on said angle-iron radially positioned between spokes of said wheel, a signal device including an operating lever, supported on said bracket-arm, an out turned ear on said angle iron, a pair of levers pivoted on said ear, one of which levers engages the operating lever of said signal device, and the other of said levers engages the side of said tire, and intermeshing teeth on said levers, whereby the movement of the tire actuated lever is imparted to the other lever, substantially as set forth.

1,349,775. DRINKING-FOUNTAIN. FRANK T. LYMAN and FRANK J. KLIMM, San Francisco, Calif. Filed Sept. 4, 1917. Serial No. 189,513. 2 Claims. (Cl. 299—12.)



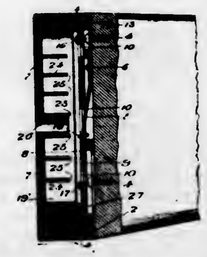
1. A drinking fountain comprising a bowl and a nozzle for throwing an inclined stream over the bowl, the nozzle having a horizontally elongated mouth.

1,349,776. EDUCATIONAL TOY. ALEXANDER L. MACKINTOSH, Denver, Colo., assignor of one-half to David R. Riddick, Rawlins, Wyo. Filed Nov. 25, 1918. Serial No. 264,051. 5 Claims. (Cl. 35—1.)



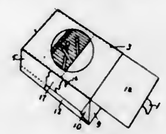
1. An educational toy comprising a chute having educational characters on its bottom, and a plurality of blocks adapted to be slid along said chute, said blocks displaying characters corresponding to those aforesaid.

1,349,777. MACHINE FOR FABRICATING PLASTER-BOARD. JOHN F. MAKOWSKI, San Francisco, Calif., assignor of one-half to James A. Levensaler, San Francisco, Calif Filed Feb. 6, 1918. Serial No. 215,627. 9 Claims. (Cl. 154—1.)



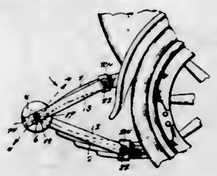
1. A plaster board machine including a stationary bed; a carriage adapted to travel over said bed; a plaster hopper on said carriage having an outlet and means for feeding sheets of paper on opposite sides of said hopper, and depositing said sheets on said bed as said carriage moves thereover.

1,349,778. WALL-BOARD AND PROCESS OF MANUFACTURING THE SAME. JOHN F. MAKOWSKI, San Francisco, Calif, assignor of one-half to James A. Levensaler, San Francisco, Calif. Filed Sept. 7, 1917, Serial No. 190,131. Renewed Dec. 29, 1919. Serial No. 348,044. 7 Claims. (Cl. 154—2.)



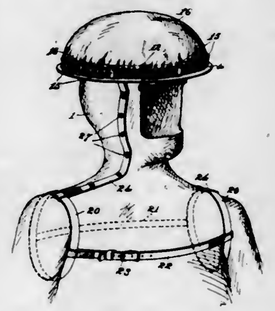
1. A process of manufacturing wall board comprising flowing a core of plastic material between reinforcing sheets of paper, allowing the same to stand until dry, and then punching holes through the completed board.

1,349,779. RECOIL-PAD FOR FIREARMS. WEBSTER L. MARBLE, Gladstone, Mich. Filed Nov. 4, 1919. Serial No. 335,590. 9 Claims. (Cl. 42—74.)



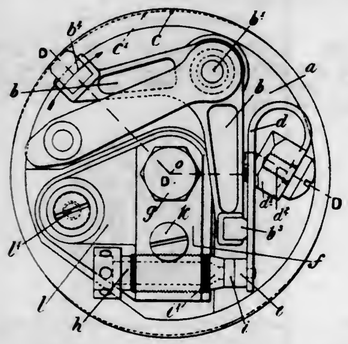
5. A recoil paid for fire arms comprising a hollow pad proper which has internal ribs, bars or partitions, and an attaching plate secured to the pad proper, said ribs, bars or partitions having their free edges normally separated, or spaced from the attaching plate and adapted to bear against the said plate.

1,349,780. CARDBOARD BOX. MIGUEL MONTANÉ MARTOS, Mexico, Mexico. Filed May 13, 1919. Serial No. 296,841. 6 Claims. (Cl. 206—48.)



6. A box formed of sheet material and comprising connected top, bottom, side and end pieces, the end pieces being permanently closed and the top piece being provided with an aperture for the removal of the contents of the box; a sliding lid to cover and uncover the aperture; and a false bottom within the box upon which the said contents rest, the false bottom having supporting flaps at its side edges which rest upon the bottom piece to elevate it thereabove and thereby provide a separate compartment to receive articles of a different character from those contained in the body of the box and also having an upturned flap at one end adapted to be secured to the adjacent end piece of the box, said end piece having a delivery opening formed in it to provide communication with said compartment.

1,349,781. SHOCK-ABSORBER FOR AUTOMOBILES AND OTHER VEHICLES. JULIUS B. MOORE, Durango, Colo. Filed Sept. 24, 1919. Serial No. 326,089. 1 Claim. (Cl. 267—9.)



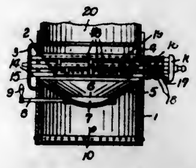
The combination with a bowed vehicle spring and a chassis or frame one end of which is connected to one end of the spring, of a shock absorber disposed coaxially with the connection between the ends of the spring and the chassis, said shock absorber comprising a pair of concentrically arranged opposed members, arms secured to the outer faces of the members and arranged at an acute angle, said arms being in turn pivotally mounted on the chassis and the spring, the inner face of one of said members being of concavely V-shaped formation, the meeting crotch of the concavely V-shaped face extending across the diameter of the member, thereby providing broad sloping solid cam faces of semi-circular outline, the inner face of the adjacent member being convexly V-shaped, the apex thereof extending across the diameter of the member, thereby providing broad sloping solid cam faces of semi-circular outline, whereby the apex may enter the crotch, and also whereby the broad solid camming surface may coöperate for absorbing the shock, and means passing concentrically through said members and including relatively strong compression means for urging pressure on the outer faces of the members, to hold them in frictional contact, whereby as the arms move with the chassis and the spring, the broad solid camming faces will act together with the compression means to absorb the shocks.

1,349,782. SAFETY DEVICE FOR AVIATORS. JOSEPH R. NAVARRE, Lakeside, Wash. Filed Feb. 21, 1919. Serial No. 278,542. 7 Claims. (Cl. 244—21.)

1. A safety device for aviators comprising a helmet, a parachute, a coiled spring in the periphery thereof, said spring having an aperture adjacent one end thereof, an eye on said spring adapted to extend through said aperture to hold the spring in coiled position, a releasing pin extending through said eye, substantially as described.

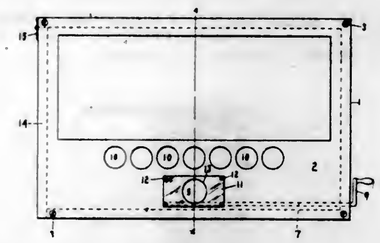
1,349,783. ELECTRIC CONTACT-BREAKER. FREDERICK HENRY ROYCE, Derby, England, assignor to Rolls-Royce Limited, Derby, England. Filed May 6, 1918. Serial No. 232,822. 1 Claim. (Cl. 200—30.)

A contact breaker for the magnetos of internal combustion engines, comprising in combination a stationary cam having a very slight eccentricity and a long and very gradual approach, the ratio of approach to eccentricity being relatively high; a frame rotatable within the cam; a double-armed rocking lever carried by said frame and actuated by said cam to receive a harmonious and smooth motion, one arm of said lever being maintained in constant contact with said cam by centrifugal force alone; a spring mounted on the frame independently of the cam and rocking lever; and a movable contact carried by the spring, the second arm of the rocking lever freely contacting with said spring so that on rotation of the frame in relation to the cam, the spring is alternately put in tension by the rocking lever to cause the movable contact to break circuit and released to remake said circuit under the action of the spring; the aforesaid disposition of the elements permitting forces of inertia in the contact mechanism to be reduced to a minimum and readily overcome, while allowing high rotational speed of the frame.



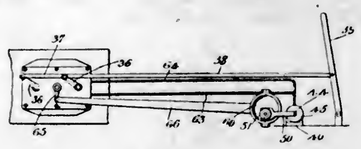
1,349,784. CONCRETE COOKER. FLETCHER A. SAUNDERS, San Pedro, Calif. Filed Jan. 7, 1918. Serial No. 210,634. 4 Claims. (Cl. 126—369.)

1. In a cooker for fish and like articles of food, a chamber having interiorly exposed concrete walls, means to introduce live steam into the chamber and in contact with the exposed concrete walls thereof, and means to support articles of food to be cooked therein exposed to the radiant heat of the walls and to the direct action of and contact with the steam.



1,349,785. GARBAGE-INCINERATOR. WILLIAM SAVAGE, Three-Rivers, Quebec, Canada. Filed Apr. 25, 1919, Serial No. 292,679. Renewed July 2, 1920. Serial No. 393,566. 3 Claims. (Cl. 110—18.)

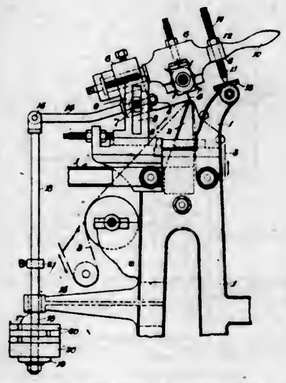
1. An incinerator comprising a casing containing an incinerating chamber and an ash pit therebeneath; a hopper within the casing between said chamber and pit, adapted to receive and support the material to be incinerated and to discharge the ashes into the pit; a movable closure for the discharge end of the hopper having operating means projecting exteriorly of the casing, a plurality of looped burner pipes arranged one above another in said chamber immediately above said hopper to act directly on



the material therein, the loop of each succeeding pipe being slightly larger than that of the next lower pipe; a gas header to which all of the burner pipes are connected exteriorly of the casing; and an obliquely-arranged annular protector mounted immediately over each of said pipes.

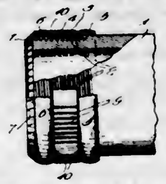
1,349,786. DISPLAY-STAND AND COIN-HOLDER. ADOLPH SCHLUETER, Oakland, Calif. Filed June 20, 1918. Serial No. 241,032. 2 Claims. (Cl. 133—11.)

1. In a device of the character described, a casing having an opening forming a money depository pocket therein communicating with the exterior of the casing, means below said opening for closing the same and controlling the passage of articles from the pocket to the interior of the casing, a guard member covering the pocket and having an opening therein, said opening in the guard permitting recovery of money from the pocket when desired, and means whereby said controlling means may be operated.



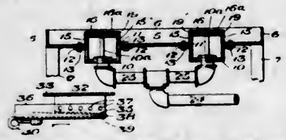
1,349,787. INTERCHANGEABLE STEAM CHEST AND VALVE. CHRISTIAN H. SCHLUNDT, Indianapolis, Ind. Filed Mar. 5, 1918. Serial No. 220,473. 2 Claims. (Cl. 121—150.)

1. A valve gear comprising a frame, a rod slidably mounted therein, a cylinder mounted thereon, a piston mounted on the rod and slidably received in the cylinder, means for admitting fluid pressure to the cylinder at the opposite sides of the piston, an arm carried by the rod, a second rod journaled on the frame, a collar carried by the second mentioned rod and engaged at the arm, a second collar slidably mounted on the last mentioned rod and constrained to rotate in unison with the same and connected with the first mentioned collar, a hub receiving the second



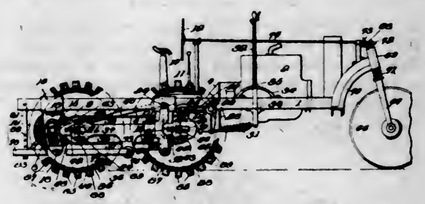
mentioned collar, cam slot and groove connections between the hub and second mentioned collar, an eccentric mounted on the hub and a rod operatively connecting the eccentric with the valve.

1,349,788. CLOTH CUTTING OR SHEARING MACHINE. ARTHUR EDWIN SELLERS, Huddersfield, England. Filed Dec. 22, 1919. Serial No. 346,552. 1 Claim. (Cl. 26—6.)



In a cloth cutting machine, a frame, a support for the cloth, a stock pivoted to the frame and provided with a cutting device, an arm projecting from the stock, a guide bracket secured to the frame, a rod pivoted to the said arm and slidable vertically in the guide bracket, a counterbalance weight for the stock carried by the said rod, and a stop collar secured on the rod above the guide bracket and limiting its downward movement by contact with the guide bracket.

1,349,789. SCREW-THREAD PROTECTOR. JULIUS SCHIRRA, Pittsburgh, Pa., assignor to Brown Specialties Company, Pittsburgh, Pa. Filed Oct. 10, 1919. Serial No. 329,707. 2 Claims. (Cl. 137—91.)

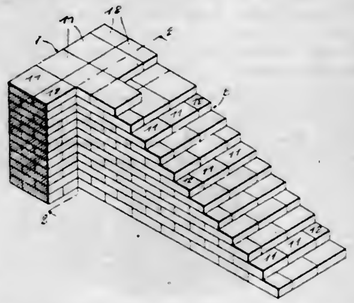


1. In a screw-thread protector, a nonmetallic sleeve having open ends and having spaced annular beads thereabout, and a metal band embracing the part of the sleeve between said heads and having sharp edges to engage with said beads for preventing accidental removal of the metal band from the space between the beads.

1,349,790. FUEL-BURNER. JAMES R. SMITH, Mechanicsville, N. Y. Filed Feb. 18, 1918. Serial No. 217,949. 3 Claims. (Cl. 110—74.)

1. A fuel burner embodying the combination of a sealed fuel support, and an air blast feeder having means for discharging the air from points above the fuel support in a general downward direction into the fuel and onto the fuel support to cause rebounding of the air upwardly through the fuel.

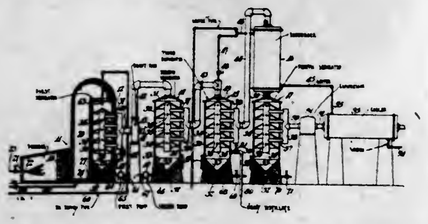
1,349,791. TRACTOR-TRUCK. WILLIAM STRAIT, Appleton, Wis., assignor to The Cleveland Tractor Company, Euclid, Ohio, a Corporation of Ohio. Filed June 6, 1917. Serial No. 173,167. 19 Claims. (Cl. 180—21.)



1. In a machine of the class described, the combination of a main frame, an arm flexibly connected near one of its ends to the main frame, a cushioning device interposed between the main frame and arm near said connection, cushioning means interposed between the main frame and said arm near the other end of the latter, and ground engaging wheels carried by said arm substantially in line with each other.

1,349,792. CONDENSER. RALPH W. STEARNS, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 24, 1916. Serial No. 127,480. 15 Claims. (Cl. 250—41.)

5. A condenser having a high internal ohmic resistance to high frequency alternating currents.



1,349,793. WALL CONSTRUCTION. KERKOR TOROSIAN, Manchester, N. H. Filed June 12, 1919. Serial No. 303,566. 3 Claims. (Cl. 72—37.)

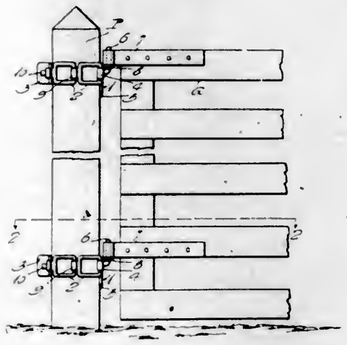
1. A brick wall in which every course forms a tie course, each course being formed of relatively small

oblong bricks and relatively large square bricks, the oblong bricks extending longitudinally of the wall and the oblong bricks of one course being positioned between the square bricks of courses above and below the said course.

1,349,794. APPARATUS FOR TREATING HYDROCARBON OILS. MILON J. TRUMBLE, Alhambra, Calif., assignor to Shell Company, California, a Corporation of California. Filed July 19, 1916. Serial No. 110,080. 4 Claims. (Cl. 196—25.)

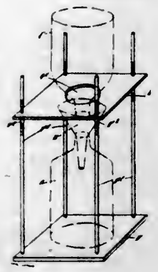
4. An apparatus for treating hydrocarbon oils comprising a furnace, means in said furnace for producing hot gases, a separator having an opening in the top thereof, a flue for conducting the hot gases formed in the furnace to said opening, and an inlet pipe so arranged as to spray the oil to be treated through said opening in the direction of the hot gases.

1,349,795. COMBINED SALT AND PEPPER SHAKER. OTTO M. VOGEL, Taber, Alberta, Canada. Filed Jan. 6, 1920. Serial No. 349,669. 4 Claims. (Cl. 65—45.)



1. A condiment holder including a body having a central partition arranged therein dividing the same into a pair of compartments, a detachable cap carried by the body, a partition carried by the cap and arranged to detachably engage the partition carried by the body, the cap having appositely inclined walls arranged on the opposite sides of the partition, said walls having a plurality of openings formed therein, and baffle plates arranged adjacent to the walls.

1,349,796. VULCANIZING-MOLD FOR BOOTS AND SHOES. DIRK FRANS WILHELMI, Doorwerth, Netherlands. Filed Feb. 14, 1920. Serial No. 358,614. 4 Claims. (Cl. 18—38.)



1. Vulcanizing-mold for the manufacturing of boots or shoes, comprising a last, having at its point and heel, parts which can be moved in and out, circumference mold-sections, a sole-mold section which can be placed under pressure and means for moving the parts at point and heel of the last in and out.

1,349,797. GATE-HINGE. CHESTER L. WILLIAMS, Chapin, Ill. Filed Nov. 24, 1919. Serial No. 340,087. 1 Claim. (Cl. 16—49.)

A gate hinge comprising a flat metal hinge carrying plate having its opposite ends reduced in width and bent to form relatively wide hooks and being provided at the center of its bottom edge with a depending tongue to bear against the post and prevent possible sagging of the gate, a pair of rectangular open links made of malleable iron and having one of their ends disposed in said hooks, each link being provided at its opposite end with a hook of the same width as the first named hooks, additional rectangular open links attached to the second named hooks, these links being likewise provided at their opposite ends with like hooks, a pair of L-shaped connecting plates, each having a slot at one end for reception of one of the last named hooks and being apertured at their opposite ends, and a bolt passing through said apertures to retain the connecting plates together.

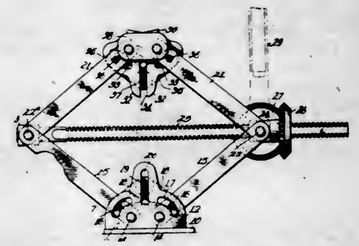
1,349,798. FILTRATION AND/OR PERCOLATION OF LIQUIDS. CYRIL YEOMAN, Herne Hill, England. Filed Oct. 2, 1916. Serial No. 123,268. 2 Claims. (Cl. 210—156.)

1. In an apparatus for the purpose described, the combination of a filter, a receptable for filtered liquid, a container for liquid to be filtered having a neck portion extending into the filter, whereby its outlet will be immersed in the liquid therein, a valve for controlling flow of liquid to the filter adapted to normally float in the liquid in said container, and means for moving the valve to close the outlet from the container.

2. In combination, a filtering device comprising a funnel provided with a filtering medium, a vessel for receiving the filtered fluid from said funnel, a container for the unfiltered fluid, provided with a neck at one end, said container being inverted and supported with its neck portion projecting directly into said funnel, a valve within said container, and a string connected to said valve and threaded through the neck portion of the container and over the edge of said funnel to permit said valve to be drawn into operative position to close off the flow of unfiltered fluid from said container.

1,349,799. COLLAPSIBLE BURIAL-CASKET. ALBERT W. ALBRECHT, St. Louis, Mo. Filed July 26, 1918. Serial No. 246,825. 1 Claim. (Cl. 220—7.)

A collapsible burial casket, composed of sheet metal comprising a bottom wall; an upwardly extending end wall portion integral with each end of the bottom wall; a side wall pivoted to one side edge of the bottom wall and being foldable inwardly upon the bottom wall between said end wall portions; an additional side wall composed of a lower part pivotally united to the opposite side edge of the bottom wall and an upper part pivoted to the lower part and arranged to fold upon the lower part between said end wall portions to position the upper edge of the upper part above the edge of the bottom wall to which the lower part of said side wall is pivoted; a top wall of equal width with the bottom wall pivoted to the upper edge of said upper part of said side wall and arranged to fold inwardly between said end wall portions and with its edges vertically above the edges of the bottom wall; end wall upper portions hinged to the upper edges of the end wall lower portions and being foldable inwardly upon the top wall after the top wall has been placed as aforesaid; means for interlocking the vertical edges of the upper end wall portions with the side walls to hold all of said walls in vertical position; said means comprising inwardly extended tongues on the vertical edges of the end walls arranged to spring into lateral extensions on the side walls and curved resilient flanges on the edges of the top wall arranged to interlock with flanges on the side and end walls.

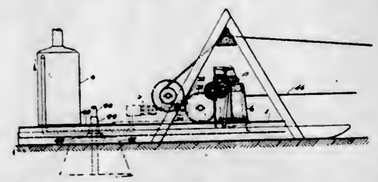


1,349,800. CONSTRUCTION OF SHIPS. WILLIAM ALDERSON, Kimberley, South Africa. Filed Sept. 4, 1918. Serial No. 252,643. 2 Claims. (Cl. 114—68.)

1. The improved construction of double-skinned vessels exposed to collision, mines or torpedoes, characterized by having between the outer and the inner skin of the vessel a plurality of water-tight divisions, each division passing vertically downward from above the water-line on one side of the vessel to above the water-line on the other side of the vessel, and forming a plurality of water-tight chambers each continuous around the inner skin of the vessel.

1,349,801. JACK. ALFRED O. ALSTEN, Worcester, Mass., assignor of one-third to Frank A. Sanderson and one-third to Alvin L. Johnson, Worcester, Mass. Filed Jan. 2, 1917. Serial No. 140,023. 9 Claims. (Cl. 254—126.)

1. In a jack of the lazy tongs type, the combination with four links constituting the lazy tongs, of a screw connecting the opposite pivot points thereof, said screw being non-circular in cross section, and a block to which two of the links of the lazy tongs are pivotally connected,



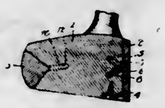
said block having a passage therethrough of non-circular shape for preventing the turning of the parts on the axis of the screw.

1,349,802. PROCESS OF MANUFACTURE OF PICRIC ACID. LOUIS G. BADIER and LIONEL B. HOLLIDAY, Huddersfield, England, assignors to L. B. Holliday & Co. Limited, Huddersfield, England, a Corporation of Great Britain. Filed Dec. 30, 1919. Serial No. 348,466. 1 Claim. (Cl. 23—24.)

A method of manufacturing picric acid, which consists in first treating dinitrophenol with about two and one-half times its weight of concentrated sulfuric acid, and then adding to the mixture nitric and sulfuric acids in about equal proportions and with the nitric acid from three to seven per cent. in excess of the quantity required by theory to effect complete nitration, the temperature of the mixed liquids being maintained at from twenty to thirty degrees centigrade while the nitration is being effected.

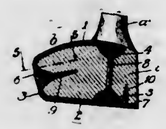
1,349,803. STUMP-PULLING MACHINE. HARRY E. BARBER, Green Cove Springs, Fla., assignor, by mesne assignments, to The American Clearing Company, Hamilton, Ohio, a Corporation of Delaware. Filed Aug. 22, 1919. Serial No. 319,133. 17 Claims. (Cl. 254—185.)

1. In a mechanism of the character described, an anchor to be sunk in the ground, a base pivotally connected with said anchor, a stump pulling device carried by said base, and means for connecting said device with a stump to be pulled.



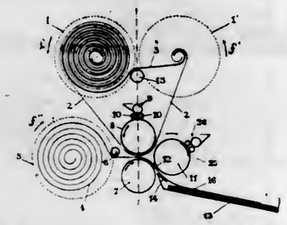
1,349,804. ELECTRIC FIRE. HERBERT HENRY BERRY and JAMES WATT REID, London, England. Filed Dec. 30, 1919. Serial No. 348,368. 1 Claim. (Cl. 240—2.)

In an electric imitation fire, a basket to contain electric lamps, a movable top for the basket, imitation fuel on



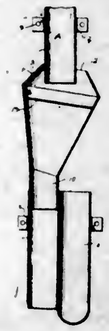
said top, and fans arranged under the top and connected thereto for rotation, said fans being carried wholly by and removable with said top.

1,349,805. GOLF-CLUB. CHARLES W. BOOTH, Chicago, Ill. Filed Mar. 27, 1919. Serial No. 285,593. 6 Claims. (Cl. 46—4.)



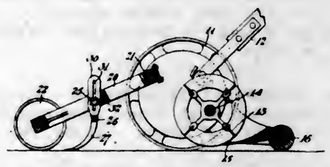
1. A golf club comprising a club head, a metal attachment thereto, and means for securing said metal attachment to said club head, said securing means consisting of projections on said attachment which interlock with holes formed in said club head, said projections being initially out of line with the holes which they engage, respectively, substantially as described.

1,349,806. GOLF-CLUB. CHARLES W. BOOTH, Chicago, Ill. Filed May 24, 1919. Serial No. 299,516. 9 Claims. (Cl. 46—4.)



1. A golf club comprising a head or body portion and a strap or band secured thereto comprising sections which extend over the top and sole of the club and around the back thereof, and weight enlargements formed on the top and sole sections of said strap substantially in line with the shaft of the club, substantially as described.

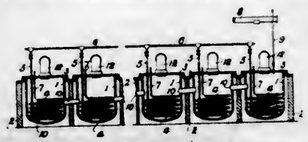
1,349,807. MACHINE FOR PRINTING OR REPRODUCING ADDRESSES AND OTHER TYPED OR WRITTEN MATTER. ALFRED DE BRAYER, Paris, France. Filed May 30, 1917. Serial No. 171,804. 2 Claims. (Cl. 101—50.)



1. In a machine for printing addresses and the like, the combination of a record band having the matter to be reproduced inscribed thereon; a drum on which the band is initially wound and from which it is unwound; a drum on which the band is wound as it unwinds from the first drum; a roller around which said band passes on its way from the first drum to the second; inking means associated with said roller; means for pressing the paper on which the inscribed matter of the record band is to be printed against said band; a cylinder having a printing surface thereon for printing additional matter on the paper while it is passing through the machine, said cylinder adapted to coöperate with said paper-pressing means; and means for inking said printing surface.

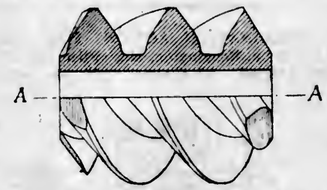
1,349,808. REVERSIBLE RAIN-WATER CUT-OFF. THEODORE H. BRISON, Sioux Falls, S. D. Filed Oct. 24, 1919. Serial No. 333,037. 1 Claim. (Cl. 137—9.)

In a rain water cut off as set forth, the combination with a main drain pipe, of a pair of pipe sections spaced below, one acting to drain waste water, the other acting to drain water to be used, the latter having a lateral extension to drain into a cistern, the main drain pipe being arranged axially between the pipe sections, a cut off member, comprising a main funnel shaped body having its lower end terminating in a cylindrical extension arranged at an angle to the body, whereby the extension may have a substantial telescopical fitting engagement in either one of said pipe sections, the upper part of the body terminating in a frusto-conical top portion having an opening of a substantial relatively larger diameter than the main drain pipe, the open end of the frusto-conical top portion having a substantial loose slipping engagement with the lower end of the main drain pipe whereby the body may be raised and lowered a substantially considerable degree, so that the extension may be easily connected and disconnected to and from either one of the pipe sections.



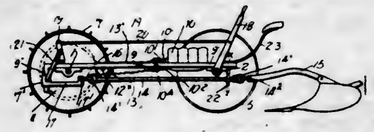
1,349,809. BERMUDA-GRASS CUTTER. MARINUS BRONNUM, South Pasadena, Calif. Filed June 2, 1919. Serial No. 301,339. 2 Claims. (Cl. 56—312.)

1. In combination a pair of lawn mower wheels; a handle by means of which said wheels are driven over the ground; fixed knife; a main frame carrying said fixed knife said wheels being pivoted in said frame; a roller pivoted in said frame in such a position as to support said fixed knife just above a surface on which said wheels and roller rests; a rotary knife driven by said wheels and coöperating with said fixed knife to cut the grass upon which the mower is operated; an auxiliary frame pivoted to said main frame and extending forwardly therefrom; wheels for supporting the forward end of said auxiliary frame; and rake teeth carried by said auxiliary frame.



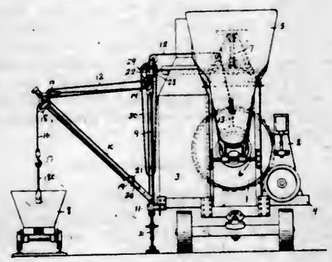
1,349,810. EVAPORATOR. JOHN N. BROOKE, Halifax, England. Filed July 1, 1918. Serial No. 242,883. 1 Claim. (Cl. 257—205.)

An apparatus for concentrating weak picric acid under atmospheric pressure, comprising a series of vessels, pipes extending between the vessels, said pipes being arranged at successively decreasing levels, so that the level of the liquor in each vessel is a little lower than in the vessel preceding it in the series, and means for applying steam



heat to the liquor in the vessels to concentrate it and effect the formation of crystals of picric acid.

1,349,811. WORM-GEARING. PERCY BROWN and FRANCIS JOHN BOSTOCK, Huddersfield, England. Filed Sept. 18, 1919. Serial No. 324,549. 5 Claims. (Cl. 74—41.)

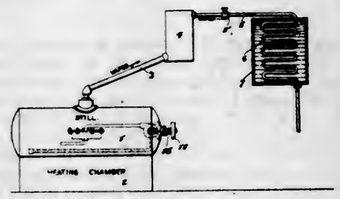


1. A worm having its thread so formed that the sides of said thread, upon a section obtained by a plane containing the axis, are portions of hyperbolas, substantially as herein shown and described and for the purpose set forth.

1,349,812. TRACTOR-VEHICLE. HERBERT JOHNSTON BURKE, Essex, Ontario, Canada. Filed Mar. 27, 1919. Serial No. 285,594. 2 Claims. (Cl. 180—14.)

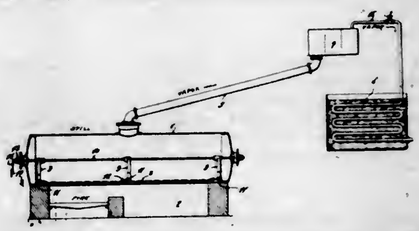
1. In a tractor vehicle, the combination with the forward axle, of a lever fulcrumed thereon intermediately of its length so as to form a rearwardly extending long arm adapted to be suitably weighted at its free end and a forwardly extending short arm, a depending extension to the end of the short arm, a bar extending rearwardly from the depending extension and slidable thereon, lever operated means for slidably adjusting the bar upon the depending extension, a draw bar connected at one end to the bar and adapted to be connected to the load at the opposite end.

1,349,813. MATERIAL-TRANSFERRING APPARATUS. EDWARD G. CARR, Cleveland, Ohio, assignor to The Lakewood Engineering Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 8, 1918. Serial No. 221,142. 7 Claims. (Cl. 214—17.)



1. In material transferring apparatus, the combination with a hopper of means for lifting the same, a boom and flexible means connecting the hopper and the boom to raise the boom when the hopper falls and to lower the boom when the hopper is lifted.

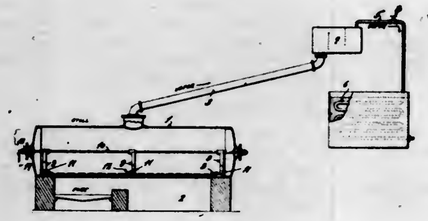
1,349,814. CROSSTIE. RIMMON J. CARR, Petoskey, Mich. Filed Sept. 29, 1919. Serial No. 327,054. 4 Claims. (Cl. 238—216.)



1. In a cross tie, a bar extending longitudinally of the tie, a plate on each end thereof, rails supported upon said plates, means for preventing longitudinal movement of the rails upon the tie, and means carried by said bar for preventing transverse movement of the rails upon the tie.

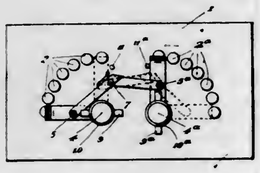
1,349,815. APPARATUS FOR CRACKING HYDROCARBONS. JOHN W. COAST, Jr., Tulsa, Okla, assignor to The Process Company, Tulsa, Okla., a Corporation of Maryland. Filed Sept. 27, 1917. Serial No. 193,455. 1 Claim. (Cl. 196—3.)

In an apparatus for cracking petroleum hydrocarbons, a fire-heated cracking still wherein a body of hydrocarbon oil is confined, the bottom of the still being exposed to the fire, means for separating coke-forming matter from said body of oil, said means including an intake conductor arranged within the still and having an inlet near the heated lower portion of the still, a filter communicating with said intake conductor, said filter having an outlet for the discharge of filtered oil to the main body of oil, and a pump whereby oil is circulated through said intake conductor and filter, said pump and filter being arranged within the still, and pump operating means at the exterior of the still.



1,349,816. ART OF CRACKING HYDROCARBONS. JOHN W. COAST, Jr., Tulsa, Okla., assignor to The Process Company, Tulsa, Okla., a Corporation of Maryland. Filed Sept. 27, 1917. Serial No. 193,470. 1 Claim. (Cl. 196—25.)

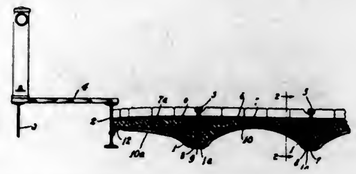
In the art of cracking petroleum hydrocarbons, the method which comprises confining a body of hydrocarbon oil in a large horizontal cylindrical fire-heated cracking still, the arcuate bottom of the still being exposed to the fire, maintaining the contents of said still under a pres-



sure greater than three atmospheres, condensing the vapor passing from the still, at the same time continually scraping coke-forming matter across the fire-heated arcuate bottom, from the middle to opposite sides of the still, and permitting such coke-forming matter to accumulate in the still at relatively high elevations beyond the hottest portion of said arcuate bottom.

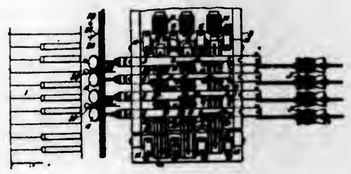
1,349,817. APPARATUS FOR CRACKING HYDROCARBONS. JOHN W. COAST, Jr., Tulsa, Okla., assignor to The Process Company, Tulsa, Okla., a Corporation of Maryland. Filed Sept. 27, 1917. Serial No. 193,471. 2 Claims. (Cl. 196—4.)

2. In an apparatus for cracking petroleum hydrocarbons, a large horizontal cylindrical fire-heated cracking still wherein a body of hydrocarbon oil is confined under pressure, the arcuate bottom of said still being exposed to the fire, a series of scraper chains having their links in scraping contact with said arcuate bottom and extending approximately from one end of the still to the other, an oscillatory shaft arranged longitudinally of said still, arms depending from said shaft and secured to said chains, and operating means whereby said shaft is oscillated to drag said chains back and forth across said arcuate bottom, so as to sweep coke-forming matter from the hottest portion of the still to the relatively cool sides thereof.



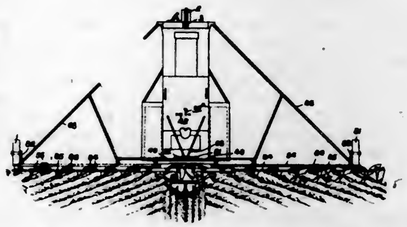
1,349,818. ELECTRICAL REGULATING-SWITCH. CHARLES HAROLD COLES, London, England. Filed Dec. 15, 1919. Serial No. 345,129. 9 Claims. (Cl. 200—5.)

1. In an electrical regulating switch, a pair of switch arms, two series of contacts over which the respective switch arms may be moved, a pair of bars, a pivotal connection between one end of one bar to one switch arm and of the other bar to the other switch arm and a pivotal connection between the free ends of the two bars.



1,349,819. CONCRETE FORM. HARRY O. DAVIDSON, Cleveland, Ohio, assignor to The Hydraulic Pressed Steel Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 13, 1916. Serial No. 130,945. 6 Claims. (Cl. 25—131.5.)

4. An arched sheet metal floor-supporting plate having at at least one edge thereof a substantially flat flange adapted to rest upon the flange of a floor supporting beam and having a corrugation extending thereacross as far as

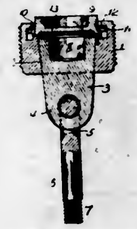


but not including said flange, said corrugation being located adjacent to a lateral edge of said plate.

1,349,820. COMBINATION-ACTION FOR ORGANS. HAROLD T. DEPUE, Kensington, Md. Filed Oct. 31, 1916. Serial No. 128,769. 13 Claims. (Cl. 84—345.)

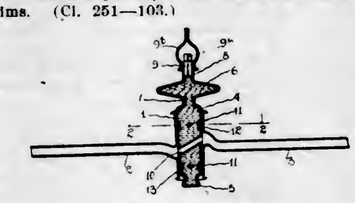
1. A combination action for electric or electro-pneumatic organs provided with a stop-setter action, groups of associated electric switches and means for moving each group as a whole into and out of operative relation to the stop setter action for the selective actuation of the switches by said stop setter action.

1,349,821. PLOWING-MACHINE. LOUIS ARSÈNE DÉSY, Montreal, Quebec, Canada. Filed July 25, 1919. Serial No. 313,173. 4 Claims. (Cl. 97—66.)



1. In a plowing machine, the combination, with a main frame; of a pair of auxiliary frames disposed at right angles to the main frame with their confronting ends in spaced relation; a connecting bar between said spaced frame ends; an endless series of plows mounted in each auxiliary frame; means for driving said series of plows whereby a plurality of oblique, converging furrows will be made; and a plurality of plows separate from the two endless series of plows suspended from said connecting bar to plow straight furrows in the ground between said endless series of plows.

1,349,822. STAYBOLT STRUCTURE. ETHAN I. DODDS, Pittsburgh, Pa., assignor to Flannery Bolt Company, Pittsburgh, Pa. Filed May 3, 1918. Serial No. 232,319. 2 Claims. (Cl. 85—1.5.)



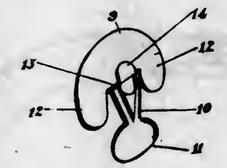
1. In a staybolt structure, the combination with a bearing member provided with a tapering opening, the wall

of which is straight longitudinally of said member, of a tapering head seated on the wall of said tapering open-

ing, a bolt body loosely connected with said head, and a closure having interlocking connection with the bearing member over said tapering head.

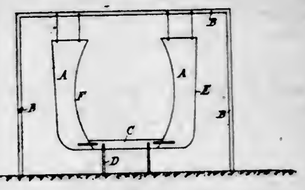
1,349,823. STOPCOCK. AUGUST EIMER and WILHELM T. WIEGAND, New York, N. Y., assignors to Stuyvesant Glass Company, New York, N. Y., a Corporation of New York. Filed Sept. 25, 1919. Serial No. 326,304. 5 Claims. (Cl. 251—103.)

1. In a stop-cock device, in combination, an open ended shell element, a hollow closure element to comprise a source of mercury supply, said elements interfitting and having transversely communicable means, including a tubular passage extended through said closure element, one of said elements having annular grooves at both sides of said communicable means, with orifices through which mercury from said supply source may enter said grooves to form a packing seal.



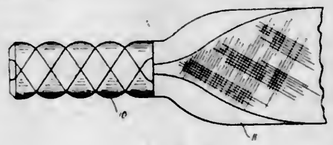
1,349,824. TABULATING MECHANISM. HARRY ARTHUR FOOTHORAP, Harrisburg, Pa., assignor to Elliott-Fisher Company, Harrisburg, Pa., a Corporation of Delaware. Original application filed Dec. 14, 1914. Serial No. 877,219. Divided and this application filed Aug. 22, 1918. Serial No. 250,996. 3 Claims. (Cl. 197—176.)

1. In a tabulating mechanism, the combination with a frame having seats, of a tabulator stop bar having its ends extended into the seats and opposed to the frame to prevent material endwise movement of the bar, one of said seats having an open side to permit the lateral withdrawal of the bar therefrom and a catch retaining the bar against lateral withdrawal from such open sided seat.



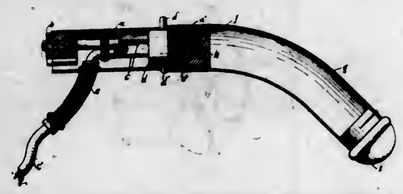
1,349,825. COLLAR-BUTTON. ALPHEUS J. FREEMAN, Chicago, Ill., assignor to Mollie E. Barnhart, Chicago, Ill. Filed Oct. 28, 1919. Serial No. 333,981. 1 Claim. (Cl. 24—101.)

A button comprising a plate having depending wings at its ends and a depending shank intermediate its ends, the wings being on opposite sides of the shank, said shank having a lateral bend at its upper end whereby it is joined to the plate, said bend forming a shoulder and off-setting the shank from the plate, and a tongue integral with the



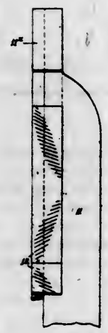
shank and projecting upwardly therefrom at its junction with the bend to a height less than that of the plate, said tongue being located opposite to and facing the center of the plate, and being spaced therefrom.

1,349,826. METHOD OF MOLDING CONCRETE SHIPS. EUGÈNE FREYSSINET, Paris, France, assignor to Societe des Navires en Ciment Armé, Paris, France. Filed June 12, 1918. Serial No. 239,587. 2 Claims. (Cl. 25—130.)



1. A process for manufacturing reinforced concrete boats, consisting in constructing beams having reinforcing rods with projecting ends, suspending said beams from a framework in such manner that said frames may be capable of conforming movements, attaching to the outer sides of said beams continuous reinforcements going from one end to the other of the boat in the longitudinal direction, then on the interior sides of said beams applying similar reinforcements, bending in the ends of the rods projecting from the beams upon the reinforcements of the exterior and interior walls, attaching upon the reinforcements of said interior and exterior walls, exteriorly and interiorly, a form or mold taking the form of the said reinforcements, simultaneously pouring cement in the several molds or forms, and removing the molds or forms.

1,349,827. LACING-TIP. EUGENE FULLER, Providence, R. I. Filed Oct. 20, 1919. Serial No. 331,972. 1 Claim. (Cl. 24—143.)



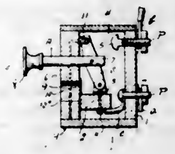
A lacing tip having a body of sheet material applied to the compressed fabric of the lacing in tubular form, said body being provided with opposite diagonally-disposed intersecting angular grooves in its outer surface forming correspondingly inwardly-extending ribs providing diamond-shaped recesses between said intersecting grooves in which recesses the lacing fabric is retained.

1,349,828. HANDLE MEMBER. PHILIP A. GEIER and FRANK E. ROBERTSON, Cleveland, Ohio, assignors to The P. A. Geier Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 25, 1916. Serial No. 86,589. 2 Claims. (Cl. 15—60.)

1. A composite handle member, comprising a length of fiber tubing, a wooden core snugly engaging said tubing interiorly substantially throughout its length, a block fitted within the upper end of said tubing, a terminal handle telescoping over said tubing and block, and means for uniting the tubing and handle, subatantially as set forth.

1,349,829. PATTERN FOR MAKING MOLDS IN WHICH METALS ARE CAST. WILLIAM GIBSON, Liverpool, England. Filed Mar. 19, 1920. Serial No. 367,219. 3 Claims. (Cl. 22—158.)

1. A pattern for making the molds in which fire bars or the like are cast, comprising a straight web having a head at each end projecting upward from the top of the web this part forming one of the units or elements of the pattern, and a plurality of interchangeable sections or lengths each having a straight groove at the underside adapted to embrace the top portion of the depending web and a continuous straight groove on the upper face.

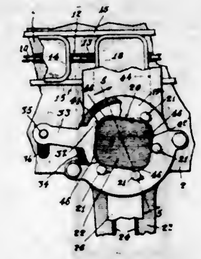


1,349,830. BOTTLE-CLOSURE. HYMAN GOLDSTEIN, Brooklyn, N. Y. Filed Mar. 14, 1919. Serial No. 282,709. 1 Claim. (Cl. 215—60.)

In combination with a bottle, a closure in the form of a truncated cone having a broad base flange to rest on a bottle neck and having its upper end extended to form a cylindrical portion, means for securing the closure to the bottle, said closure having a circular recess in each end and a curved passage extending from the base recess, and smaller in diameter to form a valve seat, a rod slidable in the closure, a disk formed on the rod to fit the base recess and having notches of a depth less than the width of the valve seat, a washer having corresponding notches resting on the disk, a semispherical cap member, a peripheral flange and a center bar formed thereon said rod extending into the bar and the flange fitting the cylindrical portion of the closure and a spring in the upper

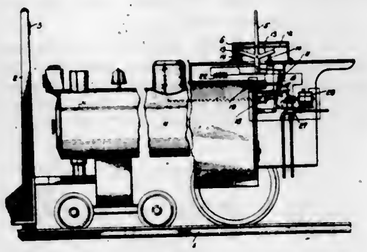
recess and surrounding the rod to seat the disk, movement of the cap and disk being limited to prevent complete withdrawal of the disk from the recess.

1,349,831. TESTING APPARATUS. WALTER WESLIE GRAMER, Marinette, Wis. Filed Mar. 8, 1919. Serial No. 281,567. 3 Claims. (Cl. 175—183.)



1. A spark testing apparatus including a housing provided with an opening in one of its walls, a pair of spaced terminals extending within said opening and forming a spark gap, one of said terminals being grounded and the second of said terminals extending within the housing to provide contact, a pair of contacts carried by the second wall of the housing, adapted to be interposed in a line leading from a coil to a plug, a movable contact member supported within the housing and in electrical connection with one of the last named contacts, said movable contact, when in one position, engaging the second of the last named contacts, and when in a second position contacting with the first named contact, and a member engaged with the movable contact and extending exteriorly of the housing for imparting movement to the movable contact member.

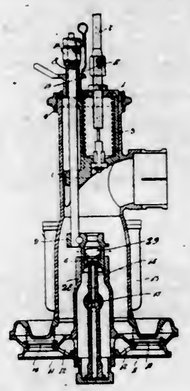
1,349,832. DENTAL HANDPIECE. ROBERT E. GRAVES, Houston, Tex. Filed June 21, 1919. Serial No. 305,829. 4 Claims. (Cl. 279—42.)



1. A dental hand piece including a casing, a sleeve fitted therein, and a rotatable shaft within the sleeve, one end of said shaft being formed into an expansible chuck, a nut threaded over said chuck, and an engaging member carried by said sleeve and arranged to be brought into engagement with the nut, whereby said nut may be turned and screwed upon, or unscrewed from said chuck by the rotation of said sleeve.

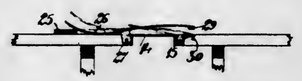
1,349,833. CAN-END-FEED MECHANISM. JAMES A. GRAY, San Francisco, Calif., assignor to American Can Company, San Francisco, Calif., a Corporation of New Jersey. Filed Sept. 8, 1916. Serial No. 119,063. 20 Claims. (Cl. 113—114.)

1. In a feed mechanism for non-circular can ends, the combination of a holder adapted to contain a stack of can ends and having means for holding the can ends from turning in their own planes, an oscillating member adapted to be turned in a plane parallel with the can ends to a first can end receiving position and then to a second stack-supporting position and having means of non-circular arrangement which in said first position permit the passage of a can end and which in said second position support the stack excepting the lowermost can end, means for oscillating said member alternately to said positions, and a plate below said oscillating member having means which support the stack in said first position of the oscillating member and which permit the passage of the received and turned can end in said second position.



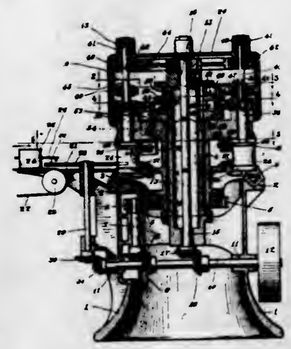
1,349,834. RAILWAY SAFETY APPLIANCE. MICHAEL IHNAT, Detroit, Mich. Filed Dec. 31, 1917. Serial No. 209,788. 4 Claims. (Cl. 246—187.)

2. In an automatically acting train stopping device, a primary circuit closing device, a solenoid in said circuit, a lever operated thereby, a motor and motor circuit, a switch in said motor circuit closed by said lever, a valve, a lever for manually operating said valve and a member operated by said motor for actuating said lever.



1,349,835. CARBURETER. JOHN THOMAS JENNINGS, Birmingham, England. Filed Oct. 24, 1916. Serial No. 127,446. 3 Claims. (Cl. 261—44.)

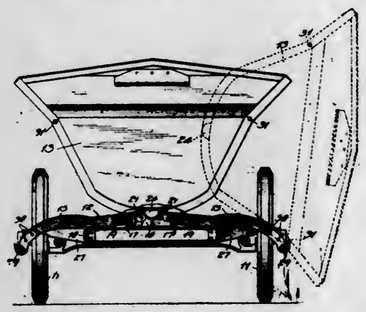
1. In a carbureter, the combination of a body member, means for giving a practically constant mixture at varying powers by the automatic variation of the area of the air inlet, a jet, a movable controlling member associated with said jet and adapted to control the passage of fuel therethrough, a throttle valve, an operating member for said throttle valve, and means for associating the movement of the throttle valve with the movement of the said movable controlling member, whereby during the first portion of the opening of the throttle valve the fuel supply control remains approximately stationary, but during the latter portion of the throttle opening the fuel supply control is adjusted to increase the fuel supply, so



giving two distinct mixtures, a weak mixture succeeding a closure of the throttle and a strong mixture succeeding a full opening of the throttle, quite independent of the running of the engine.

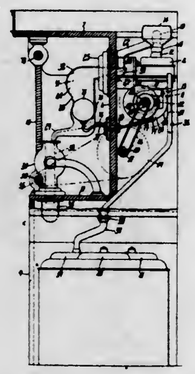
1,349,836. SORTING DEVICE FOR SAWN WOOD. GUSTAF EMANUEL JOHANSON, Sundsvall, Sweden. Filed Nov. 10, 1919. Serial No. 337,103. 9 Claims. (Cl. 83—92.)

1. A sorting device for sawn wood, comprising a runway, collecting compartments located below said runway, and vertically movable sorting means disposed in the runway at the top of each compartment, said means closing the entrance thereto in one position and opening the same in another position and adapted to control the entrance of the wood into the compartment.



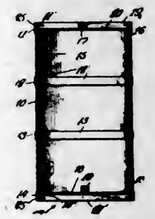
1,349,837. DOUBLE SEAMER. AXEL JOHNSON, Oakland, Calif., assignor to American Can Company, San Francisco, Calif., a Corporation of New Jersey. Filed Mar. 24, 1917. Serial No. 157,258. 10 Claims. (Cl. 113—23.)

1. In an apparatus for the described purpose, the combination of a rotating member provided with a plurality



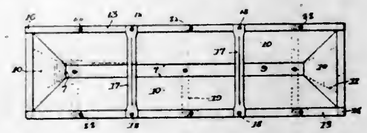
of can seats, means for successively delivering cans with loosely applied covers to said seats, devices associated with each seat for clamping the said can and cover together, a seaming roll located adjacent each of said can seats, each of said rolls being provided with a plurality of seaming grooves, and means for successively bringing the grooves of each roll and a can into operative relation whereby the can and end are united by a double seam.

1,349,838. RAIL CONSTRUCTION FOR ROLLING HOPPERS. ALBERT PRESTON LEE, Chicago, Ill., assignor to Lee Loader & Body Company, Chicago, Ill. Filed Apr. 12, 1919. Serial No. 289,491. 9 Claims. (Cl. 298—10.)



1. In a structure of the character described the combination with a rail comprising a central casing and inclined side portions formed separately from and secured to the casing, of a hopper adapted to roll on said rail substantially automatically from a central charge carrying to a limiting dumping position, and a rounded lug provided upon the bottom of said hopper at its central portion, said rail having at its central casing portion a rounded recess to coöperate with said lug.

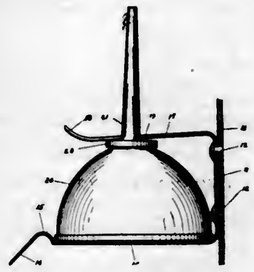
1,349,839. MACHINE FOR EXTRACTING JUICE FROM FRUIT. JACOB LEVIN, Springfield, Mass. Filed Jan. 3, 1920. Serial No. 349,134. 6 Claims. (Cl. 100—49.)



5. A machine for extracting juice from fruit having, in combination, a casing embodying a vertical back-plate, a juice conveyer comprising a main body portion provided with a chamber extending therethrough and terminating at its lower end in a spout with an open top, the upper end of said conveyer terminating in a horizontal portion extending through said back-plate and open at the top, means to fasten said conveyer to said back-plate, a hopper located at the rear of said back-plate, a spout leading out of said hopper and terminating at its outer end above the open top of the horizontal portion of said conveyer and means in said hopper adapted to extract juice from fruit.

1,349,840. DRUM. JOSEPH LIMONCELLO, Chicago, Ill. Filed Jan. 14, 1920. Serial No. 351,300. 1 Claim. (Cl. 217—1.)

A drum having an outside, one-piece wall, of veneer, with the grain extending axially of the drum; a lining of calendered paper in intimate contact with the entire inner surface of the outer wall and terminating inside the chime at each end; a plurality of pairs of hoops, between the usual end hoops, one of each pair on the inside of the structure and one on the outside thereof; a head in each end, each head neatly corresponding in diameter to the inner diameter of the outer wall; a cleat on the inner surface of the head, equal in length to the diameter of the head; another cleat on the outer surface of the head, disposed at right angles to the inner cleat, said outer cleat being materially shorter than the diameter of the head, at each end, and secured to the head before the head is placed in position in the end of the drum; a hoop, insertible between the inner surface of the outer wall and the ends of the outer cleat, after the head has been placed in the end of the drum and means to secure the head, hoop and cleat, in place whereby to provide a strong, moisture-proof drum and to facilitate closing thereof.



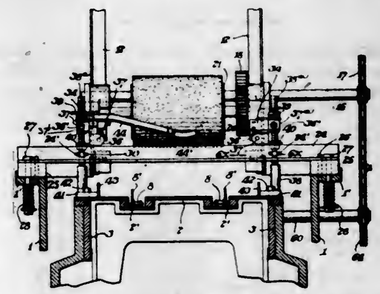
1,349,841. TROUGH AND METHOD OF PRODUCING THE SAME. AUGUST J. LUEDKE, Milwaukee, Wis., assignor to Milwaukee Corrugating Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Apr. 15, 1919. Serial No. 290,145. 7 Claims. (Cl. 119—61.)

1. As an article of manufacture, a trough formed from a sheet of bendable material and comprising a bottom portion defined by bend lines, side wall portions formed by providing a plurality of series of fold lines extending outwardly from the bend lines, the outer lines of each adjacent series of said fold lines being outwardly diverged with respect to each other, each of said side wall portions having a bend line adjacent each outer edge, the portion of the sheet of material outwardly of each of said last mentioned bend lines forming edge flanges, and the opposite ends of each of said edge flanges having interlocking retaining tabs.

1,349,842. OIL-CAN HOLDER. CHARLES W. MCKINLEY, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Oct. 29, 1917. Serial No. 199,090. 2 Claims. (Cl. 248—20.)

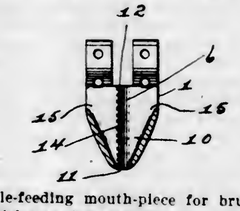
1. An oil can holder comprising a vertical portion; a spring tongue extending forwardly from the lower edge of said vertical portion and constituting a base upon which an oil can is adapted to seat, said spring tongue being provided with an abutment near the forward edge thereof, adapted to engage one edge of the oil can, and with a downwardly extending lip; a spring tongue extending forwardly from the upper edge of the vertical portion of said holder, said tongue being provided with an upwardly curved outer end, and with a longitudinally extending slot therein, said tongue being adapted to engage the top of the oil can with the oil can spout disposed in said slot.

2. An oil can holder comprising an integral sheet metal stamping having a vertical portion, a spring tongue extending forwardly from the lower edge of said vertical portion and constituting a base upon which an oil can is adapted to seat, said spring tongue being provided with a downwardly extending lip near the forward edge thereof, a spring tongue extending forwardly from the upper edge of the vertical portion of said holder, said tongue being provided with an upwardly curved outer end, and a longitudinally extending slot for receiving the oil can spout, the said tongue being adapted to resiliently engage the top of the oil can to hold the same in position.



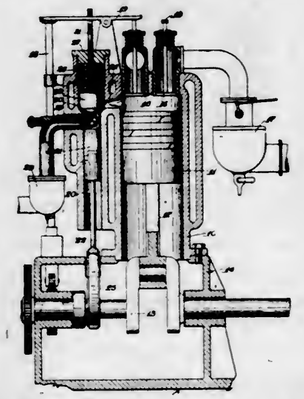
1,349,843. PRESSURE-REGULATOR. HERBERT H. MACOMBER, Kendallville, Ind., assignor to Flint & Walling M'f'g Co., Kendallville, Ind., a Corporation of Indiana. Filed Mar. 2, 1917. Serial No. 151,921. 3 Claims. (Cl. 200—83.)

1. A pressure regulator embodying a diaphragm, a switch to be actuated, and intermediate mechanism including a plunger, snap throw effecting linkage for the switch, connecting means between the plunger and linkage, and a dog movable independently of the linkage and actuable from the connecting means to hold the switch closed.



1,349,844. CHOCOLATE AND CANDY MACHINE. SYLVESTER S. MARVIN, Bryn Mawr, and WILLIAM MUNZ, Philadelphia, Pa., assignors to Pennsylvania Chocolate Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Oct. 8, 1919. Serial No. 329,400. 17 Claims. (Cl. 193—24.)

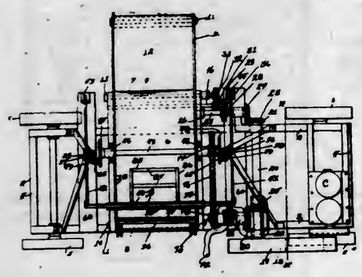
1. In a machine of the character described, the combination with a vertically reciprocatory table and conveying mechanism movable over said table, of an inclined way, a device for controlling the movement of articles along said way to said table, reciprocatory means to which said



device delivers said articles, and mechanism whereby the movements of said table operate said means and articles held thereby are delivered to said conveyer.

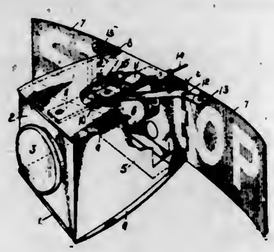
1,349,845. MOUTHPIECE FOR BRUSH-MAKING MACHINES. JOSEPH W. MAYER, Troy, N. Y., assignor to John A. Murray, Albany, N. Y. Filed Feb. 19, 1920. Serial No. 359,892. 3 Claims. (Cl. 15—7.)

2. A bristle-feeding mouth-piece for brush-making machines comprising an integral block provided with a downwardly tapered bristle-guiding slot therethrough, and on opposite sides of said slot drilled apertures open on the inner side to said slot, and pins tightly fitting said respective drilled apertures, said pins being cut-away on their inner sides to conform to said slot and being provided with oppositely disposed staple-guiding grooves, and cross-pins inserted through said block and said tight-fitting pins.



1,349,846. GAS-ENGINE IGNITION. GEORGE L. MEYER, Milwaukee, Wis. Filed Mar. 12, 1918. Serial No. 221,936. 9 Claims. (Cl. 123—143.)

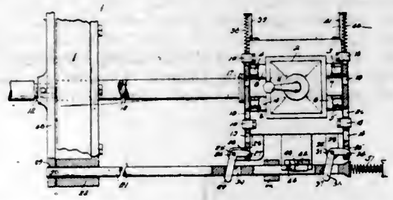
1. In a gas engine, the combination of a priming explosion chamber having a valve controlled inlet distinct from the combustion chamber and a valve controlled outlet



communicating with the explosion chamber of the gas engine, and electrical ignition means for producing an explosion in said priming explosion chamber.

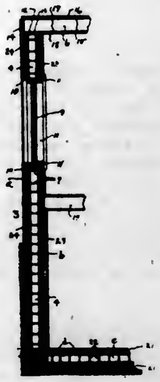
1,349,847. CORN-HEADER. JOHN R. MINGLE, Anthony, Kans. Filed Dec. 15, 1916. Serial No. 137,254. 2 Claims. (Cl. 146—7.)

2. In a cord header, the combination with a conveyer for carrying stock heads, and a suitable frame, a bale having side arms, slidably and pivotally mounted on said frame so that its body end is arranged over said conveyer and adapted to reciprocate, a cutting blade mounted on the body of the bale, a pair of upwardly extending standards slidably mounted on said frame and movably attached to said arms, means for reciprocating said standards, an upwardly projecting reach from said frame and above said bale and a contraction spring connected to the upper end of said reach and to the forward portion of said bale for raising the bale and blade, said reach being adapted to increase the distance between the attaching ends of the spring whereby a greater length of spring may be employed, and a chopper block with which said blade is adapted to coöperate.



1,349,848. SIGNAL MEANS. HUBERT A. MYERS, Toledo, Ohio. Filed Feb. 7, 1920. Serial No. 356,873. 3 Claims. (Cl. 116—45.)

1. In a lamp, a casing having windows in opposite sides thereof, a light creating means disposed within the casing, shutters hinged to the casing at the rear of the windows for outward and rearward swinging movements and displaying a signal on the inner sides thereof, said shutters being adapted to close the windows and when in open position to have light rays from the interior of the casing directed thereon through the windows, and means operable for opening and closing said shutters in unison.

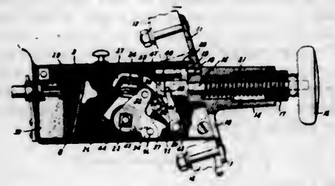


1,349,849. AUTOMOBILE-LOCKING DEVICE. CHARLES F. NORTON, East St. Louis, Ill. Filed Aug. 1, 1918. Serial No. 247,794. 2 Claims. (Cl. 70—126.)

1. In combination with a vehicle having a drive shaft and a transmission case provided with sliding pins, means movable in front of the sliding pins to block movement thereof, a lock plate fixed to the driving shaft, a plunger-rod, means for actuating the plunger-rod to cause same

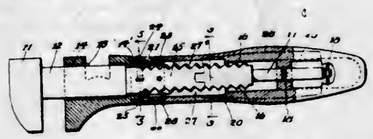
to engage the lock-plate and hold the driving shaft from rotation, means for operatively connecting the means movable in front of the sliding pins with the plunger rod, and a lock for locking the means for actuating the plunger-rod.

1,349,850. BUILDING CONSTRUCTION. DAVID C. PATTERSON, Omaha, Nebr. Filed Sept. 18, 1919. Serial No. 324,467. 1 Claim. (Cl. 72—1.)



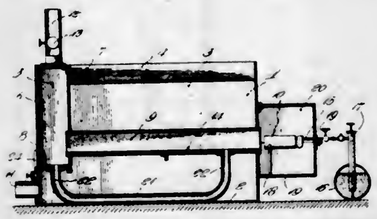
In building construction, a pair of upright walls each being provided with an opening, tie-rods embedded in said walls for maintaining them approximately parallel and to provide an air space therebetween, a frame in the openings of said walls, a footing for supporting and for closing the air space at the bottom of said walls, an insulating element mounted upon the upper terminals of said walls, a cap-member upon said insulating element, a compressible fibrous element in the openings of said walls for engaging the frame, a base-member of adhesive material extending horizontally from the footing, upright spacing-bars embedded in and projecting above the base-member, and a plurality of floor-plates of adhesive material disposed end to end above the base-member engaging the spacing-bars for providing an air-space between the base-member and floor-plates approximately equal in area to the area of said base-member.

1,349,851. ELECTRIC SWITCH. ROBERT J. PARSONS, Fort Wayne, Ind., assignor to General Electric Company, a Corporation of New York. Filed June 10, 1918. Serial No. 239,118. 6 Claims. (Cl. 200—70.)



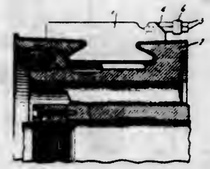
1. In an electric switch, a fixed contact, a movable contact, spring means for moving the movable contact into and out of engagement with the fixed contact, an actuator which when moved to an intermediate position puts said spring means under tension, and two catches for holding

said spring means under tension, said actuator when moved in one direction from said intermediate position releasing one of said catches to permit said spring means



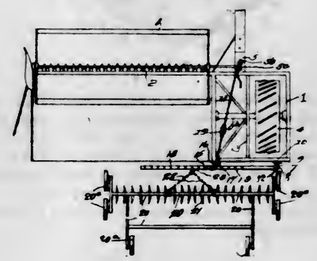
to close the switch and when moved in another direction releasing the other catch to permit said spring means to open the switch.

1,349,852. ADJUSTABLE WRENCH. EDWARD M. PAULEY, Birdsview, Wash. Filed Aug. 11, 1919. Serial No. 316,586. 1 Claim. (Cl. 81—160.)



A wrench having an adjustable engaging head integral with a shank, said shank having oppositely disposed racks thereon, a reduced portion beyond said racks, and a stop pin at the rear end of said shank, in combination with a handle surrounding the shank and in which said shank is movable, said handle being in two parts, namely, a head portion coöperating with said engaging head and having a reduced rear end, and a hollow grip for the hand of the user; a coiled spring between said head portion and said grip; a slotted collar secured to the forward end of the grip and encircling the same said collar also encircling the reduced end of the head portion and the spring therebetween; guide pins in the reduced rear end of the head portion projecting through the slots in said collar to permit a turning movement of said grip; toothed segments on the interior of said hollow grip engaging the racks upon said shank when in one position to lock the same from movement, and disengaging these rack portions when the grip is turned to free the shank for adjustment; and a collar on the interior of said hollow grip in which is guided the reduced portion of said shank, and with which the stop pin engages to limit the adjustment of the shank.

1,349,853. SNOW-MELTER. HUGH LYLE PEDEN, New York, N. Y., assignor of one-half to William F. Kearney, Spring Valley, N. Y. Filed Dec. 11, 1919. Serial No. 344,014. 2 Claims. (Cl. 126—343.5.)

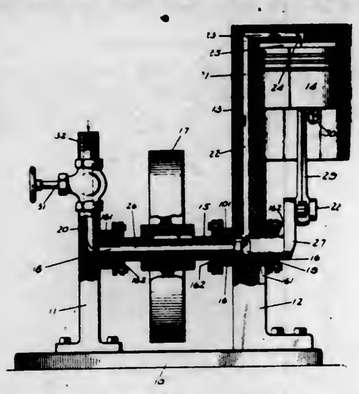


1. A snow melter comprising a rectangular tank open at its top to receive the snow, a smoke box at one end of said tank, an outlet from said smoke box, a plurality of parallel horizontal pipes communicating at one end with said smoke box and extending therefrom to the opposite end of the casing, a burner casing on the outer side of the last named casing end, and burners in said burner casing alined with said pipes for directing flame into the latter.

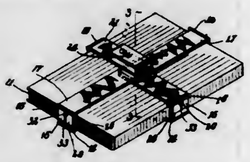
1,349,854. COMMUTATOR FOR DYNAMO-ELECTRIC MACHINES. EDWARD D. PRIEST, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Dec. 17, 1917. Serial No. 207,517. 2 Claims. (Cl. 171—321.)

2. In a commutator for dynamo electric machines, a commutator segment provided at one end with a lead receiving slot, a pair of armature leads fastened therein, and means for mechanically and electrically connecting said leads together, said means being independent of and spaced from the end of the commutator segment.

1,349,855. ATTACHMENT FOR BINDERS. HARRY H. ROBERTS, Corwin, Kans. Filed Feb. 7, 1920. Serial No. 356,854. 4 Claims. (Cl. 213—67.)



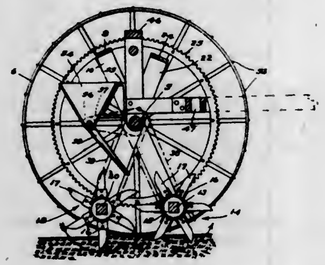
1. The combination with a wheel supported frame, of an implement at the rear thereof, a drawbar operatively pivoted on the rear of said frame offset in a plane to one side of the draft tongue of said frame, a clevis adjustably and operatively connected to the drawbar and having diverging chain connections with said implement, a cable having its forward end adjustably connected to the forward part of the frame, and its rear end adjustably and operatively connected to said drawbar, said cable comprising two sections, and means connecting the adjacent ends of the sections for adjusting the drawbar with respect to the rear of the frame.



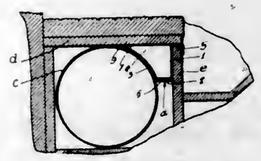
1,349,856. ENGINE. HENRY RUTTINGER, Buffalo, N. Y. Filed Oct. 15, 1919. Serial No. 330,896. 2 Claims. (Cl. 121—101.)

1. In an engine, the combination of two standards, a crankshaft supported in bearings intermediately located on the standards, a flywheel mounted on said crankshaft between the standards, a cylinder carried by one of said standards above the crankshaft, passageways in said standards extending upwardly and away from said crank-

shaft, a passageway in said crankshaft joining the passageways in said standards, passageways connecting the chamber of said cylinder with the passageway in the standard by which the cylinder is carried, and an independent valve opening through the walls of said cylinder.

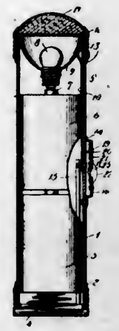


1,349,857. BOOK-LOCK. STEVEN SALOP, Youngstown, Ohio. Filed Apr. 30, 1920. Serial No. 377,767. 3 Claims. (Cl. 24—17.)



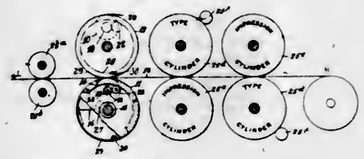
1. A book lock comprising a rigid cross shaped member, sections adjustable to the thickness of a book each comprising two non-rotatable but relatively movable parts, hinges joining one of the parts of each of said sections to one end of said member, a series of upper foldable arms, hinges joining each of the other of said parts to one end of each of said arms, and means for locking the other ends of said arms together.

1,349,858. SOIL-PULVERIZER. WILLIAM H. SHERROD, Seattle, Wash. Filed May 1, 1919. Serial No. 293,982. 2 Claims. (Cl. 55—85.)



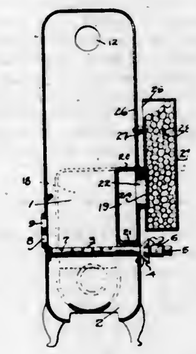
1. A soil pulverizer comprising an axle member, a wheel journaled on each end thereof, two cylindrical cutter members each provided with axial shafts that are arranged substantially parallel with said axle member, each of said cylindrical cutter members having radially projecting knives arranged in circular rows and the knives on one of said cutter members being offset with respect to the knives on the other of said cutter members, U-shaped members swingingly mounted on said axle, the said cylindrical cutter members being journaled in the lower ends of the said U-shaped members, lever means connected with the upper portions of said U-shaped members for swinging the same about said axle to raise and lower said cutter members, gear means connected with said wheels for rotating said cutter members, and clutches for disengaging said gear means.

1,349,859. TOOL-BOX. SETH R. SMITH, Los Angeles, Calif. Filed Jan. 13, 1920. Serial No. 351,227. 3 Claims. (Cl. 296—37.)



3. A tool box comprising front, end and rear walls and a bottom all formed of a single piece of sheet metal, and the end edges of the front wall and the forward edges of the end walls being joined together, the lower edge of the front wall and the formed edge of the bottom being joined together, the rear edge of the bottom and the lower edge of the rear wall being joined together, the rear edge of the rear wall being adapted to extend between the seat board of a vehicle and the fuel tank thereof, and the front wall having a forwardly extending flange adapted to rest upon the upper edge of the front board of the seat.

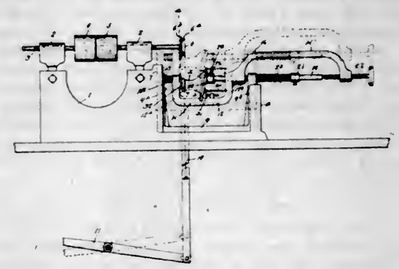
1,349,860. HAND-LAMP SWITCH. ARTHUR L. STAPLES, New Haven, Conn., assignor to Winchester Repeating Arms Company, New Haven, Conn., a Corporation of Connecticut. Filed Nov. 11, 1919. Serial No. 337,149. 8 Claims. (Cl. 200—60.)



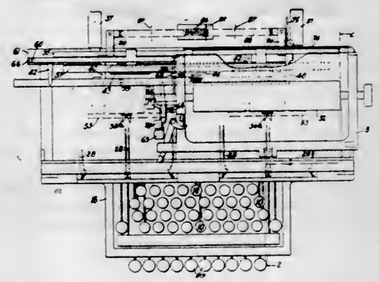
3. A contact device for battery hand lamps, comprising a spring member manually operable for instantaneous contact, and means movable in one direction to lock said member in closed-circuit position and movable in the other direction to lock said member in open-circuit position.

1,340,861. PRINTING-PRESS. BURNHAM C. STICKNEY, Elizabeth, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 19, 1917. Serial No. 202,683. 25 Claims. (Cl. 91—16.)

5. The combination with means for conveying a sheet, of means, running at a different speed, for brushing carbon over the surface of the sheet to product a predefined spot of carbon coating thereon during the motion of the sheet.



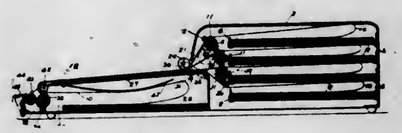
1,349,862. GAS-BURNING HEATER. JOHN C. TATE, Oakland, Calif. Filed Mar. 4, 1918. Serial No. 220,157. 1 Claim. (Cl. 126—91.)



In a heater of the character described, an upstanding combustion chamber provided at its lower end with an air inlet, a burner extending transversely within the lower portion of the combustion chamber and having sets of apertures arranged upon the opposite sides of its longitudinal axis for providing flames which impinge against the sides of said combustion chamber, upstanding tubes arranged outwardly of and near the combustion chamber and having their upper ends in communication therewith while their lower ends are free from communication with the combustion chamber, reheating chambers arranged contiguous to the side walls of the combustion chamber, said extensions having their lower ends open and in communication with the lower ends of said tubes, and a revivifying chamber connected with the reheating chambers and receiving the highly heated gases therefrom said revivifying chamber being adapted for the reception of chemical material and having an outlet opening near its top and upon the inner side thereof adjacent the heated wall of the combustion chamber.

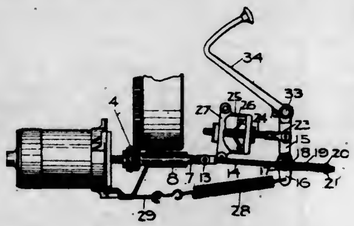
1,349,863. TOP-LIFT-BURNISHING MACHINE. FRANK J. TISDELL, Lynn, Mass., assignor of one-fourth to Charles B. Davis, Lynn, Mass., and one-half to Gregory & Read Co., Lynn, Mass., a Corporation of Massachusetts. Filed May 31, 1919. Serial No. 301,075. 9 Claims. (Cl. 12—72.)

1. A machine for finishing the edge of a top-lift of a heel comprising a rotary tool having an edge-finishing portion and a tread face engaging flange, yoke having manually controlled means to move it transversely of the axis of the tool, a heel-clamp frame, having heel-clamping members, said frame being pivotally mounted at its ends in the arms of said yoke and arranged to be manually moved about an axis parallel to the axis of the tool, and longitudinally thereof, to permit the thread face of the top-lift to be held against said flange while its edge is engaged with the edge-finishing portion of the tool, as the heel is moved rotatably and transverse axially.



1,349,864. TYPEWRITING-MACHINE. JOHN WALDHEIM, Elizabeth, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 13, 1919. Serial No. 282,306. 22 Claims. (Cl. 197—22.)

1. In a typewriting machine, the combination with a plurality of type-sets spaced from each other transversely of the machine, of a carriage having a limited range of movement in a direction transverse of the machine, a letter-space escapement mechanism for said carriage, a platen movable with said carriage, and means whereby said platen may be set along said carriage at different positions in a direction transverse of the machine, so as to coöperate with any desired type-set.

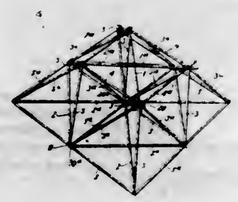


1,349,865. MANIFOLDING DEVICE. WILLIAM J. WISWALL, Portland, Oreg. Filed Oct. 15, 1919. Serial No. 330,941. 3 Claims. (Cl. 282—4.)

3. In a manifolding device of the character described, the combination therein of, a case, a container forwardly of the case, having a writing table on its upper surface, a series of trays in the case positioned one above the other and arranged to contain continuous strips of paper folded

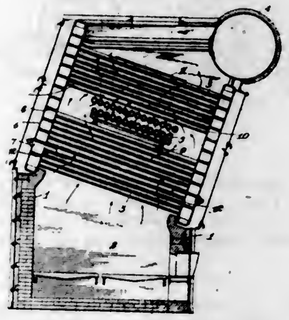
in zigzag pad form, and rollers in the outward part of the container arranged in a manner to allow the paper strips, one above the other, as drawn from the said trays outwardly over the table, to be threaded through the rollers and when these are rotated to allow the upper strips of the paper to be passed outwardly and the lowest strip to be passed into the container folded into pad form, a series of rollers positioned in the case forwardly of and in relation to the trays and table, said rollers being arranged to receive strips of carbon poper and to allow the same to be unrolled therefrom and passed between the paper strips longitudinally over the table a desired distance, and mechanism appurtenant to the said rollers whereby the same may be rotated in either direction simultaneously and locked in a desired position, for the purpose indicated.

1,349,866. ENGINE-STARTING APPARATUS. LIONEL M. WOLFFSOHN, now by judicial change of name Lionel M. Woolson, Union, N. J., assignor, by mesne assignments, to Bijur Motor Appliance Company, a Corporation of Delaware. Filed Mar. 8, 1917. Serial No. 153,359. 19 Claims. (Cl. 290—38.)



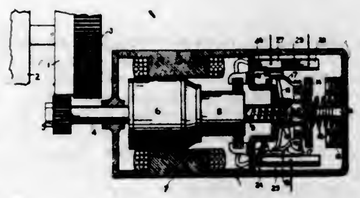
10. The combination in an engine starter, of a driven gear connected to an engine, a starting motor, a driving pinion connected thereto, operating means for shifting said pinion in an axial direction into mesh with said gear, said means being constructed and arranged first to store upon butting sufficient energy to produce meshing, and then to energize said motor for freeing said pinion thereby releasing said stored energy for effecting meshing.

1,349,867. DYEING. CHARLES S. ALTHOUSE, Reading, Pa. Filed June 24, 1920. Serial No. 391,466. 4 Claims. (Cl. 8—13.)



1. That step in the art of dyeing cotton goods sulfur black, which consists of introducing magnesium sulfate into the softening bath.

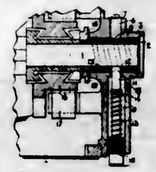
1,349,868. REINFORCED CELLULAR STRUCTURE. GROSVENOR ATTERBURY, New York, N. Y. Filed Apr. 16, 1918. Serial No. 228,873. 20 Claims. (Cl. 72—48.)



15. A reinforcement for cementitious material having two substantially parallel surfaces comprising members arranged to form pyramids having square bases in the outer surfaces of the reinforcement.

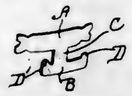
1,349,869. MARINE BOILER. JOHN E. BELL, Brooklyn, N. Y., assignor, by mesne assignments, to Foster Marine Boiler Corporation, New York, N. Y., a Corporation of New York. Filed Nov. 23, 1918. Serial No. 263,828. 3 Claims. (Cl. 122—303.)

1. In a boiler of the kind described, the combination with transverse rows of boiler tubes, alternate rows being very closely and widely spaced respectively, whereby longitudinal channels will be formed between the rows of closely spaced tubes, of short baffles in contact with a row of closely spaced tubes at each end of the same in the upper and lower parts of the bank of tubes, and a wider intermediate central baffle with gas passages at both ends, whereby the hot gases will be caused to flow horizontally through the channels and more equally upward between the closely spaced tubes.



1,349,870. ELECTRICAL STARTINB APPARATUS. JOSEPH BIJUR, New York, N. Y., assignor, by mesne assignments, to Bijur Motor Appliance Company, a Corporation of Delaware. Filed Nov. 21, 1914. Serial No. 873,264. 4 Claims. (Cl. 290—38.)

1. In apparatus of the class described, in combination an electric motor provided with a brush upon the neutral point of its commutator, a brush circumferentially offset from its neutral points, a pair of contacts respectively connected with said brushes, a source of current, a member connected with said source of current, a contact member adapted to make sliding contact with said first contacts and move from one to the other thereof, said contact member being electrically connected with said first member, and means adapted to move said contact member as the motor is started.

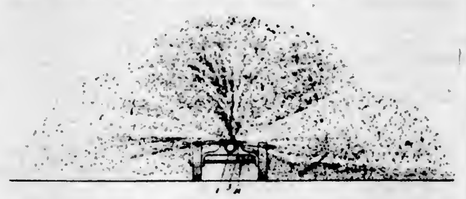


1,349,871. LUBRICATING DEVICE FOR DYNAMOS AND THE LIKE. JOSEPH BIJUR, New York, N. Y., assignor, by mesne assignments, to Bijur Motor Appliance Company, a Corporation of Delaware. Filed Nov. 29, 1915. Serial No. 63,951. 8 Claims. (Cl. 64—24.)

1. In a device of the class described, in combination, a rotary member, a bearing for said member, a reservoir for lubricant extending below said member, said reservoir being provided with a vent hole in its upper portion

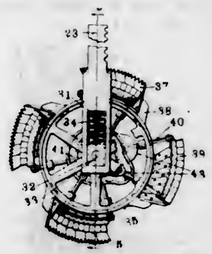
through which excess lubricant is discharged, and a wick in said reservoir contacting with said rotary member and adapted to transmit lubricant from said reservoir thereto.

1,349,872. COLLAR-BUTTON. NATHAN BLATTBERG, New York, N. Y., assignor of one-half to Samuel Lachs, New York, N. Y. Filed Nov. 26, 1918. Serial No. 264,214. 4 Claims. (Cl. 24—101.)



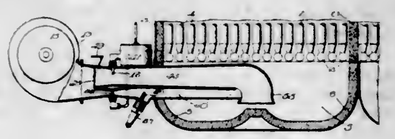
1. A collar button comprising a plurality of longitudinally curved members and a shank connecting said members, one of said members being provided with a plurality of lugs which extend from an edge portion of said member toward the other member and said lugs being positioned at opposite sides of the connecting shank.

1,349,873. ELECTRIC SWITCH. CHRISTEN CHRISTENSEN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed July 5, 1917. Serial No. 178,558. 7 Claims. (Cl. 200—150.)



1. An electric switch comprising two pairs of fixed contacts, separate movable contacts coöperating with each pair of fixed contacts, means for connecting said contacts in series, a common vessel containing oil inclosing said contacts, separate actuating mechanisms for independently controlling said movable contacts supported by said oil vessel, and means for moving said independent actuating mechanisms in synchronism whereby as the switch opens four breaks simultaneously occur in series.

1,349,874. LAWN-SPRINKLING DEVICE. WALTER HAYS COLES, Troy, Ohio. Filed Aug. 29, 1916. Serial No. 117,401. 1 Claim. (Cl. 299—58.)

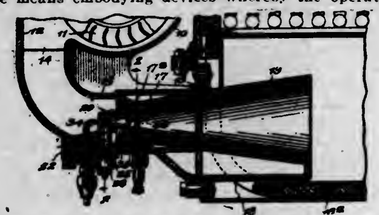


An irrigating apparatus comprising: a horizontally disposed non-oscillating distributing pipe, two nozzles carried in the upper circumference of the pipe substantially equidistant from a vertical line passing through the center of the pipe, each nozzle having a channel and a deflecting surface overhanging said channel on which the issuing stream impinges, the deflecting surfaces of said two nozzles being arranged back to back and the direction of deflection of both nozzles being away from the vertical, and a third nozzle also having a channel and a deflecting surface overhanging the channel on which the issuing stream impinges, arranged intermediate the first two nozzles and inclined slightly with respect to the vertical center line of pipe, the direction of deflection being opposite to that of the inclination of said third nozzle.

1,349,875. ROTARY PLOW. GEORGE A. CURRIER, St. Louis, Mo. Filed Feb. 2, 1918. Serial No. 215,025. 3 Claims. (Cl. 97—63.)

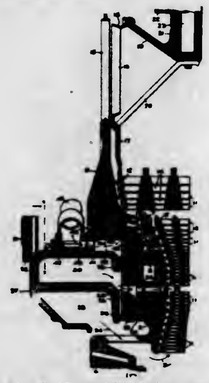
1. In a plow, the combination with a rotary member, of a plowing blade spirally arranged thereon, a scraper for said blade, and a pair of radially moving arms actuating said scraper, one of said arms having sliding connection with said scraper.

1,349,876. APPARATUS FOR BURNING FUEL. ABNER DOBLE, Detroit, Mich., assignor, by mesne assignments, to Doble-Detroit Steam Motors Co., Detroit, Mich., a Corporation of Delaware. Filed Jan. 2, 1917. Serial No. 140,020. 2 Claims. (Cl. 158—29.)



1. In a steam power plant, a liquid fuel burning device comprising a main Venturi tube having a fuel nozzle therein, a blower, means for operating the blower, a by-pass in the main venturi and means for momentarily diverting air from said blower through said by-pass, and an igniter and an auxiliary fuel nozzle in said by-pass.

1,349,877. LIQUID-FUEL-IGNITION MECHANISM. ABNER DOBLE, Detroit, Mich., assignor, by mesne assignments, to Doble-Detroit Steam Motors Co., Detroit, Mich., a Corporation of Delaware. Filed Aug. 27, 1917. Serial No. 188,502. 10 Claims. (Cl. 158—31.)

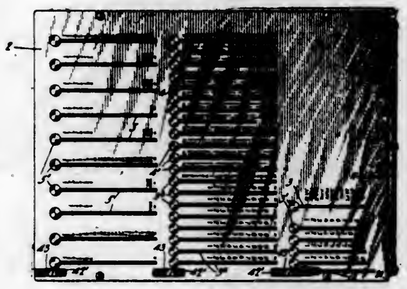


1. In a liquid-fuel burning apparatus, a main atomizer for forming a non-spark-ignitible mixture, an auxiliary atomizer so positioned as to throw an additional spray of liquid fuel directly into the spray of said main atomizer whereby said sprays combine to form an enriched mixture capable of ignition by an electric spark, an electric sparker mechanism, and means to operate said auxiliary

atomizer during the operation of the sparker mechanism, these means embodying devices whereby the operation of

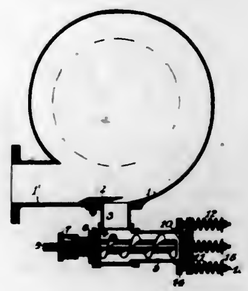
the auxiliary atomizer is stopped after momentary operation, for the purpose set forth.

1,349,878. EXTRACTION AND MIXED-PRESSURE TURBINE. JOHN H. DORAN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed June 14, 1918. Serial No. 239,942. 10 Claims. (Cl. 60—43.)



1. In an elastic fluid turbine, the combination of relatively rotating parts, two separate sets of packings for reducing leakage, said sets of packings being spaced to form an annular passage between them, fluid conveying means which connects a region of intermediate pressure in said rotating parts with the passage between said packings, and means communicating with the outside of the turbine and through which fluid can flow into or from said passage.

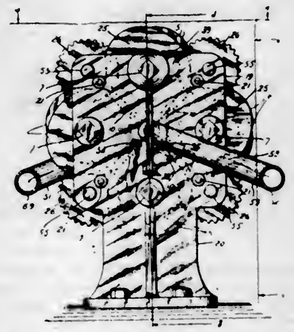
1,349,879. SKIRT. SOPHIE FRANKFURT, New York, N. Y., assignor to Maher & Kessler, New York, N. Y., a Firm. Filed Oct. 27, 1919. Serial No. 333,663. 10 Claims. (Cl. 2—42.)



1. In a skirt, means adjustable in length for connecting the lower portion of the skirt with the waist band thereof when worn on the person for producing a bag effect in the skirt.

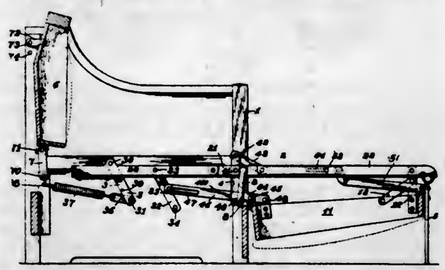
1,349,880. CHECK-WRITER. LUTHER E. GRONSETH, Duluth, Minn. Filed Sept. 14, 1918. Serial No. 254,074. 6 Claims. (Cl. 101—93.)

1. A check writer, embodying a casing, a supporting frame within the casing, tiers of movable type supported in the frame, means for moving selected type to operative position, a platen, means for drawing the platen against the type, and means controlled by the platen moving means for returning the type to normal positions.



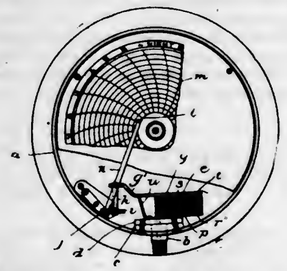
1,349,881. APPARATUS FOR SEPARATING SOLIDS FROM LIQUIDS. HENRY N. HERRICK, Bakersfield, Calif. Filed Feb. 19, 1920. Serial No. 359,781. 5 Claims. (Cl. 210—1.)

1. An apparatus for separating solids from liquids comprising a centrifugal pump for rotating the aggregate mass whereby the solid matter is thrown outwardly; means within the pump for intercepting the outwardly thrown solid matter and separately discharging the same; a housing to receive the discharged solid matter, said housing having an outlet; a valve normally closing said outlet; and means within the housing for forcing said solid matter past said valve.



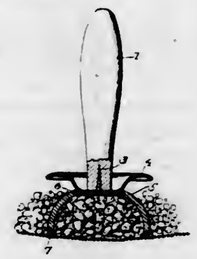
1,349,882. ROTARY ENGINE. WALTER A. HOMAN, Denver, Colo. Filed Jan. 28, 1918. Serial No. 214,074. 11 Claims. (Cl. 123—12.)

1. An internal combustion rotary engine including a stationary frame, a number of elliptical pistons mounted to rotate and coöperating with the frame to form a chamber whose volume varies as the pistons change position for intake, compression and exhaust purposes, the cham-



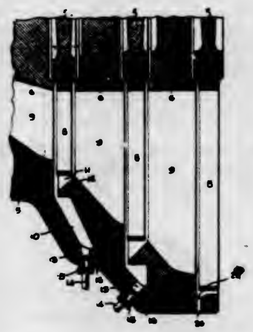
ber having inlet and exhaust ports, and means for opening and closing said ports at properly timed intervals.

1,349,883. FOLDING DAVENPORT-BED. ORNAN A. HONSINGER, Tacoma, Wash. Filed May 11, 1915, Serial No. 27,295. Renewed Nov. 3, 1919. Serial No. 335,472. 14 Claims. (Cl. 5—51.)



13. In a folding davenport, a frame, a back mounted to swing into open or closed position, and back supports comprising upper and lower links pivoted to the frame and to the back, the upper links being in substantial alinement with the back in the closed position to resist an upward effort, and the lower links being in substantial alinement with the back in the open position to resist a downward effort, and a stop limiting the swing of the back beyond the closed position.

1,349,884. DIAPHRAGM-GAGE. FRANK H. HOPKINS, Somerville, Mass., assignor to American Steam Gauge & Valve Manufacturing Company, Boston, Mass., a Corporation of Massachusetts. Filed July 11, 1917. Serial No. 179,883. 4 Claims. (Cl. 73—110.)

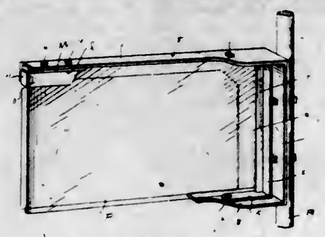


1. A diaphragm gage having flexible diaphragms peripherally connected in pairs to form shallow chambers, said chambers being superposed one upon another in a substantially axially alined series, connections having internal open communication between adjacent chambers, all at one and the same side of the axial line of the series, a support for the chamber at one end of the series having an opening for admission of fluid in communication with said end chamber and therethrough with all the chambers, and means connecting the central points of contiguous walls of adjacent chambers together.

1,349,885. POTATO-MASHER. CLARENCE E. JENKINS, Keene, N. H. Filed Dec. 1, 1919. Serial No. 341,766. 7 Claims. (Cl. 146—15.)

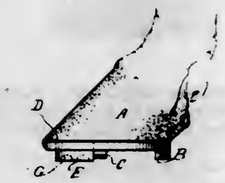
1. A vegetable masher comprising a crushing element and yieldable means carried by said masher for confining the substance within the immediate region of the crushing element.

1,349,886. ELASTIC-FLUID TURBINE. OSCAR JUNGGREN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 9, 1919. Serial No. 295,857. 3 Claims. (Cl. 253—76.)



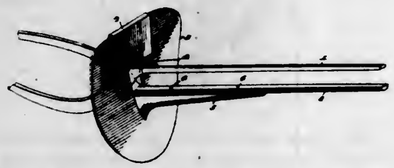
1. In an elastic fluid turbine, the combination of a rotor having buckets thereon, a casing surrounding the rotor, and diaphragms in the casing on each side of the rotor, said diaphragms forming with the casing an annular chamber surrounding the rotor and connected to the space adjacent its periphery by a continuous annular groove which is formed between adjacent walls, and an annular sloping wall for directing water to said groove.

1,349,887. SASH CONSTRUCTION. EDGAR M. JUTKINS, La Junta, Colo. Filed Mar. 22, 1919. Serial No. 284,274. 3 Claims. (Cl. 20—56.)



1. A sash structure for a safety window of a locomotive cab comprising a substantially U-shaped frame, the marginal portions of said frame being defined by inwardly directed flanges, a panel insertible within the frame and

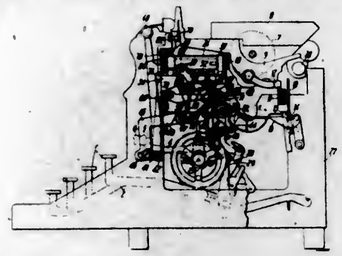
engaging the flanges, a yoke pivotally engaged with the side members of the frame and having clamping engagement with the end portion of the panel adjacent the inter-



mediate member of the frame, and a member carried by the outer end portion of one of the side members of the frame and engaging the panel.

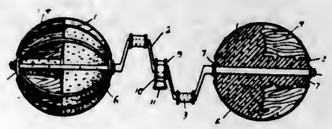
1,349,888. HORSESHOE. EDWARD C. KENNY, Brooklyn, N. Y. Filed Jan. 29, 1916. Serial No. 75,167. 7 Claims. (Cl. 168—14.)

1. In a horseshoe, the combination of a metal tread of suitable thickness and semi-elliptical plan view, with a pad of resilient or yielding material adapted to be secured between the horse's hoof and the metal tread having an integral projection extending downwardly near the toe, the lower surface of which extends below the tread surface of the metal member, the rearward side of said projection having a reinforcing bar adjacent thereto, said reinforcing bar being adapted to be removably connected at its ends to the sides of the metal member.



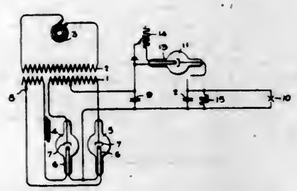
1,349,889. SHIELD FOR BUTTON-CUTTERS' SHELL-TONGS. WILLIAM J. KOCH, La Crosse, Wis. Filed Mar. 9, 1920. Serial No. 364,588. 5 Claims. (Cl. 294—131.)

1. A shield for button cutters' shell tongs comprising, a plate having a slot extending downwardly from its upper edge toward its center and a rearwardly extending, horizontal arm for attachment to the under side of the lower handle member of a tongs in rear of the pivot.



1,349,890. TYPEWRITING-MACHINE. ALFRED G. F. KUROWSKI, Brooklyn, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 23, 1918. Serial No. 255,250. 34 Claims. (Cl. 197—1.)

1. A printing device adapted to be attached to a ribbon-printing type-bar typewriting machine having a frame, said device comprising a member adapted to fit upon the frame of the machine, a ribbon vibrator adapted to raise

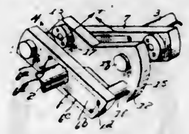


the ribbon to effective position from a point below the printing line, and a ribbon guide adapted to operate a ribbon-reversing device in the typewriting machine.

1,349,891. SWIMMING DEVICE. TIMOTHY A. KUZNETZOFF, Brooklyn, N. Y. Filed May 28, 1920. Serial No. 384,938. 7 Claims. (Cl. 9—21.)

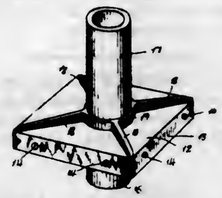
1. A swimming device, the combination with a crankshaft, floating balls on the end of said crankshaft, and paddles attached to and forming a part of said balls.

1,349,892. METHOD OF AND MEANS FOR OBTAINING CONSTANT DIRECT CURRENTS OR POTENTIALS. IRVING LANGMUIR, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Dec. 22, 1915. Serial No. 68,287. 8 Claims. (Cl. 175—363.)



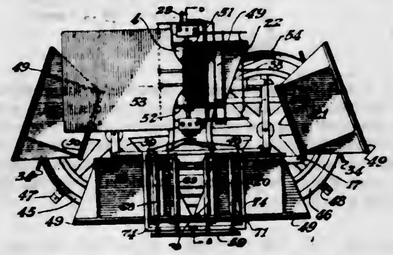
3. The method of obtaining a direct current of constant value from a variable voltage source which consists in delivering current from said source to a utilization circuit through a current limiting device and operating the current limiting device in such a way that the current flowing therethrough is maintained substantially constant at a desired value over a range of voltages of the variable voltage source greater than the voltage required to produce a current of the desired value.

1,349,893. CRANK-SHAFT FOR INTERNAL-COMBUSTION ENGINES. FRED S. LEE, Vanlue, Ohio. Filed Mar. 24, 1920. Serial No. 368,338. 4 Claims. (Cl. 74—38.)



1. A crank shaft comprising crank shaft journals, crank arms connected to the adjacent ends of said journals and arranged at angles to each other radially from the journals, an intermediate crank arm having segmental parts, the edges of which correspond to the angles of the first

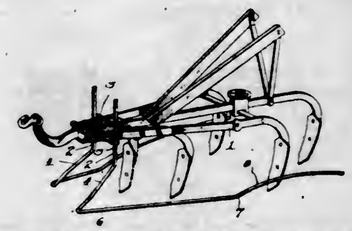
crank arms, each of said remote longitudinal edges of the first crank arms consisting of two sections, one consisting of an inset section, the other a crank arm completing section having a slot to receive the inset section, the inset



section carrying one of said crank shaft journals at one end, a connecting rod journal at the other end of said inset section and being connected to an opposite segmental part of the intermediate crank arm, and means to secure the inset section in the crank arm completing section.

1,349,894. ROOF ATTACHMENT. JAMES H. LORD, Methuen, Mass. Filed Jan. 10, 1920. Serial No. 350,551. 2 Claims. (Cl. 285—31.)

2. A roof attachment substantially as specified by claim 1, the flange being provided on its upper side with radial strengthening ribs, and with a cylindrical enlargement joined to the inner ends of said ribs and constituting a seat for the lower end of the stack.

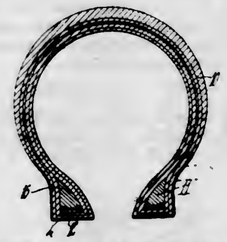


1,349,895. MULTICOLOR PRINTING MACHINE. JOSEPH F. LOUGHRAY, Philadelphia, Pa. Filed Mar. 13, 1920. Serial No. 365,416. 7 Claims. (Cl. 101—186.)

1. In a multi-color press, the combination of a pathway embodying two straight reaches and two curved connecting end reaches,—a plurality of traveling type beds which carry impression forms and are adapted to travel consecutively throughout the pathway,—an idle type bed which carries no impression form but which is in the line between two consecutive beds which carry impression forms,—an impression cylinder,—means for inking the impression forms consecutively with the desired color,—and means for occasioning the continuous travel of all of the type beds first beneath said inking means and then beneath said impression cylinder.

1,349,896. VINE TURNER AND LIFTER. CHARLES T. MCCREADY, Onley, Va. Filed Dec. 19, 1919. Serial No. 346,195. 1 Claim. (Cl. 97—32.)

A vine turner attachment for cultivators comprising an arm for attachment to a cultivator side bar, a forwardly downwardly inclined extension on the lower end of said arm, a substantially horizontally disposed rear-

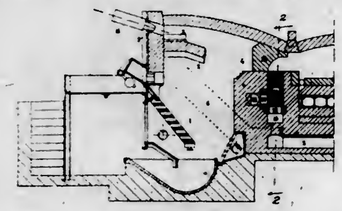


wardly extending arm on the lower end of said extension, and a substantially laterally curved upwardly inclined arm on the second named arm.

1,349,897. LIFE-FLOAT. JOHN H. MCDONAH, Boston, Mass. Filed Aug. 30, 1918. Serial No. 252,026. 5 Claims. (Cl. 9—11.)

1. A hollow tubular float construction comprising a plurality of independent tubular sections having means by which they are joined together with each section independently water-tight, comprising a flanged male end and a flanged female end on each section, the male and female ends of adjacent sections adapted to be secured together, and a connecting and separating member arranged in the connection between the adjacent sections.

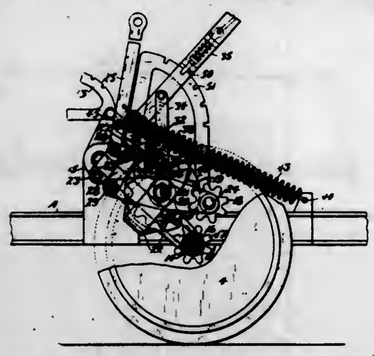
1,349,898. REINFORCEMENT FOR TIRE-BEADS. MELVON A. MARQUETTE, Springfield, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Apr. 9, 1919. Serial No. 288,716. 12 Claims. (Cl. 152—13.)



1. In a tire casing, a reinforcement for the bead thereof comprising a strip of fabric disposed circumferentially of the bead and being substantially straight in a direction transverse to the bead, said fabric having its edge portions strengthened throughout the circumference of the bead.

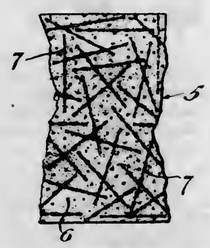
5. In a tire casing, a reinforcement for the bead thereof comprising a pair of reinforcing members, disposed circumferentially of the bead, and a tubular fabric inclosing such members.

1,349,899. FURNACE. MAURICE MATHY, Liege, Belgium. Filed June 26, 1919. Serial No. 307,029. 3 Claims. (Cl. 110—31.)



1. A reverberatory furnace having a producer for generating gas for heating the furnace, and also having a

burner for liquid fuel, and a flameless combustion burner comprising a cavity hollowed out in the hearth of the fur-

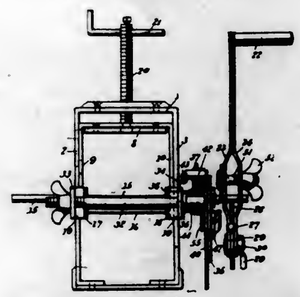


nace and filled with a mass of porous, refractory granular material, in the interstices of which a gaseous mixture is adapted to burn.

1,349,900. POWER-LIFT FOR CRANK-AXLE IMPLEMENTS. FRANCIS M. MECUM, Chico, Calif. Filed Nov. 8, 1918. Serial No. 261,727. 12 Claims. (Cl. 97—54.)

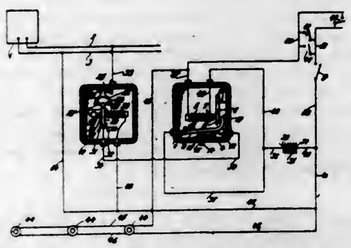
1. The combination with the main frame of a plow and a plurality of furrow openers carried thereby of a crank axle journaled on the frame, a wheel journaled on the free end of the axle, a gear fixed relative to the wheel, a second gear journaled on the crank portion of the crank axle, a connection between the second gear and frame, a lever fulcrumed concentrically with the second gear, a gear carried by the lever for connecting the first two gears, means for locking the second gear against rotation and a single means for rendering said means inoperative and said connecting gear operative.

1,349,901. FERROCONCRETE CONSTRUCTION. WILLIAM MEISCHKE-SMITH, San Francisco, Calif. Filed Dec. 16, 1918. Serial No. 267,036. 2 Claims. (Cl. 106—24.)



2. A ferroconcrete construction comprising a body of cement and reinforcing units distributed in indiscriminate directions throughout the cement body consisting of disconnected pieces of twisted flat steel wire having flat faces.

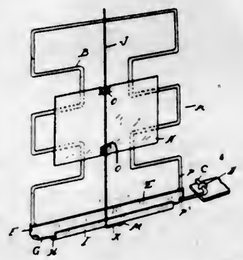
1,349,902. TIRE-BEAD. THOMAS MIDGLEY, Springfield, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Jan. 20, 1919. Serial No. 272,107. 8 Claims. (Cl. 152—13.)



1. A tire bead comprising a plurality of anchoring members located adjacent the base of the bead, and an additional anchoring member located in staggered relation to the first mentioned members, said first-named members being separated a substantial amount at a point below the second-named member, whereby the contour of the bead is built out above the base thereof.

1,349,903. COIL-FORMING MACHINE. ALBERT W. MILLER, Riverside, Calif., assignor of one-half to Elizabeth C. Bryan, Riverside, Calif. Filed Sept. 18, 1919. Serial No. 324,646. 9 Claims. (Cl. 153—67.)

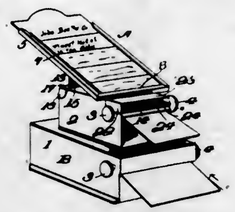
1. A coil forming machine including a mandrel, means for rotating the mandrel, means for guiding wire stock to the mandrel, a series of gage plates laterally movable to permit the insertion of the wire stock between any two of them, and means exerting a variable clamping tension on the gage plates to produce a frictional gripping tension on the wire stock.



1,349,904. ALARM DEVICE. WILMER W. MILLER, Ardmore, Pa. Filed Aug. 4, 1916. Serial No. 113,035. 14 Claims. (Cl. 179—5.)

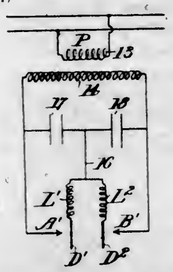
1. Alarm apparatus including in combination the main wires of a telephone system, a plurality of switches, an

electric generator in circuit with the switches, means intermediate the switches and generator for energizing the main wires of the telephone system, certain of said switches being adapted to be readily cut out of connection with the telephone system, said latter mentioned switches being included in another circuit than that in which said first switches are included; and a cut out switch included in said second switch circuit, said first mentioned switches being in connection with the telephone system at all times, substantially as described.



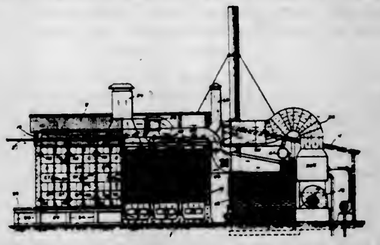
1,349,905. COPY-HOLDER. BYRON T. MILLS, Las Vegas, N. Mex. Filed Aug. 11, 1915, Serial No. 44,960. Renewed Jan. 15, 1920. Serial No. 351,558. 4 Claims. (Cl. 120—28.)

1. A copy holder, comprising a wire frame having inwardly-extending loops, one end of the wire projecting and forming a laterally-extending supporting arm terminating in a hook, a sheet metal member extending across the base of said frame having its ends looped about the side bars of the frame, and a portion of its lower edge looped about the base of the frame, said member having a laterally and upwardly-extending flange forming a channel bar.



2. A copy holder, comprising a wire frame having inwardly-extending loops, one end of the wire being extended to form a laterally supporting arm, a sheet metal member extending across the base of said frame, having its ends looped about the side bars thereof and a portion of its lower edge looped about the bottom bar, said sheet metal member having an upwardly and outwardly extending flange, forming a channel bar for supporting the copy, and a resilient rod extending through an aperture in the base of said channel bar upwardly across said frame, said rod having a hook portion engaging a struck out anchor in said flange.

1,349,906. HOLDER FOR ADVERTISEMENTS AND OTHER PAPERS. RICHARD NEDDO, Norfolk, Va. Filed Aug. 2, 1916, Serial No. 112,665. Renewed Dec. 4, 1919. Serial No. 342,476. 2 Claims. (Cl. 40—146.)



1. The herein described holder for sheets of cards or paper having a normally inclined frame plate with guide grooves and stops at the side edges and bottom arranged to provide a permanently open entrance-way at the upper end of the holder and to inclose and protect the side and bottom edges of the paper, said holder having at its lower end a relatively short vertical support projecting downward from its bottom plate and having a relatively longer downwardly projecting vertical support at points remote from its lower end, both of said downwardly projecting supports being adapted to rest upon and engage with a supporting base structure and arranged to leave the entrance to said guideways free for the insertion or withdrawal of papers.

1,349,907. APPARATUS FOR RECTIFYING ELECTRIC CURRENTS. ARTHUR F. NESBIT, Wilkinsburg, Pa. Filed Aug. 20, 1914. Serial No. 857,796. 3 Claims. (Cl. 175—363.)

1. The combination with an electrical apparatus for receiving unidirectional currents, of regulating devices, disks connected through said regulating devices to one terminal of said apparatus, electrodes placed upon opposite sides of and spaced from said disks to form spark gaps, and means connected with said electrodes for supplying alternating, oscilating or pulsating currents.

1,349,908. DEHYDRATING PLANT. LANDON E. POST and DODGE A. RIEDY, San Francisco, Calif. Filed June 9, 1919. Serial No. 302,915. 5 Claims. (Cl. 34—39.)

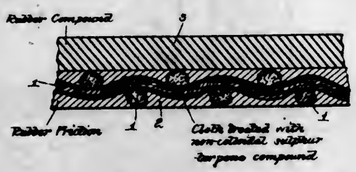
1. In a dehydrator, the combination of a series of chambers, trays mounted within said chambers, a common hot air supply, means for conducting said hot air to said chambers independently, trays mounted within said chambers one above the other, means for controlling the travel of heated air within said chambers, an air outlet near the bottom of said chambers passing into a central chamber, and an outlet from said central chamber to the atmosphere.

1,349,909. SULFUR-TERPENE COMPOUND. WILLIAM BEACH PRATT, Wellesley, Mass., assignor to E. H. Clapp Rubber Company, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 3, 1919. Serial No. 328,235. 11 Claims. (Cl. 134—26.)

1. A sulfur compound, which exhibits the following characteristics, to wit, neutral, amorphous, noncolloidal, insoluble in water, soluble in toluol and xylol, and capable of reacting with rubber.

1,349,910. WATERPROOFED FABRIC. WILLIAM BEACH PRATT, Wellesley, Mass., assignor to E. H. Clapp Rubber Company, Boston, Mass., a Corporation of Massachusetts. Filed Jan. 8, 1919, Serial No. 270,228. Renewed May 3, 1920. Serial No. 378,660. 5 Claims. (Cl. 91—68.)

1. A fabric consisting of a fibrous foundation impregnated with a non-colloidal sulfur-terpene compound.



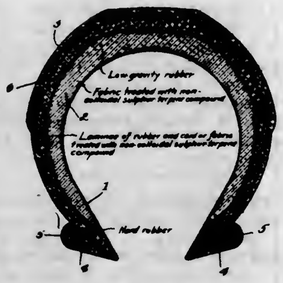
2. A fabric consisting of a fibrous thread impregnated with a non-colloidal sulfur-terpene compound.

3. A fabric consisting of a plurality of interlocked threads impregnated with a non-colloidal sulfur-terpene compound.

4. The herein described process which consists in permeating the fibers of a fibrous material with a non-colloidal sulfur-terpene compound.

5. The herein described process which consists in impregnating the fibers of a fibrous material with a solution containing a non-colloidal sulfur-terpene compound, and then removing the solvent.

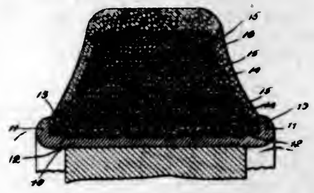
1,349,911. VULCANIZED ARTICLE AND PROCESS OF PRODUCING THE SAME. WILLIAM BEACH PRATT, Wellesley, Mass., assignor to E. H. Clapp Rubber Company, Boston, Mass., a Corporation of Massachusetts. Filed May 5, 1920. Serial No. 378,942. 10 Claims. (Cl. 91—70.)



3. The herein described process which comprises treating a strip or sheet of fibrous material with a non-colloidal sulfur terpene, coating the same with a rubber compound and subjecting the same to vulcanization.

7. A new manufacture comprising rubber, a fibrous body, and a non-collodial sulfur-terpene compound bonding the rubber and fibrous body, all vulcanized together.

1,349,912. ARTICLE AND PROCESS OF BONDING METAL AND VULCANIZED RUBBER. WILLIAM BEACH PRATT, Wellesley, Mass., assignor to E. H. Clapp Rubber Company, Boston, Mass., a Corporation of Massachusetts. Filed May 5, 1920. Serial No. 378,941. 9 Claims. (Cl. 18—59.)

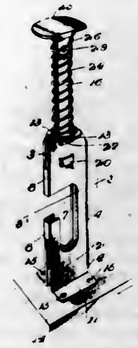


1. The herein described method of bonding vulcanised rubber and metal which comprises coating the surface of the metal with a non-colloidal sulfur terpene compound, placing thereagainst a material to be bonded to such surface and subjecting the structure to heat and pressure.

1,349,913. PNEUMATIC TIRE AND PROCESS OF MAKING THE SAME. WILLIAM BEACH PRATT, Wellesley, Mass., assignor to E. H. Clapp Rubber Company, Boston, Mass., a Corporation of Massachusetts. Filed Jan. 3, 1919. Serial No. 269,468. 7 Claims. (Cl. 154—14.)

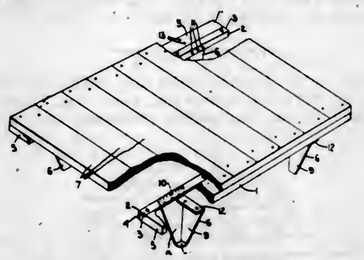
1. A method of making pneumatic tires which consists in treating a fibrous material with a non-colloidal sulfur terpene compound, forming the tire structure of rubber and said treated fibrous material, and vulcanizing said structure.

1,340,914. SOLID TIRE AND METHOD OF MAKING THE SAME. WILLIAM BEACH PRATT, Wellesley, Mass., assignor to E. H. Clapp Rubber Company, Boston, Mass., a Corporation of Massachusetts. Filed Jan. 3, 1919, Serial No. 269,467. Renewed Nov. 14, 1919. Serial No. 338,116. 17 Claims. (Cl. 154—12.)



1. A tire comprising a rim, a solid rubber tread, and a layer of non-colloidal sulfur-terpene compound uniting the tread to the rim.

1,349,915. BLOCK AND BAR SHEARS. BRUNO QUAST, Cöln-Deutz, Prussia, Germany. Filed Mar. 9, 1918. Serial No. 221,573. 2 Claims. (Cl. 164—47.)



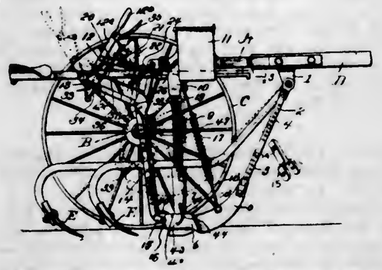
1. In a block-and-bar shearing machine, the combination with a crank shaft, of upper and lower cutter heads, a lever carrying one of the cutter heads and operatively connected with the crank shaft, a lever connected with the other cutter head, a draft bar connection between said levers, one of said levers serving as a single-armed lever for a portion of its movement and as a double-armed lever for the remainder of its movement.

1,349,916. DECAPITATOR. FRANK S. RECH, Dallas, Tex. Filed Oct. 24, 1919. Serial No. 332,983. 4 Claims. (Cl. 17—30.)

3. In a decapitator the combination of a stock consisting of parallel leaves, a web joining the back edges of said leaves and lips bridging the front edges thereof, a cutter mounted between the leaves and guided by the leaves, said web and said lips, yieldable means for holding the cutter normally raised, means for depressing the cutter, and means for limiting the movement of the cutter.

1,349,917. PLATFORM FOR USE WITH ELEVATING-TRUCKS. RAYMOND M. ROBERTS, Melrose Highlands, Mass. Filed Sept. 24, 1919. Serial No. 326,092. 7 Claims. (Cl. 248—41.)

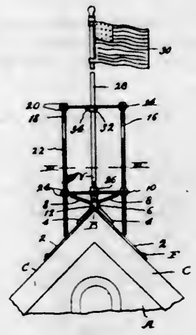
1. In a platform for elevating trucks, the combination with two sills, each having a nailing strip extending longitudinally thereof, of legs supporting said sills, and a wooden-load-supporting portion resting on the sills and secured to the nailing strips.



1,349,918. METHOD FOR PRODUCING METALLIC ALLOYS CONTAINING NICKEL. MICHELE N. SALVATI, Turin, Italy; Guido Beer and Arrigo Tedesco, executors of said Michele N. Salvati, deceased, assignors to Societa Anonima Stabilimenti Biak, Turin, Italy, a Company of Italy. Filed Dec. 19, 1917. Serial No. 207,853. 2 Claims. (Cl. 75—1.)

1. A method of manufacturing alloys containing nickel and zinc, consisting in first alloying together practically pure nickel and zinc and then adding the alloy thus obtained to the rest of the constituents of the final alloy.

1,349,919. PROCESS OF MANUFACTURING NITRIC ACID AND OTHER NITROGEN COMPOUNDS FROM ATMOSPHERIC AIR. JOHN F. SANDERS, Roseburg, Oreg., assignor to Frank H. Churchill and Oliver P. Coshow, Roseburg, Oreg. Filed Oct. 23, 1917. Serial No. 198,168. 9 Claims. (Cl. 23—1.)



1. The process of forming oxids of nitrogen, which comprises passing a mixture containing nitrogen, oxygen and hydrogen over platinum, heated to any desired degree of incandescence by an electric current.

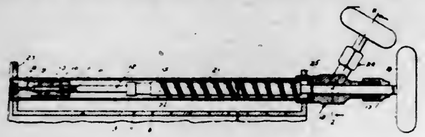
1,349,920. CORN-REPLANTER. PAUL T. SELLERS, Nicholasville, Ky. Filed Feb. 14, 1919. Serial No. 277,061. 2 Claims. (Cl. 111—23.)

2. The combination with a cultivator, of a planting shoe attached thereto for movement toward and away from the ground surface, means for normally holding said shoe in raised position, the shoe being provided with a seed tube, means for supplying seed to said tube when the shoe is moved into raised position, means for lowering said shoe into planting position, a valve acting to normally close the seed tube of the shoe, and means for optionally moving said valve into open position so as to discharge seed from said tube when the planting shoe is in planting position.

1,349,921. FLAGSTAFF AND SUPPORT THEREFOR. CHARLEY SHORT, Courtney, Mo. Filed May 4, 1920. Serial No. 378,846. 4 Claims. (Cl. 248—37.)

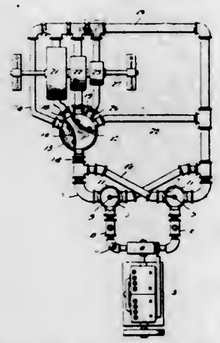
2. In an apparatus of the character described, upper and lower plates to support a flag staff, standards connecting said plates, an adjustable member connected to the lower plate, and means for securing said adjustable member to the roof of a building.

1,349,922. TIRE-VALVE CAP. ROBERT H. SIMPSON, Berkeley, Calif. Filed Sept. 29, 1919. Serial No. 327,259. 2 Claims. (Cl. 152—12.)



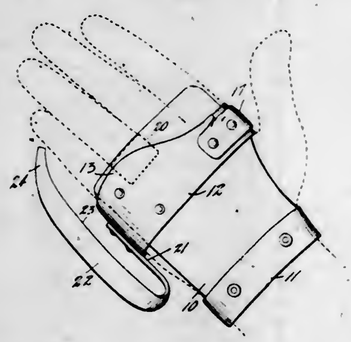
1. In combination with a tire valve stem, a sleeve upon the body portion of the stem, a cap adapted to telescope thereover and fitted with a closed threaded end into which the end of the valve stem may be screwed, a bayonet slot formed in the side of the cap, and a protrusion formed upon said sleeve for engagement with said slot.

1,349,923. GAS-GENERATOR. HARRY M. SMITH, Daly City, Calif., assignor to The Colmar Burner Company, San Francisco, Calif., a Corporation of California. Filed May 19, 1919. Serial No. 298,006. 3 Claims. (Cl. 158—53.)



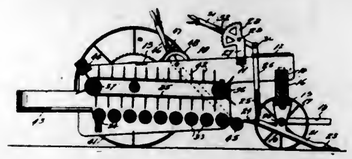
3. In a hydro-carbon generator construction, a generator casing having a fuel inlet port leading thereto and a vapor outlet port leading therefrom, a valve closure rod mounted in said casing and controlling said vapor outlet port, said valve rod having a peripheral groove arranged in a helical form, a coiled spring mounted in said groove, the ends of said spring being secured to said rod, the pe-

ripheral surface of the coils of said spring contacting with the interior surface of the generator casing, and



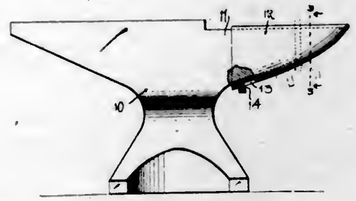
means to operate said rod, whereby on a rotation thereof the spring coils will free the interior surface of said casing of foreign matter.

1,349,924. FLUID-TRANSMISSION MECHANISM. ROBERT L. SWANSON, Red Bluff, Calif. Filed May 8, 1918. Serial No. 233,337. 2 Claims. (Cl. 60—53.)



1. An apparatus of the class described, comprising a series of separated motors, of different sizes, a shaft common to all the motors, a valve casing, a pipe connecting the same with each motor, a pump, an inlet pipe connecting the same to the valve casing, a valve in said casing having its inlet end of sufficient size to permit it to remain in register with the inlet pipe while its outlet end is moved to register with any of the pipes leading to the motors, means for returning the fluid to the pump after it leaves the motor and means associated with the last mentioned means for permitting the fluid to pass through the idling motors.

1,349,925. HAND-HARVESTER. JOSEPH S. TAYLOR, Pilot Point, Tex. Filed Jan. 12, 1920. Serial No. 350,745. 1 Claim. (Cl. 30—9.)

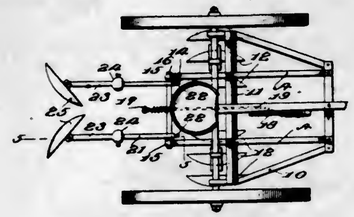


A hand harvester, comprising a plate to be arranged in the palm of the hand and extending transversely of the palm, means to secure the plate in place upon the hand, a cutting blade provided at its rear end with a shank bent back upon the blade and spaced therefrom in substantial parallel relation, said cutting blade extending longitudinally of the hand at the inner edge thereof when the palm is arranged uppermost and spaced therefrom for providing a longitudinal passage having its forward end open, said blade being transversely inclined and having its upper longitudinal edge sharpened, the sharpened edge being arranged approximately in the plane of the plate and the forward end of the blade being extended laterally, the blade being adapted to cut by pulling it toward said plate, and means for securing the shank to the plate.

1,349,926. SOD CUTTING AND DISINTEGRATING MACHINE. ROBERT L. THOMPSON, Troup, Tex. Filed May 10, 1920. Serial No. 380,264. 6 Claims. (Cl. 55—1.)

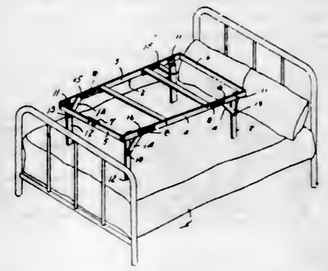
1. In a machine of the character described, a wheel supported frame, an inclined elevator, a forward truck supporting the frame and carrying the elevator, a plow attached to the front end of the elevator, a plurality of disintegrating rollers mounted in the frame and extending rearwardly with relation to the elevator, a rearwardly traveling disintegrating member passing over the rollers, means for removing material from said member mounted at the rear end of the frame, and a discharge element mounted at the rear end of the frame for discharging the material removed from the disintegrating member.

1,349,927. ANVIL ATTACHMENT. HARRY TROUTS, Bridgeport, Conn. Filed Sept. 25, 1918. Serial No. 255,642. 1 Claim. (Cl. 78—7.)



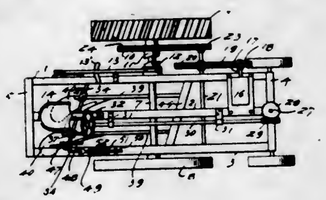
As an article of manufacture an attachment for an anvil comprising a hollow tapering body of an external outline the shape of the horn of an anvil, and an internal outline and size to snugly fit the horn of an anvil, the outer face of the body having a longitudinal groove extending through the smaller end of the body and terminating adjacent the larger end of the body, and a screw engaged through the last-named end of the groove, said grooved portion of the body being thicker than the remainder thereof.

1,349,928. LEVELING ATTACHMENT. HERBERT F. UNRUH, Meno, Okla. Filed June 24, 1919. Serial No. 306,310. 1 Claim. (Cl. 97—34.)



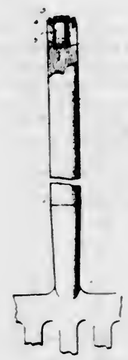
A ridge leveling attachment for an agricultural machine, the same comprising a pair of brackets whereof each includes an open triangular body for attachment to the frame of such machine, arms projecting rearwardly from the body, and bearings carried by said arms, a rock shaft journaled in said bearings, an arm rising therefrom,

a lever connected by a link with said arms for adjusting the position of the shaft, trailing arms adjustably mounted on said rock shaft, other arms carrying ridge-breaking



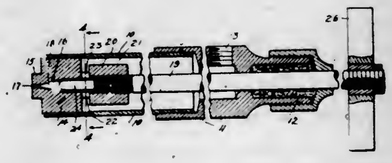
and leveling implements, and ball-and-socket joints between these arms and the trailing arms whereby their angles thereto may be adjusted.

1,349,929. CANOPY FOR BEDS. CARL L. VAN TUYL, Bison, Kans. Filed Nov. 15, 1916. Serial No. 131,423. 1 Claim. (Cl. 5—14.)



A canopy support comprising a rectangular frame constructed from a single length of material bent to form side and end members and said material having its ends disposed in engagement with each other and located in one of the end members and at a point intermediate the ends thereof, means securing the ends of said material together and disposed on the inner face of the last named end member, said side members having elongated slots adjacent their ends and terminating in arcuate shaped slots that form shoulders in one of the ends of said elongated slots, legs pivoted to said side members at their ends, braces pivoted to said legs, and headed pins secured to said braces and extending through and slidable in said slots and adapted to engage the shoulders to prevent collapsing of said legs when positioned on a bed to support the frame in spaced relation thereto.

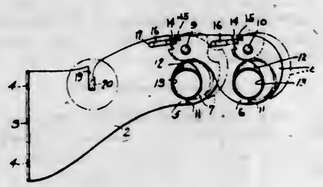
1,349,930. TRACTOR. CHARLES J. WHITE, Pawnee, La. Filed Aug. 15, 1919. Serial No. 317,738. 1 Claim. (Cl. 180—26.)



In a tractor, a main supporting frame, an axle rotatably mounted thereon, a ground wheel mounted on said axle at one end thereof for free rotation, a main drive wheel secured on the axle at the other end thereof, means for optionally rotating the axle to propel the tractor, an axle mounted at the front of the frame and rockable about a vertical axis, front ground wheels mounted on said front axle at each end thereof for steering purposes, the front axle being less in length than the rear axle and pivoted at a point midway between its ends to the frame, at a point located in a plane lying parallel with the first mentioned ground wheels, said plane being disposed at a distance from the rear furrow ground wheel equal to one half of the length of the front axle whereby one of the front wheels is located in advance of and in line lying between the rear wheels and the rear furrow ground wheel tracks with the other front wheels, and means for rocking said front axle about its axis for modifying or neutralizing the tendency of the main drive wheel to turn the tractor about the ground wheel loosely mounted on said axle.

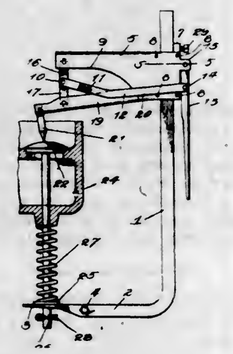
1,349,931. TOOL-HANDLE OILER. WALTER WILSON, Meridian, Idaho, assignor of one-half to Raymond Barnum, Nampa, Idaho. Filed Jan. 3, 1920. Serial No. 349,334. 4 Claims. (Cl. 145—61.)

1. In combination with a tool handle provided at its free end with a longitudinally extending cylindrical opening, a cylinder for containing oil adapted to be inserted in said cylindrical opening so as to leave a space between said cylinder and the walls of said opening, said cylinder provided with a plurality of apertures in its side walls, means for closing one end of said cylinder and means provided for attaching said cylinder to said tool handle.



1,349,932. HYDROCARBON-GENERATOR. MATTHIAS S. YEAGER, San Francisco, Calif., assignor to The Colmar Burner Company, San Francisco, Calif., a Corporation of California. Filed Jan. 29, 1919. Serial No. 273,832. 2 Claims. (Cl. 158—120.)

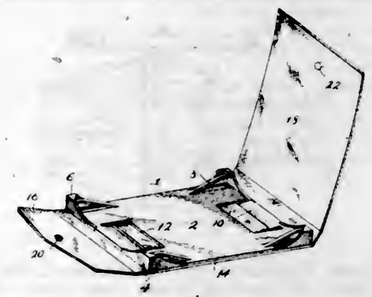
1. In a gas generator, a cylindrical casing, a gas outlet plug in the discharge end of said casing, a bearing formed integrally with the inner end of said plug and being provided with a screw threaded aperture therethrough, the



diameter of said bearing being less than the diameter of the plug, whereby to form an annular passage for the gas generated by said generator when the plug is mounted therein, said bearing being provided with a pair of inlet openings, said openings communicating with the bore of said plug, a valve rod mounted within said casing and being in screw threaded engagement with the threaded bearing formed on the plug, and means to operate said valve rod to open or close the discharge outlet formed in the plug.

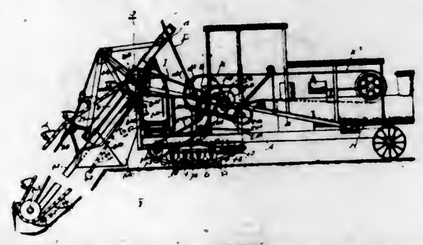
1,349,933. SHADE, CURTAIN, AND DRAPERY HOLDER. HUGO C. ZEITZ, Monessen, Pa. Filed Jan. 29, 1920. Serial No. 354,985. 6 Claims. (Cl. 156—22.)

6. A bracket for curtain rods and the like comprising a base plate of sheet material having a downwardly and forwardly extending projection forming a recess, a curved jaw member pivotally attached to the said base plate adjacent to the said recess, the said jaw member being provided at its upper end with a plurality of notches, and a locking detent or pawl pivotally secured to the said base plate and adapted to enter any one of the said notches.



1,349,934. VALVE-SPRING LIFTER. EBER CHARLES AUSTIN, Wahoo, Nebr. Filed May 29, 1919. Serial No. 300,656. 5 Claims. (Cl. 29—87.1.)

1. A tool for the purpose set forth, the combination of a standard, a body extending laterally from the standard, an arm pivoted to the body, a presser pin carried by the free end of said arm, toggle members pivoted to the body and the said arm, respectively, and pivotally connected to each other, links extending from the pivotal connection between the toggle members, and a hand lever fulcrumed upon the body and pivoted to said links.



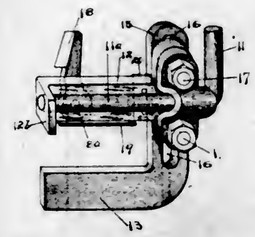
1,349,935. CARD-HOLDER. JOHN H. BENDER, Kansas City, Mo. Filed July 22, 1919. Serial No. 312,611. 3 Claims. (Cl. 129—35.)

1. In a device of the character described, a frame consisting of a back plate adapted to support a plurality of cards, corner members on said back plate adapted to abut the corners of the cards, top plates on said corner

members, and spring members struck from the back plate to press the cards upwardly and hold the uppermost card in engagement with said top plates.

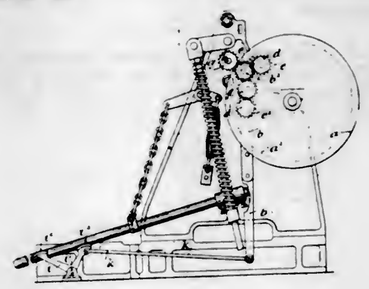
1,349,936. TRENCHING-MACHINE. HANS J. BENTSON, La Jolla, Calif., assignor to Frederick C. Austin, Chicago, Ill. Filed Jan. 10, 1913. Serial No. 741,208. 1 Claim. (Cl. 37—24.)

A trenching machine comprising a body frame, a transverse shaft on said body, at the rear thereof, a swinging support, a digging beam depending from said shaft, movable in a vertical plane to vary the depth below ground of the lower end thereof, and to permit raising of such beam above ground, an endless belt mounted to travel up and down said support, operated by said shaft, excavating buckets on said belt, mechanism for rotating said shaft, carried on said body, means for receiving the dirt from said buckets, mounted on said body, said buckets being disposed in parallel series, at opposite sides of the ditch, the buckets of one series being staggered relative to those of another series, and said support comprising an upper frame which is wider than said belt, mounted to tilt on said shaft, a lower frame which is narrower than said belt, secured to said upper frame, the said buckets all passing between the sides of said upper frame, but extending outside of the lower frame.



1,349,937. PUZZLE. WILLIAM A. BICKINGS, Detroit, Mich. Filed Mar. 15, 1919. Serial No. 282,788. 3 Claims. (Cl. 46—41.)

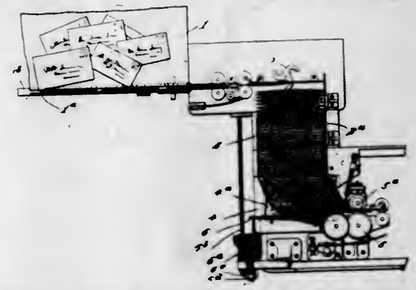
2. A puzzle comprising a bottom plate having a pocket formed therein, a pair of upper plates pivoted on said bottom plate and provided with interlocking projections



and recesses, the opposed edges of said upper plate being cut away at one point to permit turning of said upper plate in one direction upon their pivots, and means for normally locking said upper plate in one position upon said bottom plate.

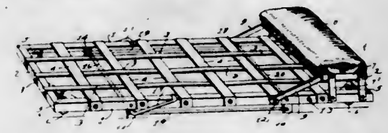
1,349,938. LUGGAGE-RACK. CLINTON F. BLAKE, Portland, Oreg. Filed Sept. 24, 1919. Serial No. 326,077. 6 Claims. (Cl. 224—29.)

1. In a luggage rack, a plurality of clamps each consisting of a pair of parallel jaws, means to adjust the distance between said jaws and to positively secure the same at the desired distance one from the other, a clamping device secured to one of said jaws, and bearings upon the other of said jaws; in combination with a rack of lazy tong construction consisting of a plurality of flat bars diagonally disposed, a plurality of round bars diagonally disposed, feet upon each of said round bars normal thereto and adapted to be mounted within said bearings of said clamps.



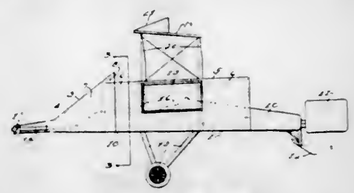
1,349,939. MECHANICAL OR POWER-ACTUATED HAMMER. WILLIAM BLACKER, Staleybridge, England. Filed Mar. 29, 1919. Serial No. 285,984. 5 Claims. (Cl. 74—58.)

1. In combination with a hammer and a screw-threaded shaft for causing its lateral traverse, a gear wheel on said shaft turning therewith, a reversing lever carrying a gear wheel in mesh therewith, additional gear wheels of a reversing system carried by said lever and permanently meshing with the second gear above mentioned, friction disks turning with the latter wheels, a driving friction wheel engaging one or the other of said disks, according to the position of said lever, to turn said shaft in either direction as chosen, a doubly acting treadle, and means for connecting said treadle to said lever in order that the lateral traverse of the hammer may be reversed while the machine is working and while the operator's hands are employed in controlling the hammer.



1,349,940. APPARATUS FOR SORTING, POSTMARKING, AND CANCELING MAIL. WALTER H. BOWES, Greenwich, Conn. Filed Sept. 7, 1918. Serial No. 253,065. 12 Claims. (Cl. 101—240.)

2. In apparatus for sorting and canceling mail mechanically; the combination of a sorting table having a letter discharge channel or chute in which the letters are moved edgewise; and a stacker wheel adjacent the end of such channel; a canceling machine having canceling mechanism through which the letters are passed edgewise; said canceling machine being arranged with a

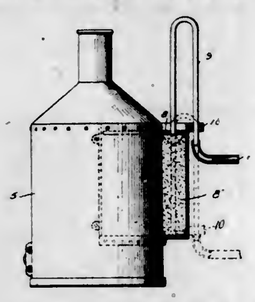


downwardly inclined chute adapted to receive letters from the sorting channel and direct them to the canceling machine, the letters being automatically fed by the stacker from the sorting table channel to and through the chute to the canceling machine.

1,349,941. AUTOMOBILE-CREEPER. WILLIAM J. BROOME, Los Angeles, Calif. Filed Jan. 26, 1920. Serial No. 354,292. 4 Claims. (Cl. 5—4.)

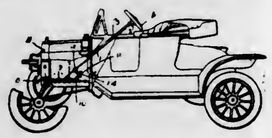
2. A creeper comprising a bed having parallel side rails, a pair of spaced legs pivoted to each of said rails, connecting rods between the legs on each side of said bed, a transverse member pivotally connecting one leg of one pair with the opposite leg of the other pair, and operating means at the side of said bed adapted to engage said rails at opposite extremes of action for holding said legs parallel with and vertical to said rails.

1,349,942. FLYING-MACHINE. JOHN H. CARR, Alhambra, Calif. Filed Jan. 3, 1919. Serial No. 270,423. 15 Claims. (Cl. 244—12.)



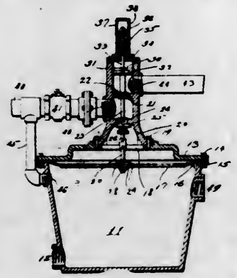
1. An airplane having main planes for sustaining the vehicle in flight, diagonally disposed side planes extending rearwardly from the front thereof and an inclined plane connecting said main and side planes, as described.

1,349,943. HEATING APPARATUS. DAVID P. CLEVELAND, Dallas, Tex., assignor to Universal Paint Remover and Motor Cleaning Company, Dallas, Tex. Filed July 7, 1919. Serial No. 309,219. 3 Claims. (Cl. 34—21.)



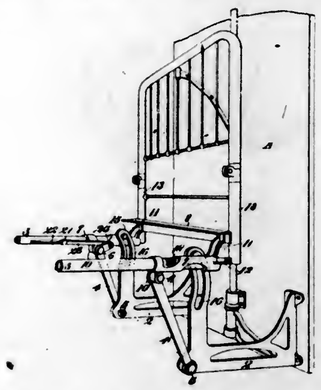
3. In apparatus of the character described, a heating shell, a drying chamber carried thereby and vertically ar-

ranged, a follower operating within the drying chamber and having an opening formed therein passing through the upper and lower surfaces of the same, a goose neck having one end secured within the opening, a guide block



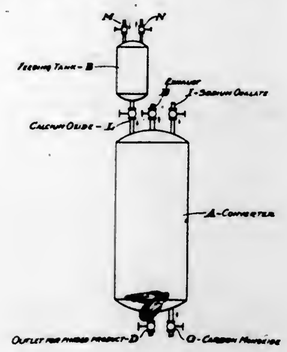
secured to the outer arm of the goose neck near its lower end and slidably engaging the exterior of the drying chamber, and a flexible suction conduit secured to the outer arm of the goose neck beneath the guide block.

1,349,944. AUXILIARY-SPARK-LEVER CONTROL. LESLIE J. COOPER, Los Angeles, Calif. Filed Jan. 14, 1919. Serial No. 271,099. 2 Claims. (Cl. 123—186.)



1. A spark adjusting mechanism for motor vehicles comprising in combination with the motor, and a main spark adjusting rod connected with said motor, of an auxiliary spark adjusting member having one of its ends extended in front of the vehicle and arranged for manual operation and a portion operably connected with said main spark adjusting rod, the extended end of said auxiliary member being spaced and detached from the starting crank and adapted to operate said main spark rod, whereby the spark may be advanced or retarded apart from said main rod.

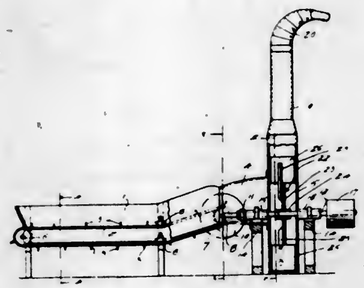
1,349,945. GAS-REGULATOR. JOHN DENTON and ALVA L. SKINNER, Bridgeport, Ill. Filed Oct. 23, 1919. Serial No. 332,758. 4 Claims. (Cl. 137—153.)



1. In a regulator of the type described, the combination with a pressure chamber, a diaphragm therein, a valve casing including a cylinder, a partition, and a seat between them, an inlet line entering a casing between the seat and partition and branched to the pressure chamber, and an outlet line leading from the casing between the seat and cylinder; of a valve coacting with the seat, a piston movable in said cylinder, a stem connecting the valve and piston, a stuffing box in said partition, and a second stem connected with the valve and leading through the stuffing box to said diaphragm.

1,349,946. FOLDING BED. NAPOLEON B. DOUGLASS, Berkeley, Calif. Filed Sept. 11, 1916. Serial No. 119,444. 10 Claims. (Cl. 5—54.)

1. In a folding bed, an up-ending main frame, up-standing swinging fulcrum supports for the head-end of the main frame arranged to swing downwardly and outwardly when the bed is unfolded, extensions on the upper ends of the fulcrum supports, guide means to control the head-end of the bed in its movement, helical coil springs extending parallel with the side rails of the main frame connected at one end thereto and at the other end to the extensions on the fulcrum supports for counterbalancing the main frame.

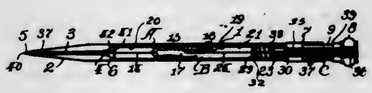


1,349,947. PROCESS FOR MAKING CALCIUM OXALATE. FRANCIS M. DUPONT and GUSTAV A. HANKE, Milwaukee, Wis. Filed Mar. 18, 1919. Serial No. 283,397. 5 Claims. (Cl. 23—24.)

1. That step in the process of producing calcium oxalate and sodium formate which consists in subjecting a mixture of sodium oxalate in solution and suspension, milk of lime and carbon monoxid to heat and pressure.

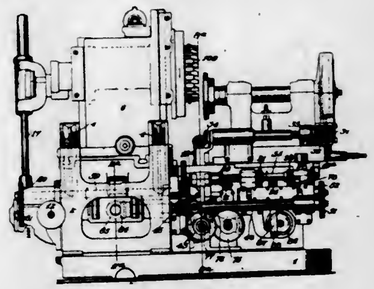
1,349,948. GRAIN-ELEVATOR. WALDEMAR E. ECHTERLING, Crete township, Will county, Ill. Filed Oct. 2, 1917. Serial No. 194,356. 1 Claim. (Cl. 302—8.)

A grain elevator comprising a blower casing, a blower shaft extended transversely through said casing, supporting means for said shaft, a discharge spout extended upwardly from said casing, a conveyer extended at an angle to said casing, said casing having an entrance opening, a conveyer within said conveyer casing and having end shafts, a comparatively large friction disk mounted on one of said end shafts of the conveyer, a comparatively small friction disk mounted on the blower shaft and adapted to drive the comparatively large disk, said com-



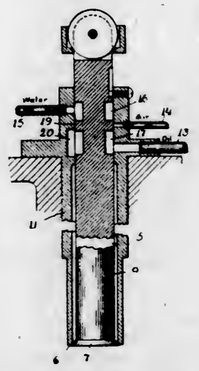
paratively small friction disk being adjustable transversely of said comparatively large friction disk to vary the speed of rotation thereof, a blower mounted on the blower shaft within the first mentioned casing, said conveyer being adapted to convey material into the blower casing by way of the inlet opening thereof, and a drive wheel mounted on the said blower shaft to be driven from a suitable source of power.

1,349,949. RAILWAY-TIE AND FASTENER. CICERO J. ERB and WALTER J. BRIANT, Centralia, Wash. Filed Oct. 9, 1919. Serial No. 329,550. 3 Claims. (Cl. 238—75.)



1. A railway tie and clamp comprising a hollow tie having openings formed adjacent each end, tongues struck from the tie and having openings therethrough, a clamping bar having one end passing through the opening in the tie and the opposite end passing through the opening in the tongue, and means carried by the clamping bar for engaging the top of the tongue and adjusting the clamping bar.

1,349,950. PENCIL. HOWARD L. FISCHER and FRANK J. KRISTOFEK, St. Paul, Minn. Filed Oct. 30, 1917. Serial No. 199,234. 18 Claims. (Cl. 120—17.)

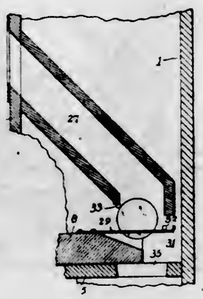


14. In a pencil of the class described having a barrel a lead ejecting means which is adapted to eject a lead a degree at a time and means for collectively holding said ejecting means with its operating parts in operative position in, or out of, said barrel.

1,349,951. METHOD OF AND MACHINE FOR CUTTING GEARS OR WHEELS. JAMES E. GLEASON and ARTHUR L. STEWART, Rochester, N. Y., assignors to Gleason Works, Rochester, N. Y., a Corporation of New York. Filed Dec. 26, 1914. Serial No. 879,026. 43 Claims. (Cl. 90—4.)

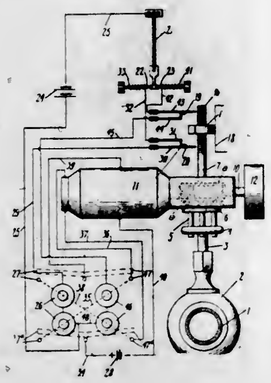
1. The method of cutting a gear or wheel which consists in moving a tool in a curved path in a plane substantially tangent to the pitch surface of the gear to be produced to shape the tooth, imparting a continuous indexing movement to the blank, and simultaneously rolling the blank on its pitch surface to generate the tooth.

1,349,952. INTERNAL-COMBUSTION ENGINE. FRANK S. HAMMOND, New York, N. Y. Filed Aug. 11, 1919. Serial No. 317,351. 2 Claims. (Cl. 123—25.)



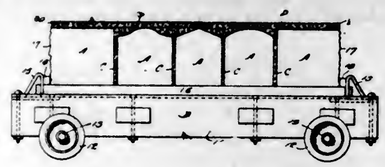
1. An internal combustion engine comprising a cylinder, a piston reciprocative therein, a sleeve communicating with the interior of the cylinder, a valve having an elongated stem slidable in said sleeve, the sleeve having a recess, the stem having two annular grooves, a fuel oil supply through said sleeve to the lower annular groove, a water supply through said sleeve to the upper annular groove when the valve is closed, and a compressed air supplying means to the upper annular groove when the valve is open, said recess being disposed for putting both said grooves into communication when the valve is open.

1,349,953. COIN-CONTROLLED VENDING-MACHINE. HARRY HANSON, Watertown, Mass., assignor to Select Service Company, Boston, Mass. Filed Sept. 26, 1918. Serial No. 326,663. 2 Claims. (Cl. 194—57.)



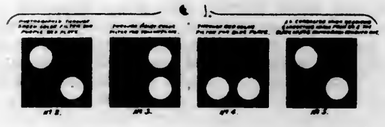
1. A coin controlled machine comprising a slidable article-removing member, a fixed stop, a leaf spring supported at one end by said member and having a hooked

free end adapted normally to engage said stop, said spring having an opening disposed to partially receive a designated coin, and a stationary device, whereby, a designated coin being deposited in said opening, the withdrawal of



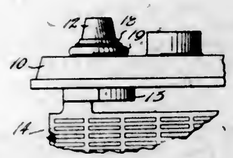
the article-removing member will cause the spring to press the coin against the stationary device and to be itself sufficiently depressed to permit its hooked end to freely pass said fixed stop.

1,349,954. ELECTROTHERMOSTATIC-CONTROLLED MECHANISM. EDWARD VASSALLO HARTFORD, Deal, N. J. Filed May 27, 1915. Serial No. 30,840. 4 Claims. (Cl. 236—78.)



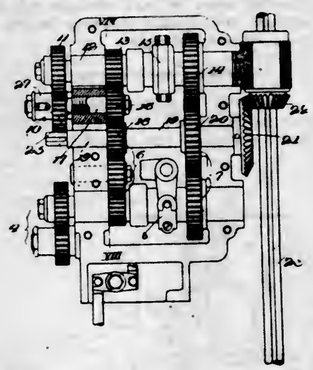
1. In combination with a reciprocatory valve, an electric motor coöperatively associated therewith, an energizing circuit for said motor, a thermostat in said circuit adapted to control the operation of the motor and adapted to control its direction of rotation, an electromagnetic contact in said energizing circuit and coöperating with said thermostat to maintain positive connection therewith, switching instrumentalities in said circuit, means operated by the motor and coöperating with the switching instrumentalities to control the extent of motor rotation and to release the thermostat from the electromagnetic contact, and means for storing kinetic energy whereby the motor may operate for a brief period after the circuit has been opened.

1,349,955. METHOD OF PRODUCING DUPLICATE PATTERNS IN GRANITE. JOHN HARWOOD, Berea, Ky., assignor of one-half to John D. McColm, Huntington, W. Va. Filed May 11, 1916. Serial No. 96,810. 15 Claims. (Cl. 125—12.)



6. A method of producing duplicate patterns in granite, which consists in arranging a plurality of pieces of stock in spaced relation, placing a filler therebetween, and sawing the mass.

1,349,956. COLOR-FILTER NEGATIVE AND THE PROCESS OF PREPARING SAME. JOSEPH ARTHUR HENRY HATT, Brooklyn, N. Y. Filed Dec. 28, 1918. Serial No. 268,617. 9 Claims. (Cl. 95—2.)



1. The process which consists in preparing a photographic negative from a picture by exposure through a certain color filter, developing the plate so produced and superposing above said developed surface a new photographically sensitive surface, placing the design of the first layer in exact photographic registry with the image of a negative made from the original picture but through a different color filter then making an exposure, and then developing and fixing the image in said new sensitive surface whereby a corrected color separation negative suitable for transfer to a printing plate is obtained.

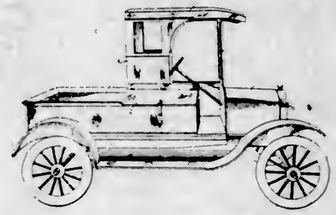
1,349,957. BATTERY-TERMINAL FASTENING. ALDA F. HAWKINS, Fort Worth, Tex. Filed Apr. 5, 1920. Serial No. 371,458. 6 Claims. (Cl. 204—29.)

3. In a battery terminal fastening, the combination with a cell cap having an opening, of a terminal post extending through the opening and having a stop element at its lower end to engage beneath the cap, said post extending outwardly beyond the cap and provided with a radially projecting flange spaced from the cap, said post having an annular recess beneath the flange, said recess being curved in cross section and having its upper portion increasing in radial dimension toward the cap, and an elastic ring arranged between the flange and cap in contact with the curved wall of said recess, said ring being circular in cross section.

1,349,958. INTERCHANGEABLE POSITIVE AND FRICTION DRIVE AND REVERSIBLE GEARING FOR MACHINE-TOOLS. ERNEST C. HEAD, Van Wert, Ohio, assignor to Colburn Machine Tool Company, Franklin, Pa., a Corporation of Pennsylvania. Filed Nov. 10, 1917. Serial No. 201,246. 27 Claims. (Cl. 74—59.)

1. An interchangeable positive and friction drive for machine tools, comprising a feed element, a driving element, means adapted to be frictionally-driven for transmitting motion from said driving element to said feed element, means adapted to be positively-driven for transmitting motion in either direction of shaft rotation from said driving element to said feed element, and means to selectively interpose either of said frictionally-driven or positively-driven means in the drive of said feed element.

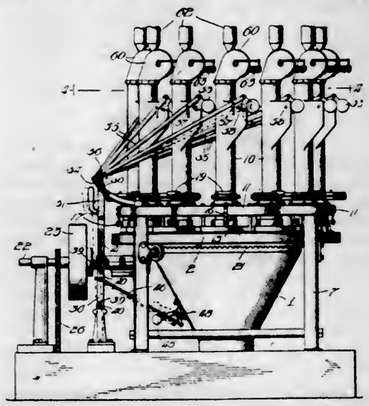
2. An interchangeable positive and friction drive for machine tools comprising a feed element, a driving element, means adapted to be frictionally-driven for transmitting motion from said driving element to said feed element, and means adapted to be positively-driven for transmitting motion in either direction of shaft rotation from said driving element to said feed element, said frictionally-driven and positively-driven means being selectively interchangeable in the drive of said feed element.



3. An interchangeable positive and friction drive for machine tools comprising a feed element, a driving element, means for frictionally driving said feed element from said driving element, means for positively driving said feed element from said driving element in either direction of shaft rotation, and a transposable member for selectively interposing either of said means in the drive of said feed element.

4. In a machine tool, a feed element, a driving element, and a train of gearing adapted to transmit motion from said driving element to said feed element, said train of gearing comprising a frictionally-driven shaft, a positively-driven shaft, and a transposable gear adapted to be mounted on either of said shafts in motion-transmitting relation to said train whereby said feed element may be driven through a friction drive or a positive drive.

5. In a machine tool, a feed element, a driving element, and a train of gearing adapted to transmit motion from said driving element to said feed element, said train of gearing comprising a frictionally-driven shaft, a plurality of positively-driven reversely-rotating shafts, and a transposable gear adapted to be mounted on any of said shafts in motion-transmitting relation to said train whereby said feed element may be driven through a friction drive or in either direction through a positive drive.

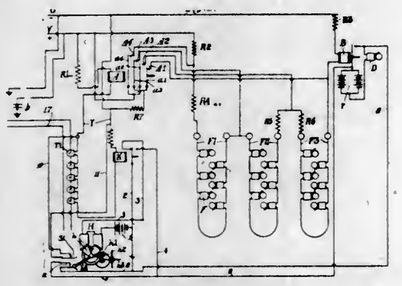


1,349,959. VEHICLE-BODY. FREDERIC M. HOBLITT, New York, N. Y. Filed Apr. 6, 1920. Serial No. 371,731. 5 Claims. (Cl. 296—37.)

5. In a vehicle body, a single operator's seat extending from one side partly across the body, a top above said seat having side walls inclosing said seat, a windshield of a width corresponding to said seat, a dash, and a receptacle extending from said seat to the other side of the

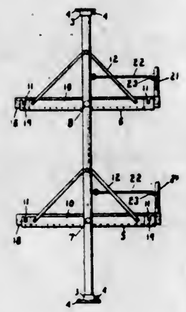
body and having a cover inclined sharply downward toward said last named side of the body, said receptacle and cover also extending forwardly of the seat to partly shut off the space between the seat and dash.

1,349,960. MACHINE FOR MIXING POWDERED OR GRANULAR MATERIALS. GEORGE HOEPNER, Chicago, Ill. Filed July 26, 1919. Serial No. 313,554. 14 Claims. (Cl. 83—73.)



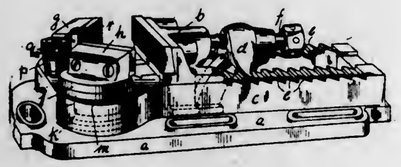
1. In a machine of the character described, a rotatable table, delivery spouts arranged above and projecting down in proximity to the top of the table, each spout being open at the bottom and having a section removed on one side at the lower end to permit it to discharge laterally in the direction in which the table is traveling, and an adjustable gate associated with the lower end of each spout and adapted to vary the area of the lateral-discharge opening.

1,349,961. SIGNALING SYSTEM. RICHARD M. HOPKINS, New York, N. Y., assignor to American District Telegraph Company, Jersey City, N. J., a Corporation of New Jersey. Filed Oct. 20, 1916. Serial No. 126,649. 8 Claims. (Cl. 177—367.)



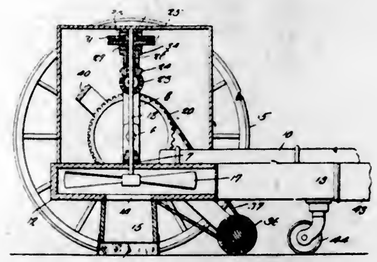
1. In a signaling system, the combination with a source of current supply and a transmitter circuit containing one or more transmitters, of a signal giving circuit including one or more signal-giving devices, means controlled by said transmitter circuit and controlling said signal-giving circuit and arranged to cause the signal-giving device or devices to operate in the event of operation of one of the said transmitters, means for passing a low test current through said signal-giving circuit normally, a trouble signal device arranged to operate in the event of sub-

stantial or complete failure of said test current, and means controlled by said transmitter circuit and also controlling said trouble signal device and arranged to stop the opera-



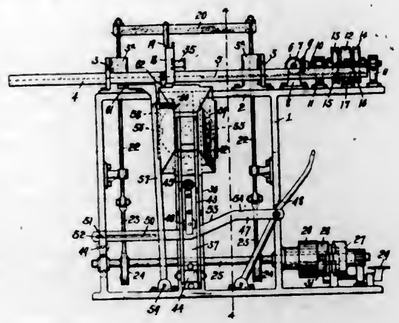
tion of said signal-giving device or devices and to cause the operation of said trouble signal device, in the event of development of trouble in the transmitter circuit.

1,349,962. BUNK. CARL G. JANSON and CHARLES J. BRAUN, Oakland, Calif. Filed July 9, 1918. Serial No. 244,029. 4 Claims. (Cl. 5—60.)



4. A bed of the kind described comprising a single head-post and a single foot-post, transversely extending supporting members one secured at an intermediate portion thereof to each post, respectively, a pair of brace arms secured to each post, the arms of each pair having connection respectively with the opposite ends of a supporting member, and a mattress frame adapted to extend between said posts and to rest on said supporting members.

1,349,963. MACHINE OR OTHER VISE. JAMES HENRY JERRIM, Bromsgrove, England. Filed June 26, 1919. Serial No. 306,971. 5 Claims. (Cl. 81—17.)



5. A machine vise comprising in combination a body, a platform thereon, a movable jaw, means for rapidly setting said jaw in relation to said body, means for finely adjusting said jaw, a pair of elements mounted on said platform on pivots parallel to the said jaw, gripping faces on said elements and said jaw, said faces each having an inclined surface engaging an incline on the jaw or the element as the case may be, screws in said faces passing through slots in said jaw or element, springs around said screws to draw said faces against the element or jaw, a conical collar on each element and a conical clamping member between said elements located so as to engage the conical collar of each.

1,349,964. VACUUM CLEANING-MACHINE. OLIVER A. KALBFUS, Baltimore, Md. Filed Sept. 27, 1919. Serial No. 326,905. 1 Claim. (Cl. 15—17.)

1. In a street cleaning machine, a frame, a pair of ground wheels supporting the frame, a suction casing carried by the frame and having separate compartments located alongside each other, an outlet trunk extending forwardly from said compartments, a caster wheel supporting the forward end of the trunk, a draft pole attached to the trunk, suction heads extending downwardly from the aforesaid compartments, fans operating in the compartments, a rotary brush located beneath the aforesaid outlet trunk and operating in front of the suction heads, and driving means for the fans and the brush operated by the aforesaid ground wheels.

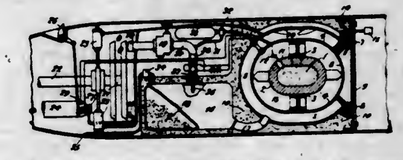
1,349,965. BASKET-NAILING MACHINE. OTTO HENRY KILMER and PETER MADISON, Oak Harbor, Ohio. Filed June 2, 1919. Serial No. 301,185. 8 Claims. (Cl. 147—47.)

1. In a machine of the class described, a rotatable work-holding form, clamping means for relative work releasing and engaging movements relative to the form and for rotary movements therewith, and means operable to impart predetermined vertical movements to the form and clamping means.

1,349,966. BRAZING AND WELDING COMPOUND AND METHOD OF PREPARING SAME. JOZEF KLEIN, New York, N. Y. Filed June 24, 1920. Serial No. 391,497. 4 Claims. (Cl. 204—29.)

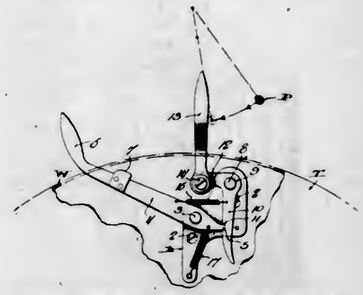
1. The method of preparing a compound for use in uniting metals consisting of slaking one part of quick lime in half its weight of water, adding a small quantity of sand, spreading four parts of melted borax flat on a warm steel plate, spreading the dried mixture of slaked lime and sand on the melted borax, cooling and removing the resulting compound from the plate, melting the compound, then again cooling and grinding and mixing with one part of iron filings.

1,349,967. ADJUSTABLE CUTTER. FREDERICK H. KORFF, Brooklyn, and STARLING H. HUMPHREY, New York, N. Y. Filed May 29, 1919. Serial No. 300,678. 12 Claims. (Cl. 29—103.)



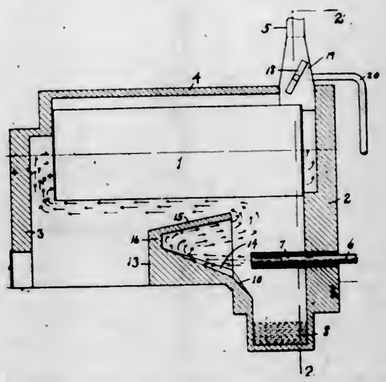
1. In a cutter, the combination of a plurality of cutter parts, means for holding said parts in operative position and an adjusting means carried by one of the parts and adapted to cause a change in the distance between the effective cutting edges upon the relative movement of the cutter parts.

1,349,968. EXPANSION-REAMER. STARLING H. HUMPHREY, New York, and FREDERICK H. KORFF, Brooklyn, N. Y. Filed May 29, 1919. Serial No. 300,679. 2 Claims. (Cl. 77—73.5.)



1. An expansion reamer including a spindle, blades mounted upon said spindle and radially movable with respect thereto, screw threads formed upon such spindle, a graduated member mounted upon such screw threads and being adapted to bear against said blades, and to cause a movement on the part of the same, a collar mounted upon such spindle and adjacent to such graduated member, said collar having associated with it indicating means adapted to register with the markings upon said member, said collar being formed with an inwardly projecting tongue adapted to extend into a longitudinal groove formed transversely through such screw threads, whereby to permit only a longitudinal movement on the part of such collar, and means for holding such collar at all times during the operation of such reamer, against said graduated member.

1,349,969. POWER GENERATION. WARD G. LEATHERS, Haworth, N. J., assignor to Submarine Arms Corporation, New York, N. Y. Filed May 8, 1917. Serial No. 167,309. 18 Claims. (Cl. 60—40.)

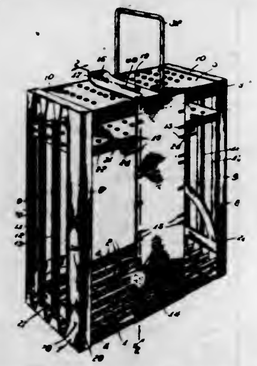


1. A power generator comprising a heat producing material, a pressure chamber adapted to contain a fluid to be heated by said material, and an insulating means between the pressure chamber and said material.

1,349,970. AUTOMATIC PHONOGRAPH-STOP. CLIFFORD H. LENERVILLE, Peshtigo, Wis. Filed Jan. 3, 1920. Serial No. 349,271. 1 Claim. (Cl. 74—46.)

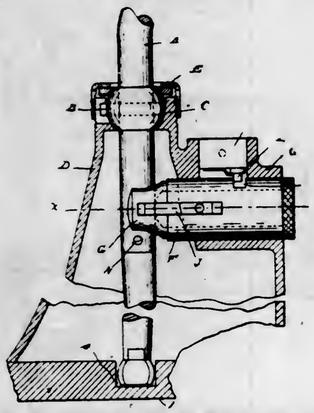
An automatic stop comprising an attaching plate, a brake bar pivoted intermediate its ends to the plate, one end forming a latch bar engaging member, the other end comprising a resetting arm, a bell crank shaped latch bar pivoted to the plate and having means carried by one arm for coöperation with said latch bar engaging member, a spring fixed to said arm of the latch bar and to the brake bar between the pivot thereof and said resetting arm, a second spring of greater tension than the first having one end attached to the brake bar between the pivot thereof and said latch bar engaging member, and thereunder being fixed, and a trip arm on one arm of the latch bar.

1,349,971. FURNACE. JOHN URBAN MCDONALD, Decatur, Ill. Filed Sept. 15, 1919. Serial No. 323,810. 5 Claims. (Cl. 110—28.)



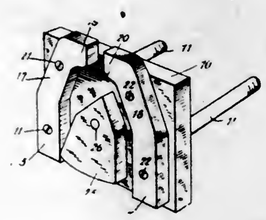
3. A boiler furnace for burning powdered fuel comprising a front wall extending up to the boiler, a rearwardly tapering ignition chamber spaced from the front wall and

facing it and a combustion chamber between them, an injector for fuel and air extending through said wall and partially across the combustion chamber, the bottom of the ignition chamber being inclined downwardly toward the front wall and so positioned relative to the injector that the blast of incoming fuel will strike it at an acute angle.



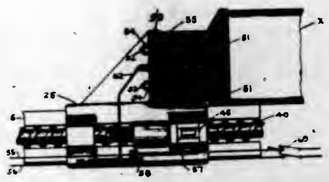
4. An ignition chamber for furnaces adapted to receive a blast of fuel and air comprising a rear wall, a bottom sloping up to a rear wall and an arch resting on said bottom and sloping down to the rear wall, the upper surface of the bottom being in two parts sloping down toward each other and toward the central vertical plane of the structure.

1,349,972. PHOTOGRAPHIC-PLATE RACK. GLENN J. MACDOWELL, Chicago, Ill., assignor to Burke & James, Inc., Chicago, Ill., a Corporation of Delaware. Filed Oct. 6, 1919. Serial No. 328,897. 6 Claims. (Cl. 95—100.)



1. A photographic plate rack adapted for immersion in a developing tank or the like comprising two opposed members equipped with guides to receive and engage opposite edges of plates and transversely disposed walls operatively engaged with said members and having slots through which plates are adapted to be inserted into said guide grooves, the said slots in opposed walls being disposed in staggered relation to each other and registering with alternate pairs of opposed guide grooves.

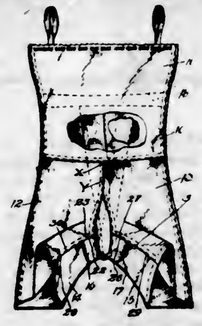
1,349,973. GEAR-SHIFT LOCK. GUADON C. MATHER, Detroit, Mich. Filed Mar. 26, 1917. Serial No. 157,425. 6 Claims. (Cl. 70—128.)



2. The combination with a housing for gear-shifting mechanism and a control lever fulcrumed thereon and projecting therein, of a bar slidable in a bearing in said housing in a direction transverse to the plane of initial movement of said lever from its neutral position, said bar having its inner end located below the fulcrum of said lever and adapted for engagement with said lever to hold the same in neutral position, and means upon said lever and engageable with said bar for holding said lever from outward longitudinal movement when said bar is in engagement with said lever.

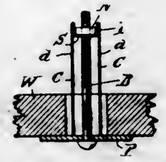
1,349,974. DIE-SHIFTER. SOLOMON MENKIN, New York, N. Y. Filed May 21, 1919. Serial No. 298,693. 5 Claims. (Cl. 79—5.)

1. In a button making machine, a laterally movable die-carrying block, means for reciprocating said block vertically, a member projecting from one side of the die block, and a guiding device adapted to engage said member to move said block a fixed distance in opposite directions laterally upon respective up and down strokes of the said means.



1,349,975. METAL-PUNCHING MACHINE. JOHN D. MORGAN, Summit, N. J., assignor to Steel Utilities, a Corporation of New York. Filed May 26, 1919. Serial No. 300,008. 12 Claims. (Cl. 164—87.)

1. In a machine for operating upon metal plates or beams, a carriage traveling under control of a distance determining device, a head fixed to said carriage and in engagement with the work, means impelling the work against said head and means for magnetizing said head to prevent rebound or displacement of the work relatively to the head.

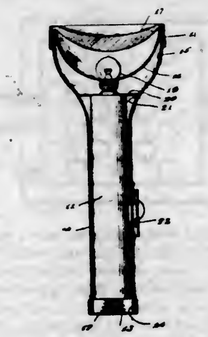


1,349,976. UNDERGARMENT. HARRY S. MOSES, Hubbard Woods, Ill. Filed Aug. 14, 1919. Serial No. 317,443. 1 Claim. (Cl. 2—144.)

An undergarment of the union-suit type comprising a body-portion formed of front and back sections sewed together at their side edges, the front section being formed from a single unsevered unitary piece of relatively inelastic fabric, leg portions the front of each being formed from a single piece and having their upper edges secured to the lower edge of the front body section, and overlapping crotch-forming members forming an opening and secured to the inner edges of said leg portions, the free edges

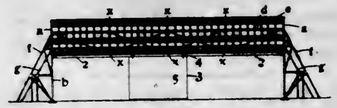
of said crotch-forming members being substantially parallel from the apex of the crotch with the lower portion of said side seams.

1,349,977. WALL BOLT-HOLDER. JOHN J. MULKERN, Cambridge, Mass. Filed Aug. 2, 1919. Serial No. 314,923. 3 Claims. (Cl. 85—2.4.)



3. A wall-bolt holder, consisting of a pair of flexible metal strips each of which is bent near its middle portion at right angles to its length, to form a seat for the bolt-nut, with a hole through the seat for the bolt, and beyond such seat a portion of each end of each strip being bent backward upon itself thus forming projections which engage the sides of the nut, and having the inner surface of the strips creased between the seat and the ends of the bent back portions, to determine the location of their maximum expansion when caused to collapse and engage the encompassing wall, by the force of the nut upon the seat when drawn inward by the action of the screw bolt.

1,349,978. CONVERTIBLE PLATE FOR ELECTRICAL PLUG-RECEPTACLES. ADOLPH C. RECKER, Oakville, Conn., assignor to The Chase Companies Inc,. Waterbury, Conn., a Corporation. Filed Sept. 20, 1919. Serial No. 325,210. 1 Claim. (Cl. 247—23.)

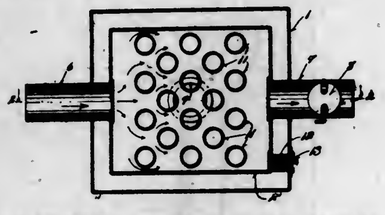


A door-unit for the conversion of plates for electrical plug-receptacles of the screw-plug and push-plug types, the said unit consisting of a closure-plate and a leaf to which the same is secured and which is perforated for the reception of one of the screws by means of which the plate is secured to the receptacle.

1,349,979. ELECTRIC DARNING-BALL. LUCINDA RITTER, Riverside, Calif. Filed Apr. 10, 1920. Serial No. 372,765. 3 Claims. (Cl. 240—8.5.)

3. A darning device comprising a casing containing an electric lamp, means for holding a battery in coöperative relationship with said lamp, and a concave lens arranged at the end of said casing over said lamp with its concave face outwardly.

1,349,980. RELATING TO STRUCTURES. THOMAS EDGAR RICHARDS, London, England. Filed Apr. 1, 1919, Serial No. 286,631. Renewed July 10, 1920. Serial No. 395,340. 7 Claims. (Cl. 20—0.5.)

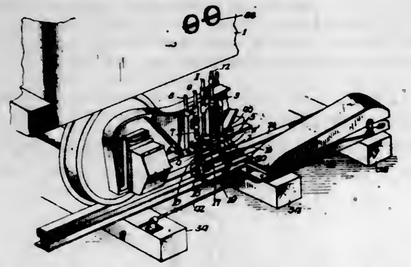


1. In a structure for housing aeroplanes, in combination, a main ridge member, side ridge members, braces therefor, eave purlins, braces for the whole, end trusses supporting the ends of the ridge and the braced roof whereby a clear open space is left from end to end.

1,349,981. MARINE PROPELLER. EDWARD SIEVART, Manitowoc, Wis. Filed Mar. 3, 1919. Serial No. 280,472. 2 Claims. (Cl. 170—159.)

1. A propeller comprising a hub portion, an annular wall portion extending from the hub portion and disposed in a plane at right angles to the axis of the hub portion and a plurality of blades extending radially from said annular wall portion and having their major portions curved transversely whereby they are disposed obliquely with respect to the plane of the annular wall portion, said blades having obliquely undercut rear surfaces on their inner portions merging with the blade wall portion whereby to direct water transversely of the hub portion.

1,349,982. HEATING APPARATUS. EDWARD SHEVART, Manitowoc, Wis. Filed Mar. 29, 1919. Serial No. 286,206. 2 Claims. (Cl. 257—166.)



1. A heating unit comprising an outer casing, an inner casing therein and spaced from the walls thereof, a plurality of parallel rows of open ended fluid passageways disposed in the inner casing, their opposite ends being secured in the opposite sides of the inner casing to communicate with the space between the casings, the corresponding passageways of the several rows also forming parallel rows disposed in planes at right angles to the planes of the first mentioned rows, an inlet pipe extending through the outer casing and communicating with the inner casing, an outlet pipe from the inner casing and extending through the outer casing, said pipes being adapted to convey hot gases through the inner casing, a fluid inlet into the outer casing, and a fluid outlet from the outer casing.

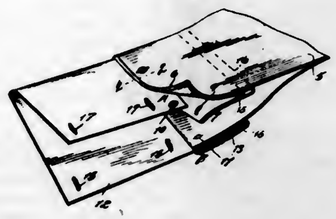
1,349,983. PROPELLANT EXPLOSIVE. OSWALD SILBERRAD, Buckhurst Hill, England. Filed Sept. 10, 1919. Serial No. 322,947. 16 Claims. (Cl. 52—3.)

16. A "flameless powder" as hereinbefore defined composed substantially of a mixture of nitrocellulose 30.7%, nitroglycerin 44%, vaseline 3.9% and starch 21.4% as hereinbefore described.

1,349,984. RAILWAY SAFETY DEVICE. AMOS HOFFMAN SIMMS, Chicago, Ill. Filed July 22, 1916. Serial No. 110,770. 6 Claims. (Cl. 246—192.)

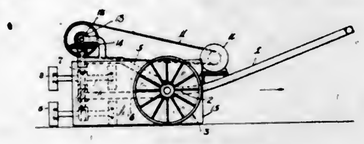
6. A trip for safety devices for railway trains comprising a fixed lower member, an upper member pivoted at one end to the lower member and having an inclined upper surface, means for holding the free end of the upper member normally in elevated position, and an auxiliary member extending lengthwise of the upper member adjacent the free end thereof and having a sloping surface on its outer side.

1,349,985. PUSH-POLE FOR LOCOMOTIVES. LAWRENCE V. STEVENS, Pittsburgh, Pa. Filed Nov. 1, 1919. Serial No. 335,082. 4 Claims. (Cl. 213—19.)



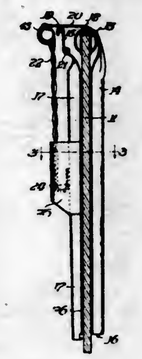
3. In a push pole, in combination, a pole, a fork formed of a bent bar pivotally attached at its angle to the end of the pole.

1,349,986. TRAIN-OPERATED RAILWAY-GATE. MICHAEL STRELCHIK, Glenfield, N. Y. Filed July 10, 1919. Serial No. 309,928. 2 Claims. (Cl. 246—302.)



1. In a train-operated railway gate, the combination with a post, of a gravity opened gate hinged thereto, a rotatable member, an actuating bar pivoted to said rotatable member and said gate, track-trips in front of said gate, a connection between said track-trips and said rotatable member, trip locking means movable with said track-trips, depressible members in rear of said gate, a connection between said depressible members and said rotatable member, means in engagement with said locking member for disengaging the same from said trips, a connection between said depressible members and said last-mentioned means, depressible members in rear of said trips, and means actuated by said last-mentioned depressible members for causing said trips to move out of the path of the wheels of a train moving from said gate toward said track-trips.

1,349,987. DETACHABLE CUFF FOR SHIRT-SLEEVES. ISADORE N. STRUMPH, New York, N. Y. Filed July 29, 1919. Serial No. 313,972. 1 Claim. (Cl. 2—79.)



A sleeve provided with a plurality of flap-members, said flap-members being formed by folding the material at the free end of the sleeve upon itself first inwardly, then outwardly intermediate the ends of the inwardly folded portion of the sleeve, then inwardly intermediate the ends of the outwardly folded portion of the first named inwardly folded portion, the folded over portions being secured together and to the sleeve at a point somewhat removed from the end of the sleeve to provide separable flap-members, a cuff arranged to be inserted along a longitudinal edge thereof, between said flap-members and means to releasably secure the cuff and flap-members together.

1,349,988. SAND-CUTTING MACHINE. HOWARD L. WADSWORTH, Cleveland, Ohio. Filed Dec. 12, 1919. Serial No. 344,415. 5 Claims. (Cl. 259—144.)

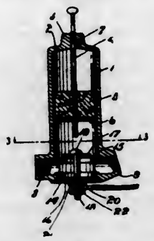
1. In a machine of the character described, the combination of a frame, a pair of supporting wheels therefor, a rotary sand-cutting element mounted on said frame on one side of the axis of said wheels, and a handle attached to said frame on the other side of said axis from said cutting element.

1,349,989. WINDSHIELD-CLEANER. JOHN F. WHITE, Chicago, Ill., assignor, by mesne assignments, to White Products Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 12, 1917. Serial No. 191,080. 4 Claims. (Cl. 15—59.)

1. In a device of the character described, the combination of a slidable clip for spanning the upper edge of the glass of a windshield, a pair of cleaning members carried by the clip one bearing on the outside and the other on the inside of the glass, the inner member being hingedly connected to the clip so as to be capable of movement out of parallelism with the outer member, and a spring having a sliding bearing on the inner member in its medial portion to press the same against the glass in opposition to the outer member, the contacting faces of the members faced with yielding wiping elements.

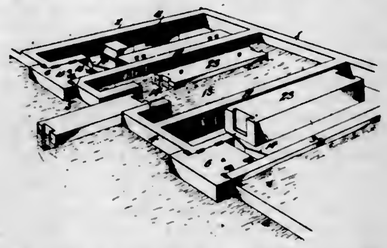
2. In a device of the character described, the combination of a slidable clip for spanning the upper edge of the glass of a wind shield, a pair of cleaning members carried by the clip one bearing on the outside and the other on the inside of the glass, the inner member being linked to the clip so as to be capable of moving out of parallelism with the outer member and at each end toward and from such outer member, and a spring having a sliding bearing on the inner member in its medial portion to press the same against the glass in opposition to the outer member, the contacting faces of the members faced with yielding wiping elements.

3. In a device of the character described, the combination of a slidable clip for spanning the upper edge of the glass of a wind shield, a pair of cleaning members carried by the clip one bearing on the outside and the other on the inside of the glass, the inner member being linked to the clip so as to be capable of moving out of parallelism with the outer member and at each end toward and from such outer member, an operating handle for the inner member comprising elements horizontally spaced to provide a vertical channel therebetween, a suitably anchored spring carried by the device with its free end disposed within the channel to slidably bear against the inner cleaning member to press the same against the glass in opposition to the outer member, the contacting faces of the members faced with yielding wiping elements.



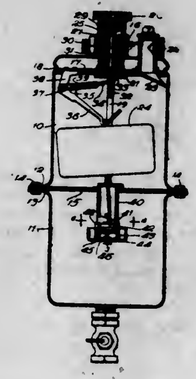
4. In a device of the character described, the combination of a slidable clip for spanning the upper edge of the glass of a wind shield, a pair of cleaning members carried by the clip one bearing on the outside and the other on the inside of the glass, the inner member being linked to the clip so as to be capable of movement toward and from the outer member while maintaining parallelism therewith, and a spring having a bearing on the inner member near its middle portion to press the same against the glass in opposition to the outer member.

1,349,990. TIRE-SPREADER. STEPHEN B. WILBUR, Akron, Ohio. Filed May 15, 1920. Serial No. 381,685. 8 Claims. (Cl. 152—27.)



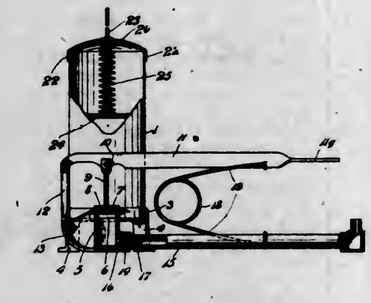
1. In a device of the class described, a central member, two side members, each end of said central member pivotally connected to the central portion of one of said side members, similar ends of each side member provided with means to engage the bead edge of a tire and means to swing said side arms on said central member and force said similar ends apart.

1,349,991. OIL-ALARM DEVICE. FLOYD G. WITHROW, Grand Rapids, Mich. Filed Mar. 12, 1919. Serial No. 282,233. 2 Claims. (Cl. 200—84.)



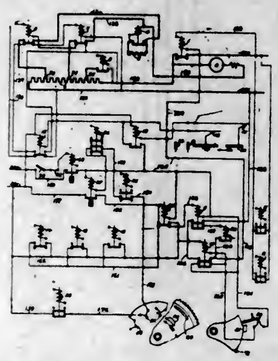
1. A device of the character described comprising a hollow housing having a closed upper end, a rod which constitutes one contact and which passes loosely down through said upper end of the housing, a float attached to the rod, a disk of insulating material in the lower end of the housing, a second disk positioned above the first disk and supported within the housing, the second disk also being of insulating material, a screw which constitutes the other contact, has a head at its upper end, passes downwardly through the disks and receives a nut at its lower end to bind the disks against disengagement from the housing, and inlet and outlet means at opposite sides of the housing whereby liquid may pass into the housing, between the disks and out at the opposite side, or upwardly into the housing, the second disk being cut away to provide passage for the liquid into the housing, substantially as described.

1,349,992. PLANT FOR CONCRETE CONSTRUCTION. JOSEPH STOKES WILLIAMS, Riverton, N. J. Filed Jan. 22, 1913. Serial No. 743,431. 10 Claims. (Cl. 61—64.)



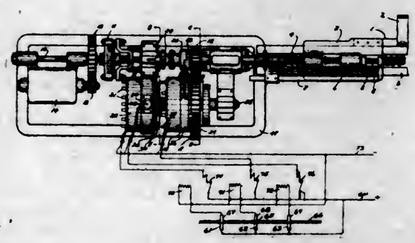
10. A plant of the character stated, in combination with a subway line opening into it and having its walls in waterproof union with the walls of the plant.

1,349,993. VACUUM-TANK. LYNN A. WILLIAMS, Evanston, Ill. Filed June 14, 1918. Serial No. 239,946. 14 Claims. (Cl. 158—36.)



1. A vacuum tank comprising a storage receptacle, a suction receptacle located above said storage receptacle, a pipe for affording communication between said receptacles extending downwardly in said storage receptacle and having its lower end in a substantially horizontal plane, a disk valve for closing the lower end of said pipe having a central ring shaped projection on the lower side, and a pin having a rounded head received in said ring shaped projection to pivotally support said disk valve adjacent the lower end of said pipe.

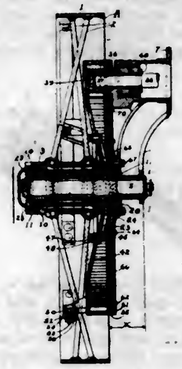
1,349,994. GREASE CONTAINER AND DISPENSER FOR HEAVY GREASES. A. J. WOOD, Greenville, Mich., assignor to Bennett Injector Company, Muskegon, Mich., a Corporation of Delaware. Filed Apr. 13, 1917. Serial No. 161,754. 7 Claims. (Cl. 221—80.)



1. In a device of the character described, a container for grease, a smaller auxiliary container for grease adjacent the bottom of the first container and in communication therewith, a cover for said first container, means for detachably securing the cover in place on said container, a follower to lie above the grease, a rod attached thereto extending upwardly through the cover, a coiled spring normally under compression around the rod and located between the follower and cover to force grease from the container into the auxiliary container, means mounted to move downwardly in the auxiliary container and force grease therein out of the same, there being an outlet opening adjacent the bottom of the auxiliary container, and check means in said outlet permitting passage of the grease in an outward direction but stopping return thereof, substantially as described.

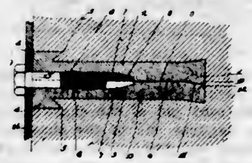
1,349,995. CONTROLLING SYSTEM FOR METAL-WORKING MACHINES. EDWARD V. WURTS, Newark, and BERTRAM S. PERO, Jersey City, N. J., assignors to Steel Utilities, Incorporated, a Corporation of New York. Filed Sept. 24, 1917. Serial No. 193,011. 51 Claims. (Cl. 164—115.)

1. A controlling and operating mechanism for a metal punching machine including in combination a work progressing motor, circuit controlling devices cooperating with a distance record sheet and devices in circuit with said controlling devices operating to start, accelerate, retard and stop said motor in accordance with the reading of the distance record sheet.



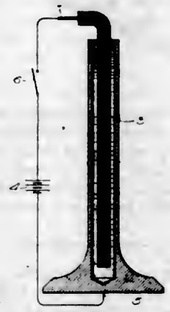
1,349,996. DISTANCE-DETERMINING MECHANISM FOR METAL-WORKING MACHINES. EDWARD V. WURTS, Newark, N. J., assignor to Steel Utilities, Incorporated, a Corporation of New York. Filed Feb. 11, 1918. Serial No. 216,660. 20 Claims. (Cl. 164—87.)

1. A distance determining device controlling the feed of the work in a metal working machine and including in combination a plurality of members moving proportionately to the travel of the work, settable devices cooperating with said proportionately moving members, and means for holding a proportionately moving member during a resetting of the settable means.



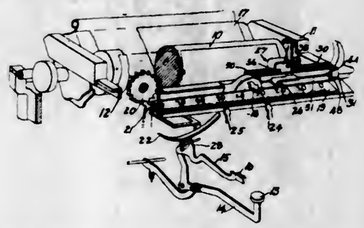
1,349,997. SELF-PROPELLED VEHICLE. CHARLES J. ALLEN, Moorestown, N. J., assignor to S. L. Allen & Co., Inc., a Corporation of Pennsylvania. Filed June 24, 1919. Serial No. 306,293. 6 Claims. (Cl. 180—70.)

1. In a self-propelled vehicle, the combination of a stationarily supported axle, a sleeve surrounding said axle and rotatable relative thereto, a gear in operatively fixed relation with said sleeve, means for rotating said gear, a wheel having a plurality of chord-like members operatively connected to said gear, and means whereby the operative



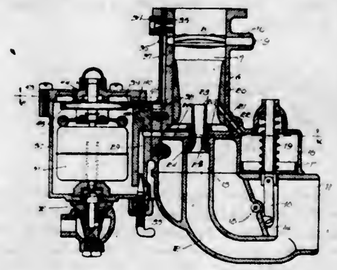
position of said members may be reversed with respect to said gear and said axle to vary the width of the tread of said vehicle.

1,349,998. EXPANSION-BOLT. HENRY W. AYLWARD, Brooklyn, N. Y. Filed Sept. 10, 1918. Serial No. 253,388. 13 Claims. (Cl. 85—2.4.)



13. A device of the character described comprising two members of substantially cylindrical cross section and adapted to be placed side-by-side to produce a substantially cylindrical structure, a head on each member, each head having a semi-circular cutting edge whereby the structure may be caused to enter a refractory material, and means for distorting the members to intimately engage the refractory material in which the structure is inserted, there being means on the peripheries of the members to resist withdrawal of the structure.

1,349,999. PROCESS OF AMALGAMATING STEEL BODIES. CLARENCE W. BALKE, Highland Park, Ill., assignor to Pfanstiehl Company, Inc., North Chicago, Ill., a Corporation of New York. Filed May 31, 1918. Serial No. 237,459. 2 Claims. (Cl. 204—1.)



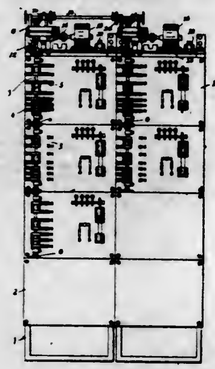
2. The method of amalgamating the inner surfaces of a hollow steel valve stem or other hollow steel body which consists in mixing a minor quantity of mercuric chlorid salt with a major quantity of hydrochloric acid to form an electrolyte solution, filling the hollow steel body to be amalgamated with said electrolyte solution, inserting an electrode into said solution in spaced relation to the walls of said steel body and then causing an electric current to flow from said electrode through the electrolyte solution to said steel body.

1,350,000. TYPEWRITING-MACHINE. HARRY BATES, New York, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 15, 1919. Serial No. 282,891. 24 Claims. (Cl. 197—187.)

1. In a typewriting machine, the combination with a typewriter frame and a traveling carriage, of a revoluble platen, a scale on the frame, a pointer upon the carriage adapted to normally occupy one position upon the carriage, and a counting device for moving said pointer step by step to another point on the carriage.

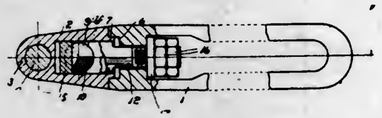
1,350,001. CARBURETER. CLIFFORD C. BRADBURY, Oak Park, Ill., assignor to Curtis B. Camp, Oak Park, Ill., and Lynn A. Williams, Evanston, Ill., joint trustees. Filed June 26, 1919. Serial No. 306,831. 6 Claims. (Cl. 158—36.)

1. In a vacuum feed carbureter the combination of a fuel chamber, means for producing a partial vacuum in said chamber for the purpose of lifting fuel thereto, valve mechanism for regulating the vacuum in said chamber and curved gage tubing responsive to the vacuum produced in said chamber for operating said valve.



1,350,002. DENTAL SEPARATING OR GRINDING DISK. GILDEROY O. BURLEW, Newark, N. J. Filed Oct. 21, 1918. Serial No. 259,005. 1 Claim. (Cl. 32—13.)

The combination with the frame of a dental tool, and a separating strip mounted therein, of a metal strip also



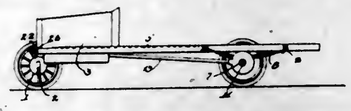
mounted in said frame and rigidly secured to said separating strip, the longitudinal edge of the metal strip being in advance of the longitudinal edge of the separating strip.

1,350,003. ELECTRIC CONTROLLER. EMIL J. CARROLL, Cincinnati, Ohio, assignor to The American Laundry Machinery Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Nov. 23, 1916. Serial No. 133,061. 8 Claims. (Cl. 175—298.)

1. An electric control board unit, comprising a panel body, a rotary shaft thereon, machine controlling switches on said panel body operated by said shaft, said shaft terminating at opposite edges of the panel body, and couplings on the ends of the shaft for operatively connecting it to adjacent shaft members.

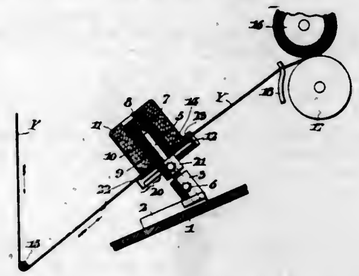
1,350,004. JOURNAL ADJUSTMENT FOR ARMS OF MULTIPLE-SPINDLE DRILLS. EDGAR W. CLEVELAND, Holland, Mich. Filed Sept. 29, 1919. Serial No. 327,105. 9 Claims. (Cl. 77—24.)

1. In a device of the character described, an arm, a journal member mounted at one end of the arm, said journal member having a vertical opening therein, a rod located in said opening, studs, one at each end of the rod projecting from the journal member through the arm, interengaging means between the ends of the rod and said studs for turning the rod about its vertical axis and simultaneously moving one stud as the other stud is moved but in an opposite direction, and nuts on the free ends of the studs for binding the journal member to the arm, substantially as and for the purposes described.



1,350,005. POWER-DRIVEN HAIR-CLIPPER. CLYDE O. CONNOR, Wichita, Kans., assignor of one-half to Dean Harr, Wichita, Kans. Filed Jan. 23, 1920. Serial No. 353,486. 3 Claims. (Cl. 30—1.)

3. In a power driven hair cutting device, a hollow stock, a stud integral with said stock; a gear wheel, carrying a crank, rotatably mounted on said stud; a pinion fixedly fastened to a flexible driving shaft housed in said stock, engaging said gear wheel; a lower cutting blade, fixedly fastened to said stock, a slotted upper blade slidably positioned upon said lower blade and lugs on the lower blade engaging within slots in the upper blade; a bolt upwardly projecting from the base of said stock, an oscillatable shaft pivotally mounted on said bolt; said shaft at its upper end having an elongated slot and within which slot the crank of the gear wheel is operatively positioned; the lower end of said shaft engaging within a slot in the upper blade; a cap plate fixedly covering said stock, a



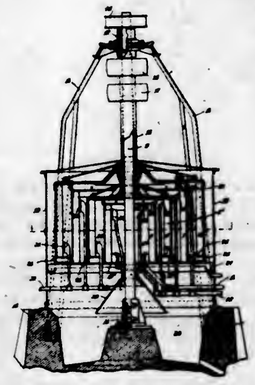
spring plate attached to said cap plate; a housing cover mounted upon the shaft pivot bolt, said cover having two bearing lugs in contact upon said upper blade and a third lug in contact upon said spring plate and a nut on said bolt above said cover adjustable thereon for the purposes specified.

1,350,006. TRUCK ATTACHMENT FOR AUTOMOBILES. ALBERT E. COOK, Chicago, Ill. Filed Oct. 11, 1917. Serial No. 195,930. 8 Claims. (Cl. 180—16.)

1. A truck attachment comprising in combination with a car chassis, a truck frame, a mechanism for connecting the frame to the front end of the chassis, a pivot suspension between the rear end of the chassis and truck frame, truck wheels and axle, a differential on the axle driven from the car engine, and springs supporting the truck frame on the truck axle.

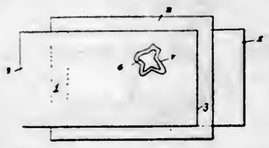
1,350,007. YARN-WAXING DEVICE. THOMAS CUNNINGHAM, Philadelphia, Pa. Filed Nov. 14, 1919. Serial No. 337,931. 6 Claims. (Cl. 91—36.)

1. A yarn waxing device comprising a holder freely rotatable about an inclined axis, and adapted to sustain a cake of wax in such manner as to be held by gravity in contact with the yarn being coated, the inclination of the structure serving to modify the effect of gravitation so that only a very slight pressure is maintained upon the yarn.



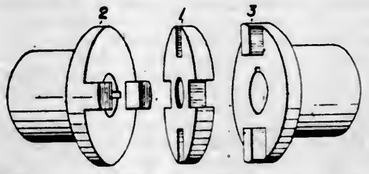
1,350,008. HANGER OR COUPLING. JACOB DAVIS, Cleveland, Ohio. Filed Jan. 10, 1919. Serial No. 270,457. 8 Claims. (Cl. 285—14.)

1. In a device of the character described, the combination of a casing, a pair of sockets mounted in the casing and forming an annular space therein, insulating material filling the space within the casing around said sockets,



and means for connecting one of said sockets to the casing, said means forming an end wall for the annular space.

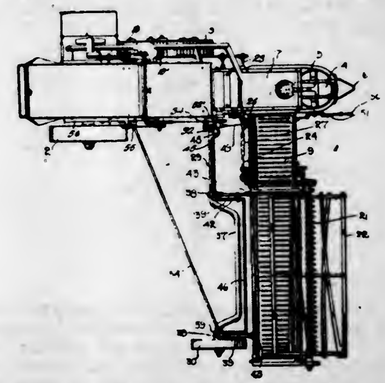
1,350,009. CENTRIFUGAL CLARIFIER. ANTONIO M. DEL VALLE, New York, N. Y. Filed Aug. 16, 1919. Serial No. 317,880. 7 Claims. (Cl. 233—18.)



5. In a clarifying machine, a plurality of concentrically arranged cylindrical pans, means of communication between said pans, means for introducing liquid into the inner pan, means for collecting the clarified liquid from the outer pan and means for removing the scum from the liquid in each pan.

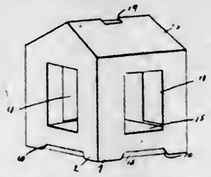
1,350,010. SELF-PROTECTING CONDENSER. WILLIAM DUBILIER, New York, N. Y. Filed Jan. 16, 1918. Serial No. 212,096. 12 Claims. (Cl. 250—41.)

1. A self-protecting condenser or protective device comprising foil armatures and intervening non-inflammable dielectric, said armatures being so thin that upon rupture of the dielectric material the material of an armature recedes from the margin of the rupture to a distance preventing conduction between the armatures on opposite sides of said dielectric.



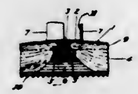
1,350,011. FLEXIBLE-COUPLING DISK. CLARENCE L. DU BOIS, Camden, N. J. Filed Feb. 26, 1919. Serial No. 279,258. 1 Claim. (Cl. 64—96.)

A flexible-coupling disk provided with peripheral notches extending clear through it and having parallel side walls,



and provided with a fiber lining for the working walls of the notches, whereby the coupling can run without oil, substantially as described.

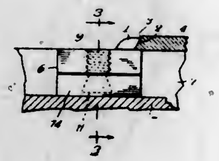
1,350,012. HARVESTER. THOMAS DUGAN, Wichita, Kans., assignor to J. I. Case Threshing Machine Company, Racine, Wis., a Corporation. Filed Dec. 14, 1918. Serial No. 266,773. 10 Claims. (Cl. 56—20.)



1. In a combined harvester and threshing machine, the combination with a threshing machine, and a harvester disposed transversely with respect to the threshing machine, of means for supporting the harvester from the threshing machine and permitting relative turning movement thereof in a horizontal plane, and means for operating the harvester from the threshing machine, said operating means being extensible to permit the said relative turning movement of the harvester.

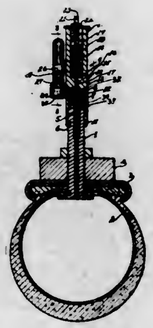
1,350,013. FEEDING DEVICE FOR POULTRY. GEORGE C. EATON, Norwich, N. Y. Filed Apr. 14, 1919. Serial No. 289,968. 3 Claims. (Cl. 119—61.)

1. In a device of the character described a cover being open at the bottom to permit free placing of the same over, and removing from, a container, having side-walls with feed-openings and cut away at the bottom for access of air against the container and having a ceiling and a roof with an aperture in each, oppositely disposed, and a hood interposed between the apertures whereby air-currents have passage from contact with the container out of the top of the device and a container, in combination.



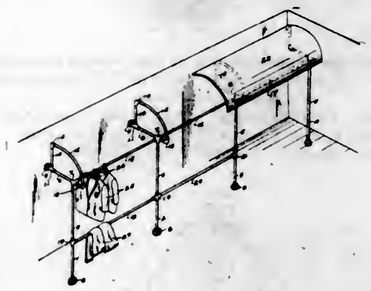
1,350,014. SHOCK-ABSORBER FOR TYPEWRITING-MACHINES. CHARLES W. ECKERMAN, Alameda, Calif. Filed Feb. 26, 1917. Serial No. 151,056. 2 Claims. (Cl. 45—137.)

1. A shock absorber comprising a pad, a clamp, a rivet extending through the central part of the pad to hold the clamp thereon, said rivet drawing the central part of the



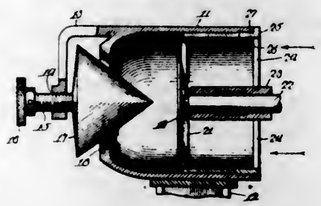
pad up and providing a central recess in the bottom of the pad, so as to distribute the weight of the typewriter to the outer portion of the pad.

1,350,015. PRINTING-PLATE CLAMP. WILLIAM M. EVENSEN, Chicago, Ill., assignor to Goss Printing Press Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 6, 1917, Serial No. 200,501. Renewed Jan. 8, 1919. Serial No. 270,213. 12 Claims. (Cl. 101—381.)



1. A printing plate clamp adapted to coöperate with a slotted plate bed, and including in combination a clamping jaw, a clamp body attached thereto and extending into a slot in the bed, the clamp body being longitudinally recessed from the center thereof to one side, an expanding member substantially of the shape of the recess in the clamp body and located in said recess, the adjacent upright faces of the body and expanding member having corresponding hemi-conical recesses therein terminating in a screw-threaded aperture through the clamp body, and an expanding screw having a conical head in said hemi-conical recess and its shank threaded into the screw-threaded aperture in the clamp body.

1,350,016. SIGNAL FOR INDICATING SUBNORMAL PRESSURE IN PNEUMATIC TIRES. CLYDE THOMAS EWING and ARTHUR G. EWING, Los Angeles, Calif. Filed Aug. 26, 1919. Serial No. 319,991. 3 Claims. (Cl. 116—34.)

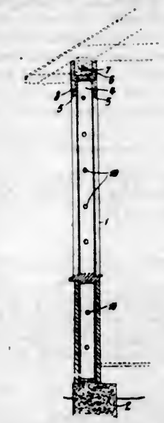


1. A low pressure signal for pneumatic tires comprising a casing adapted to be screwed upon the tire valve stem and having a whistling aperture formed in its wall, a wall extending transversely of said casing above said aperture, a rod slidably mounted in said transverse wall and adapted to extend to and engage the valve in the valve stem, a spring mounted to press against the upper end of said rod above said transverse wall, and means for adjusting the pressure exerted by the spring whereby a decrease of a pre-determined pressure in the tire will cause the tire valve to be opened and the whistle to be blown.

1,350,017. CLOTHES-RACK. MORRIS FELDMAN, Los Angeles, Calif. Filed Apr. 7, 1920. Serial No. 372,098. 2 Claims. (Cl. 211—14.)

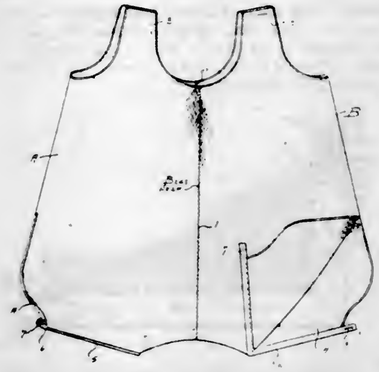
1. A clothes rack including a plurality of standards, each standard comprising an upright mounted on the floor, a transverse member connected to the upper end of said upright and connected at its inner end to a vertical wall, and rafters; a roof resting upon said rafters; a rail connecting each adjacent pair of standards at the upper end of their uprights upon which coats may be hung; and a rail connecting the uprights of each adjacent pair of standards about one-third the distance from the lower to the upper ends of said uprights upon which rails trousers may be hung.

1,350,018. GOVERNOR FOR MOTORS. CHARLES H. GILL, Chicago, Ill. Filed June 18, 1919. Serial No. 305,116. 7 Claims. (Cl. 74—69.)



1. A clothes rack including a plurality of standards each lindrical air chamber, a rotatable shaft, a fan member carried by said shaft within said air chamber, an air compression space, air inlet openings, an air outlet gate of beveled circular form, a conical stopper member for said outlet gate, a threaded shaft carrying said stopper member, an internally threaded bearing for said threaded shaft, means for manually turning said threaded shaft and means for operatively connecting said governor to the motor it is to govern.

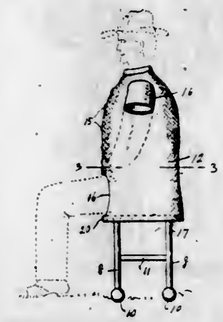
1,350,019. BUILDING STRUCTURE. JOHN HARKNESS, Ayr, Scotland. Filed July 15, 1919. Serial No. 310,964. 2 Claims. (Cl. 72—16.)



1. A wall structure, comprising a base, upright beams of H section set on said base with the edges of the flanges abutting and interengaged with each other, said beams forming integral connected outer and inner faces of a cavity wall, the webs of said beams constituting studs

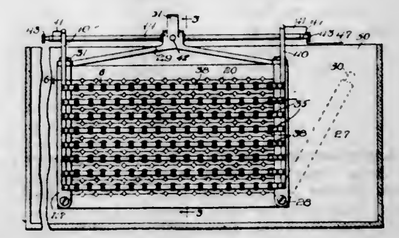
and protruding at the upper edges beyond the flanges, and a horizontally disposed beam of substantially H section

and of a cross section equal to that of said upright beams and fitting the upper ends of the said upright beams.



1,350,020. UNION-GARMENT. GAIL H. HEATLY, Mangum, Okla. Filed Nov. 15, 1919. Serial No. 338,313. 1 Claim. (Cl. 2—144.)

As a new article of manufacture, a bifurcated union garment comprising two substantially duplicate sections, each forming one side and one half of each of the front and back of the completed garment and each having straight meeting edges, said meeting edges being connected throughout by a straight middle seam lying at the center of the front and back of the completed garment, the lower edges of said sections being open and being connected together for a short distance at each side of said middle seam to provide spaced leg openings, whereby the completed garment is free from side seams and central openings and will lie flat when being laundried, the leg openings communicating with side openings and coacting therewith to form front and back flaps and means for detachably connecting said flaps.

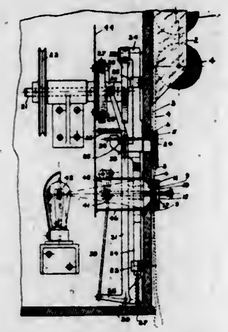


1,350,021. CHAIR. JEREMIAH R. HOLLIDAY, Winnsboro, S. C. Filed Apr. 28, 1920. Serial No. 377,338. 1 Claim. (Cl. 155—37.)

A device of the character described comprising a seat member, said seat having recesses adapted to receive a portion of the limbs of the person, supporting legs depending from said seat, a fabric body member surrounding the periphery of said seat and adapted to snugly engage the body of the person, the lower end portions of said body member being cut away to provide recesses adapted to

receive a portion of the limbs of the person at certain times, the recesses of the body member coöperating with the recesses of the seat to permit unobstructed movement of the limbs of the person, and means for connecting the ends of said body member to each other and to the front portion of the seat extending between said recesses.

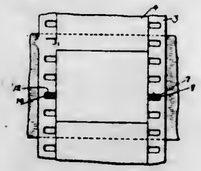
1,350,022. RADIATOR AND PROCESS OF AND APPARATUS FOR PRODUCING SAME. GEORGE B. JACKSON, Chicago, Ill. Filed Apr. 23, 1917. Serial No. 163,845. 11 Claims. (Cl. 204—1.)



1. The method of producing a one piece, seamless radiator which consists in separately forming radiator air tubes, grouping and holding the tubes in predetermined spaced relation by a matrix and producing by electrolytic deposition on the matrix a complete radiator shell and a union of said tubes with said shell.

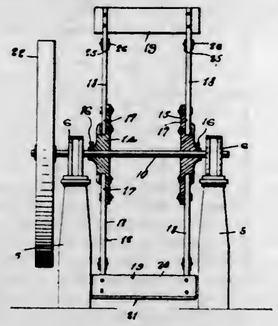
1,350,023. PHOTOGRAPHIC PRINTING. WILLIAM V. D. KELLEY, Brooklyn, and JOSEPH MASON, New York, N. Y., assignors, by mesne assignments, to Prizma Incorporated, a Corporation of Maine. Filed July 26, 1917. Serial No. 182,817. 39 Claims. (Cl. 95—75.)

1. The method of photographically printing images upon a positive strip from a negative strip while in contact, which consists in exactly registering laterally and longitudinally a single perforation in the negative strip, occupying a fixed position relatively to the image thereon, with a corresponding like perforation in the positive strip and simultaneously registering another corresponding separated perforation in both positive and negative in one direction only to effect both longitudinal and lateral registration of the negative with the positive as the standard, and printing an image on the positive strip from said negative while so registered.



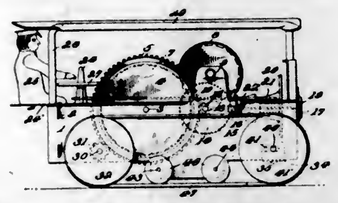
12. In a photographic printing machine, a full fitting pin for registering a negative film laterally with respect to a positive film to be printed, a loose fitting pin

spaced therefrom for effecting longitudinal registration only by another perforation of each film, and means for clamping the negative and positive in registered printing position,



---

1,350,024. PHOTOGRAPHIC IMAGE. WILLIAM V. D. KELLEY, Brooklyn, and JOSEPH MASON, New York, N. Y., assignors, by mesne assignments, to Prizma Incorporated, a Corporation of Maine. Original application filed July 26, 1917, Serial No. 182,817. Divided and this application filed Mar. 9, 1918. Serial No. 221,343. 1 Claim. (Cl. 88—19.5.)



A photographic film strip transparency having a series of image areas, each area carrying a plurality of color value printed images, each image being similarly registered longitudinally with a certain perforation and laterally with a certain other perforation of the film strip.

1,350,025. WATER-MOTOR. WILLIAM J. KINBACK, Bethlehem, Pa. Filed Oct. 5, 1917. Serial No. 194,895. 1 Claim. (Cl. 170—111.)

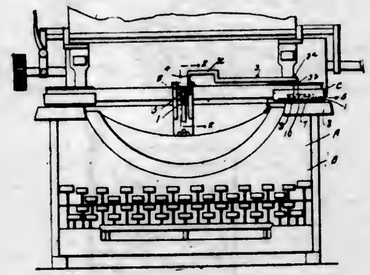
A water motor comprising a shaft, a hub mounted upon the shaft and provided at its periphery with radially disposed sockets, radially disposed spokes having their inner ends secured in the sockets of the hub, blades carried at the outer end of the spokes, and links secured at their ends to the adjacent spokes and bridging the space between them and holding the spokes in radial position with relation to the shaft, the end portions of the adjacent links overlapping each other and the links being arranged substantially in an arcuate line around the center of the shaft, each arcuate line lying against one side of the spokes and the other side lying against the opposite sides of the spokes.

1,350,026. TOY TRACTOR. EDWARD JOSLIN KINGSBURY, Keene, N. H. Filed June 11, 1919. Serial No. 303,289. 4 Claims. (Cl. 46—48.)

3. A toy tractor comprising a frame, a pair of drive wheels mounted in the frame, a motor for driving said wheels, a pair of wheels carried by the opposite end of the frame, endless traction belts passing around the wheels, and guards carried by the frame and extending downwardly over the belts to prevent them slipping from the wheels.

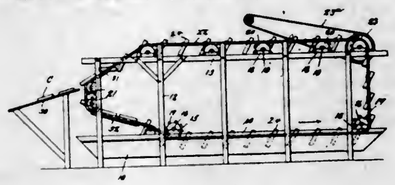
1,350,027. METAL WINDOW-SCREEN. ALFRED M. LANE, St. Louis, Mo., assignor to Monarch Metal Products Company, St. Louis, Mo., a Corporation of Missouri. Filed Aug. 21, 1919. Serial No. 318,878. 17 Claims. (Cl. 156—14.)

17. A screen comprising inner and outer frame members and meshwork locked between them, one of said frame members comprising a strip of metal bent lengthwise to form a hollow boxing, the marginal portion of the outer face of said boxing being soldered to the inside of the corner portion of the boxing.



1,350,028. CLOTHES-TONGS. LEONARD M. LARSON and CHARLES J. CARLSON, Tacoma, Wash. Filed Nov. 17, 1916. Serial No. 131,867. 5 Claims. (Cl. 68—6.)

2. A device for withdrawing articles of clothing from a wash boiler, comprising a shaft, a hand crank connected

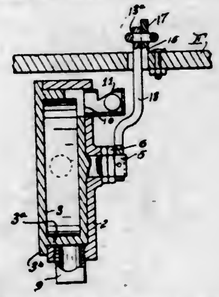


to one end of the shaft, and a fork pivotally connected to the other end of the shaft for angular movement with relation to the shaft.

1,350,029. UNDERSCORER FOR TYPEWRITERS. ALBERT E. LASTINGER, Ooltewah, Tenn. Filed Jan. 21, 1919. Serial No. 272,279. 1 Claim. (Cl. 197—113.)

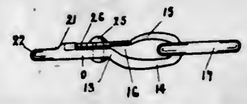
The combination with a typewriter including a frame, a platen carried thereby and writing keys mounted in operative relation to the platen, of a bracket connected with the frame at one side thereof, a horizontally extending arm provided with a depending pivot pin extending through the bracket to pivotally mount the arm, a rectangular block carried by the depending pin beneath the bracket, a spring element engaging the block to hold the arm in position, and an underscoring face carried by the free end portion of the arm.

1,350,030. COOKING APPARATUS. EDWARD M. LAWRENCE, Rockland, Me. Filed Jan. 17, 1920. Serial No. 352,140. 5 Claims. (Cl. 53—7.)



1. A cooking apparatus comprising an endless conveyer having upper and lower runs, a cooking receptacle through which the lower run of the conveyer passes, pivotally supported article-container holders carried by the conveyer, said holders having an open top and a foraminous front, against which latter open portions of the article-containers are adapted to seat, the pivots of the holders being so located that said holders have a normal tendency to pendent position on the upper and lower runs of the conveyer, and means interposed in the paths of the holders to invert the same at one end of the upper run of the conveyer to dump the article-containers from the open tops of the holders.

1,350,031. PROCESS OF TREATING FIBROUS VEGETABLE MATERIAL AND THE RESULTING PRODUCT. GUY S. MCDANIEL, Smyrna, Ga., assignor of one-half to E. H. Kimbell, Atlanta, Ga. Filed July 24, 1919. Serial No. 313,003. 9 Claims. (Cl. 92—15.)



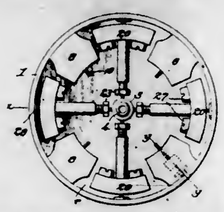
1. The process of treating Spanish moss which consists in subjecting the green partly cured or cured moss to an alkaline solution of specific strength whereby the outer coating is shrunk and set upon the inner fiber substantially as described.

1,350,032. AUTO-THEFT SIGNAL. JOHN W. MARR, Newport Beach, Calif. Filed Feb. 25, 1920. Serial No. 361,336. 2 Claims. (Cl. 116—33.)

1. In a theft signal for motor vehicles, the combination of a circular valve casing adapted to be attached to the exhaust outlet, a whistle attached to said casing adapted to be sounded by exhaust gases, outlets to atmosphere and to a muffler from said casing, the said outlets and exhaust pipe connection being disposed radially about the periphery of said casing, a valve revolubly mounted within said casing comprising an arcuate wall adapted to slidably contact with the inner circular surface of said casing, ports in said valve adapted to register with outlets in said casing, and means to rotate said valve.

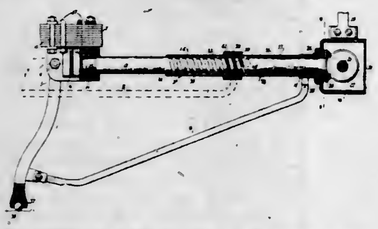
1,350,033. CLASP-HOOK. WILLIAM MONROE, Hooper, Nebr. Filed Jan. 29, 1920. Serial No. 354,761. 1 Claim. (Cl. 24—232.)

A hook comprising a body portion having an offset portion and a bill returned upon the offset portion and having its end spaced from the body portion providing a mouth, an arcuate shoulder on the body portion at the opposite end from the hook, said end having the shoulder formed with an opening, a pin extending through the body portion and forming a center from which the curve of the shoulder is struck, a disk rotatably mounted on the pin and having its periphery rotating close to and past the free end of said bill and said arcuate shoulder, said disk having a slot in its edge, and an element adapted to interlock with the bill and receivable into the slot in the disk in moving into and out of the bill.



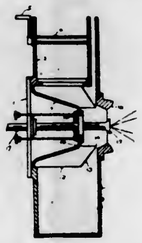
1,350,034. SAFETY-RAZOR. RILEY HERBERT PARKER, Winthrop, Mass., assignor to Gillette Safety Razor Company, Boston, Mass., a Corporation of Delaware. Filed Jan. 6, 1919. Serial No. 269,742. 7 Claims. (Cl. 30—12.)

1. In a safety razor, a holder comprising a guard, a cap-piece pivotally mounted on an axis parallel with the guard



and provided with stops adapted to engage and position the cutting edge of a blade, and means for maintaining the blade in operative position when the holder is closed.

1,350,035. COMPENSATING BALANCE-WHEEL. INGILD POVELSEN, Washington, D. C. Filed Mar. 2, 1920. Serial No. 362,877. 18 Claims. (Cl. 58—107.)

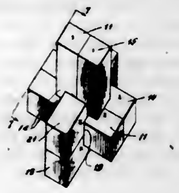


5. A balance wheel comprising a hub, a rim, a member connecting the hub and rim, a cover on the wheel, and timing and compensating devices positioned within the rim and adjustable from without the rim.

1,350,036. LIFTING-JACK AND THE LIKE FOR USE ON MOTOR ROAD AND OTHER VEHICLES. FREDERICK LIONEL RAPSON, Liverpool, England. Filed Dec. 22, 1917. Serial No. 208,497. 6 Claims. (Cl. 254—86.)

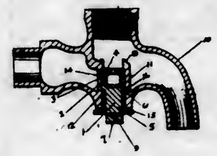
1. In a lifting jack for vehicles, a chassis, a lever pivoted on the chassis, shaft journaled on the chassis and provided with a spiral groove, a sleeve slidable on the shaft and provided with an internal spiral groove coinciding and coöperating with the groove in the shaft to form a spiral race-way, balls mounted in the race-way, a second sleeve slidable on the shaft, a tubular connection between said sleeves and arranged in embracing relation with said shaft, a connection between the second mentioned sleeve and said lever, and means to slide the sleeves on the shaft whereby to raise and lower the lever.

1,350,037. FURNACE-FRONT. JOHN REID, New York, N. Y. Original application filed Apr. 19, 1919, Serial No. 291,362. Divided and this application filed Dec. 16, 1919. Serial No. 345,396. 3 Claims. (Cl. 158—1.5.)



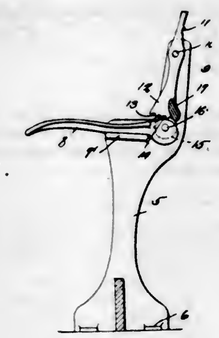
1. In a furnace front, a front plate and a back plate forming an air pocket in a forced draft furnace system, a closure plate secured to the front plate for the fuel opening, an oil pipe having a burner nozzle and supported by said closure plate, a cone shell forming an air deflector and introduced between said front and back plates in the fuel openings, and guide plates mounted on said shell and extending outwardly in a substantially horizontal direction from the larger end of the shell and terminating adjacent to the back plate.

1,350,038. STREET-CAR ANNUNCIATOR. JAMES L. SCROGGINS, Bennington, Okla. Filed Sept. 16, 1919. Serial No. 324,146. 3 Claims. (Cl. 40—59.)



1. A street annunciator of the class described comprising a web, rollers upon which said web is adapted to be wound, and actuating mechanism for effecting the winding operation comprising an electro-magnet, an electric circuit therefor, a circuit closer adapted to be intermittently operated, ratchet mechanism including spaced pawls suspended from the armature of the electromagnet, and a gear member interposed between said pawls to hold them in operative position, said gear being connected to one of the web rollers to actuate the same.

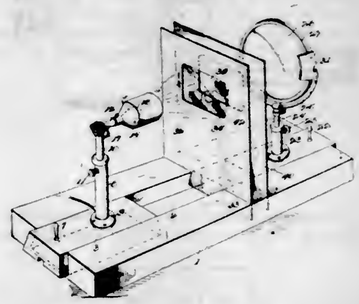
1,350,039. BLOCK PUZZLE. SAM SENYK, Toronto, Ontario, Canada. Filed July 23, 1919. Serial No. 312,664. 1 Claim. (Cl. 46—41.)



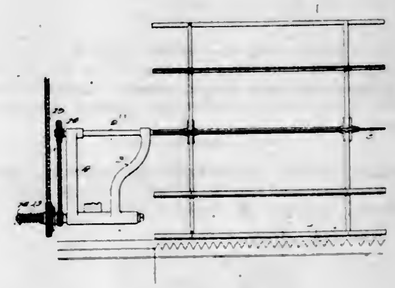
A block puzzle comprising fixed rectilinear blocks, of uniform length, thickness, and arranged in pairs, one of said blocks being plain upon each of its four sides, another block having two recesses formed in corresponding sides, one of said recesses being half the width of the other and spaced therefrom at a distance corresponding to half the width of the block, a pair of blocks each having a recess in their sides equal to the combined width of the blocks, and another recess in the side adjacent thereto equal in length to the width of the block, and another pair of blocks recessed upon adjacent sides, each of said recesses being equal to the width of the block and offset one from the other in amount equal to one half the width of the block, the recesses in one block being formed oppositely to the recesses to the other block, all of said blocks being capable of interengagement when correctly assembled presenting a symmetrical geometrical figure.

1,350,040. VALVE. ALFRED EDWARD SHACKLEFORD and GUSTAVE ARTHUR FRANKLIN, Calgary, Alberta, Canada. Filed Aug. 12, 1918. Serial No. 249,508. 2 Claims. (Cl. 277—66.)

2. A fluid valve, in which a cut-out plug is formed in three integral sections, a cylindrical shaped middle bearing section, a bottom key section and a cylindrical upper cup section having a straight wall vertically, a full dimension upper outlet and a side port of rectangular shape, a casing having a perfect cylindrical and vertical chamber formed therewithin a port corresponding to said side port, said cylindrical chamber being closed in slightly by a tapering wall, adapted to form on the inside a shoulder as a limiting stop for the cupped end of said plug and on the outside a narrow valve seat, a valve on said seat and an operating stem therefrom, and a gland nut screw-threaded into said vertical chamber and locking said cut-out plug in position.



1,350,041. CHAIR. GAYLE L. SQUIRE, Hastings, Fla. Filed Dec. 30, 1919. Serial No. 348,257. 1 Claim. (Cl. 155—84.)

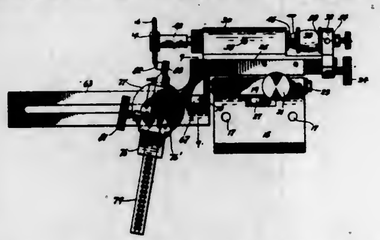


In a chair, supporting legs, each of said supporting legs having an upwardly extending arm, a back rest comprising spaced arms pivotally supported by the upwardly extending arm, each of said spaced arms having a segmental gear formed at the lower end thereof, a pivoted seat portion positioned between the arms, segmental gears carried by the seat portion and coöperating with the first mentioned segmental gears, supporting flanges disposed under the seat and adapted to receive the seat portion when the same is in a horizontal position, and a stop formed integral with each of the spaced arms, and adapted to engage a portion of the segmental gears of the seat portion for restricting movement of the back rest.

1,350,042. APPARATUS FOR THE EXAMINATION OF X-RAY AND OTHER NEGATIVES. ELZA R. STEALY, Shenandoah, Iowa. Filed Sept. 18, 1918. Serial No. 254,606. 27 Claims. (Cl. 88—1.)

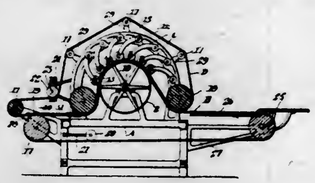
1. In apparatus for the examination of negatives, means for supporting a negative, a source of light mounted for universal adjustment at one side of the means, and a uniformly magnifying mirror at the other side of the said means.

1,350,043. SAFETY-DRIVE FOR HARVESTER-REELS. ORLANDO STITT, Toledo, Ill. Filed July 9, 1917. Serial No. 179,517. 1 Claim. (Cl. 74—29.)



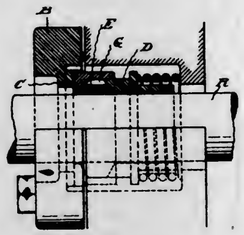
The combination with a driven shaft, of a bracket therefor, a second shaft carried in the bracket, and spaced from the driven shaft, a sprocket wheel fixed to the driven shaft, large and small sprocket wheels loose on the second shaft, a friction clutch disk formed on one of the loose sprocket wheels, the other loose sprocket wheel being formed with a friction face to be engaged by the friction clutch disk, a sprocket chain trained over the large sprocket wheel, an endless sprocket chain trained over the smaller sprocket wheel and over the sprocket wheel fixed to the driven shaft, and a coiled expansion spring carried by the second shaft and active against the loose sprocket wheel adjacent thereto for frictionally holding the clutch disk in positive engagement with the clutch face.

1,350,044. ATTACHMENT FOR GRINDING SCREW-THREADED ARTICLES. JOSEPH M. STRYHAL, Washington, D. C., assignor of one-half to William M. Manion, Philadelphia, Pa. Original application filed June 23, 1917, Serial No. 176,610. Divided and this application filed July 20, 1918. Serial No. 245,827. 6 Claims. (Cl. 125—11.)



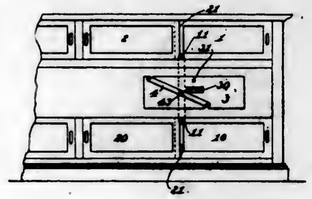
1. A dressing attachment for a grinding device comprising a supporting arm detachably connected to said

grinding device, a plate capable of longitudinal adjustment therealong, a tool carrier angularly adustable on said



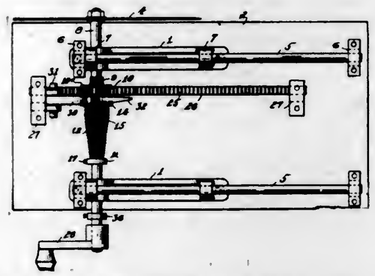
plate, and common means for securing adustments of said plate and tool carrier relative to said supporting arm.

1,350,045. APPARATUS FOR DESEEDING FLAX. FREDERIC LANGTRY VAN ALLEN, Regina, Saskatchewan, Canada. Filed May 19, 1919. Serial No. 298,165. 6 Claims. (Cl. 130—13.)



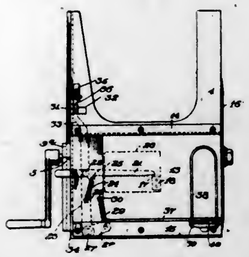
1. In a machine for the purpose specified and in combination, a relatively large conveying roller, and a plurality of deseeding rollers held in yieldable contact with the surface of the conveying roller and arranged in staggered rows.

1,350,046. PACKING-BOX FOR PISTON-RODS. ADRIAN O. VAN DERVORT, Troy N. Y. Filed Oct. 22, 1919. Serial No. 332,408. 10 Claims. (Cl. 286—23.)



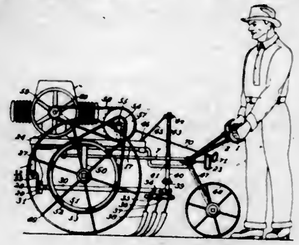
1. In a rod-packing, in combination, an annular packing ring chamber comprising an outer wall forming a tension hoop, and two annular end walls each facing toward the other; a follower ring of which the inner face thereof constitutes one of said end-walls; means for actuating the follower ring in a direction for subjecting a packing ring in said chamber to a width-contracting pressure; and a packing ring in said chamber consisting of co-acting segments composed of a metal mixture moldable under the action of the pressure and heat of superheated steam, said segments each having one underlapping wedge-end, and also having one overlapping lever-end bearing upon and extending only partially over the wedge-end of a co-acting segment, and the rod packing having between the tension hoop and the lapping wedge-end and lever end, a relief chamber occupying an arcual length circumferentially of the ring greater than the arcual length of the bearing of a said lever end upon said wedge-end.

1,350,047. SHOW-CASE LOCK. EUGENE W. WAY, Seattle, Wash. Filed Dec. 29, 1919. Serial No. 348,089. 7 Claims. (Cl. 45—94.)



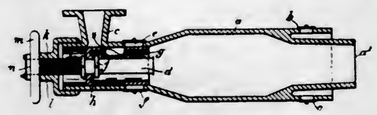
1. In a show case, in combination, a plurality of doors placed one above the other, a member normally secured in the show case and slidable outwardly therefrom, and a locking bar carried by said slidable member and engageable with said doors to secure them in fixed position.

1,350,048. SLICING-MACHINE. SOLOMON WILE, Rochester, N. Y. Filed Nov. 10, 1919. Serial No. 336,962. 15 Claims. (Cl. 17—24.)



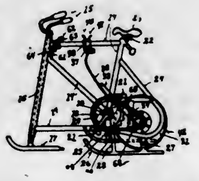
1. A slicing machine comprising a rotary cutter movable in the direction of its axis, and a support for the material to be sliced movable transversely of the axis of rotation of the cutter.

1,350,049. SLICING-MACHINE. SOLOMON WILE, Rochester, N. Y. Filed Jan. 26, 1920. Serial No. 354,081. 7 Claims. (Cl. 17—24.)



1. In a slicing machine, a frame, a cutter movable on the frame, a carriage movable on the frame parallel with the plane of operation of the cutter, a carriage for supporting the material to be sliced movable on the first mentioned carriage transversely of the plane of operation of the cutter, and mechanism for shifting the second mentioned carriage on the first mentioned carriage comprising a lever pivotally mounted on the first mentioned carriage, and a second lever pivotally mounted on the first mentioned lever and coöperating with the second mentioned carriage to shift the latter step-by-step.

1,350,050. CULTIVATOR. DALTON K. WILSON, Waterloo, Iowa. Filed June 30, 1919. Serial No. 307,608. 12 Claims. (Cl. 97—42.)

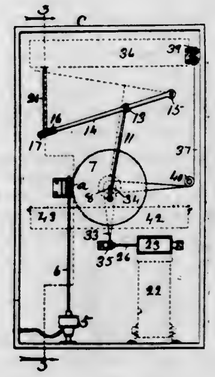


1. In combination, a frame, means of transportation including steerable elements on which said frame is mounted for relative movements of said steerable elements, gangs of implements movably supported on said frame, and loosely connected mechanisms operatively associated with said frame, said means of transportation, the steerable elements thereof, and with said gangs of implements, movable separably to steer said device or vertically or laterally to shift said gangs of implements, or together to perform both said operations simultaneously.

1,350,051. GAS-BURNER. LLOYD WILSON, Keswick, England. Filed Apr. 7, 1917. Serial No. 160,485. 6 Claims. (Cl. 158—119.)

6. A gas burner for furnaces comprising in combination a tubular body portion having an inlet near its outer end for the supply of gas, inlet ports for the supply of primary air, a hollow sleeve valve having a port therein, and formed to coöperate with the gas inlet port and with the air inlet ports so as to simultaneously regulate the air and gas supplies, a hollow centrally arranged tube for the supply of additional primary air, means for connecting the tube to the adjustable hollow sleeve valve, and means for moving said tube in an axial direction relative to the body of the burner substantially as described.

1,350,052. BICYCLE-SLED. OSCAR W. AHLBOM, Salt Lake City, Utah. Filed Nov. 17, 1919. Serial No. 338,753. 5 Claims. (Cl. 208,161.)

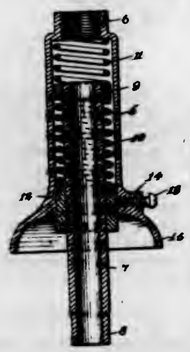


1. A bicycle-sled comprising a frame having a steering post and a saddle, a steering rod rotatably mounted in said steering post and having a runner connected thereto at its lower end and a hand lever at its upper end, a pair of runners pivotally connected to the rear portion of said frame, a pedal shaft journaled to said frame, a propeller wheel having a tire of resilient material, and a series of retractile spurs mounted upon said frame and driven from said pedal shaft and adapted to engage the surface over which the runners are to be propelled at a point between said pair of runners, and a cam wheel operable at the will of the operator to extend and retract said spurs.

1,350,053. LIFTING-GRAPPLE. AUGUST AWISCHUS, Filley, Nebr. Filed Aug. 1, 1919. Serial No. 314,607. 4 Claims. (Cl. 294—109.)

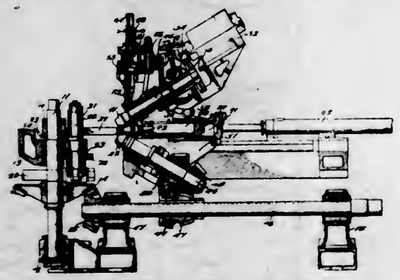
1. A device of the class described, comprising a plurality of pairs of curved fingers, a common rod on which said fingers are pivoted, extensions on one of said pairs of fingers forming operating handles, a block through which said rod passes, a rope from which said block is suspended, a second rope looped around said handles for drawing the said fingers together, an extension formed on another of said fingers, a locking arm pivoted to such extension, and an element carried by one of the first mentioned extensions adapted to be engaged by said arm to lock the said fingers.

1,350,054. ADVERTISING DEVICE. EDWARD J. BAKER, Chicago, Ill. Filed Apr. 22, 1918. Serial No. 230,150. 3 Claims. (Cl. 40—32.)



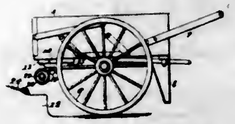
1. In a device of the class described, a transparent front having stationary landscape scenery shown thereon, a frame in which said front is secured, a back casing removably attached to said frame and providing a chamber in which the actuating mechanism is located, a partition with a slot, an illuminating lamp loosely inserted in said slot, a motor, and the operative connections between said lamp and motor.

1,350,055. CARTRIDGE-TYPE FUSE. EDWIN C. BALLMAN, St. Louis, Mo., assignor, by direct and mesne assignments, to Valley Electric Company, Wilmington, Del., a Corporation of Delaware. Filed Nov. 15, 1918. Serial No. 262,696. 10 Claims. (Cl. 200—128.)



3. An electric fuse, comprising, a case, terminals on said case, a fuse-link connecting said terminals, and a freely movable, tubular element mounted on said fuse-link.

1,350,056. ELECTRIC-LAMP SUPPORT. JOHN E. BARRY, Jr., Chicago, Ill. Filed Apr. 30, 1919. Serial No. 293,789. 2 Claims. (Cl. 248—30.)



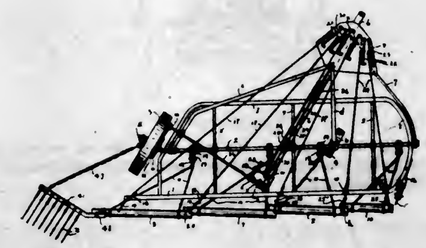
1. An electric lamp support comprising a tubular body; an elongated tubular supporting element having one end mounted in said body for relative longitudinal movement in said body, the passages through said parts being unobstructed for the accommodation of conductor wires; an external stop on said end of said element; an internal stop on said body at one end thereof; a spring interposed between said stops; an internal stop at the opposite end of said body; and a second spring interposed between said second mentioned internal stop and said external stop.

1,350,057. ROLLING-MILL. FRANK B. BELL, Chicago Heights, Ill., assignor to Edgewater Steel Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 7, 1915, Serial No. 44,256. Renewed July 9, 1920. Serial No. 395,173. 40 Claims. (Cl. 80—16.)

1. In a rolling mill, means for removably holding a roll for engaging the interior surface of a tire blank, rolls for engaging the rim of either a car wheel blank or of a tire blank, and means for removably holding rolls in cooperative relation with said rim engaging rolls for rolling a car wheel and also alternatively holding rolls in cooperative relation with said interiorly engaging tire blank roll and with said rim engaging rolls to roll a tire.

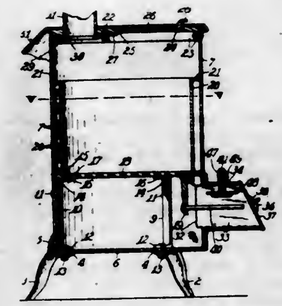
1,350,058. HAND-CART. JAMES Z. BENEDICT, Cedar Rapids, Iowa. Filed Mar. 1, 1919. Serial No. 280,078. 2 Claims. (Cl. 280—54.)

1. In a hand-cart, the combination of carrying-wheels, a body mounted thereon, a base-plate attached near the forward end of the body and lengthwise thereof, a bracket mounted under said base-plate and slidable endwise thereof, means for fastening the bracket to the base, and wheels carried by said bracket, the wheels and bracket being slidable forward to fulcruming position, and back out of such position.



1,350,059. DRILLING DEVICE. HENRY F. BLACKWELL, New York, N. Y., assignor of one-half to William H. Strawn and one-half to Maude A. Blackwell, New York, N. Y. Filed Feb. 18, 1920. Serial No. 359,586. 20 Claims. (Cl. 255—4.)

1. A device of the class described, comprising a casing, power means within said casing, said power means having a shaft, a cutting head shaft driven from the power shaft, a passage through both of said shafts through which comminuted material, displaced by the drilling operation, passes and suction exerting means driven by the power means for causing the comminuted material to be drawn through said passage.



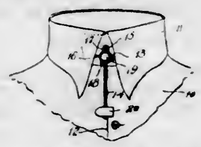
1,350,060. ROAD-FORMING MACHINE. BICK R. BONNEY, Omaha, Nebr., assignor to Michael J. Foley and William P. Monahan, Omaha, Nebr. Filed July 12, 1919. Serial No. 310,391. 6 Claims. (Cl. 37—7.)

1. In a road-forming machine, an axle having an inclinedly disposed part, a frame provided with a caster-wheel and journaled on the axle, a vehicle-wheel journaled on the inclinedly disposed part of the axle, a second frame rigidly mounted on the axle and disposed above the first named frame, scraper-blades connected with the first named frame and also connected with the axle, an operating-shaft revoluble by the revoluble movement of the vehicle wheel, a drum, an operating-bar pivotally mounted

on the second frame and provided with a pulley, a cable connected with the drum and second frame and engaging said pulley, a spacing-bar connected with the first named frame and said operating-bar, and a clutch movable for communicating revoluble movements of the operating shaft to the drum.

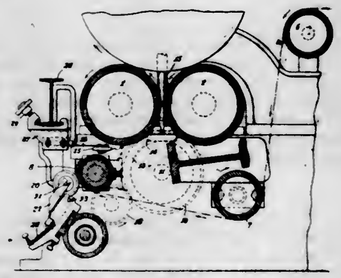
1,350,061. HEATING-STOVE. FRANK E. BOWERS, Indianapolis, Ind. Filed Feb. 28, 1918. Serial No. 219,714. 2 Claims. (Cl. 236—6.)

1. A heating appliance comprising a bottom and a side wall, one portion of the wall having an aperture therein, a neck secured to the wall at the aperture and having an air-inlet port in the top thereof, a closure removably secured to the front end of the neck, a guide on the neck, a pivotally supported valve lever guided by said guide, a link connected to said lever and extending through said port, a supported thermostatic device to operate said lever, and a valve within said neck and connected to said link to close or open said port.



1,350,062. BULLET-PROOF ARMOR. GUY OTIS BREWSTER, Dover, N. J., assignor to Guy Otis Brewster and Emil Heller, trading as Brewster and Heller. Filed Dec. 28, 1915. Serial No. 69,009. 2 Claims. (Cl. 89—36.)

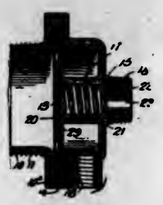
2. An armor comprising head, body, arm and leg portions of angular bullet proof material, said head portion being bent backwardly to protect the top of the head of the user and provided with eye openings therethrough, and shields for said openings to protect the eyes of the



user when said head portion is downwardly inclined, without obscuring his sight.

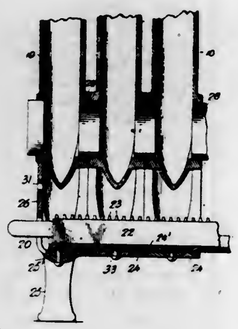
1,350,063. COLLAR-HOLDER. BENJMIN F. BURGOYNE, New Haven, Conn. Filed July 18, 1919. Serial No. 311,740. 1 Claim. (Cl. 24—81.)

The herein described collar holder, the same comprising a wire element including an upright stem bent at its upper end to form two jaws facing each other and an interposed resilient neck, the terminal of the wire being spaced from the stem to leave an entrance opening, and a spring clip at the lower end of said element, the latter constituting the pivot for its jaws, the upper jaws adapted to embrace a collar button behind its head and outside the collar, and the lower jaws adapted to engage the shirt.



1,350,064. SLITTING AND REWINDING MACHINE. JAMES A. CAMERON and GUSTAF BERGER BIRCH, Brooklyn, N. Y., assignors to Cameron Machine Company, Brooklyn, N. Y., a Corporation of New York. Filed May 23, 1919. Serial No. 299,273. 6 Claims. (Cl. 164—65.)

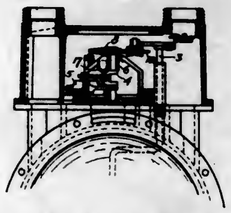
1. A rewinding machine comprising: a front and a rear surface rewinding drum in spaced relation, a displaceable rewinding shaft above and intermediate the rewinding



drums, means for guiding flexible material over the surface of the front rewinding drum and up between the two drums to the rewinding shaft, and means for rotating the two drums in one and the same direction.

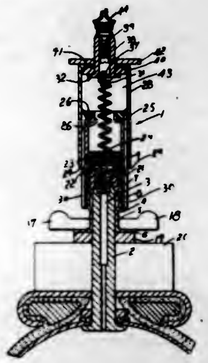
1,350,065. AUTOMATIC CONTROL-VALVE. JAMES M. CAMMACK, Brooklyn, N. Y. Filed June 21, 1916. Serial No. 104,905. 1 Claim. (Cl. 236—26.)

In an automatic control valve, the combination of a ring adapted to be screwed into the wall of a fluid container and having a flange on its outer edge, a diaphragm covering the outer end of the ring, a cap attached to the flange and securing the diaphragm, a nipple constituting the inlet at the inner face of the cap and impinging the diaphragm when pressure is put on the inner side of the latter, a spring within the nipple and bearing on the diaphragm, a nut in the nipple to adjust the pressure of the spring, and a protecting surface on the diaphragm.



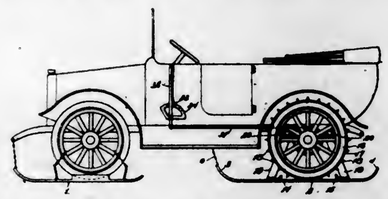
1,350,066. RADIATOR. JAMES M. CAMMACK, Brooklyn, N. Y. Filed Apr. 22, 1916, Serial No. 92,889. Renewed Jan. 13, 1920. Serial No. 351,255. 2 Claims. (Cl. 237—17.)

1. In a gas fired radiator, the combination of radiator sections coupled together, of leg sections at each end of the radiator and having openings and cross pieces, a bar supported by the cross pieces, removable plates covering the openings, a burner carried by the bar, and separate perforated housing sections beneath the radiator sections and hung from the bar.



1,350,067. TANGENT-POST FOR GAS-METERS. HORACE CHRISMAN, Edgewood, Pa., assignor to Pittsburgh Meter Company, East Pittsburgh, Pa., a Corporation of Pennsylvania. Filed July 20, 1917. Serial No. 181,867. 6 Claims. (Cl. 73—1.)

1. In combination with the crank shaft of a meter, a bendable crank shaft engaging member rigidly secured thereto, a flag arm connection integrally formed with said member and comprising a yoke adapted to surround the said crank shaft, and means carried by the yoke on opposite sides of the said crank shaft and adapted to adjust



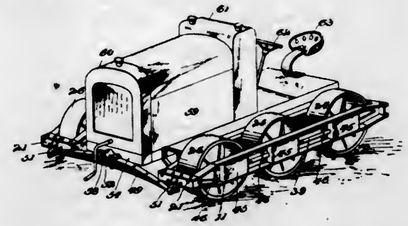
the yoke with respect to the said shaft, thereby adjusting the angular position of the said connection with relation to said crank shaft.

1,350,068. PNEUMATIC-TIRE-FILLING DEVICE. HAROLD B. CODY, Palm Springs, Calif. Filed May 12, 1919. Serial No. 296,681. 2 Claims. (Cl. 152—11.5.)

1. A pneumatic tire filling device comprising a stem fixed to the tire forming an air conduit having an outside screw thread, a base, screw seated upon the stem, an inner telescoping member connected to the base forming an air tight joint and having gage lines on its periphery, an outer telescoping member slidably mounted on the inner telescoping member its lower edge forming an indicator for the gage lines, a flexible piston ring mounted at the top of the inner telescoping member forming a slidable air tight joint between it and the outer telescoping member, a pulling spring connecting the base to the outer telescoping member and an air inlet valve mounted upon the outer telescoping member having means for connecting it with a proper air supply.

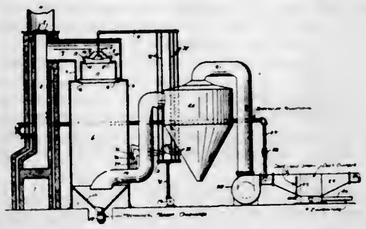
1,350,069. SLED-RUNNER ATTACHMENT FOR AUTOMOBILES. GEORGE W. CORSEPIUS, Downey, Idaho. Filed Oct. 26, 1917, Serial No. 198,625. Renewed Jan. 2, 1920. Serial No. 349,085. 3 Claims. (Cl. 180—6.)

1. A traction attachment for automobiles comprising a pair of sled runners, a bolster carried by said runners



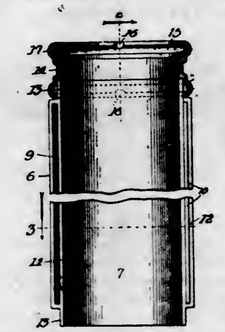
and composed of spaced bolster sections, clips engaging the axle housing, links connecting the clips with the bolster sections for adjustably supporting the rear axle from the bolster, means associated with the link mechanism for raising and lowering the axle, and suitable traction devices applied to the wheels of the rear axle.

1,350,070. IDENTIFICATION MEANS. JOSAPHAT COUTURE, Hull, Quebec, Canada. Filed Aug. 13, 1918. Serial No. 249,733. 1 Claim. (Cl. 40—10.)



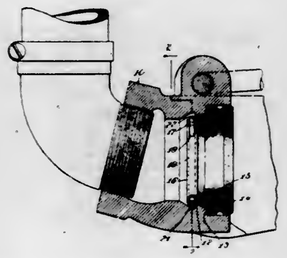
An identification receptacle comprising a container subdivided into two compartments, a spring controlled plunger in one compartment, a curvilinear arm on the container overhanging the end of the same to coact with the said plunger, a ring pivotally connected to the other end of the container, and a cap designed to fit the open end of the other compartment having a head adapted to lie within the ring, as and for the purpose specified.

1,350,071. MULTIPLE-WHEEL DRIVE FOR TRACTORS. LLEWELYN J. DAVIES, Twin Lakes, Colo. Filed Mar. 20, 1919. Serial No. 283,813. 4 Claims. (Cl. 180—22.)



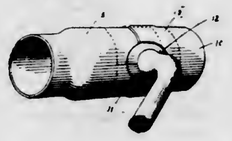
1. A multiple wheel drive including companion drive units connected together in parallel relation, each of said units comprising a supporting frame, shafts journaled upon the frame, one of said shafts providing a drive shaft, drive wheels carried by the shafts, a longitudinal countershaft journaled upon the frame and common to all of the first shafts, and a gear connection between the countershaft and said first mentioned shafts.

1,350,072. PROCESS OF DRYING SOLUTIONS. CHARLES L. DEAN, Denver, Colo. Filed Apr. 27, 1918. Serial No. 231,288. 5 Claims. (Cl. 127—9.)



1. A process of drying solutions comprising spraying said solutions into a chamber and subjecting said spray to a series of alternating convergent and cylindrical streams of relatively highly heated, dry gases.

1,350,073. PIPE STRUCTURE. FLOYD DOW, Wyanet, Ill., assignor of one-half to Llewellyn D. Edminster, Wyanet, Ill. Filed May 10, 1919. Serial No. 296,242. 6 Claims. (Cl. 137—75.)



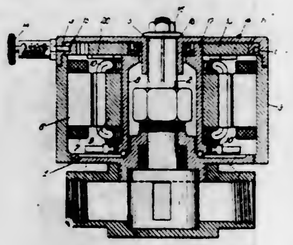
1. A pipe structure formed of a plurality of pipe members disposed in end to end relation, and each formed of sections extending lengthwise thereof, and means engaging the ends of said pipe members operating to hold said pipe sections in assembled condition and permit of the relative rotation of adjacent pipe members.

1,350,074. GASKET FOR TRAIN-PIPE COUPLINGS. EGBERT H. GOLD, Chicago, Ill. Filed Dec. 26, 1919. Serial No. 347,364. 6 Claims. (Cl. 285—69.)

1. The combination with a coupler head having a port provided with an inward projection, of a gasket adapted to fit into said port adjacent said projection and means for securing the gasket in its operative position comprising a ring adapted to expand into a locking engagement with the coupler in a position back of said projection; said ring being formed with a bend providing an outwardly extending projection which normally fits back of said projection in the coupler port when the gasket is in its operative position.

1,350,075. LUBRICATOR. HARRY C. HEATH, San Francisco, Calif. Filed Mar. 31, 1919. Serial No. 286,224. 3 Claims. (Cl. 287—90.)

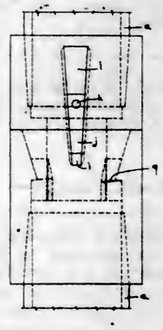
1. In a protector for a ball and socket joint, in which said ball is mounted with a shank and said socket is contained within a tubular member; a two-part sleeve re-



cessed to admit the free movement of said shank, and means for securing said sleeve to said tubular member: a concentric member constructed and adapted to slide between the said sleeve and the said tubular member and split and recessed to fit the said shank.

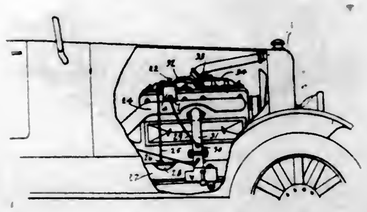
1,350,076. BELT-BUCKLE. FREDERICK W. LEWIS, Providence, R. I., assignor to Chapin & Hollister Co., Providence R. I., a Corporation of Rhode Island. Filed Jan. 14, 1920. Serial No. 351,330. 3 Claims. (Cl. 24—194.)

1. A belt buckle comprising a face-plate having rearwardly-turned side walls provided with inclined slots therein, and a cam-shaped belt-gripping bar rotatably mounted in said slots to bind the belt by a rotating action against the inner surface of said face-plate.



1,350,077. VALVE-OPERATING MECHANISM. WARREN P. LOUDON, Niagara Falls, N. Y., assignor to Vapor Car Heating Company, Inc., Chicago, Ill., a Corporation of New York. Filed Mar. 25, 1918. Serial No. 224,449. 5 Claims. (Cl. 172—36.)

1. In a valve operating mechanism of the character described, the combination with a rotary valve having a stem projecting therefrom, of an electric motor surrounding said valve stem and arranged co-axially therewith, and means providing an operative engagement between said motor and valve stem comprising a cam operated by the motor, a gear eccentrically supported with relation to the axis of said motor and operated by said cam, and a gear connected with said valve stem and meshing with the first mentioned gear.

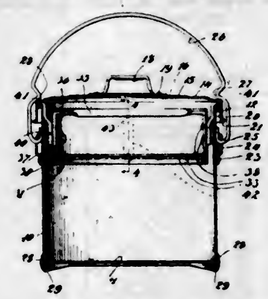


1,350,078. PIPE-COUPLING. WILLIE A. MCCULLAR and JULES J. AYRAUD, Beaumont, Tex. Filed Aug. 26, 1919. Serial No. 319,867. 1 Claim. (Cl. 285—146.)

In a pipe coupling, a member to which a pipe is connected, an extension of the said member tapered toward its end, the said extension terminating in flanges the ends of which are in separated relation to each other, a coupling member to which the pipe is connected, the end of said member remote from said pipe having an aperture with inwardly tapered walls, the said walls being recessed to form clearances for the flanges of the first mentioned member and the under surfaces of the said wall forming shoulders to engage the flanges of the first mentioned member, said members having coinciding external grooves the grooves being tapered from end to end, the reduced end of the groove of one member alining with the

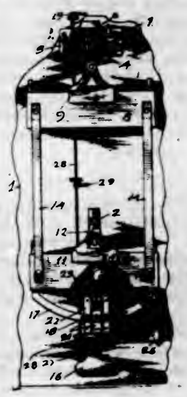
enlarged end of the groove of the other member and keys in said grooves conforming to the contour of the grooves in the two members.

1,350,079. VAPORIZER FOR INTERNAL-COMBUSTION ENGINES. THOMAS A. MULKERN, Hollywood, Calif., assignor of one-half to Charles E. Kerlee, Los Angeles, Calif. Filed Feb. 24, 1919. Serial No. 278,902. 1 Claim. (Cl. 123—25.)



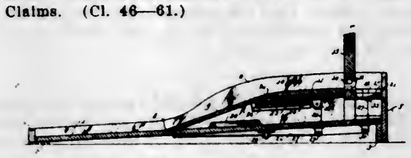
The combination with an internal combustion engine comprising a crank case, an exhaust manifold, and a water jacket, of a pipe nipple tapped through the wall of the exhaust manifold and having therein a cup-shaped vaporizing chamber, a bottom extending from the pipe nipple, an annular wall extending from the edge of the bottom and forming a mixing chamber in communication with the cup-shaped vaporizing chamber, a head screwed into the annular wall, a pipe connecting the mixing chamber with the intake manifold, a second pipe connecting the crank case chamber with the head and with the mixing chamber by way of a passage through the head, a third pipe connecting the water jacket with the mixing chamber by way of a passage through the head, a needle valve in the head for regulating the water passage, the lower face of the head being flat, a valve plate fitting against the flat face of the head to cover the passage through the head, a stem extending from the valve plate through the head, a spring upon the stem bearing against the head and against a seat adjustable on the stem.

1,350,080. ASH-SIFTER. CHARLES NOTTER, West Hoboken, N. J. Filed Oct. 22, 1919. Serial No. 332,420. 4 Claims. (Cl. 83—60.)



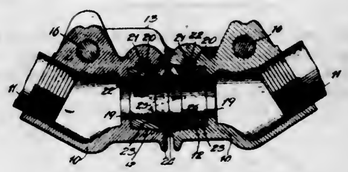
1. In an article of the class described a cylindrical receptacle, a basket having a perforate bottom suspended within said receptacle by means of elements projecting outwardly over and resting upon the top edge thereof, a

cover for said receptacle, and a bail hinged to said receptacle and having inwardly projecting side portions



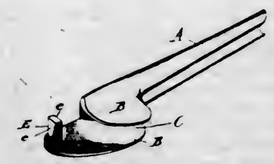
adapted to engage over said cover and clamp the latter and said elements upon the receptacle when the bail is in vertical position.

1,350,081. BERTH. RICHARD PHELAN, Oakland, and FREDERICK BENDIX, San Francisco, Calif. Filed Jan. 23, 1920. Serial 354,243. 5 Claims. (Cl. 114—192.)



1. A non-vibrating berth comprising a berth having brackets at each end thereof whereby said berth may be suspended; and means for pivotally and resiliently engaging the brackets to prevent transmission of vibration and lateral movement of a ship within which the berth may be suspended, to said berth, and means slidably engaging the berth for locking said berth against lateral movement and permitting vertical movement relatively to said ship.

1,350,082. TOY AND GAME. RYUJI SATO, New York, N. Y. Filed Sept. 16, 1919. Serial No. 324,134. 4 Claims. (Cl. 46—61.)



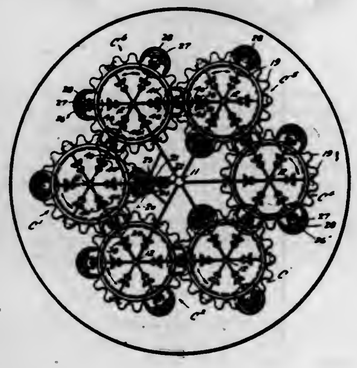
2. In an amusement device of the character described, the combination of a target having an opening therein, a ball runway leading to said target, guiding means adapted to cause the thrown balls to return by gravity to the starting point of said runway, and separate releasable retaining devices adapted to prevent access respectively to said guiding means of the balls passing through said opening and the balls failing to pass through said opening.

1,350,083. HOSE-COUPLING. EDWARD A. SCHREIBER, Chicago, Ill., assignor to Vapor Car Heating Company, Inc., Chicago, Ill., a Corporation of New York. Filed Mar. 6, 1919. Serial No. 280,944. 7 Claims. (Cl. 285—69.)

1. In a coupler of the gravity type, the combination with a coupler head provided with means for positively forcing and holding the same pressed against a mating coupler, of a gasket for said coupler consisting of a tubular member adapted to fit into the port of the coupler head, an annular facing member, both said members being made of substantially non-compressible metal, and means providing an engagement between said members which permits the facing member to oscillate on the other member during coupling and uncoupling operations.

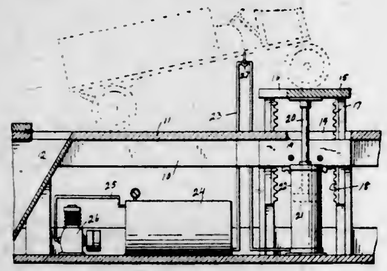
1,350,084. CLAMP. CHARLES H. SCHUB, New York, N. Y. Filed Nov. 13, 1917, Serial No. 201,806. Renewed Feb. 19, 1920. Serial No. 359,850. 9 Claims. (Cl. 144—297.)

1. In a device of the character described, a pair of face-abutting flanges each of which is provided with a slot positioned to substantially register with the other, in combination with a clamp embodying a pair of rigid spaced lips providing an intermediate tapered, open-mouthed slot, and a pin of non-circular cross section, rigid with said lips, whereby the pin may be inserted into the substantially registering apertures and provide a fulcrum about which the clamp may be pivoted to a position wherein the lips will embrace the flanges for the purpose of clamping them tightly together, the rotation of the non-circular pin in said apertures serving to simultaneously and automatically bring the slots into perfect registration.



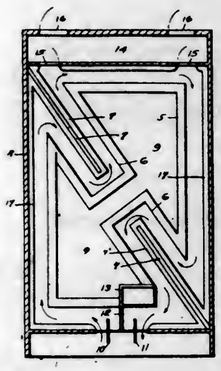
1,350,085. THRESHING-MACHINE. GEORGE A. STANFIELD and CHARLIES SCROGGIN, Lake City, Iowa. Filed May 15, 1920. Serial No. 381,582. 1 Claim. (Cl. 130—23.)

In a threshing machine, a threshing mechanism, a rack to which the threshing mechanism delivers straw, a concave plate supported at the rear of the rack, an agitating cylinder mounted for rotation with relation to the plate and whereby the periphery above the axis rotates away from the outer end of the said rack and whereby the periphery above the axis is approximately on a



horizontal plane with the outer end of the said rack, a baffle plate supported above the plane of the outer end of the rack and depending below the axis of the shaft of the cylinder, and a rack under the baffle plate and below the plane of the axis of the shaft of the cylinder.

1,350,086. AMUSEMENT DEVICE. JOHN STANLEY, Santa Monica, Calif., and JAMES C. PORTER, Seattle, Wash. Filed Oct. 27, 1919. Serial No. 333,776. 5 Claims. (Cl. 104—65.)



1. In apparatus of the class described, tangentially arranged wheels, vehicle carrying spindles, means provided on the spindles whereby the latter are suspended from the rims of said wheels, hook devices for releasably securing said spindles to the wheels, a cam provided for each of said devices and operatively connected thereto, and means rendered operative by the rotation of the wheel whereby rotary motion is imparted to said cams to successively raise and lower the said hook devices into and out of engagement with the spindles.

1,350,087. TRUCK-DUMPING MECHANISM. CHARLES L. TRAPP, Schuyler, Nebr., assignor, by direct and mesne assignments, of one-fourth to Grover C. Donovan, Schuyler, Nebr., and one-fourth to Louis W. Gohr, Omaha, Nebr. Filed Feb. 12, 1919. Serial No. 276,595. 5 Claims. (Cl. 214—49.)

1. A dumping mechanism comprising a fixed truck supporting platform, a horizontal, vertically movable platform coacting therewith and adapted to support the forward wheels of the truck, said movable platform having downwardly extending guiding rack bars at its four corners, intermeshing gear wheels engaging said rack bars, and power operated means for raising or lowering the movable platform.

1,350,088. VENDING APPARATUS. ROBERT A. TRIBBLE, Cedarbluff, Miss. Filed Mar. 21, 1919, Serial No. 284,122. Renewed Apr. 23, 1920. Serial No. 376,174. 2 Claims. (Cl. 211—8.)

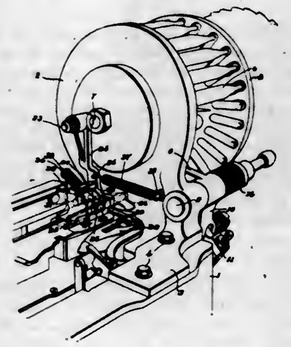
1. In a device of the character described the combination with a storeroom, a display structure located therein comprising a substantially continuous barrier which surrounds an interior space, said barrier being shaped to form deeply indented portions and being adapted to receive and display goods, barriers projecting into said indented portions from the walls of the storeroom, entrance and exit structures and means for preventing the passage of persons from the entrance to the exit structure except around the display structure.

1,350,089. METHOD OF SEPARATELY OBTAINING POTASSIUM CHLORID AND BORAX FROM CERTAIN WATERS. NOAH WRINKLE and WALTER A. KUHNERT, San Francisco, Calif. Original application filed May 22, 1919, Serial No. 299,042. Divided and this application filed July 14, 1919. Serial No. 310,730. 1 Claim. (Cl. 23—22.)

In a process of obtaining separately potassium chlorid and borax from certain waters containing sodium biborate and potassium chlorid, adding a sufficient quantity of sodium hydrate to the solution to produce within the solution a borate compound of increased solubility.

1,350,090. METHOD OF SEPARATING BORAX FROM POTASSIUM CHLORID. NOAH WRINKLE and WALTER A. KUHNERT, San Francisco, Calif. Filed July 21, 1919. Serial No. 312,254. 2 Claims. (Cl. 23—13.)

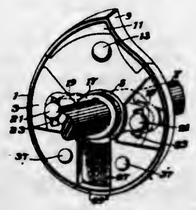
1. The method of separating potassium chlorid and borax consisting in converting a sufficient portion of the borax to boric acid by treatment with an acidifying agent in aqueous solution, to so increase the solubility of the unaltered borax and the thus formed boric acid to the extent necessary to enable potassium chlorid to be removed as crystals from the solution, and then removing the potassium chlorid from the solution which retains therein the borax and boric acid.



1,350,091. MANUFACTURE OF POTASSIUM CHLORID FROM NATURAL SILICATES, ROCKS, MINERALS, RESIDUES, OR WASTES CONTAINING POTASSIUM. EDGAR ARTHUR ASHCROFT, London, England. Filed Nov. 13, 1917. Serial No. 201,812. 2 Claims. (Cl. 23—22.)

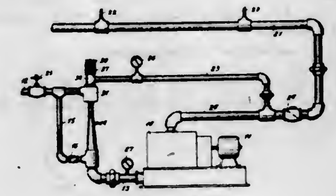
1. The process of manufacturing potassium chlorid which consists in percolating fused chlorid of an alkali metal through a mass of finely divided potassium bearing material at a temperature of from 800° to about 1200° centigrade in the absence of air and moisture and collecting and cooling the percolated salts.

1,350,092. MANUFACTURE OF CAFFEIN. RASIK LAL DATTA, Calcutta, India. Filed Oct. 17, 1919. Serial No. 331,428. 1 Claim. (Cl. 23—24.)



As a new process of manufacture the process of precipitation of remaining tannin and albumin from tea extract by means of basic or simple lead acetate or lead hydroxid after the partial precipitation of tannin and albumin by milk of lime for the production of caffein.

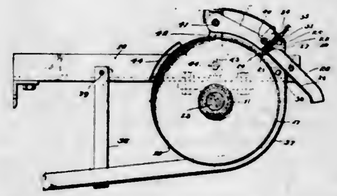
1,350,093. FILLING-REPLENISHING LOOM. HARRY A. DAVIS, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Feb. 1, 1919. Serial No. 274,392. 12 Claims. (Cl. 139—85.)



1. In a filling replenishing mechanism for looms, the combination of a rotary hopper adapted to support filling carriers, a transferrer, an abutment against which a filling carrier bears when in position for transfer, a filling carrier support underlying the filling carrier when in transferring position and adapted to yield downwardly to permit the filling carrier to pass, and an arm carrying the filling carrier support mounted to permit said support to move bodily at substantially right angles to the path of movement of said transferrer to prevent a break when during transfer the filling carrier is not in proper transferring position.

1,350,094. CAM FOR LOOMS. HARRY A. DAVIS, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Feb. 14, 1919. Serial No. 277,068. 5 Claims. (Cl. 74—1.)

1. A picker cam comprising a hub portion, a circumferential flange portion and a web portion extending between said hub and flange portions; said cam having a radial passage of less width than the diameter of the hub and extending outward from the interior of said hub, said web having plate receiving sockets formed in a face thereof upon each side of said passage, a bridge plate adapted to span the radial passage in the cam and provided with wing portions snugly fitting said sockets, said sockets constructed to entirely surround the edges of said wing portions to retain the bridge plate against lateral displacement in any direction, and means for securing said wing portions within said sockets.

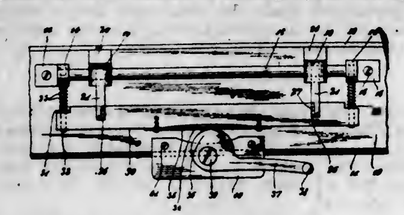


1,350,095. METHOD AND APPARATUS FOR UNLOADING PUMPS. WILLIAM BARTON EDDISON, Irvington, N. Y., assignor to The Surface Combustion Co., Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 11, 1918. Serial No. 221,652. 16 Claims. (Cl. 103—54.)

1. The method of operating a positive pressure pump against substantial pressure resistance, comprising diverting unused fluid discharged by the pump in an amount which varies inversely with variations in the amount of compressed fluid utilized, and applying energy of said unused fluid to raise the pressure of intake fluid to reduce the load on the pump.

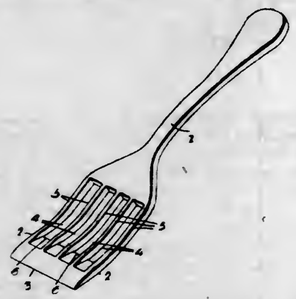
10. The combination with a pump, of a Venturi tube interposed in the fluid supply line leading to the pump inlet, a by-pass around said Venturi tube provided with a check valve, a by-pass leading from the discharge side of the pump to a nozzle set to discharge into the throat of the Venturi tube, and a valve controlled according to the pressure on the discharge side of the pump for controlling the flow of fluid through said last mentioned by-pass.

1,350,096. PINEAPPLE-MEAT ERADICATOR. GEORGE EDWIN FISHER, Honolulu, Hawaii. Filed Apr. 6, 1918. Serial No. 227,007. 4 Claims. (Cl. 146—11.)



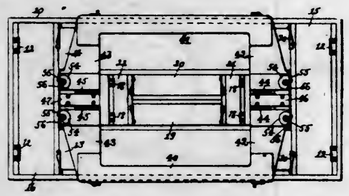
2. In a machine of the class described, the combination with a rotary drum, of means for flattening pineapple shells against the drum by pressure on the inner face of the shells causing an initial separation of the meat from the shell and a knife arranged to the rear of said means to cut and further lift the pineapple meat from the shells.

1,350,097. WORK-HOLDER. FRANK B. GLOVER, Brooklyn, N. Y. Filed Apr. 8, 1919. Serial No. 288,622. 7 Claims. (Cl. 90—60.)



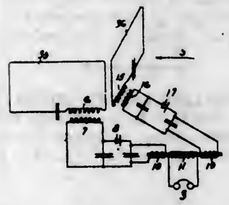
1. A work holding fixture comprising a level rectangular, slidably mounted base, two or more rigid horizontal jaws movably mounted on said base to extend transversely over its upper surface, said jaws having

level lower surfaces, and means for forcing objects against the lower surfaces of said rigid jaws whereby the



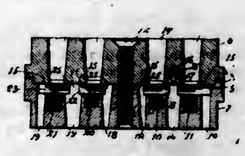
objects may be held so that their upper surfaces are invariably at a fixed distance from said base, irrespective of their diameters.

1,350,098. MIXING-KNIFE. JOHN L. HESSEY, Philadelphia, Pa. Filed Jan. 22, 1920. Serial No. 353,223. 3 Claims. (Cl. 30—22.)



2. A mixing knife consisting of a handle and a parallel sided concave body portion, the latter having a relatively sharp straight cutting edge at right angles to its sides and having relatively large longitudinally extending slots, the forward walls of said slots being beveled to constitute cutting edges.

1,350,099. KNOCKDOWN TOOL-BOX. PELEG T. HEWEY, Malden, Mass. Filed June 7, 1919. Serial No. 302,510. 5 Claims. (Cl. 217—15.)

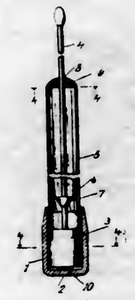


1. A tool box of the character described, comprising a bottom wall, side and end walls hinged thereto to be folded into a position substantially parallel with said bottom wall and to be folded into an upright position to form an outer compartment, means for locking said side and end walls in fixed relation in their upright position, a second set of side and end walls hinged within the outer compartment, means for locking the side and end walls of said second set in their upright position in fixed relation to form an inner compartment, a handle composed of members pivotally connected at their opposite ends to the said bottom wall between the end walls of said inner and outer compartments and foldable in opposite directions substantially parallel with said bottom wall, and means for securing said handle members in fixed relation in their upright position.

1,350,100. RADIOSIGNALING. JOHN L. HOGAN, Jr., Brooklyn, N. Y., assignor, by mesne assignments, to International Radio Telegraph Company, a Corporation of Delaware. Filed Nov. 27, 1916. Serial No. 133,656. 3 Claims. (Cl. 250—20.)

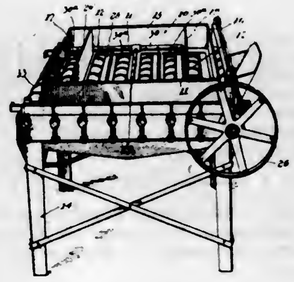
3. In a radio signal receiving system, the combination of two wave absorbing systems having the same natural period, one of which is arranged to absorb little or no energy from waves arriving from a certain direction and the other arranged to absorb a relatively greater amount of energy from the waves arriving from that direction whereby the ratio of static strength to signal strength is different in one absorbing system from that in the other, a receiving circuit connected to said two absorbing systems arranged to substantially neutralize the effects of static in said circuit, and an indicator responsive to the signal waves.

1,350,101. PLATE-VALVE CONSTRUCTION. JOHN G. KELLER, Milwaukee, Wis., assignor to The Vilter Manufacturing Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Mar. 17, 1919. Serial No. 283,194. 6 Claims. (Cl. 251—119.)



2. A valve construction, comprising a two part casing member forming a tight peripheral closure and having passageways axially extending therethrough, one of said member parts having an annular valve seat and the other member having an annular valve recess and an annular spring recess, a flat ring-shaped valve within the valve recess and engaging the valve seat, a coiled spring formed of flat material positioned within the spring recess for holding the valve yieldingly in closed position, and means for holding the two parts of the two part casing member together.

1,350,102. THROTTLE-VALVE FOR FLUID-PRESSURE TOOLS. HENRY J. KIMMAN, Cleveland, Ohio, assignor to Chicago Pneumatic Tool Company, Chicago, Ill., a Corporation of New Jersey. Filed Aug. 21, 1919. Serial No. 318,936. 11 Claims. (Cl. 121—35.)



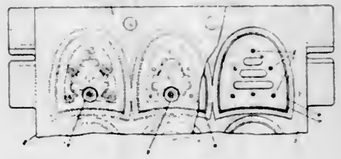
1. The combination of a throttle valve and means for operating the same including a member operatively connected with the valve, and a device having a rotary and a radial movement and adapted to be pressed into operative relationship with said member and then when rotated to actuate the latter to cause operation of the throttle valve.

1,350,103. TOY. GOTTHILF LEHMANN, New York, N. Y. Filed Nov. 7, 1919. Serial No. 336,434. 3 Claims. (Cl. 46—37.)

1. A toy comprising a barrel having one end open and the other end closed, a projectile adapted to rest freely in said barrel, a parachute carried by said projectile, said parachute being bodily adjustable lengthwise of the said projectile.

1,350,104. EXHAUSTER. HARRY W. LOWE, Omaha, Nebr., assignor, by mesne assignments, to Sprague Canning Machinery Co., a Corporation of Illinois. Filed Feb. 19, 1917. Serial No. 149,536. 11 Claims. (Cl. 126—272.)

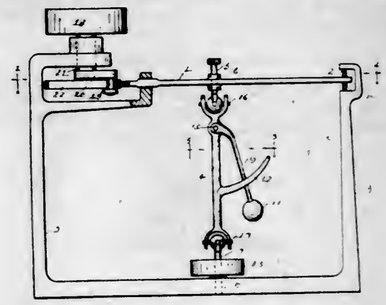
1. A can conveying mechanism comprising a plurality of rotatable members, each having a helical cam for engaging the cans to move them along and rotatable means carried by one of said members for transferring the cans from one member to another.



2. A can conveying mechanism comprising a plurality of rotatable members, each having a helical cam for engaging the cans to move them along and rotatable cam means carried by one of said members for transferring the cans from one member to another.

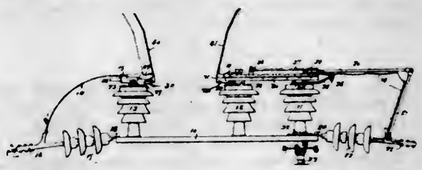
3. A can conveying mechanism for conveying cylindrical cans with their axes in substantially vertical position, comprising a rotatable member, having a helical cam for engaging the cans, to move them along, means for holding said cans with their axes in substantially vertical position, and a heating pipe extending alongside said rotatable member, against which the sides of the cans bear, for causing the cans to rotate about their own axes as they are moved along and for heating the contents of the cans.

4. A can conveying machine comprising a plurality of parallel, horizontal, elongated, rotatable members lying in substantially the same plane, each having a helical cam for engaging the cans, to move them along, and cam means carried by one of the members, adjacent one end thereof, for engaging the cans successively to push them over onto the adjacent rotatable member.



5. A can conveying machine, comprising a plurality of parallel, horizontal, elongated, rotatable members lying in substantially the same plane, each having a helical cam for engaging the cans, to move them along, cam means carried by one of the members, adjacent one end thereof, for engaging the cans successively to push them over onto the adjacent rotatable member, and a guide for supporting the cans in upright position, as they are being pushed over.

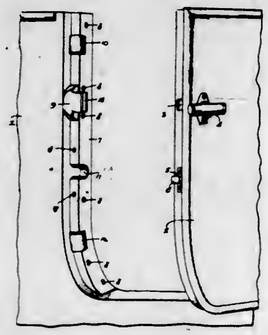
1,350,105. RUBBER-MOLD HARVEY F. MARANVILLE, Akron, Ohio, assignor to The Firestone Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Sept. 9, 1918. Serial No. 253,155. 3 Claims. (Cl. 18—42.)



1. A mold for rubber heels or the like comprising top and bottom plates, a central plate provided with a cavity, passing through the plate, a raised edge about said cavity having a tight fit with the surfaces of said top and bottom plates and a vent located in one of said plates and communicating with the mold cavity.

1,350,106. ROTARY-MOTION MECHANISM. ADOLPH MARTINOICZ, Muskegon, Mich. Filed Mar. 6, 1920. Serial No. 363,700. 6 Claims. (Cl. 74—14.)

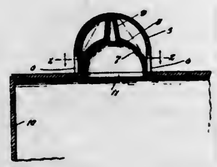
1. In mechanism of the character described; a swingable arm; means for swinging the arm; an approximately upright rotatable member rotatably connected to the arm; a weighted arm connected at its upper end to said member swingably in an approximately vertical plane.



1,350,107. ELECTRIC SWITCH. MARSHALL P. MAXWELL, Brooklyn, and JOEL S. LAWSON, St. James, N. Y. Filed Jan. 4, 1918. Serial No. 210,383. 10 Claims. (Cl. 200—48.)

9. In an air gap switch, a fixed terminal having a movable arcing horn, a coöperating movable terminal and

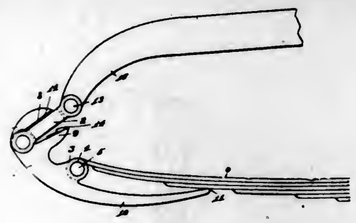
a latching device associated with said horn for locking the latter to the movable terminal in the closed position of the switch.



1,350,108. DOOR RABBET-STRIP. ERNEST R. MITCHELL, Philadelphia, Pa. Filed Oct. 13, 1919. Serial No. 330,449. 6 Claims. (Cl. 70—16.)

2. The combination of a supporting structure; a hollow rabbet strip mounted thereon; a striker plate extending into the hollow of said strip; with screws for holding said plate to the rabbet strip.

6. The combination of a hollow rabbet strip having an opening; a casing fastened in said rabbet strip and a corrugated spring element mounted in the casing with one of its convolutions adjacent the opening of the rabbet strip; with means engaging the ends of said spring element for connecting them to the rabbet strip.

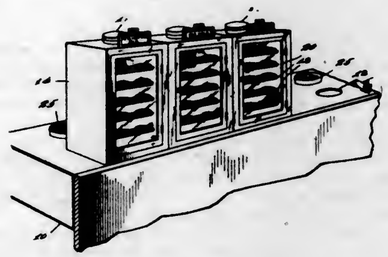


1,350,109. AIR-VENT. CARL F. NYSTROM, New York, N. Y. Filed Jan. 30, 1917. Serial No. 145,448. 2 Claims (Cl. 220—44.)

1. An air vent of the kind described comprising an inner hollow member having an opening whereby communication with its interior is established and having a sloping outer surface and a hollow outer member covering said inner member and having its one end open and fitted over said inner member in surface contact therewith, said outer member having an aperture located at the foot of the slope of said inner member whereby communication between the atmosphere and the interiors of said inner and outer members is established.

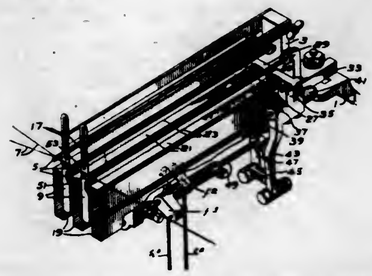
1,350,110. COMBINED SHOCK-ABSORBER AND REBOUND-SNUBBER FOR VEHICLE-SPRINGS. GEORGE J. OLTSCH, South Bend, Ind. Filed Oct. 20, 1919. Serial No. 331,986. 6 Claims. (Cl. 267—19.)

1. In combination with a frame and a suspension spring, a combined shock absorber and snubber, said shock absorber and snubber comprising a compensating lever pivotally connected to the end of the suspension spring and formed beyond the spring connection with upper and lower contact faces, an arm rigid with the lever and having a fulcrumed bearing beneath the suspension spring, and a link pivotally connected to the frame and to the lever, said link operating between the contact faces.



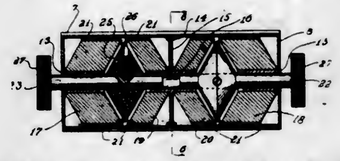
1,350,111. FUSE-PLUG. HENRY T. PAISTE, Philadelphia, Pa., assignor to H. T. Paiste Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 21, 1917. Serial No. 208,301. 11 Claims. (Cl. 200—130.)

1. The combination in a fuse plug of a body; a fuse-carrying element removably but non-rotatably mounted in said body with its fuse inclosed thereby; terminals respectively on the body and on said element normally connected through the fuse; and a member extending through the fuse-carrying element, mechanically and separably connecting it to the body.



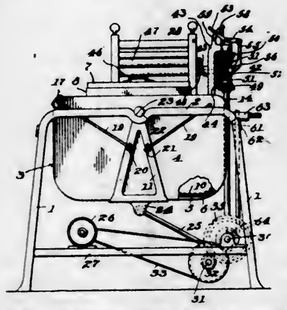
1,350,112. DISPENSING APPARATUS. FLOYD E. PAYNE, Indianapolis, Ind. Filed Dec. 2, 1919. Serial No. 341,949. 3 Claims. (Cl. 211—8.)

1. A food-dispensing device, comprising a hollow table having two series of perforations, one for the reception of supply vessels, and a series of dispensing cabinets having hollow walls placed in communication with the other series of openings of the table, said dispensing cabinets having independent front and rear doors giving access to the interior thereof either from the customer's side or the service side.



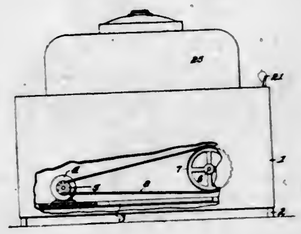
3. A dispensing cabinet having hollow walls capable of being placed in communication with the interior of a supporting table, said cabinet having doors in its front and rear faces, and having an interior support upon which dispensable viands may be placed.

1,350,113. WARP STOP-MOTION FOR LOOMS. ALONZO E. RHOADES, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Dec. 27, 1918. Serial No. 268,562. 3 Claims. (Cl. 139—92.)



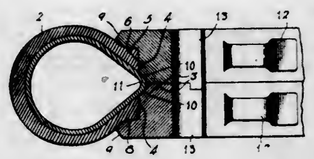
3. In a warp stop motion for looms, the combination of bridge bars having an unobstructed space between them through which lint and fluff may pass, feelers mounted for movement over the top of the bridge bars, means including a rock-shaft and link connections for moving the feelers over the bridge bars, and a series of detectors each having a recess with an outwardly divergent wall into which the feelers move when the detectors are supported by non-faulty warp threads.

1,350,114. CALENDAR. PINCUS RICE, New York, N. Y. Filed Sept. 10, 1919. Serial No. 322,894. 6 Claims. (Cl. 40—117.)



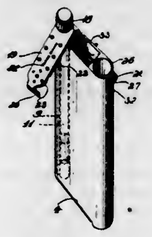
1. In a perpetual calendar operated by frictional devices, a main casing having side bearings, a center wall having a through going center bearing alined with said side bearings, two hand operated shafts, each passing through one side bearing and into the center bearing, double-cone-shaped friction members rigidly attached to said shafts between the bearings, dating members rotatably mounted upon the outer surfaces of the bearings and overhanging the same, permitting their engagement by said friction members.

1,350,115. WASHING-MACHINE. WILLIAM H. SARGENT, St. Louis, Mo., assignor to Wayne Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Apr. 4, 1919. Serial No. 287,564. 5 Claims. (Cl. 259—75.)



1. In a machine of the class described, the combination of a frame, an elongated receptacle, a bracket mounted on each side of said receptacle, securing means engaging the edges of each side toward each end, for clamping each bracket in position, said brackets having trunnions supported on said frame to enable the receptacle to swing on said frame, and means attached to one of said brackets for oscillating said receptacles.

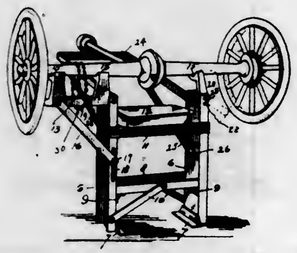
1,350,116. WASHING-MACHINE. WILLIAM H. SARGENT, St. Louis, Mo., assignor to Wayne Manufacturing Company, St. Louis, Mo., a Corporation. Filed Oct. 17, 1919. Serial No. 331,412. 14 Claims. (Cl. 259—73.)



1. A washing machine comprising a casing, having an opening in its top and provided on its interior, and below the top, with rocker supports, a rocker-frame comprising rockers mounted on said supports and a tub holder, a tub insertible through said opening and adapted to be received by said holder, said rocker-frame, when in position on said supports, being located below the top of said casing, and means for rocking said rocker-frame.

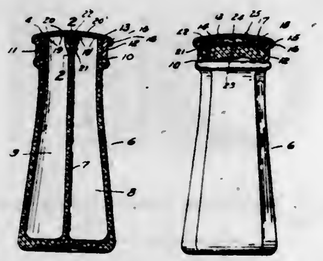
1,350,117. BEAD-FORMING RING FOR MOLDING PNEUMATIC TIRES. JOHN SCHMIDT, New Brunswick, N. J., assignor, by mesne assignments, to Howe Rubber Corporation, a Corporation of Delaware. Filed Aug. 25, 1919. Serial No. 319,599. 11 Claims. (Cl. 18—45.)

1. A tire bead-forming ring having its inner corner edge cut away.



1,350,118. RECEPTACLE. THOMAS C. SPELLING, New York, N. Y. Filed Sept. 7, 1917. Serial No. 190,112. 6 Claims. (Cl. 120—57.)

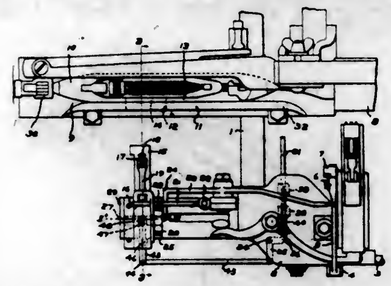
1. A receptacle comprising an ink container, a pen container, an intermediate compartment for other materials useful in writing with a pen, and means for securing.



locking and sealing the ink container and compartment, said means consisting of a flat arm journaled around the neck of the pen container, the arm extending over the compartment and ink container, carrying sealing means for both, and having a terminal acutely bent at its extremity, to facilitate its engagement with a relatively sharp edged enlargement on the ink container.

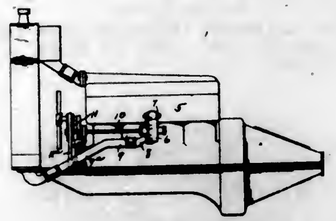
1,350,119. AXLE-STAND. JOSEPH H. STALEY, Columbus, Ind. Filed Nov. 24, 1919. Serial No. 340,375. 7 Claims. (Cl. 29—89.)

1. In an axle-stand, a body-portion, a member having a pair of jaws at different distances from said body-portion, means for adjusting said member to vary the relative horizontal positions of the jaws to fit the taper of the axle-housing, and an additional axle-support attached to said body-portion.



1,350,120. CONDIMENT-HOLDER. ALBERT STONE, Seattle, Wash. Filed May 24, 1920. Serial No. 383,691. 3 Claims. (Cl. 65—45.)

1. In a condiment holder, the combination with a receptacle having a partition dividing it into separate compartments, a perforated cap for said receptacle, and a perforated cover plate mounted upon the cap for rotary movements with respect thereto, of a packing bar mounted for longitudinal rocking movements upon said partition and engageable with the under surface of the cap to close the opening between the partition and the cap.



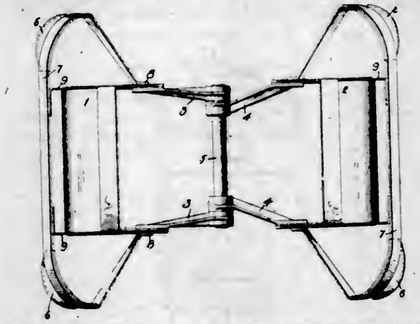
1,350,121. FEELER-LOOM. MELVIN L. STONE, Lawrence, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Nov. 5, 1919. Serial No. 335,843. 11 Claims. (Cl. 139—85.)

1. In a feeler loom, the combination of a feeler stand mounted for movement in a direction transversely of the loom, a feeler member movable with the feeler stand, a shuttle detector constructed and arranged to be engaged and displaced by the shuttle as it moves frontwardly on a detecting beat, and connections between the shuttle de-

tector and feeler stand for moving the latter transversely of the loom when, on a detecting beat, the shuttle detector finds the shuttle improperly boxed.

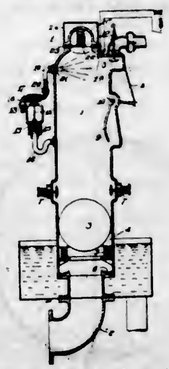
1,350,122. PUMP ATTACHMENT FOR AUTOMOBILES. WILLIAM THOMAS STRATTON, Billings, Mont. Filed Feb. 19, 1920. Serial No. 359,764. 2 Claims. (Cl. 123—175.)

2. A device of the character described comprising a pump, means for attaching the same to the side of a Ford water jacket to have connection therewith, a shaft extending in substantial parallelism with the side of the engine for driving said pump, a pulley on said shaft, a bracket support from the engine and capable of vertical adjustment with respect thereto, and a bearing horizontally adjustable upon the bracket within which said shaft is mounted.



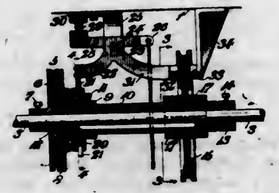
1,350,123. ARTICLE-HANDLER. ANOSTOPOULO D. THEODORE, whose full legal name is Theodore D. Anagnostopoulos, Eunice, La. Filed June 15, 1918. Serial No. 240,266. 1 Claim. (Cl. 294—19.)

In an article handler, the combination with an elongated tubular guiding handle comprising a plurality of axially alined united threaded sections, whereby the guiding handle may be shortened or extended, of a pole movably slidably in said guiding handle having a handle



at one end to limit the pole in its movement in one direction, said pole comprising a plurality of rod sections axially arranged, the adjacent end of said rod sections having reduced threaded parts, a sleeve interiorly threaded, and adjustably connecting said reduced threaded parts for uniting said rod sections, whereby the movable rod may be shortened or lengthened correspondingly to the guiding handle, an additional sleeve interiorly threaded connected to a certain reduced threaded part of an end rod section, and a member threaded into one end of said additional sleeve, and provided with spaced longitudinal extensions resiliently movable toward and from each other, said extensions terminating in rigid intersecting pivoted elements extending at slight obtuse angles from the resilient extensions, said extensions having parts, adjacent where the elements merge therefrom, adapted to contact and coöperate with the extremity of the interior of one end of said guiding handle, thereby limiting the pole in its movement in the opposite direction, said resilient extensions when moved toward and from each other by contact with the extremity of the guiding handle, adapted to actuate said elements.

1,350,124. EXCAVATING-BUCKET. WILLIAM M. VENABLE, Pittsburgh, Pa., assignor to Blaw-Knox Company, a Corporation of New Jersey. Filed Jan. 22, 1920. Serial No. 353,175. 8 Claims. (Cl. 37—30.)

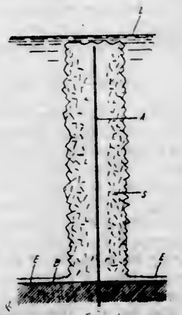


1. The combination with a clam shell bucket having opposing jaws, of cutting members secured to the jaws but spaced away therefrom.

1,350,125. INTERNAL-COMBUSTION PUMP AND COMPRESSOR. WILFRED FOULSTONE VERNON, Walton-on-the-Hill, England, assignor to Humphrey Gas Pump Company, a Corporation of New York. Filed Sept. 4, 1914, Serial No. 860,308. Renewed Jan. 17, 1920. Serial No. 352,234. 5 Claims. (Cl. 160—1.)

1. In combination with a play pipe for the reciprocation of a liquid column of sufficient bulk and path of travel to acquire useful momentum, a combustion chamber connected with the play pipe, means for spraying liquid fuel into the combustion chamber at the end of the compression stroke comprising a pump operated to inject fuel by the direct compression pressure of the instroke of the liquid column.

1,350,126. MOTOR ATTACHMENT FOR SEWING OR OTHER MACHINES. EMANUEL WAGMAN and HARRY BRUSSELL, Philadelphia, Pa. Filed Jan. 21, 1919. Serial No. 272,257. 5 Claims. (Cl. 74—46.)



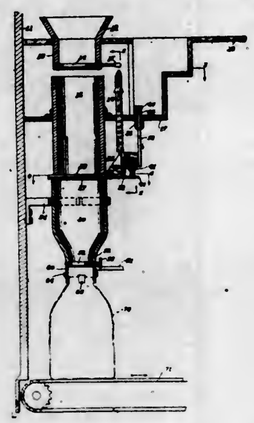
1. In an operating attachment for sewing or other machines, a main power shaft, a clutch comprising members one fixed and the other slidable with reference to said shaft, a main driving member spaced from said clutch, a pivoted member having wings for frictional coöperation with said driving member and the slidable member of the clutch, and a buffer for coöperation with the driving member in opposition to the wing that coöperates therewith.

1,350,127. INKING-ROLL TRUCK. LEROY J. WARNER, Fostoria, Ohio. Filed Feb. 26, 1920. Serial No. 361,373. 3 Claims. (Cl. 101—348.)

1. An inking roll truck comprising a hub member, a pair of collars mounted for relative axial movements thereon and having their adjacent surfaces of opposed conical form, a set of balls encircling the hub member between the collars in opposed contact with their opposed conical surfaces, an expansible band encircling said balls and resting thereon, an expansible rim without the said band, and means coöperating with the hub member and operable to effect a relative axial adjustment of the collars and a consequent radial adjustment of the balls, band and rim members.

1,350,128. PROCESS OF DEPOSITING SODA, &c. WILFRED W. WATTERSON, Bishop, Calif. Filed Sept. 8, 1919. Serial No. 322,567. 13 Claims. (Cl. 23—13.)

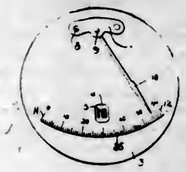
1. The herein described process of obtaining salts from solution, embodying the crystallization of such salts onto



a relatively small stick, allowing such crystallization to continue until the deposited mass is comparatively large relatively to the mass of the stick, and then breaking up the whole mass, including the stick.

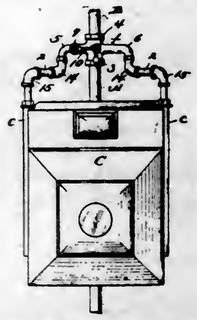
1,350,129. RAILWAY-JOINT. WILLIAM YOUNG, Detroit, Mich. Filed Jan. 24, 1920. Serial No. 353,892. 3 Claims. (Cl. 238—209.)

1. A rail joint, comprising rails having lapped and thickened ends fastened together, and fish-plates connecting the rails and recessed on the inner side to inclose said thickened parts.



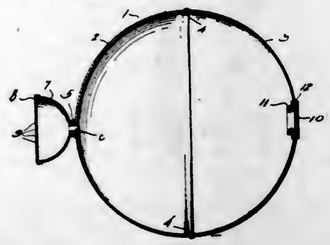
1,350,130. SUGAR-PACKING MACHINE. JOSEPH ZAKARKA, Brooklyn, N. Y. Filed Dec. 30, 1919. Serial No. 348,446. 2 Claims. (Cl. 265—55.)

1. An apparatus of the type described, comprising a hopper, a measuring chute below said hopper, a scale having its pan divided into two halves and adapted to close the bottom of said chute, a delivery funnel below said chute, and means for separating the two halves of said pan, said means comprising gear segments rigid with the respective halves of the pan, a manually operable rack bar, and gear connection between said rack bar and gear segments.



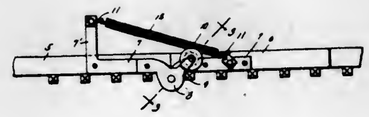
1,350,131. CLOCK. CHESTER HENRY ANDERSON, Los Angeles, Calif., assignor of one-fourth to Cortland L. Hill, and two-fourths to H. Richard Kleinbach, Los Angeles, Calif. Filed June 20, 1919. Serial No. 305,451. 2 Claims. (Cl. 58—125.)

1. A clock comprising a mechanism for rotating a shaft once in sixty minutes, a cam rigidly secured to said shaft and rotated thereby, a dial having arc-shaped graduations thereon indicating the minutes of an hour, an opening adjacent said graduations, a pointer adapted to move over said graduations, a shaft rigidly secured to the pointer and extending through the dial, a lever rigidly secured to said shaft, a pin extending from said lever and engaging the face of said cam whereby as the same is rotated said lever will be swung in one direction so that the pointer will be gradually moved over said graduations, a spring acting on said lever for quickly swinging the lever and the pointer carried thereby back to the starting point at the end of each sixty minutes, an hour dial formed with numbers thereon from one to twelve and arranged so that



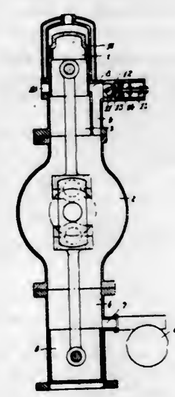
one of the numerals may be seen through said opening, said hour dial being formed with twelve notches thereon, a pawl pivotally mounted on said lever, a pin extending from said pawl adapted to engage the notches in said hour dial, and a spring for maintaining said pin against said hour dial.

1,350,132. FITTING FOR DOMESTIC GAS-METERS. WALTER A. ASHLEY, Chillicothe, Ohio. Filed June 13, 1919. Serial No. 303,888. 4 Claims. (Cl. 285—3.)



1. A fitting for fluid meters comprising a manifold having a central portion provided with inlet and outlet passages and a web separating said passages and having arms projecting from said central portion at opposite sides of said web, said arms having down-turned connecting portions and having their axes in a common plane with the axes of said passages, coupling pipes connected to said arms adapted to swing about the connecting portions thereof, and means for connecting said pipes when in adjusted position, to the inlet and outlet of the meter respectively.

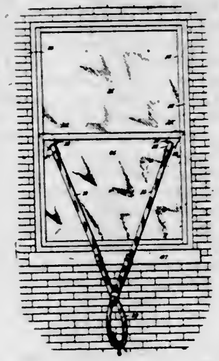
1,350,133. CLOTHES-SPRINKLER. ROLAND A. BEATTY, New York, N. Y. Filed July 18, 1917. Serial No. 181,386. 1 Claim. (Cl. 299—90.)



In a sprinkling device including a semi-spherical cup member of rigid material, a sprinkler head attached thereto, a second semi-spherical cup member of rubber connected to the first to form a sphere, the rubber member having an opening, a valve casing in the form of a device of rigid material, a pair of annular flanges on the outer surface in spaced relation said flanges receiving the edges defining the opening when the sleeve is inserted therein, an annular flange upon the inner surface of the sleeve and a disk pivotally mounted within the sleeve and bearing against the last mentioned flange to form a closure.

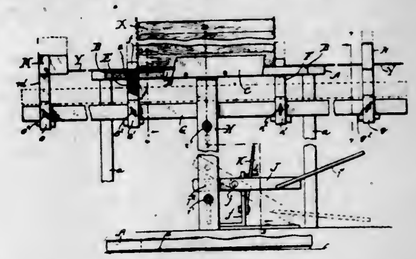
1,350,134. GATE CLOSER AND SUPPORTER. ROBERT PEARCE BELLICAN, Natchez, Miss. Filed Apr. 22, 1920. Serial No. 375,795. 6 Claims. (Cl. 16—100.)

1. In combination with a fence and gate therefor, of a closure including a pair of pivotally connected plates rigidly secured to said gate and fence respectively, and means extending between said plates for closing the gate.



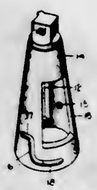
1,350,135. TWO-STROKE INTERNAL-COMBUSTION ENGINE. KARL ASSAR THEODOR BERG, Höganäs, Sweden. Filed Aug. 28, 1919. Serial No. 320,423. 2 Claims. (Cl. 123—73.)

1. A two-stroke internal combustion engine having a cylinder and pump casing and a closed crank case serving as a compression chamber intermediate the cylinder and pump casing, said engine being formed with a passage leading from the compression chamber and opening into the cylinder, a valve controlled air inlet opening into said compression chamber through said passage, and a gas inlet opening into the pump chamber.



1,350,136. LIFE-PROTECTOR. PAUL BILLY, Linden, N. J. Filed Apr. 14, 1920. Serial No. 373,836. 9 Claims. (Cl. 20—72.)

1. A device of the class described comprising an angular plate adapted to be secured to the upper corner of a window sash with a leaf thereof projecting at an angle inwardly of the sash and a semi-tubular guide depending



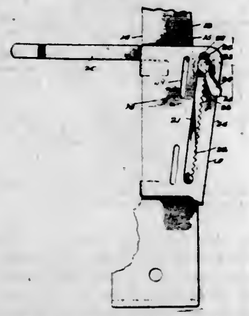
therefrom adapted for the reception of the window cord therethrough when the device is in use.

1,350,137. MEANS FOR BINDING SHIPPING-PACKAGES. SPENCER C. CARY and VINCENT RAGONA, Brooklyn, N. Y., assignors, by direct and mesne assignments, to Cary Manufacturing Company, Brooklyn, N. Y., a Corporation of New York. Filed Mar. 9, 1918. Serial No. 221,571. 7 Claims. (Cl. 144—25.)

1. In a device for applying binders to shipping packages, the combination with a table, and work-locating devices thereon, of a carrier bar movable relatively to said table, a plurality of bending jaws mounted on said carrier bar for movement therewith, said bending jaws being slotted for the reception of a binder and said jaws being grooved for the reception of said binder after the latter shall have been bent relatively to a package, and means for imparting movement to the carrier bar and the bending jaws relatively to the table.

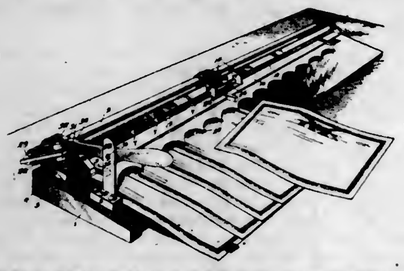
1,350,138. CUT-OFF AND RELIEF VALVE FOR AIR-BRAKES. EDWARD P. CLAUSS, Lyons, N. Y. Filed Aug. 1, 1919. Serial No. 314,623. 2 Claims. (Cl. 251—94.)

1. A cut-off and relief valve for air brake systems of trains comprising a valve casing having a passageway



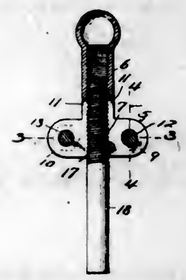
therethrough, a rotatable valve member having a passageway therethrough adapted to be brought into registry with the passageway in the casing when the valve member is open, said valve member having an aperture positioned substantially at right angles to the passageway through the valve member, said aperture merging into the passageway in said valve member and with a tortuous bleeding passageway in the face of the valve member, said tortuous passageway having a horizontal section positioned substantially diametrically opposite said aperture, a longitudinal section, and a second horizontal section extending beneath the passageway in the valve member, and a pair of bleeding ports arranged in the casing, one co-acting with said bleeding passageway, and the other with the port in the valve member.

1,350,139. SCREW-LOCK. WILLIAM H. CLOPTON, Washington, D. C. Filed Nov. 25, 1919. Serial No. 340,446. 4 Claims. (Cl. 151—32.)



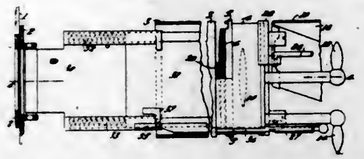
2. A lock for screws comprising a shell to receive the screw head, a member for fixedly securing the shell in position, and means adapted to be displaced into the screw head-slot.

1,350,140. AUXILIARY GRIPPER. CHARLES G. COPE, Pittsburgh, Pa. Filed Feb. 2, 1920. Serial No. 355,551. 5 Claims. (Cl. 101—408.)



1. An auxiliary gripper having main-gripper-engaging means and retaining means movable in a line inclined with respect to said engaging means.

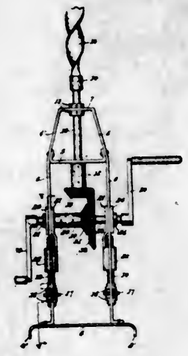
1,350,141. BINDER-BOARD. FRANK E. CROMPTON, Brooklyn, N. Y., assignor to Signature Company, New York, N. Y., a Corporation of New York. Filed Feb. 10, 1919. Serial No. 276,004. 9 Claims. (Cl. 129—35.)



9. In a binder board, a bed plate for receiving a binder for a group of documents, a shaft oscillatably mounted on said bed plate, a lever arm mounted on said shaft, means mounted on said shaft and coöperating with said bed plate for opening the grippers of said binder, and a group index plate supported from said oscillatory shaft and movable by said shaft into and out of position to indicate the relative positions of said group of documents in said binder.

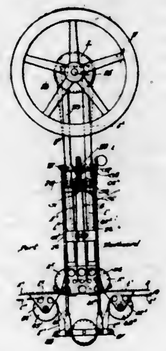
1,350,142. ADJUSTABLE SPLIT LOCK-NUT OR UNION. HARRY E. DICKINSON, San Antonio, Tex. Filed Sept. 11, 1919. Serial No. 323,073. 2 Claims. (Cl. 151—21.)

1. An adjustable split lock nut or union of the character specified, comprising a tubular threaded shaft having a head at one end extending across the same equally from the center of the shaft and in a plane at right angles to the latter, the opposite end of the shaft being formed with a closed rigid impact receiving means, the threaded bore of the shaft being continued through the center of the head, the head being centrally split throughout its length to provide opposite pairs of end jaws, the split of the head being continued part way through the length of the shaft at diametrically opposite portions of the latter, and clamping bolts extending transversely through and reversely arranged in the pairs of jaws.



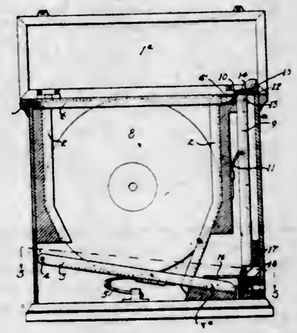
1,350,143. COLOR CINEMATOGRAPHY. FRANK WORDSWORTH DONISTHORPE, Barnes, England. Filed Jan. 15, 1917. Serial No. 142,803. 1 Claim. (Cl. 88—16.4.)

A cinematographic projector, comprising a film of standard width in which there are pairs of images side by side with the horizontal lines of the objects parallel to the length of the film, a pair of focusing lenses in the projector, a gate in the projector through which the film passes vertically, a partition between the focusing lenses extending to the film, the said partition comprising a sliding portion and a pivoted portion which is laterally adjustable, and means by which the image of the film is optically rotated through 90°.



1,350,144. BREAST-DRILL. KAZIMIERZ DROZD, Willock, Pa. Filed Dec. 22, 1919. Serial No. 346,738. 2 Claims. (Cl. 145—66.)

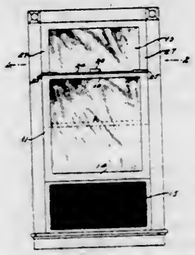
1. A breast drill comprising a frame, a drill shaft journaled longitudinally thereof, a power shaft journaled transversely of said frame, a gear fixed to the inner end of the drill shaft, a sleeve adjustably fixed to the power shaft, relatively large and small gears carried by said sleeve and movable with the sleeve over the power shaft to aline either of the large or small gears with the power shaft gear, means for shifting the power shaft longitudinally of the frame to move either of said gears into meshing contact with the gear upon said power shaft, said last named means comprising a pair of screws journaled in the frame and connections between said power shaft and screws.



2. A breast drill comprising a frame, a drill shaft journaled longitudinally thereof, a power shaft journaled transversely of said frame, a gear fixed to the inner end of the drill shaft, a sleeve adjustably fixed to the power shaft, relatively large and small gears carried by said sleeve and movable with the sleeve over the power shaft to aline either of the large or small gears with the power shaft gear, means for shifting the power shaft longitudinally of the frame to move either of said gears into meshing contact with the gear upon said power shaft, said last named connections including bearing plates for said power shaft, block hangers carried by said bearing plates, adjusting screws movable relative to said frame and co operating with said block hangers to shift the bearing plates and power shaft with the gears supported thereon.

1,350,145. CONTROLLING DEVICE FOR AEROPLANES. CHARLES RICHARD FAIREY, Hayes, England. Filed Apr. 23, 1919. Serial No. 292,168. 1 Claim. (Cl. 244—29.)

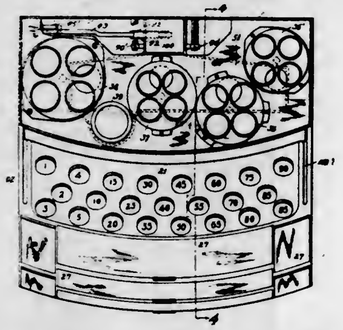
In an aeroplane whereof the wings have trailing marginal portions of variable inclination, control cables, a control-pillar having a fixed section and a movable section, means for varying the effective length of the control-pillar, a manually-operable drum mounted to rotate on the movable section of said control-pillar, said control cables being connected with the trailing marginal portions of the respective wings and wound from opposite directions upon said manually-operable drum, balance wires, a pair of guide-pulleys mounted on said fixed section of the control-pillar, a single guide-pulley carried by said movable section of the control-pillar, said balance wires being connected with the trailing marginal portions of the respective wings and led around said pair of guide-pulleys and led from opposite directions around said single guide-pulley, said single guide-pulley being mounted on said movable section in a position relatively to said pair of guide-pulleys to decrease the distance separating the centers of the pair of guide-pulleys from the center of the single guide-pulley when the effective length of the control-pillar is increased, and vice versa.



1,350,146. RECORD-CABINET. EDWARD CHARLES FREMAUX, Rayne, La. Filed Oct. 1, 1919. Serial No. 327,691. 9 Claims. (Cl. 211—16.)

1. In a dispensing cabinet, a plurality of article holding compartments, a cover for each compartment, a lock for each cover, an article support in each compartment adapted to project the article beyond the compartment upon the unlocking of the cover thereof, and means coacting with the article support for collectively locking the covers of the remainder of the compartments upon the unlocking of the cover of one compartment.

2. In a dispensing cabinet, a plurality of article holding compartments, a cover for each compartment, a lock for each cover, an article presenting support in each compartment adapted to project the article beyond the compartment upon the unlocking of the cover thereof, means for collectively locking the remainder of the compartments upon the unlocking of one compartment, and means cooperating with the article support for maintaining any of said compartments inactive.



1,350,147. WINDOW ATTACHMENT. JOSEPH E. GALBRAITH, New York, N. Y. Filed Oct. 29, 1919. Serial No. 334,297. 2 Claims. (Cl. 20—40.)

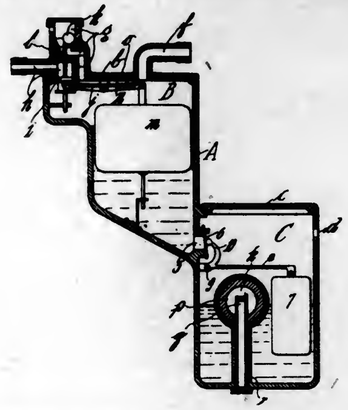
1. A window attachment in the form of a covering means adapted to be placed on top of the rail of the lower sash and fitting against the upper sash, the said covering means comprising side plates having flanges at the inner ends and a box extending over the sash fastener

and provided at its sides with flanges slidingly engaging the said flanges on the side plates to connect the side plates and the box and to allow of removing the box for gaining access to the sash fastener.

1,350,148. COIN CHANGING AND DELIVERING MACHINE. JOSEPH GARAMI, Newark, N. J. Filed May 22, 1918. Serial No. 236,045. 7 Claims. (Cl. 133—4.)

1. A machine of the class described including a casing, groups of coin-holding tubes therein disposed, two of the groups being associated to constitute a double group, each group comprising four tubes arranged about a common center, a coin-discharging disk operatively arranged under each group and adapted to separate coins one by one from the members thereof successively and operable only in one direction, and key-operated mechanism for actuating one or more of said coin-discharging disks to effect the separation of coins from one or more groups at each operation, said mechanism embodying means for separating coins alternately from the members of the double group.

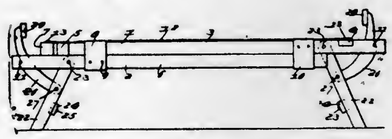
1,350,149. PROCESS OF PRODUCING NITRID OF ALUMINIUM FROM MATERIALS CONTAINING ALUMINIC OXID. VIKTOR GERBER, Zurich, Switzerland. Filed Jan. 28, 1920. Serial No. 354,641. 7 Claims. (Cl. 204—63.)



1. The process of producing nitrid of aluminium from materials containing aluminic oxid consisting in treating the molten aluminic oxid produced from said materials with a reducing agent and a nitrogenous gas and in supplying at the same time an amount of electric energy necessary for carrying out the reduction.

1,350,150. PROCESS OF PRODUCING ALUMINIUM FROM ALUMINIC OXID. VIKTOR GERBER, Zurich, Switzerland. Filed Jan. 28, 1920. Serial No. 354,642. 9 Claims. (Cl. 204—63.)

1. The process of producing aluminium, which comprises forming a melt of alumina, subjecting the same to reduction by the action thereon of carbon and hydrogen and supplying electric energy for the reduction.



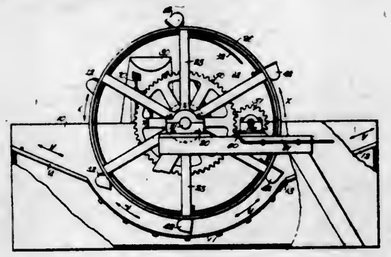
1,350,151. VACUUM-FEED CARBURETER. PIERRE P. GILLES, Springfield, Mass. Filed Oct. 14, 1918. Serial No. 258,091. 4 Claims. (Cl. 158—36.)

1. A vacuum feed carbureter, comprising, a casing provided with chambers at different levels and a passage affording communication between the lower portion of the upper and the upper portion of the lower chamber, a float in the upper chamber, means controlled by said float to draw fuel into the upper chamber, an atomizing device in the lower chamber, a float in the latter, a single clack valve controlling said passage and opening into the lower chamber, and means operable from the second float to close said valve when the fuel in the

lower chamber reaches a predetermined level and to release said valve when the fuel in the lower chamber falls below such level.

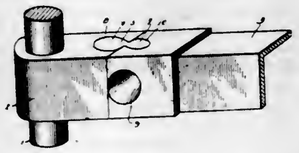
1,350,152. FOLDING COT. ORREN J. GREEN, Afton, N. Y. Filed Nov. 29, 1918. Serial No. 264,676. 1 Claim. (Cl. 5—5.)

A folding cot including a pair of superposed frames embodying cross bars and slidably connected side bars, a spring connected to the upper faces of the outer cross bars of the frames, cross rods spanning the side bars of both frames adjacent the outer ends thereof, legs arranged in pairs and pivoted to the inner faces of the side bars of the frames adjacent the outer ends thereof, arcuate bracing and supporting members pivotally connected to the legs at an intermediate point and lying against the said side bars, and end pieces spanning the bracing and supporting members at the ends remote from those connected with the legs, the arcuate bracing and supporting members being cut away from the edges engaging the cross bars to provide shoulders for abutting relation with said rods when the legs are in extended position.



1,350,153. GUN-SIGHT. ELI E. GREGORY, Lewisport, Ky., assignor to Rangefinding Sight Company, New York, N. Y. Filed Dec. 14, 1917. Serial No. 207,142. 4 Claims. (Cl. 33—47.)

1. The combination with an implement which is to be aimed, of a sight mounted on the forward portion of said implement and presenting transversely to the line of sight an outline having upwardly converging sides and a base wider than the interpupillary distance of the person



aiming, said sight, when the object aimed at is viewed by the person with both eyes, producing the optical effect of two images corresponding to the sight outline and spaced laterally of the line of sight, said images overlapping and thus forming a resultant triangular image varying in size with the range of the object, and having its apex in the line of sight.

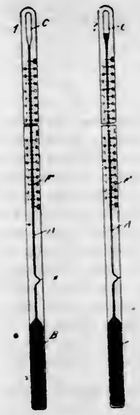
1,350,154. SAND-SEPARATING APPARATUS. HAROLD LOUIS HAMILTON, Fargo, N. D. Filed Aug. 29, 1918, Serial No. 251,946. Renewed June 7, 1920. Serial No. 387,156. 8 Claims. (Cl. 83—86.)

1. A sand separating apparatus, comprising a tank having an inlet for the sand bearing water and an overflow for the water, a revoluble sand separating wheel extending into the said tank and provided with hinged buckets adapted to pass through the sand bearing water to dip the sand out of the water, means for gradually dumping the buckets to discharge the water contained in the buckets and to then discharge the sand out of the buckets, and means for receiving the discharged sand and carrying it away from the machine.

1,350,155. BED. RUDOLPH F. HELLWEG, El Paso, Tex. Filed Jan. 16, 1920. Serial No. 351,814. 3 Claims. (Cl. 5—55.)

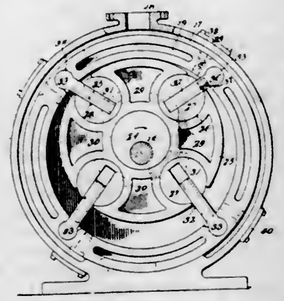
1. In a bed corner, a frenching secured to the corner post of the bed and having a tapering recess largest at its upper end and tapering to its lower end, an angle rail, a block on the angle rail having a pair of recesses at right angles to each other, said recesses largest at one end and tapering to their other ends, and a coupling comprising two coupling tongues integral with each other oppositely disposed and tapering from end to end, said coupling adapted to be positioned in the recess of the frenching and in either of the recesses of the rail block.

1,350,156. TURNED SHOE. FRANK W. HOMAN, Philadelphia, Pa. Filed Feb. 11, 1920. Serial No. 357,920. 3 Claims. (Cl. 36—34.)



1. A shoe comprising a covered heel, a forepart-and-shank sole-section partly overlapping by its rear extremity the forward portion of said heel and attached thereto by fastening means engaging with the overlapping portions, and an upper with which the combined sole-section and heel are connected by fastenings engaging with the sole-section and passing through the upper portion of the heel-covering around the sides and back of the heel.

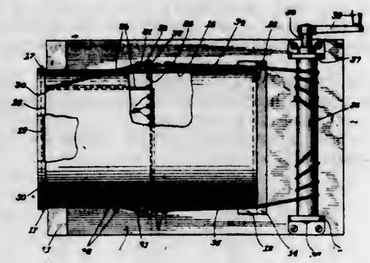
1,350,157. PROCESS FOR TREATING CELLULOID PRODUCTS. FREDERICK W. HORTON, Hackensack, N. J. Filed Jan. 13, 1920. Serial No. 351,196. 3 Claims. (Cl. 252.)



1. The process of recovering silver from photographic film which consists in dissolving the film in caustic alkali causing the silver to be precipitated out therein, and separating the precipitated silver from the solution.

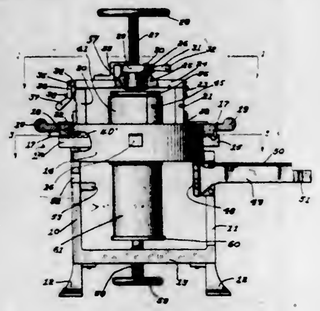
1,350,158. METASTATIC THERMOMETER. EDWARD N. HURLBUT, Rochester, N. Y., assignor to Taylor Instrument Companies, Rochester, N. Y., a Corporation of New York. Filed Sept. 21, 1916. Serial No. 121,384. 4 Claims. (Cl. 73—52.)

1. A metastatic thermometer comprising a tube containing heat expansive liquid and having a portion of its bore modified in form without material variation of its cross sectional area to permit the liquid to pass freely in either direction when held in a vertical position and to cause the liquid column to break or separate when the tube is placed in a generally hroizontal position, a supplemental reservoir for surplus liquid at one end of the tube communicating with the board, a graduated scale for the tube, and a bulb at the opposite ends of the latter communicating with the bore.



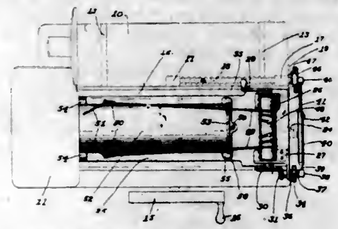
1,350,159. AIR-COMPRESSOR. SVEN A. JOHNSON, Brooklyn, N. Y. Filed Aug. 1, 1919. Serial No. 314,713. 5 Claims. (Cl. 230—30.)

3. An air compressor including a casing having inlet and outlet, a rotor mounted for movement in the casing



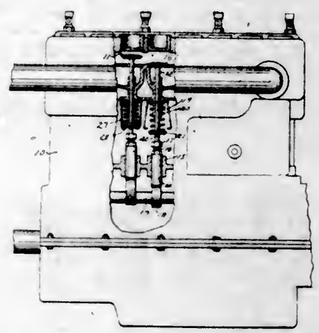
in an eccentric path, a plurality of members rotatably mounted in said rotor, and a plurality of abutments having passages therethrough slidably engaging said rotatable member and oscillatably mounted in the casing.

1,350,160. COMBINED MEAT CONTAINER AND EJECTOR. FERDINAND KRUSE, New York, N. Y. Filed July 24, 1919. Serial No. 312,998. 2 Claims. (Cl. 220—93.)



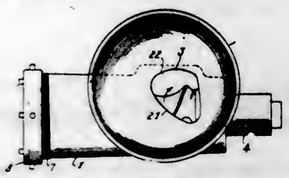
1. In a device of the class described, the combination with a container comprising a casing, a cover removably engaged therewith, a plate movable in said casing, prongs projecting from said plate for engaging material entered in said casing, flexible cords entering said casing near the cover thereof and extending downward closely adjacent the walls of the casing, said cords crossing each other on the lower side of said plate, eyes engaged with the outer portions of said cords, hooks engageable with said eyes, other cords to which said hooks are attached, a roller upon which the last named cords may be wound, means for rotating said roller, a base on which said roller is mounted, and means on said base for receiving said casing when disposed horizontally thereon.

1,350,161. MEAT-PRESSER. FERDINAND KRUSE, New York, N. Y. Filed July 24, 1919. Serial No. 312,999. 5 Claims. (Cl. 226—101.)



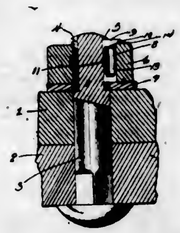
1. In a meat press, the combination with a pair of standards, a ring carried at the upper ends thereof, said raing having radial rectangular slots formed through its walls, bars slidably engaged in the recesses of said ring, teeth formed upon the upper side of said bars, a ring rotatably engaged upon the first named ring, manually operated means for actuating said second ring, spiral teeth formed upon the lower surface of said ring engageable with the teeth upon said bars whereby they may be moved, a pair of opposed formers secured to oppositely disposed bars, said formers being resilient and adapted to engage one within the other, and heads formed with the other pair of said bars adapted to make contact with said formers whereby they are held in a cylindrical form.

1,350,162. ATTACHMENT FOR SLICING-MACHINES. FERDINAND KRUSE, New York, N. Y. Filed Aug. 15, 1919. Serial No. 317,639. 5 Claims. (Cl. 17—24.)



1. In a feeding device for slicing machine the combination with a machine having a base, a laterally reciprocable table, means for manual actuation and a pendant arm carried by said table of a base plate mounted on said table, a container horizontally supported on said base plate, a drum rotatable on said plate, means combined with said drum for extracting the contents of the container, means for manually rotating said drum and means actuated by said pendant lever for intermittently rotating said drum.

1,350,163. VALVE-EXTRACTOR. EDWARD T. LIESS, Huntington, N. Y. Filed Oct. 29, 1919. Serial No. 334,245. 1 Claim. (Cl. 29—86.3.)

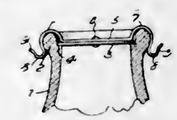


In a valve extractor, a rigid collar adapted to be permanently positioned around a valve stem between a valve spring and its seat, a plurality of arms hinged at one end around the periphery of said collar, and a transverse finger formed on the end of each arm opposite the hinge adapted to engage the spring washer and hold the spring in compression after the compressive force is removed.

1,350,164. MEAT-GRINDER. PAUL F. LOICHOT, Louisville, Ohio. Filed Dec. 24, 1919. Serial No. 347,169. 3 Claims. (Cl. 17—20.)

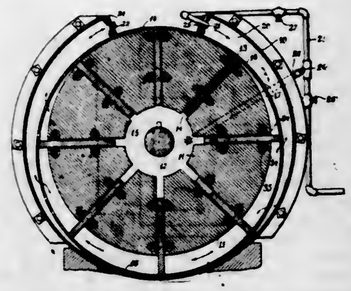
1. A meat grinder including a cylinder, a rotatable screw therein and a hopper located at one side of the longitudinal center of the cylinder and communicating with the interior of the cylinder, the inner wall of the hopper at the point of communication being located at nearly a right angle to the threads upon the screw.

1,350,165. NUT-LOCK. EMIL LUCK, Clara City, Minn. Filed June 4, 1919. Serial No. 301,635. 2 Claims. (Cl. 151—8.)



2. The combination with a bolt having a longitudinal groove, and a screw threaded shank, and a nut for the bolt provided with a groove adapted to be mounted upon the shank, the said grooves being adapted to be in registration at certain positions of the said nut on the bolt, of a pair of complementary locking plates, one of the plates having a relatively large opening with the other plate slidably mounted therein, a spring arranged in the opening and normally urging the smaller of the plates outwardly whereby one edge of the smaller plate will project from one longitudinal edge of the larger plate for projecting into the opening in the said nut to maintain the nut and bolt in fixed assembled position.

1,350,166. ALLOY. FOSTER MILLIKEN, Lawrence, N. Y., assignor to Foster Milliken, S. Fullerton Weaver, and James M. Repplier, trustees. Filed Aug. 29, 1918. Serial No. 251,940. 4 Claims. (Cl. 75—1.)



1. An alloy containing copper, nickel, iron, zinc and a purifying agent, the copper, nickel, iron and zinc being in a purified state and in proportion substantially as specified, the said purifying agent being a portion of 0.25 to 5 per cent. of the purifying agent used as the medium for purifying the said copper, nickel, iron and zinc, and remaining as an integral part of the alloy after purification of the said copper, nickel, iron and zinc, the said alloy being characterized by increased electrical resistance, increased elastic limit, increased tensile strength, increased density, a close and fine grain, and a high resistance to corrosion.

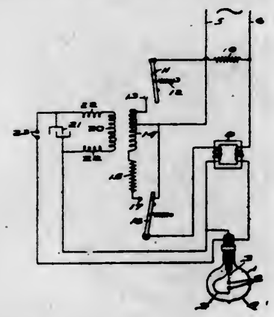
1,350,167. MILK-BOTTLE COVER. CHARLES W. MOSLEY, Hollywood, Calif. Filed Jan. 7, 1919. Serial No. 270,033. 1 Claim. (Cl. 215—14.)

A new article of manufacture comprising a disk for placement in the mouth of a milk bottle, and a resilient strip secured to the disk at the center of the latter, the strip being formed with curved portions for embracing the bead at the mouth of the bottle and being further formed with return bends adjacent the curved portions, the return bends terminating in lips for engagement by the fingers, whereby the curved portions may be spread to effect their disengagement from the bead for the useful purpose specified.

1,350,168. ROTARY ENGINE. CHASE MULINEX, Tolley, N. D. Filed Nov. 4, 1918. Serial No. 261,042. 4 Claims. (Cl. 121—87.)

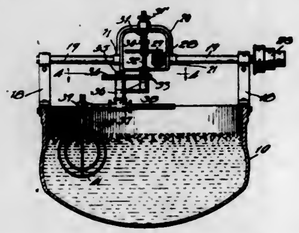
1. A rotary engine including a cylindrical casing, a rotor concentric in the casing and spaced therefrom to provide an intervening concentric chamber adapted to receive a motive fluid, radially disposed pistons carried by the rotor and slidable therein, a cylindrical guide wall in said chamber and eccentric to the motor and rotor, said wall presenting imperforate arcuate areas approximately diametrically opposite each other, over which areas the pistons operate without radial movement in their positions of maximum and zero projection respectively, the remaining portions of said guide wall being perforated so that the pistons move over a perforated area of the wall in their forward and return strokes to and from the position of maximum projection, said chamber having an inlet and an exhaust for motive fluid respectively at opposite sides of that imperforate area over which the pistons travel in their position of zero projection.

1,350,169. SHIRT. JAMES PATRICK MULLANE, Cambridge, Mass. Filed Jan. 6, 1920. Serial No. 349,677. 1 Claim. (Cl. 2—41.)



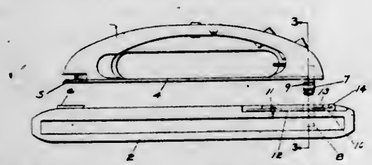
An open front shirt, comprising a body portion adapted to fit loosely around the body of the wearer, said body portion terminating in a relatively wide belt adapted to fit snugly around the hips of the wearer, said belt being open at the front, securing devices at the free edges of the shirt, securing devices at the ends of the belt in line with the securing devices in the shirt, and means carried by the intermediate portion of the belt for adjusting its length.

1,350,170. ARC-LAMP SYSTEM. THOMAS J. MURPHY, Rochester, N. Y., assignor of one-half to James P. B. Duffy, Rochester, N. Y. Filed Jan. 12, 1917. Serial No. 141,990. 4 Claims. (Cl. 176—12.)



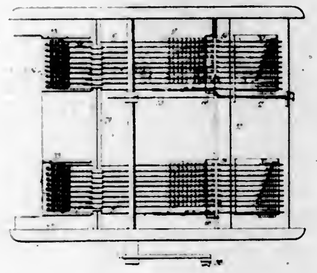
4. In a lamp lighting system, a source of current supply having a high electro-motive force and exceedingly small amperage, a second source of current having a lower electro-motive force and larger current, a lamp having

electrodes connected to the said sources, a third source of current having an electro-motive force lower than the



second named source, means for disconnecting the lamp from the first named two sources and connecting it with the last named source.

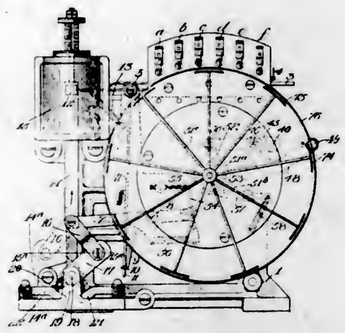
1,350,171. MIXING-MACHINE. ALOIS NIEDDERBERGER, Argyle, Wis. Filed Feb. 28, 1919. Serial No. 279,763. 2 Claims. (Cl. 259—99.)



1. In a mixer, a vertical shaft, means for driving said shaft, a horizontal arm fixed at one end to said shaft, a second vertical shaft rotatably carried in the outer end of said arm, means whereby the last mentioned shaft is caused to rotate independently on its own axis when swung around the first mentioned shaft by the said arm, a beater carried by the last mentioned shaft, and means for adjusting said beater toward and away from said last mentioned shaft, said means including a horizontal sleeve fixed upon the lower end of said last mentioned shaft, and an arm mounted in said sleeve to be adjustable longitudinally therein and having the said beater attached to its outer end.

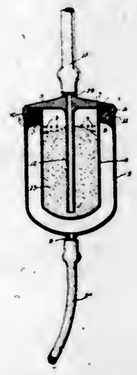
1,350,172. SHUTTLE. NILS W. NILSON, Walpole, Mass. Filed Mar. 29, 1918. Serial No. 225,558. 2 Claims. (Cl. 139—27.)

1. A loom shuttle of the character described, comprising a base, a bobbin holder, a plate secured to the base and having an undercut notch therein the walls of which notch diverge as they extend toward the opposite end of the base, a plate fixed to one end of the holder shaped to enter said notch and rest in engagement with said walls when the holder is in its operative position on the base, said diverging walls coöperating with the plate on said holder to guide the holder into a central position on the base while it is being attached thereto, a pin projecting from the bottom of the holder near one end thereof, said base having a hole therein to receive said pin, and a spring operated latch carried by said base and arranged to engage said pin to coöperate with said plates to positively secure the holder to said base.



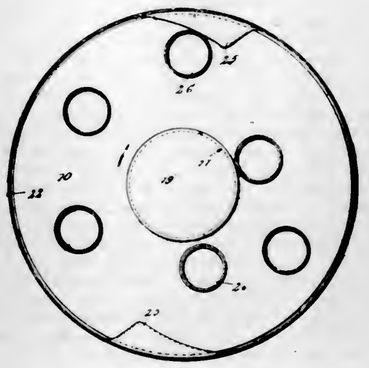
1,350,173. COMBINED TYPEWRITING AND COMPUTING MACHINE. CARL E. NORIN, Hartford, Conn., assignor to Underwood Computing Machine Company, New York, N. Y., a Corporation of New York. Filed Dec. 4, 1915. Serial No. 64,948. 16 Claims. (Cl. 235—60.)

13. In a combined typewriting and computing machine, the combination with a single set of pin-setting bars, of two sets of register wheels having numbers thereon running in opposite directions, and a separate set of pins for each register.



15. The combination with a complementary subtraction device, of two registers driven thereby simultaneously, one effective to add and the other effective to subtract.

1,350,174. AUTOMATIC RECORDING MECHANISM. HARRY Y. NORWOOD, and FREDERICK W. STALKER, Rochester, N. Y., assignor to Taylor Instrument Companies, Rochester, N. Y., a Corporation of New York. Filed May 20, 1916. Serial No. 98,775. 24 Claims. (Cl. 234—5.5.)

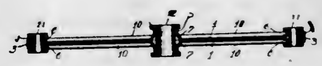


1. In a mechanism for recording conditions at a plurality of stations, the combination with a movable record surface, of a measuring instrument adapted to be controlled from said different stations, a recording arm operated by the measuring instrument in a plane parallel to said record surface and also movable toward the record surface, a recording element positioned adjacent said record surface, an actuating device operating to engage said recording arm and move the recording element against the record surface, and means acting automatically to effect a different number of operations of the measuring instrument and of the actuating device in a given interval for the different stations, to obtain distinguishable records for said stations.

1,350,175. SOAP-CONTAINER. EDWARD O'CONNOR, New Haven, Conn. Filed Aug. 26, 1919. Serial No. 319,954. 4 Claims. (Cl. 299—83.)

3. A device of the character stated, comprising a casing having an internal annular recess at its upper end, a container in the casing having an annular flange fitting in said recess, a cap secured on the upper end of the casing and holding the flange of the container in the recess of the casing, an inlet tube on the cap projecting into the container, and said container having perforations in the upper portion only of its wall communicating with the casing.

1,350,176. AMUSEMENT DEVICE. ANGELO PINTO, Coney Island, N. Y. Filed Oct. 15, 1919. Serial No. 330,734. 3 Claims. (Cl. 46—27.)

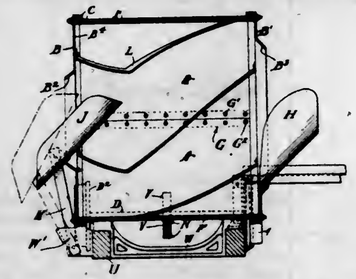


1. An amusement device comprising a rotatable platform, sloping from the center toward the periphery, a plurality of swiveled cars, supported thereon to travel in any direction, a stationary central bumper, and a plurality of peripheral stationary abutments, said cars being given an irregular path by alternate contact with said central bumper pand peripheral abutments.

1,350,177. METHOD OF MAKING CONNECTING-RODS. ALEXIS R. PRIBIL, Cleveland, Ohio. Filed Dec. 6, 1917. Serial No. 205,765. 2 Claims. (Cl. 29—148.)

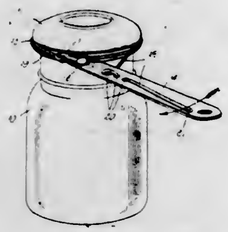
1. In the art of producing connecting rods, wherein the rod is formed of a rod portion and a cap separable therefrom, and wherein the rod portion includes an embryo assembly of two members of similar configuration together with bushing formations for the piston pin and crank pin openings, the method of producing such assembly which consists in shaping a sheet metal blank symmetrically relative to a central transverse line to produce two configurations each having a piston pin boss at its outer end and a single crank pin boss symmetrically disposed relative to such line, bisecting the blank on such line to produce two independent sections, positioning complemental sections in assembly relation with similar boss configurations axially alined and projecting in opposite directions, positioning bushing formations relative to the alined boss configurations to produce an assembly in which each bushing projects beyond the ends of alined bosses and with each bushing integral from end to end, and completing the assembly by shaping the bushing to locate its opposite ends in overlying relation to the boss outer ends.

1,350,178. METHOD OF MAKING CONNECTING-RODS. ALEXIS R. PRIBIL, Saginaw, Mich. Original application filed Dec. 6, 1917, Serial No. 205,765. Divided and this application filed May 31, 1918. Serial No. 237,576. 3 Claims. (Cl. 29—148.)



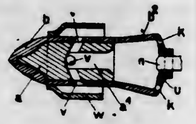
1. In the art of producing connecting rods, wherein the rod is formed of a rod portion and a cap separable therefrom, and wherein the rod portion includes an embryo assembly of two members of similar configuration together with bushing formations for the piston pin and crank pin openings, the method of producing such assembly which consists in shaping a sheet metal blank symmetrically relative to a central transverse line to produce two configurations each having a piston pin boss at its outer end and a single crank pin boss symmetrically disposed relative to such line, positioning a similar blank in assembly relation thereto with similar boss configurations axially alined and projecting in opposite directions, securing the blanks in such relation by bushing formations shaped to locate the opposite ends of a bushing in overlying relation to the outer ends of the alined boss configurations of both blanks, and bisecting the assembly on such transverse line.

1,350,179. CONCRETE-MIXING APPARATUS. ARTHUR W. RANSOME, Plainfield, N. J., assignor to Ransome Concrete Machinery Company, Dunellen, N. J., a Corporation of New Jersey. Filed May 27, 1914. Serial No. 841,185. 12 Claims. (Cl. 83—73.)



1. In a knock-down concrete mixer, in combination, a drum having sides longitudinally partible into nesting segments, nesting ends for said drum, the ends adapted to form the bottom and the sides the roof of an inclosed

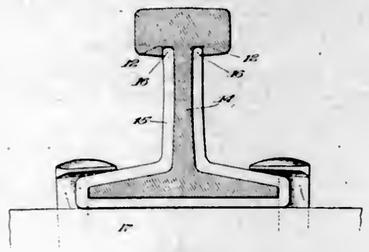
space, removable nesting mixing blades, adapted to be stored within the inclosed space indicated, and charging



and discharge chutes, shaped to conform to the space so inclosed.

1,350,180. OPENER FOR GLASS-TOPPED JARS. DEWITT C. RELYEA, Coscob, Conn. Filed Jan. 28, 1920. Serial No. 354,647. 2 Claims. (Cl. 81—3.1.)

1. In a glass-top lifter for fruit jars, the combination with a lever of flat rigid material and a flexible plaited wire pivotally attached to one end thereof and adapted to pass around the container beneath the top, said lever having a rounded end terminating in an obtuse angular shoulder, of a keeper with which said wire is adapted to coöperate adjustably for determining the effective length of the wire in accordance with the size of any fruit jar, the free end of the wire beyond the keeper lying along the longer end of the lever in position to be grasped by the hand of the operator.



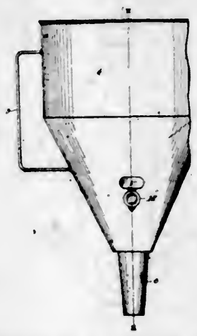
1,350,181. SOLDERING-IRON. HERMANN REMANÉ, Berlin, Germany. Filed Apr. 24, 1918. Serial No. 230,584. 13 Claims. (Cl. 158—26.)

1. A soldering iron comprising an outer recessed mantle composed of a metal not readily oxidizable in a flame and constituting the soldering surface and an inner core located within the recess of said mantle and operatively combined therewith, said inner core consisting of a metal which is a good conductor of heat.

1,350,182. RAIL-JOINT. GEORGE B. RYAN and WILLIAM M. RYAN, Leakey, Tex. Filed Nov. 17, 1919. Serial No. 338,549. 2 Claims. (Cl. 238—205.)

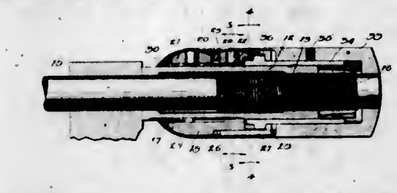
1. A rail joint comprising a connector sleeve formed from stock of uniform thickness for closely engaging the bases and webs of the abutting ends of two rails and with the upper edges thereof fitting within grooves in the

under portion of the heads of the rails, adapted to slide over the end of one of the rails and thereafter be moved to engage the ends of both rails.



1,350,183. THERMOSTATIC SWITCH. JOHN RIOS, New York, N. Y. Filed Oct. 22, 1918. Serial No. 259,169. 1 Claim. (Cl. 200—140.)

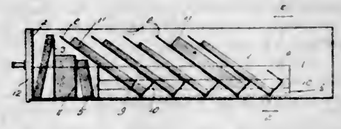
A device for the purpose indicated comprising a tubular container, a column of mercury carried in the bottom of the container, a composite rod member slidably mounted in the container and formed both with a head and a foot approximating the internal cross sectional area of the container but having its body portion considerably reduced in cross sectional area, the foot bearing on the column of mercury, the head and foot and reduced portion of the rod being of insulating material but the reduced portion containing a section of conducting material, contact springs set in opposite sides of the container and bearing upon the reduced portion of the rod, and a spring within the container and compressed between the top of the latter and the head of the rod.



1,350,184. GASOLENE-FUNNEL. GABRIL SAMBOLL, St. Cloud, Minn. Filed Mar. 4, 1920. Serial No. 363,163. 5 Claims. (Cl. 210—45.)

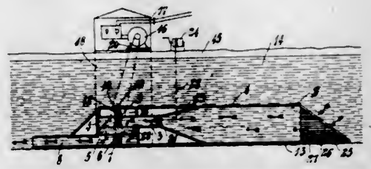
1. A gasolene funnel comprising a body portion, a receptacle centrally disposed within the body portion, an elbow pipe extending from the bottom of said receptacle through the side of said body portion, an outlet spout for said receptacle extending into the funnel body and means

within said receptacle for directing the flow of gasolene entering the same.



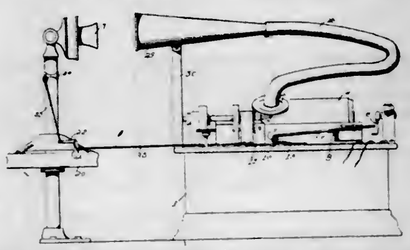
1,350,185. MICROMETER-GAGE. THOMAS SHAW, Woonsocket, R. I. Filed Aug. 13, 1919. Serial No. 317,217. 3 Claims. (Cl. 33—166.)

1. A micrometer gage comprising a frame including spaced arms, an abutment member carried by one of said arms, a tubular extension on the other arm having the outer end of its bore threaded, a stem slidable and rotatable through said extension and having a portion threaded for engagement within the threaded portion of said member, a sleeve splined upon said tubular extension and having a reduced portion and also having a portion cut away to provide a flat bearing surface, a guide sleeve engaged upon said reduced portion and having an inwardly extending annular flange, studs mounted on said flat bearing surface, a pair of indicator wheels journaled on such studs and each bearing indicia ranging from zero to 9, the periphery of one of said wheels being provided with teeth and the periphery of the other wheel being provided with a single tooth engaging said first named teeth successively, a gear formed on the underside of said second named wheel, a shell surrounding and secured to said sleeve and forming a housing for said wheels, said shell being provided with sight openings through which said indicia are visible, the end of said shell adjacent the frame being curved into proximity with said extension, and said extension being provided with graduations exposable upon longitudinal movement of said shell outwardly, a handle member secured upon the outer end of said stem and of the same diameter as said shell and having its open end disposed against the other end of said shell, a sleeve secured within said handle member and having an outwardly extending flange engaging said inwardly extending flange, and a gear formed on said last named sleeve and engaging said first named gear.



1,350,186. DESK-DRAWER FILE. FREDERICK L. G. STRAUBEL, Green Bay, Wis. Filed Nov. 29, 1918. Serial No. 264,499. 4 Claims. (Cl. 45—7.)

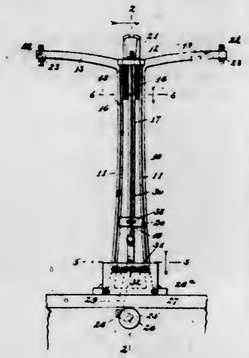
1. In a filing drawer, pivoted partitions, each composed of spaced fronts and backs and a bottom connecting the fronts and backs, the pivots being located adjacent the fronts and above the drawer bottom and the bottoms being at an obtuse angle to the fronts so that the points of juncture between the backs and bottom will project be-



low the pivots and afford stops to engage the drawer bottom to limit rearward swinging of the partitions.

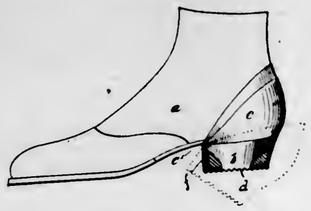
1,350,187. SUBMERSIBLE WATER-POWER DEVICE. JOHN C. STREIBICH and GEORGE F. GRUVER, Little Rock, Claims. (Cl. 253—31.)

1. In a submersible water power device, a casing having an inlet end and an outlet end, and an intermediate inclosed cylindrical wheel chamber with a passage from the inlet end into the upper part of said chamber, and a passage to the outlet end from the lower part of said chamber of unreduced cross-sectional area from the lower part of said chamber to the exterior of its down-stream end, a water wheel, and mountings for said wheel whereby said wheel rotates in a plane across said cylindrical chamber between the inlet and outlet passages, said water wheel comprising a series of vanes inclined to its axis, each series being confined between cylindrical vertical shells and each vane slanting downwardly and rearwardly from top to bottom with reference to the entrance of the water which passes therethrough, and power transmitting means operatively connected to said water wheel and extending laterally from said casing for operative connection to suitable power distributing means, a frame slidable into and out of said wheel chamber and supporting said water wheel and said operative connection, and a water-tight box surrounding said operative connection on said frame, said box being removable from said casing along with said frame and said water wheel.



1,350,188. AUTOMATIC BURGLAR-ALARM. FRANKLIN ADELBERT TERRY, San Francisco, Calif. Filed July 9, 1917. Serial No. 179,378. 5 Claims. (Cl. 179—5.)

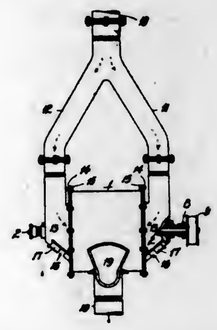
2. A burglar alarm comprising a telephone set, a phonograph disposed near the set, a brake for normally holding the phonograph mechanism stationary against spring tension, means connecting the switch hook of the telephone set with the brake mechanism for holding the switch hook in normal position, a motor, an electric circuit for operating the motor containing circuit closing devices,



means for holding the phonograph needle normally out of engagement with the record, means actuated by the motor for releasing the brake mechanism and the switch hook, and means for subsequently shifting the needle holding means to permit the needle to be brought into operative engagement with the record.

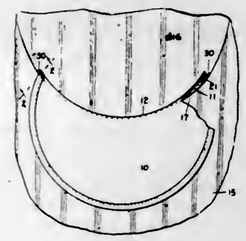
1,350,189. POST FOR SCALES. GEORGE GOTTFRIED VOLAND and EMIL L. VOLAND, New Rochelle, N. Y. Filed July 22, 1919. Serial No. 312,625. 4 Claims. (Cl. 265—54.)

1. In a scale, a post having a vertical slot, two laterally extending arms, and guideways, a rod slidable in the guideways and having means for supporting a scale beam for coöperating with the arms, a plumb depending from the top of the post, there being a mark adjacent the base of the post with which the plumb may be compared, and a pin on the rod for movement in the vertical slot.



1,350,190. NON-SLIP HEEL FOR FOOTWEAR. GEORGE W. WATSON, Boston, Mass. Filed June 20, 1919. Serial No. 305,537. 4 Claims. (Cl. 36—72.)

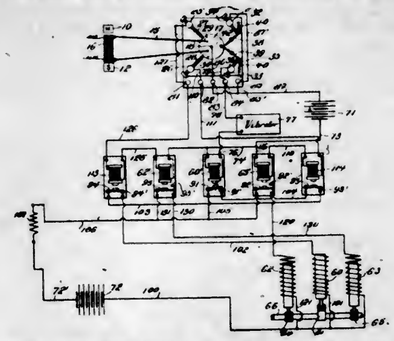
1. In a device of the character described in combination a heel, a heel inclosing pocket of resilient material and adapted to snugly fit the rear part of said heel, and inwardly concaved, cup shaped, resilient projecting means at the front wall of said pocket, and adapted to rest against the breast of said heel.



1,350,191. FAN FOR USE IN SPARK-ARRESTING AND SMOKE-CONSUMING DEVICES. WILLIAM ANDREW WATTERSON, Macquarie River, via Euchareena, New South Wales, Australia. Filed Aug. 5, 1919. Serial No. 315,501. 3 Claims. (Cl. 230—11.)

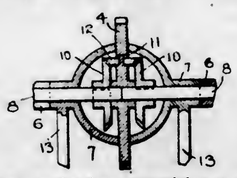
1. A fan for spark arresting and smoke consuming devices of the kind specified, consisting of a cylindrical casing, a mechanically operated spindle extending therethrough and upon which are fixed rotary fan blades, a discharge pipe from the casing, a junction pipe connected at one end with the suction pipe and formed at the other end with branches connected with the ends of the casing,

the mouths of said branches being flared and provided with controllable air inlets.



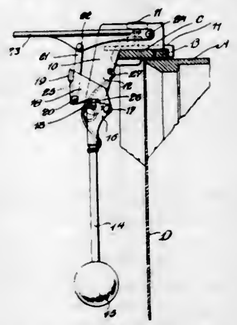
1,350,192. DRESS-SHIELD. HELEN WEEKS, New York, N. Y., assignor of one-half to Samuel E. Durant, New York, N. Y. Filed July 18, 1919. Serial No. 311,801. 1 Claim. (Cl. 2—34.)

In combination, a garment having a body and sleeves, spaced loops at the junction of the body and sleeves and projecting from the said junction, and a dress shield having a body flap and a sleeve flap, the flaps being united at their upper edges, a snap fastener on each corner of the dress shield and having a socket member and a stud member, one of the said members being secured to the outer face of the body flap and the other member being attached to the under side of the arm flap, the stud of the said stud member passing through the corresponding loop and engaging the socket member to fasten the dress shield in position on the garment.



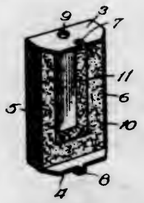
1,350,193. ATTACHMENT FOR CABLE-RECORDERS. FREDERICK S. WHITNEY, New York, N. Y. Filed Mar. 25, 1918. Serial No. 224,686. 3 Claims. (Cl. 178—92.)

1. In a device of the class described, a plurality of magnets, a coil mounted for rotation on a vertical axis between the poles of the magnet, a disk mounted for rotation on a vertical axis, the mounting means including a staff and mineral elements within which the staff is carried, contact members mounted on the disk, means connecting the disk with the coil and causing the disk to rotate in unison with the movement of the coil, a vibrating device and a recording device, contact members mounted in the path of movement of the contact devices first named upon the rotation of the disk, an additional contact element on the disk, and pivoted arms contacting therewith on opposite sides thereof when the disk is stationary, an additional circuit and means for completing the latter through the vibrator and an element of the recording device and



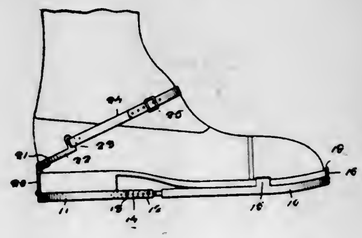
through said arms, when the disk is stationary, the rotation of the disk moving either of the arms pivotally for breaking the circuit last named.

1,350,194. DIFFERENTIAL MECHANISM FOR FRONT AND REAR DRIVEN VEHICLES. ISAM ISAAC WIGGINS, McIntosh, Ga. Filed Apr. 12, 1917. Serial No. 161,504. 1 Claim. (Cl. 74—99.)



A differential mechanism comprising a pair of axially alined and abutting driving shafts, a bevel gear keyed to each of the abutting ends of the driving shafts, a spur gear intermediate the two bevel gears and mounted loosely on the axial abutting ends of the two parts of the driving shafts, said spur gear having a radial pin, a bevel pinion journaled on said pin at right angles to the axis of said spur gear and meshing with the bevel gears, a casing surrounding the bevel gears and the central portion of the spur gear and having its outer edges spaced from the teeth of said spur gear, said casing comprising two semi-spherical sections, the outer ends of said semi-spherical sections forming supporting means for the axially alined driving shafts, and means for supporting the sections of the casing and its bearings.

1,350,195. BASS-DRUM-OPERATING MECHANISM JOHN DUNCAN WILLIAMS, Charlotte, N. C. Filed Oct. 7, 1919. Serial No. 329,015. 3 Claims. (Cl. 84—422.)

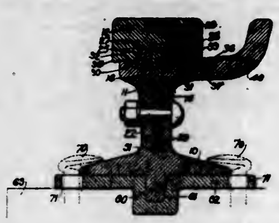


1. A device of the character described comprising a bracket detachably engageable upon the hoops at one end of a bass drum, a striking member pivotally connected with said bracket and carrying a beater head adapted to be moved into engagement with the head of the drum, a lateral extension on said striking member, a lever pivotally connected with said lateral extension at one side of the pivot point of the striking member, a link pivotally connected with said lever at the opposite side of the pivot point of said striking member, and an operating lever pivoted upon said bracket and pivotally connected with said link.

1,350,196. OIL-CUP. LOUIS HENRY WILLIAMS, St. Joseph, Mo. Filed Mar. 1, 1920. Serial No. 362,432. 2 Claims. (Cl. 184—1.)

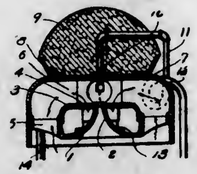
2. In combination with a spring formed of a plurality of superposed leaves secured together, an oil cup comprising a pair of separable tray-shaped oil receptacles, each of said receptacles having at each end an integral lug formed into a hook, and an oil hole in one end, a continuous strip of packing disposed within each receptacle along the side walls thereof, said packing constituting the inner side walls of an oil chamber communicating with said oil hole, and a pair of tension springs adapted to engage the hook at each end of said oil receptacle, whereby the latter are held against the side edges of the superposed leaves in said spring.

1,350,197. ATTACHMENT FOR SHOES. WALTER WOOD, Bay City, Oreg. Filed Dec. 22, 1919. Serial No. 346,475. 3 Claims. (Cl. 36—63.)



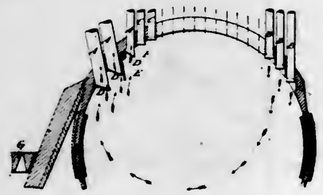
1. A shoe attachment of the class described consisting of a substantially straight frame corresponding in plan with a shoe sole and consisting of toe and heel members of channel iron adjustably secured together at their meeting ends, the toe member being provided with a toe clip and the heel member with a heel clamp provided with forwardly and upwardly extending arms, and an instep strap connecting said arms.

1,350,198. RAIL. NICHOLAS I. WOOLSEY, New York, N. Y. Filed July 8, 1919. Serial No. 309,291. 4 Claims. (Cl. 238—146.)



3. A rail made in sections of which one comprises a base and a web having a longitudinally extending recess reaching approximately from the top of the web to the lower edge thereof, the other section having a head and a depending tongue fitting into the said recess, the said web

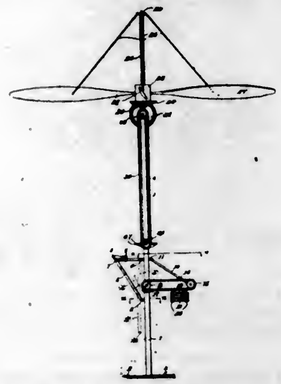
being provided at the top adjacent the outer sides with inwardly downwardly inclined seats, the said head being



provided at the underside adjacent its outer edges with inwardly downwardly inclined faces fitting said inclined seats.

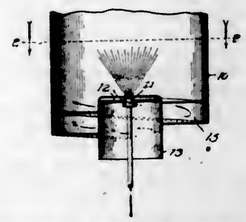
1,350,199. HYDROCARBON-FUEL BURNER. THOMAS E. WORTHINGTON, Kansas City, Mo. Filed Nov. 5, 1919. Serial No. 335,914. 3 Claims. (Cl. 158—91.)

1. In an oil burner comprising a concave bottom having a central, upstanding, conical projection, a baffle ring about the projection, the bottom being provided with air openings, a spider-like top fitting over the bottom and having air ports alining with the air openings, and an oil supply pipe extending through the top of the burner.



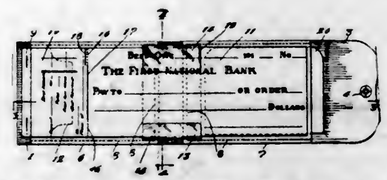
1,350,200. CIRCULATION IN WATER-TUBE BOILERS. HAROLD E. YARROW, Glasgow, Scotland. Filed Oct. 30, 1917. Serial No. 199,311. 2 claims. (Cl. 122—365.)

1. Means for obtaining an improved circulation of water in a water tube boiler, comprising a water drum of approximately circular cross section, a source of heat, and a nest of tubes communicating with said water drum, the tubes relatively near the source of heat conveying upward currents of water and the tubes farther from the source of heat conveying downward currents of water, the lower ends of tubes nearest the source of heat terminating in oblique sections so that the part of each of said last named tubes which is turned away from the source of heat is lower than the part toward said source, substantially as described.



1,350,201. FLYING-MACHINE. PAUL YESO, Dodgeville, Mich. Filed June 1, 1920. Serial No. 385,798. 3 Claims. (Cl. 244—19.)

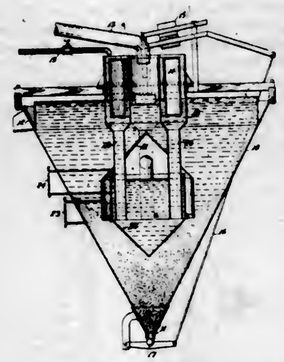
3. A flying machine of the type described comprising a vertical standard, a seat frame supported thereon, a counterbalancing weight shiftably mounted on said standard in directions at right angles to the longitudinal axis thereof, a elicoptical propeller journaled upon the upper end of said standard, manually operating means for said



propeller, said operating mechanism including a hub for the propeller, a beveled gear integral with said hub, a beveled gear journaled on said standard in mesh with the hub gear and chain and sprocket mechanism for operating said gears.

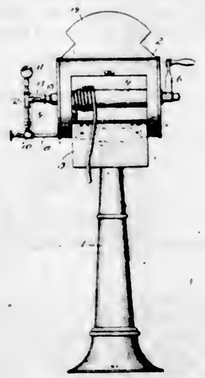
1,350,202. LIQUID AND GAS CONTACT APPARATUS. HANS J. ZIMMERMANN, Chicago, Ill., assignor, by mesne assignments, to The G. A. Buhl Company, Chicago, Ill., a Corporation of Illinois. Filed July 5, 1918. Serial No. 243,326. 3 Claims. (Cl. 261—79.)

3. In combination with a gas conduit, a spray nozzle mounted to deliver in a line substantially axially of the conduit, a shield of substantial diameter mounted concentrically with and behind the spray nozzle, and an annular helicoidal vane lying between the conduit wall and the said shield for directing the gas current in a helicoidal line at the zone of the spray.



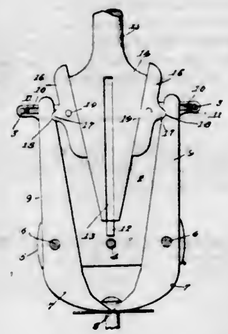
1,350,203. CHECK-BOOK ATTACHMENT. WILLIAM EDGAR ABBOTT, Bend, Oreg., assignor to Abbott Incorporated, Bend, Oreg., a Corporation of Oregon. Filed July 14, 1919. Serial No. 310,529. Renewed July 14, 1920. Serial No. 396,336. 3 Claims. (Cl. 24—66.)

1. As a new article of manufacture, a device for holding the checks of a folding check book flat while being



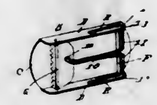
written upon, comprising a flat body having the whole of its ends bent upwardly and inwardly to form overhanging members whereby when the body of the device is arranged below the lowermost check at the fold, it will extend on each side of said fold and the overhanging members will extend a short distance over the uppermost check and in engagement therewith a distance on each side of the fold.

1,350,204. SLIME-PULP THICKENER. CHARLES ALLEN, El Paso, Tex. Original application filed June 9, 1917, Serial No. 173,785. Divided and this application filed Oct. 10, 1918. Serial No. 257,624. 5 Claims. (Cl. 210—54.)



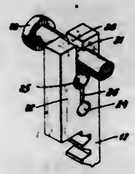
1. A slime pulp thickener comprising a tank having a discharge orifice in the bottom thereof, a valve member normally closing said orifice, a float chamber, a float supported upon the liquid therein, operating mechanism between the valve and the float, means whereby variation in the density of the pulp within the tank will affect the liquid within the float chamber to raise the float and an air-cell between said chamber and said means, whereby communication between the contents of tank and the contents of float chamber will be prevented.

1,350,205. HOSE-REEL. JOHN E. ANDERSON, Jamestown, N. D. Filed Apr. 20, 1918. Serial No. 229,802. 1 Claim. (Cl. 299—78.)



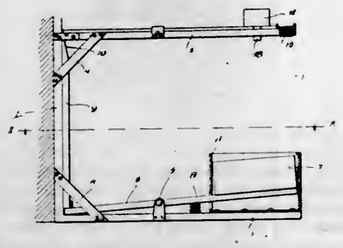
A device of the character described comprising a hollow standard, a hollow cylindrical casing mounted upon the upper end of the standard and having a door in one side, a reel journaled longitudinally through said casing, a handle on one end of said reel exteriorly of said casing, a hose wrapped upon said reel, the opposite end of the reel from the handle being formed with a bore with which one end of the hose communicates, a supply pipe extending through said standard and disposed laterally through the lower portion of said casing, a connection outside of said casing at the end opposite the handle between the upper end of said supply pipe and the bore of said reel, and a gage associated with said connection.

1,350,206. RIVET-CUTTER. IRA W. BARNES, East Liverpool, Ohio. Filed Oct. 10, 1919. Serial No. 329,655. 6 Claims. (Cl. 81—197.)



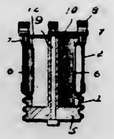
6. In a rivet cutter, two plates mounted in parallel spaced relation, opposed cutters rockably mounted between said plates and each having an upwardly extending relatively long shank, each of the plates being provided with a central longitudinally extending and inwardly projecting rib, blocks rockably engaging said shanks adjacent the upper ends thereof, said blocks being provided with outwardly projecting studs and the plates being provided with arcuate slots concentric with the axes of movement of the cutting members and receiving said studs for supporting and guiding the blocks during operation thereof, and a wedge member slidable between said blocks provided in its opposite sides with longitudinally extending grooves receiving said ribs, the lateral faces of the wedge member engaging the inner faces of said blocks for forcing the same apart when the wedge member is forced inwardly between said plates.

1,350,207. BELT-BUCKLE. HARRY E. BILLINGS, Lead, S. D., assignor of one-half to Charles J. Searle, Lead, S. D. Filed Nov. 29, 1919. Serial No. 341,415. 1 Claim. (Cl. 24—170.)



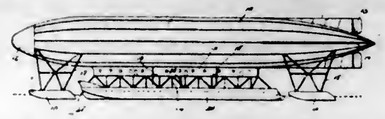
In combination with a belt buckle formed with a plate with upper and lower flanges, a hook member formed from a single length of resilient wire bent intermediate its ends to provide a horizontally extending shank terminating in an upwardly curved bill, the end portions of said hook member being arranged in vertical alinement and extending through holes in the upper and lower flanges of the buckle, and the extremities of said end portions being bent laterally, said shank being insertible through a loop provided at the top edge of the fly of trousers.

1,350,208. ADJUSTABLE LINE-SUPPORTING POST. GURLEY BROSHEARS, Newburg, Ind. Filed Nov. 14, 1919. Serial No. 338,108. 2 Claims. (Cl. 68—12.)



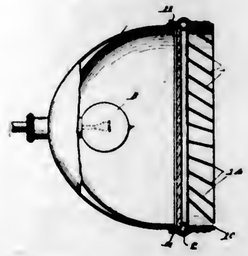
2. The combination with a bar having in its upper portion a lower aperture, an upper comparatively large aperture, a kerf between and connecting the said apertures and another kerf extending from the upper aperture and open at its outer end; of a line holder having a reduced intermediate portion adapted to pass through the upper kerf in the bar and also having a portion adapted to snugly occupy the upper comparatively large aperture in the bar.

1,350,209. HEN-MARKER. HARVEY A. CALMUS, Pittsburgh, Pa. Filed Mar. 16, 1920. Serial No. 366,182. 2 Claims. (Cl. 119—45.)



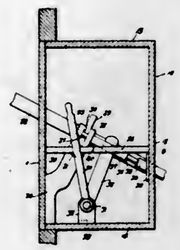
2. A hen marking apparatus comprising a frame, a lever, a nest on the outer arm of the lever and movable downwardly by the weight of a hen, means to yieldingly support the nest, a receptacle for marking substance connected with the frame and having a discharge arranged above the nest, an upright thrust rod movable upwardly by the inner arm of the lever and having tapered upper portion, and a spring-pressed valve normally closing the discharge of the receptacle and operable by upward movement of the thrust rod to momentarily open the discharge of the receptacle.

1,350,210. FUSE-PLUG. MARTIN JOSEPH CANNING, Chicago, Ill. Filed June 8, 1918. Serial No. 238,908. 1 Claim. (Cl. 200—125.)



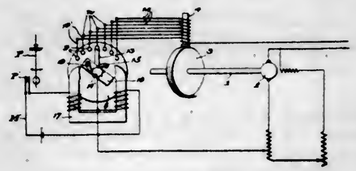
A fuse box comprising a metal screw threaded band and a fiber case connected with said band, an insulated bottom in said band, partitions connected with said bottom and dividing the box into a number of compartments, a bolt passing through the bottom and the junction of said partitions, a rotatable switch plate carried by said bolt, a fuse element in each compartment having its lower end connected with the band, terminals carried by the upper edge of the fiber case with which the upper end of the fuse element engages and detachable means for connecting the switch plate with said terminals.

1,350,211. SEA-DIRIGIBLE. DAVID CORSON, Jr., Mount Union, Pa. Filed Apr. 26, 1920. Serial No. 376,782. 3 Claims. (Cl. 244—2.10)



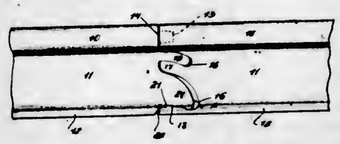
3. In combination, a dirigible comprising in combination, a gas bag provided with driving means, rigid frames extending downwardly at the end portions of the bag and carrying hollow shells serving as pontoons, a tank supported beneath the bag and adapted to serve as a boat structure, means permitting inlet of water into the tank whereby to serve as ballast, and means for expelling water from said tank.

1,350,212. SHADE FOR AUTO HEAD-LAMPS. FRANK E. DAVIS, Bremerton, Wash. Filed Oct. 31, 1919. Serial No. 334,717. 2 Claims. (Cl. 240—48.4.)



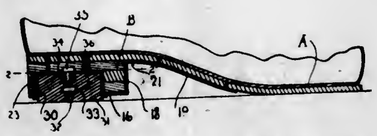
1. An attachment for automobile head lamps comprising a circular band detachably engaged upon the front of a head lamp, a plurality of transverse forwardly and downwardly inclined parallel blades within the upper portion of said band, and a plurality of other downwardly and forwardly inclined blades within the lower portion of said band, said last named blades being radial with respect to the center of the source of light of the lamp.

1,350,213. LOCK. LEWIS T. DIEBOLT, Logansport, Ind. Filed July 22, 1919. Serial No. 312,531. 3 Claims. (Cl. 74—39.)



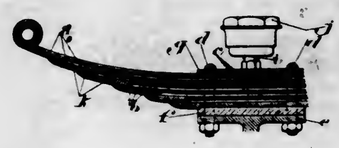
3. Means for locking a steering post of a vehicle against rotation, comprising a support to which the steering post extends, a bolt mounted for sliding movement, means for supporting the bolt, a member carried by said post and designed to receive the bolt, said bolt being normally separated from said member, a shaft journaled for rotation, a member projecting from the shaft and associated with the bolt for sliding the latter, toward and away from said member, a lever for rotating the shaft, means for holding the lever in a given position.

1,350,214. DEVICE FOR REGULATING AND MAINTAINING CONSTANT THE SPEED OF MOTORS. RICHARD EISENMANN, Berlin, Germany. Filed Dec. 29, 1914. Serial No. 879,598. 3 Claims. (Cl. 172—293.)



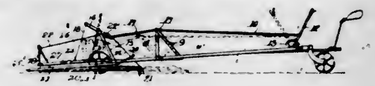
1. The combination, with an electric motor and its shaft; of a controller for accurately maintaining constant the number of revolutions of the motor shaft, comprising a contact arm, means for continuously rotating said arm at a constant, predetermined speed, a disk constantly driven by the motor at a speed which is directly proportional to that of the motor, said disk being provided with a plurality of contacts with which the contact arm co-acts, and a brake magnet having sectional windings operatively associated with the motor shaft to act thereon, said contact arm in moving over said contacts supplying currents of varying intensities to the sections of the magnet so as to exert accordant braking actions on the motor shaft.

1,350,215. RAIL-JOINT. PAUL J. FENSKE, Mart, Tex. Filed Apr. 5, 1920. Serial No. 371,316. 2 Claims. (Cl. 238—241.)



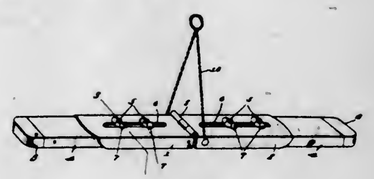
2. In a device of the class described, a rail joint comprising coacting rails abutting end to end, each including a head portion, a web portion and a flange portion, the head portion of one rail having a socket and the head portion of the other rail having a spur engaging in said socket, the web portion of one rail having a plurality of downwardly curving sockets extending entirely therethrough and the web portion of the other rail having tongues curved to correspond to and engageable in the curved sockets, and the flange of one rail cut away to form a tongue and the flange of the other rail having a downwardly opening recess to receive the terminal of the flange tongue.

1,350,216. SHOE-HEEL. GEORGE F. FISCHER, Rochester, N. Y. Filed July 21, 1919. Serial No. 312,150. 1 Claim. (Cl. 36—36.)



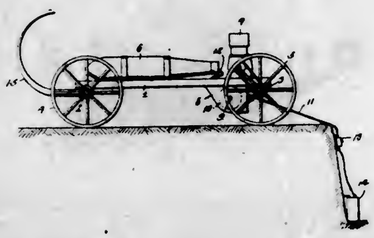
In combination with a heel provided with a cylindrical recess, a cylindrical socket member secured within said recess, a bolt extending through the socket member and having an angular head embedded within the heel at the bottom of the recess, a rubber plug engaged within the socket and having a bore for the passage of said bolt, and a nut embedded within the plug and having threaded engagement with the bolt whereby upon rotation of said plug the same may be caused to extend to a greater or less extent beyond the lower surface of the heel.

1,350,217. LUBRICATING DEVICE FOR LEAF-SPRINGS. JOSEPH MARIE ETIENNE FRANC, St. Vallier, France. Filed Feb. 24, 1919. Serial No. 278,969. 2 Claims. (Cl. 267—50.)



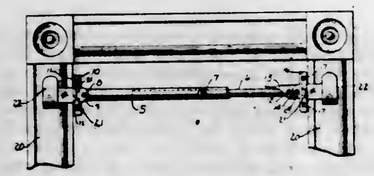
1. In a device of the character described, a leaf-spring composed of a plurality of leaves of successively decreasing length having longitudinal grooves along their surfaces in contact, said grooves communicating with one another by orifices formed in the leaves and being of successively decreasing width from leaf to leaf, and means for supplying lubricant to said grooves.

1,350,218. PUSH-RAKE. ALFRED JOHN GIBBS, Hay Springs, Nebr. Filed Mar. 12, 1917. Serial No. 154,329. 2 Claims. (Cl. 56—395.)



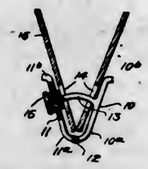
1. A push rake including a wheeled frame a rake prop r disposed forwardly of the frame, a sliding vertical abutment on the rake, a rearwardly disposed arm engaged with the intermediate portion of the abutment and carrying a spur on its rear end adapted for engagement with the surface over which the push rake moves whereby to cause said abutment to be moved when in inoperative position on the rake, hingedly connected bracing arms pivoted at their opposite ends to the abutment and portions of the frame, an arm pivotally supported on the frame at a point above the rake having connection with the hingedly connected arms, an operating lever mounted on the rear end of the wheeled frame, and means for connecting said operating lever to the free end of the pivoted arm for imparting movement thereto upon the rocking of the operating lever whereby to break the hinged joint between the bracing arms.

1,350,219. SKIRT-HANGER. ROBERT GIBBS, Portland, Oreg. Filed Jan. 16, 1920. Serial No. 351,833. 1 Claim. (Cl. 211—13.)



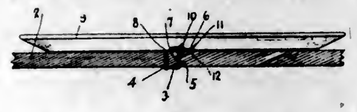
A hanger of the class described comprising a pair of metal channel members hinged together, each member having a longitudinal slot therein, blocks having portions sliding in the channels in said members, thumb bolts carried by the blocks and passing through the slots, a suspension chain having each end connected with each channel member at one side edge thereof adjacent the hinged end and resilient tips secured to the outer ends of the block.

1,350,220. LAND-TORPEDO. EDWARD GRAHAM, Saginaw, Mich. Filed Nov. 17, 1917. Serial No. 202,589. 1 Claim. (Cl. 102—2.)



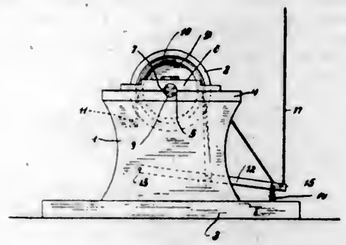
In combination with a land torpedo, comprising a wheeled truck having propelling means and having a torpedo supported by and secured longitudinally thereon; of a fender comprising a curved member having its lower end secured centrally to the front of the truck and disposed upwardly of the torpedo and terminating in a line with the center and above the torpedo, and angle brace means between the side of the fender member, and the front of the truck.

1,350,221. COMBINED BRACKET AND CLAMP. ASA ALLAN H. GRIFFIN, Butler, Pa. Filed Dec. 19, 1919. Serial No. 345,967. 2 Claims. (Cl. 156—23.)



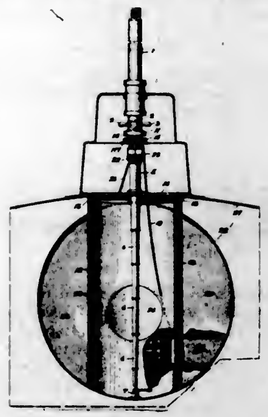
2. In a device for the purpose set forth, two telescopic elements providing a support, binding means therebetween for retaining the elements adjusted, a channeled head having its sides provided with ears which are pivotally secured to the outer end of one of the elements, a lever having side members which are pivotally secured to the outer end of the other element, a channeled head having central ears pivotally secured to the outer end of the lever, and a compressible element on the outer face of each of the heads.

1,350,222. CUFF-LINK. JAMES L. HALL, Beaumont, Tex., assignor of one per cent. to Van O. Holland, Clay, Tex., one per cent. to Ocie Hunt, Somerville, Tex., and two per cent. to Edward T. Hall, Atlanta, Ga. Filed Sept. 23, 1919. Serial No. 325,741. 1 Claim. (Cl. 24—102.)



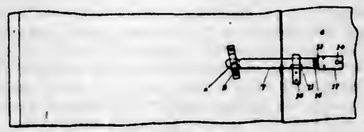
A cuff link having head elements provided respectively with an arcuate stem and a revoluble nut for engaging a threaded extremity of the stem, said elements having arms disposed radially of the stem and permanently jointed in concentric relation therewith.

1,350,223. PLATE-FASTENING DEVICE. EDDIE H. HAMILTON, Washington, D. C. Filed Nov. 17, 1919. Serial No. 338,755. 2 Claims. (Cl. 65—54.)



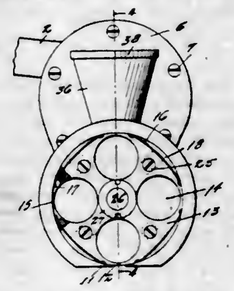
2. In a means for holding a plate that has its lower edge provided with opposed outstanding slotted eyes on a support, comprising a clamp formed from spring material to include an angle base which is attached to and which exerts a tension against the support, an arm arising from one end of the base, an angle beak on the outer end of the arm, and said beaks designed to be received in the slotted eyes of the plates.

1,350,224. SUNKEN-BOAT DETECTOR. EARL G. HAUN, Marion, Ind. Filed Nov. 24, 1919. Serial No. 340,325. 1 Claim. (Cl. 9—9.)



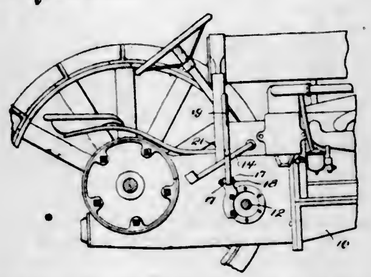
Means for indicating the position of a sunken ship comprising a winch located on the ship, a float, a cable connecting the float with the winch and means for preventing further unwinding of the cable from the winch when the boat reaches the bottom, said means consisting of a brake, spring means for holding the brake in braking position and means for releasing the brake by the pull of the cable as the float passes to the surface.

1,350,225. SIGHTING INSTRUMENT. MARLEY F. HAY, The Hague, Netherlands. Filed Dec. 12, 1917. Serial No. 206,772. 19 Claims. (Cl. 114—16.)



1. The combination, with a periscopic sighting instrument; of a rising and falling carrier whereon said instrument is rotatably mounted to be raised and lowered; said carrier constituting a bodily support for the observer using the instrument and a housing for the carrier in which the latter is movable.

1,350,226. DOOR-LOCKING MEANS. CHARLES W. HOVIS, Clintonville, Pa. Filed Aug. 12, 1919. Serial No. 317,045. 1 Claim. (Cl. 70—14.)

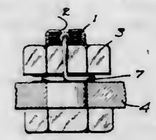


A lock for doors, comprising a latch bar positioned to be swung across the edge of the door, and having a keeper recess in its free ends, a pivotal support for the latch bar, said support being key-operated, and a latch bolt opposite the free end of the latch bar when the latter is in locking position, said bolt being adapted to enter the keeper recess of the latch bar for locking the same.

1,350,227. ROTARY RAZOR. SIDNEY P. JONES, Waco, Tex. Filed Sept. 17, 1918. Serial No. 254,418. 17 Claims. (Cl. 30—12.)

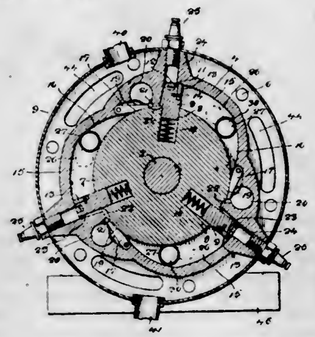
1. In a rotary razor, an elongated handle member, a shaving guard mounted on the handle member, a rotating cylindrical member coöperating with the guard, and cutting blades having their edges exposed on the periphery of the cylindrical member, lather accumulating pockets in the cylindrical member, said cylindrical member having openings between the cutting edges of the blades communicating with the latter accumulating pockets.

1,350,228. PEDAL-HOLDER. ARCHIE J. LEAR, Rago, Kans. Filed Mar. 9, 1920. Serial No. 364,577. 1 Claim. (Cl. 74—81.)



In a tractor, the combination with a motor driven shaft, clutch means between the motor and shaft, and a pedal for operating said clutch to release the shaft from the motor, of a plate secured to the clutch casing and having a bifurcated upper end, a lever having one end thereof received in the bifurcated end of the plate, a removable pivot connecting the lever to the plate, means on the lever engaging with the plate for sustaining the same against swinging beyond the vertical in one direction only, and a curved finger on the lever arranged to engage with the pedal for locking the same in clutch releasing position.

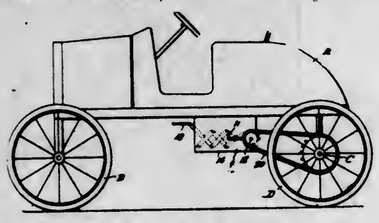
1,350,229. IRRIGATION-TILE. CHARLES O. LEE, Modesto, Calif. Filed Jan. 17, 1920. Serial No. 352,045. 3 Claims. (Cl. 61—13.)



1. A tile of the class described having an inwardly extending wedge-shaped projection formed by converging portions of its wall, said projection forming a recess between its walls and having openings in its inner end which communicate with said recess.

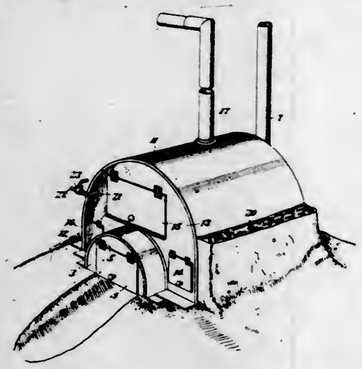
1,350,230. NUT-LOCK. SAMUEL H. MCCAIN, Jr., San Francisco, Calif. Filed Mar. 25, 1920. Serial No. 368,544. 1 Claim. (Cl. 151—29.)

A nut lock comprising a pair of overlying wings forming a washer, said wings having an eyelet formed at the center to receive a bolt and a wire surrounding the eyelet and having its ends extending from the washer.



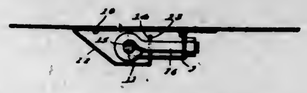
1,350,231. ROTARY MOTOR. WILLIAM L. MCFARLAND, Fairfield, Ill. Filed May 8, 1918. Serial No. 233,271. 6 Claims. (Cl. 123—16.)

1. In a rotary engine, the combination of a rotary engine shaft, a rotor fast thereon and having a plurality of vanes each movable in a substantially radial direction, and a non-rotary rotor casing formed with a plurality of internal combustion chambers elongated in a circumferential direction, and also having internal com-



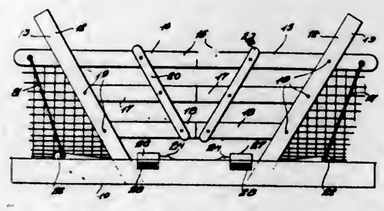
pression chambers which are cut off from communication with the respective combustion chambers during the major portion of the rotative movement of the rotor, the casing also having intake and exhaust ports in direct communication with said combustion chambers, the rotor having ports in its periphery which intermittently place the compression and combustion chambers in communication.

1,350,232. TOY VEHICLE. WILLIAM MOIR, Chicago, Ill. Filed Dec. 30, 1919. Serial No. 348,285. 2 Claims. (Cl. 208—38.)



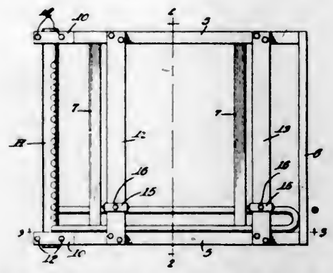
1. In a toy vehicle including a body, front wheels therefor, a rear axle and wheels thereon, a drive mechanism comprising a pair of plates secured beneath the body and having longitudinal slots, a crank shaft journaled through said plates and formed with crank portions, a chain and sprocket connection between said crank shaft and the rear axle, a lazy tongs disposed against each plate and having one forward link pivoted thereon and the other forward link provided with a pedal, means connecting the rear ends of each of the lazy tongs, said connecting means being slidable within said slot, and a pitman connected with said slidable connection and with the adjacent crank portion of the crank shaft.

1,350,233. FURNACE. FRANCIS C. NICHOLAS, Boston, Mass. Filed Aug. 30, 1917. Serial No. 188,881. 1 Claim. (Cl. 126—29.)



A furnace of the class described comprising an inner shell of semi-circular shape in cross section and provided with bottom flanges at its sides, end members closing the ends of said shell, a door in one of said end members, a chimney connected with the other end, a second shell of inverted U-shape in cross section of less length than the first shell, end members for said second shell, having semi-circular openings therein for engaging the projecting ends of the first shell, a door in one of said end members of the second shell, a chimney connected with the top of the second shell and flanges on the lower edges of the second shell and on the lower edges of the end members thereof, said last mentioned flanges engaging the flanges of the first shell.

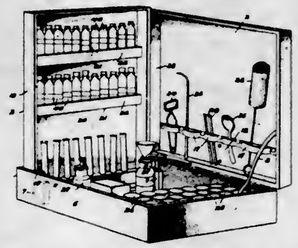
1,350,234. CHAIN-PROTECTOR. WILL NORAS, Ellendale, N. D. Filed Sept. 22, 1919. Serial No. 325,289. 2 Claims. (Cl. 280—153.)



1. The combination with a vehicle fender including a supporting arm, a clamping plate engageable over said arm and an eye-bolt carried by said plate and engaging said arm, of a protector engageable with the eye-bolt and overlying the clamping plate, said protector including substantially parallel long and short walls, the former bearing upon the fender to provide a firm engaging base and an inclined wall connecting the parallel walls.

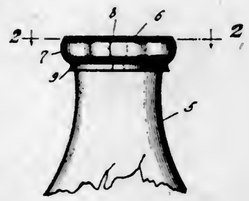
1,350,235. GATE. JAMES H. PICKETT, Queen, N. Mex. Filed Sept. 15, 1919. Serial No. 323,813. 2 Claims. (Cl. 39—18.)

1. A gate of the character described comprising a supporting frame disposed within a roadway, a pair of upwardly diverging posts secured to said frame at the intermediate portion thereof, a pair of similar gate sections adapted to bridge the space between said posts and each including a plurality of normally horizontally disposed bars individually pivotally connected with said posts and diagonally extending strips connecting said bars, one bar of each gate section projecting outwardly beyond the associated post, a pair of transversely disposed levers pivotally mounted in said frame and disposed in overlapping relation with their pivot points at opposite sides of the frame, links pivotally connected with the ends of said levers and with the projecting ends of said gate bars, and treadle members disposed upon opposite sides of the gate sections and bearing upon the intermediate portions of said levers.



1,350,236. BOILER-UNIT-ASSEMBLING RACK. JOHN PIERCE, Jr., South Norwalk, Conn., assignor of one-half to Dickinson S. Cummings, Stamford, Conn. Original application filed Feb. 13, 1920, Serial No. 358,513. Divided and this application filed June 3, 1920. Serial No. 386,394. 6 Claims. (Cl. 29—89.)

1. In a work holder, a frame, means carried by the frame for supporting an element at one end of the frame,

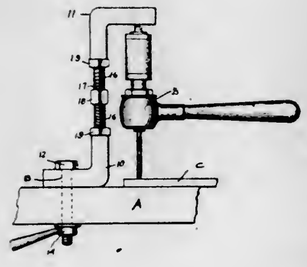


pairs of bars secured to the opposite faces of the frame and between which, elements, each including a pair of legs to be assembled with the first mentioned element, are arranged, and vertically adjustable blocks mounted between each pair of bars and adapted to engage both legs of the element to clamp the same in proper position with respect to the first mentioned element while said legs are being secured thereto.

1,350,237. EDUCATIONAL DEVICE. HAROLD M. PORTER, Hagerstown, Md., assignor to The Porter Chemical Company, a Corporation of Maryland. Filed Dec. 3, 1919. Serial No. 342,054. 20 Claims. (Cl. 206—16.)

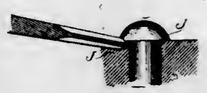
9. In a device of the character described, a rectangular box provided with a cover hinged thereto, and means for preventing the cover from swinging outward beyond an upright position, in combination with a tray, means to alternately support the tray in its horizontal position in the box or to secure it in a vertical position and adjacent to the under side of the box cover when swung into an upright position, whereby the tray serves to hold the cover in its upright position, the tray being of a length equal to the interior depth of the box body plus the height of the upturned cover.

1,350,238. BOTTLE-CAP. CLARA M. RICE, Aberdeen, S. D. Filed Apr. 26, 1920. Serial No. 376,718. 1 Claim. (Cl. 215—81.)



In a cover for bottles, a circular top, a curved depending flange having connection with the top throughout a portion of its length to provide spring arms, said spring arms adapted to overlap each other at the free ends thereof, and means forming a part of the spring arms to cam the same outwardly to cause the arms to grip the bottle to which the same is applied.

1,350,239. PROCESS OF PRODUCING COPPER-SULFATE SOLUTIONS FROM ORES. JAMES SINCLAIR ROSS, Westminster, London, England. Filed July 14, 1920. Serial No. 396,062. 1 Claim. (Cl. 23—13.)

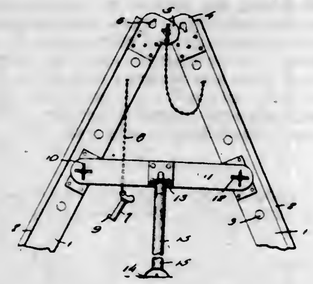


The process of producing copper sulfate solution directly from ores by treating unroasted copper carbonate ore with a dilute solution containing sulfuric acid at substantially below the boiling point, then bringing the resulting copper sulfate solution into contact with a further quantity of unroasted copper carbonate ore which has not been previously treated with acid, such second treatment being effected while the solution is maintained at substantially below its boiling point, and the treatment being continued until the solution becomes basic, subsequently heating the solution and maintaining it at near the boiling temperature, while subjecting the same to the direct action of air and steam, while in contact with solid basic copper compounds, and while maintaining the solution in a non-acid condition until the major part of the extraneous substance are precipitated and separating such precipitated extraneous substances from the boiled solution, substantially as described.

1,350,240. TOOL-CLAMP. WILLIAM L. ROSS, Jersey City, N. J. Filed Sept. 11, 1917. Serial No. 190,829. 1 Claim. (Cl. 77—59.)

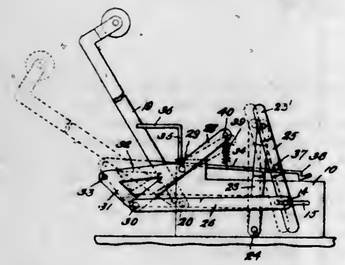
The combination with a bench or like support; of means thereon for holding and advancing a drill to its work, comprising an angle foot member and an angle head member which is disposed thereabove, pivot means securing the foot member to the bench or support, binding means for said pivot means, the vertical legs of the respective head and foot members having bores one provided with right hand threads and the other with left hand threads, a bolt member having a central manipulating portion and a shank provided with right and left hand threads respectively from said manipulating portion and received in and engaging with the right and left hand threads in the legs of the said foot and head members, and lock nuts on the bolt contacting with the confronting ends of the said legs.

1,350,241. COLD-CHISEL. WILLIAM T. ROUTH, Helena, Ga. Filed June 9, 1919. Serial No. 302,642. 2 Claims. (Cl. 81—13.)



1. A cold chisel, comprising a body, and a blade, the lower portion of the blade having a cutting edge, and a plurality of wedge-shaped cutting ridges spaced apart and rising from the said cutting edge, on both sides of the said edge.

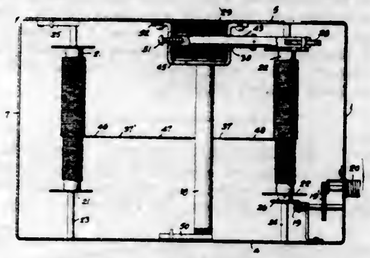
1,350,242. LADDER CONSTRUCTION. JULES L. SAGET, New Orleans, La. Filed Mar. 16, 1918. Serial No. 222,944. 1 Claim. (Cl. 228—33.)



In a ladder, the combination of ladder sections hinged at their upper ends, turn keys arranged on the sides of the sections, links having slots formed on their ends that

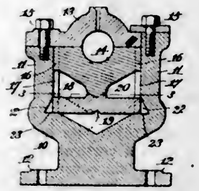
receive the keys of the sections and also having members secured to the center of the links, and ears formed on the

lower end of said members and having apertures therein, and laterally extending props having ends adapted to enter said apertures.



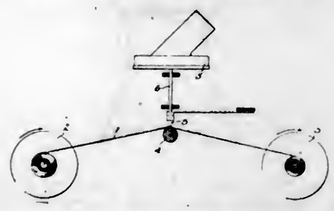
1,350,243. TROLLEY-CONTROL. MIKE SHUKITES, Jr., Johnston City, Ill. Filed Feb. 27, 1918. Serial No. 219,476. 2 Claims. (Cl. 191—88.)

1. A trolley pole control and support including a casing, a trolley pole pivotally mounted thereon, a pair of spaced levers pivotally mounted at points intermediate their ends upon the casing, a bolt connecting adjacent ends of said levers to afford a support for the trolley pole in its lowered position, a coil spring within the casing having one end connected to the trolley pole, a block slidably mounted in the casing to which the other end of the spring is secured, links connecting said levers with the block, a pair of arms connected to the back, a transverse bolt carried by said arms, a bell crank member pivotally mounted on the casing to engage the bolt to retain the block in shifted position to tension the spring, and a coil spring connecting said arm with the levers, the bell crank member being engageable by the trolley pole when suddenly moved upward to release the bolt whereby the block may return to normal position to render the spring effective.



1,350,244. VEHICLE-ROUTE-INDICATOR DEVICE. EDWARD SIEGEL, Elmhurst, N. Y. Filed Oct. 30, 1919. Serial No. 334,479. 5 Claims. (Cl. 40—42.)

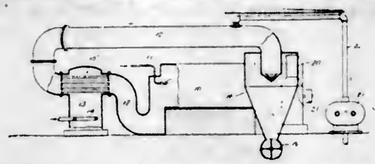
1. A route indicator comprising a continuously movable member, a master control device actuated thereby including a plurality of spools rotatably mounted, and an element wound thereon, the said element having insulated portions distributed throughout the length thereof, a direction indicator including a tape having indicia bearing portions, and spools therefor, a driving means for the direction indicating means, and an electroresponsive clutch



means governed by the master control mechanism, adapted to be shifted thereby for intermittently actuating the tape to visualize the indicia bearing portions successively.

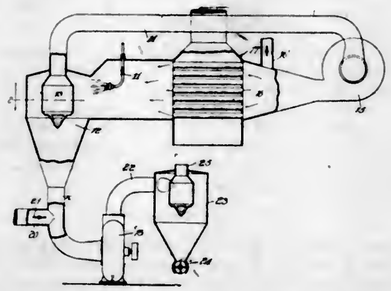
1,350,245. BEARING. JOSEPH F. STACHOWSKI, New York, N. Y. Filed Nov. 28, 1919. Serial No. 341,105. 3 Claims. (Cl. 64—10.)

2. A bearing including a body member, a plurality of parts recessed to form a shaft hole supported by said body member, one of said parts being arranged for sliding movement, and a separate element, weakened to a predetermined strength by its being checked, supporting said last mentioned part.



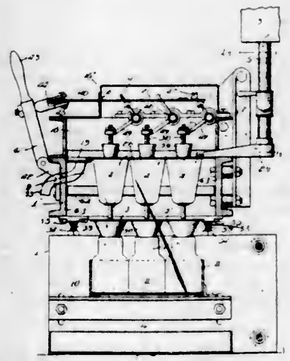
1,350,246. SOUND RECORDER AND REPRODUCER. EUGEN STEIGER, Zurich, Switzerland. Filed July 15, 1919. Serial No. 311,058. 8 Claims. (Cl. 274—46.)

8. A process of recording sound, which consists in causing a structureless, twistless thread to unwind from one spool and, at the same time, wind on another spool, impressing a record of sound vibrations on that portion of the thread which is between the two spools, then winding the thread back upon the spool from which it was taken originally, thereby bringing it into condition to be operated for purposes of reproducing.



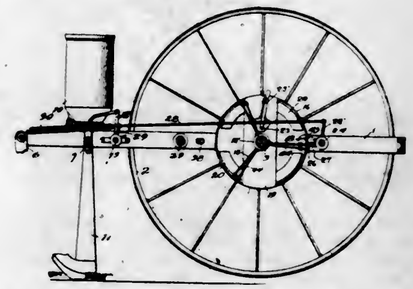
1,350,247. PROCESS FOR DESICCATING FLUID SUBSTANCES. RICHARD W. G. STUTZKE, Chicago, Ill., assignor to Crown Maltose Company, Chicago, Ill., a Corporation of Illinois. Filed June 8, 1916. Serial No. 102,441. 2 Claims. (Cl. 127—9.)

2. The process of evaporating liquids, which consists in spraying the liquid into an atmosphere entirely of its own vapor, circulating said atmosphere and super-heating it during its circulation, and exhausting the evaporated



liquid from the circulating system at such a rate as to maintain a sub-atmospheric pressure therein, and collecting the desiccated solids.

1,350,248. ART OF DESICCATING MILK AND THE LIKE. RICHARD W. G. STUTZKE, Chicago, Ill., assignor to The G. A. Buhl Company, Chicago, Ill., a Corporation of Illinois. Filed July 9, 1917. Serial No. 179,490. 8 Claims. (Cl. 127—9.)



6. The method of desiccating liquids containing albuminous substances such as milk, which consists in subjecting said substances in finely divided form to the action of a circulating current of superheated water-vapor, preliminarily collecting the resultant dried solids within the circulatory system, venting the collected solids from the system in suspension in a discharging current of superheated water-vapor, admixing said current with air, and finally collecting the suspended solids from the admixed current.

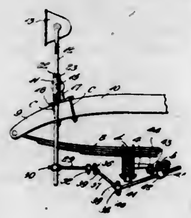
1,350,249. BOTTLING-MACHINE. AXEL E. SWANSON, Chicago, Ill. Filed Jan. 31, 1919. Serial No. 274,306. 2 Claims. (Cl. 226—70.)

1. A receptacle filling machine, adapted for the rapid handling of liquids of more or less viscid character such as vanishes, paints and the like, comprising in combination a frame, a large master gage, a plurality of relatively small unit gages designed and arranged to serve one for each receptacle to be filled, a broad manifold connecting said master gage and unit gages for transmitting and distributing the successive contents of the former to the latter, the bottom of said manifold being broad and provided with horizontal rows of outlets, and means for controlling the temperature and corresponding fluidity of the liquid as it passes through said machine.

1,350,250. MECHANICAL MOVEMENT. JOHN R. WARREN, Marshalltown, Iowa. Filed Feb. 13, 1917. Serial No. 148,316. 3 Claims. (Cl. 74—14.)

1. In an apparatus of the class described, a rotating member, a plurality of radially disposed fingers carried by said rotating member, a supplemental finger associated with each of the radial fingers and swinging relative thereto, means for adjusting the supplemental fingers at their free ends toward and away from the radial fingers, a support adjacent the rotating member, a transmitting arm carried by the supporting member, and a trip carried by the supporting member and extending into the paths of the supplemental fingers.

1,350,251. TRICK POCKET-KNIFE. ROBERT ARMOUR, Providence, R. I. Filed July 23, 1919. Serial No. 312,744. 2 Claims. (Cl. 46—41.)



1. A trick pocket knife having a two part handle, extensions on the handle parts, an intermediate blade, a pivot pin through the handle extensions and the blade, concealed means for locking the blade in the handle and deceptive means rotatably secured to the pivot pin, whereby the deceptive means has the appearance of the means for unlocking the knife.

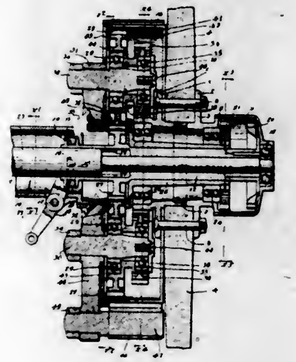
1,350,252. DIRIGIBLE HEADLIGHT. GEORGE H. BUDD, Salt Lake City, Utah. Filed Apr. 15, 1919. Serial No. 290,209. 1 Claim. (Cl. 240—62.)

A headlight steering attachment for automobiles including a vertical bearing, an upper light-carrying shaft

section having its lower end rotatably received in said bearing, a shoulder on said shaft section disposed at the upper end of the bearing, the lower end of said shaft section being reduced and extending below the bearing,

a nut threaded on said reduced end, said nut and said shoulder preventing sliding of said shaft section in said bearing, and a lower tubular light-turning shaft section receiving said reduced end of said upper section and secured thereto.

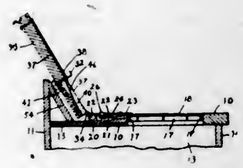
1,350,253. REPAIR-CLAMP FOR AUTOMOBILE-RUNNING-BOARD TRUSS-RODS. GEORGE K. CAVINESS, Seymour, Iowa. Filed Jan. 2, 1920. Serial No. 348,948. 3 Claims. (Cl. 280—163.)



1. The combination with a running board truss rod and supporting bracket, of a repair clamp for the truss rod comprising a neck portion and a head portion and divided longitudinally to embrace the truss rod, the truss-receiving lug of the bracket and the lock nuts on the truss rod, the repair clamp having matching means for the reception of a clamp bolt to hold the clamp in housing relation to the nut end of the truss rod and the body of the truss rod on opposite sides of a break in the truss rod.

1,350,254. ABSOLUTE ALCOHOL AND THE PROCESS OF MAKING THE SAME. GEORGE BELL FRANKFORTER, Minneapolis, Minn. Filed Dec. 20, 1918. Serial No. 267,678. 6 Claims. (Cl. 195—6.) Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

1. A process for the preparation of absolute alcohol consisting in treating common commercial alcohol with a mixture of potassium carbonate and potassium fluorid so as to remove some of the water, decanting the alcohol, then heating in an autoclave retort under a pressure of approximately 55 pounds per square inch with quicklime until all but a trace of water has been removed and finally distilling and passing the vapor formed by distillation over calcium carbid whereby the last trace of water is removed.

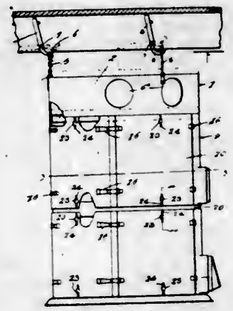


1,350,255. VARIABLE-SPEED DEVICE. ARNOLD H. JESSEN, Los Angeles, Calif., assignor to Big Four Wheel Company, Los Angeles, Calif. Filed Dec. 26, 1918, Serial No. 268,325. Renewed July 14, 1920. Serial No. 396,331. 10 Claims. (Cl. 74—58.)

1. In a variable speed device, the combination with a vehicle axle and a housing therefor, of a spindle fastened to the axle housing and having an opening, a wheel journaled on the spindle, a gear fastened to the wheel, reduction gearing to drive said gear extending through the opening in the spindle, clutch means between the wheel

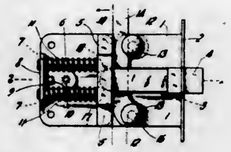
and axle, and means either to connect the reduction gearing with the axle inside of the spindle or to throw the clutch means into engagement.

1,350,256. PHOTOGRAPHIC-PRINTING MACHINE. ALFRED E. KAISER, Seattle, Wash., assignor to Specialty Manufacturing Company, Seattle, Wash., a Corporation of Washington. Filed Nov. 19, 1917, Serial No. 202,868. Renewed June 28, 1920. Serial No. 392,513. 5 Claims. (Cl. 95—73.)



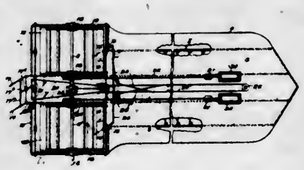
4. In a device of the class described, the combination with an apertured support having a transparent plate in the aperture thereof and means to clamp a photographic negative on said plate, of a platen board hinged to said support and having a spring pressed means to normally clamp a sheet of sensitized paper against the engaging face thereof, and a bumper carried by the support engageable by the paper clamping means when the latter is swung to an inoperative position away from the transparent plate and negative to automatically release said paper clamping means from the paper and the paper from the platen board, said paper clamping means affording a support for the paper at all times when the platen board is moving from operative to inoperative position.

1,350,257. SECTIONAL CASING FOR FURNACES. WILLIAM F. KASBOHM, Vanwert, Ohio. Filed Feb. 16, 1916. Serial No. 78,655. 4 Claims. (Cl. 126—114.)



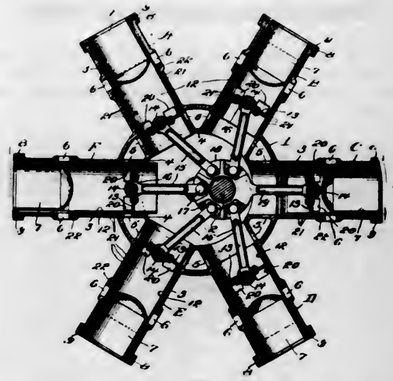
1. The combination with a furnace casing comprising a body consisting of a plurality of independently removable

sections, and a removable hood for said body, of means for elevating and suspending the hood so as to permit



said sections of the body to be removed independently of said hood.

1,350,258. LATCH FOR DOORS, GATES, AND THE LIKE. HENRY RALPH KELLERMAN, Sydney, New South Wales, Australia, assignor of one-half to Henry Petrie Fletcher, Sydney, New South Wales, Australia. Filed Jan. 28, 1919. Serial No. 273,632. 4 Claims. (Cl. 292—173.)



1. A reversible lock for vehicle doors having a base plate, guides on the opposite ends of the base plate, a latch bolt mounted in said guides, a spring for actuating the latch bolt, alternative fulcrum pins fixed in the base plate and positioned on opposite sides of the latch bolt, a detachable and reversible lever for releasing the latch bolt and adapted for insertion into either side of the lock for pivotal engagement with one of said pins and having its motion limited by the opposite pin.

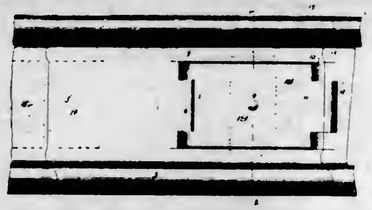
1,350,259. MARINE VESSEL. WILLIAM P. LAY, Gadsden, Ala. Original application filed July 28, 1917, Serial No. 183,253. Divided and this application filed Mar. 26, 1918. Serial No. 224,812. 1 Claim. (Cl. 115—50.)

In combination with the hull of a vessel having its stern recessed inwardly from the sheer planes in the sides to form wheel pockets, paddle wheels arranged within said pockets, independent shafts for each of said wheels, said shafts being axially alined and independent gear wheels upon the inner ends of said shafts, a power plant, lead shafts extending from the power plant to a point directly beneath the gears and the ends of the wheel shafts, worm gears carried by the ends of the lead shafts for engagement with the gears on the wheel shafts, reversing mechanism connected with the lead shafts and disposed between the power plant and the outer ends of said shafts and a clutch mechanism connecting the inner ends of the wheel shafts whereby said shafts are positively connected together so that they can be rotated unidirectly forward or backward.

1,350,260. TWO-CYCLE ROTARY-CYLINDER INTERNAL-COMBUSTION ENGINE. ALBERT R. LONG, Ballston, Va. Filed Jan. 8, 1920. Serial No. 350,098. 7 Claims. (Cl. 123—44.)

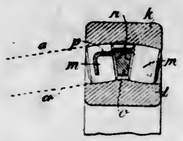
1. A rotary multiple cylinder engine comprising a crank case and cylinders, said cylinders being radially disposed and having their inner portions extended into the engine crank case and formed with ports, the outer portions having intake and exhaust ports therein and sleeve valve pistons slidable in the cylinders for alternately controlling said intake and exhaust ports and having ports therein adapted to intermittently register with said first ports for supplying a scavenging current to the pistons and cylinders.

1,350,261. CORN-GRINDER. FRED M. LYON, Pontiac, Ill. Filed Oct. 19, 1916. Serial No. 126,604. 3 Claims. (Cl. 83—13.)



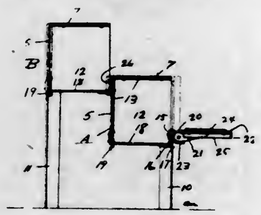
1. A cast metal grinding element for grinding soft grain and cobs, having a grinding surface inclined to the axis of the element, the grinding surface being provided with relatively large spaced inclined ridges decreasing in depth from the feed toward the discharge ends, the surface of the grinding element between said ridges being grooved to form lesser ridges, all the ridges having sharp cutting edges, and the operative surface of the element, including all the ridges and depressed surfaces, being ground and polished throughout.

1,350,262. COLLAPSIBLE AUTOMOBILE-RIM. LILLIAN BERTHA OLNEY, San Francisco, Calif., assignor of one-half to Foster Weeks and Frank Berry, San Francisco, Calif. Filed Sept. 13, 1919. Serial No. 323,562. 2 Claims. (Cl. 301—32.)



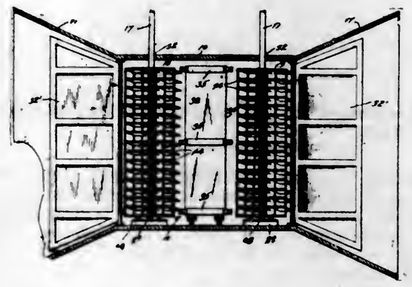
1. A collapsible automobile rim including a flanged major section and a flanged minor section hinged at one

end of the major section, the minor section recessed back from one end, and a plate having one end hinged at the inner end of the recess and the other end hinged to one



end of the major section, said plate of a length to cause the flanges at the end of the minor section to abut the flanges at the end of the major section when the rim is expanded.

1,350,263. ROLLER-BEARING. NILS ARVID PALMGREN, Gottenborg, Sweden, assignor to Aktiebolaget Svenska Kullagerfabriken, Gottenborg, Sweden, a Corporation of Sweden. Filed Dec. 16, 1919. Serial No. 345,321. 5 Claims. (Cl. 64—62.)



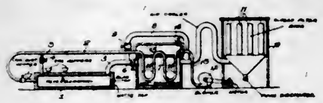
2. In a roller bearing, the combination of an inner race, an outer race having a spherical rolling surface for the rollers, and two rows of rollers between said races, the axes of the rollers of the respective rows converging in cones having their axes on the bearing axis at opposite sides of the bearing, each of said rollers having an outwardly curved rolling surface of such shape that it bears against at least one of the rolling surfaces of said races along the greater portion of the length of the roller and that the tangents to the roller in the axial plane of the bearing at the points through which the resultants of forces acting on the roller from the rolling surfaces of said races pass are parallel so that the roller rolls substantially as a cylinder.

1,350,264. PORTABLE NEST STRUCTURE. ELMER M. PRATT and ALBERT H. ROCKEFELLER, Macksville, Kans.; said Pratt assignor to said Rockefeller. Filed June 25, 1919. Serial No. 306,710. 1 Claim. (Cl. 119—45.)

A portable nest structure of the character described comprising superposed bodies, one being arranged forwardly of the other in a step by step fashion, each body being formed from sheet metal having an open front and bottom, a support for the bodies having angle irons forming corner legs, partitions arranged within each body for dividing the same into independent compartments, a front strip secured to the lowermost body at its open front, ears formed on the partitions in the lowermost body and fastened to the front strip, a spacer strip located between the bodies and having bends for engaging the partitions in the upper most body, a running board swingingly supported on the front strip and adapted to be moved to a position for closing the lowermost body and also to be moved to another position to lie in a horizontal plane, a door section hinged to each body at its bottom, and means for latching the door sections closed.

1,350,265. HYDRAULIC MOTOR. JOSEPH GABRIEL RECUERO, New York, N. Y. Filed June 30, 1919. Serial No. 307,548. 2 Claims. (Cl. 170—101.)

1. A hydraulic motor comprising a conduit, driven wheels operatively mounted in said conduit, a shiftable deflector arranged in the conduit between the wheels, said deflector being movable at right angles to the line of movement of water passing through the conduit and serving to automatically expose one of the wheels to the active force of water passing through the conduit and to shield the remaining part of said wheel from the action of water passing through the conduit, tide actuated deflectors mounted in the conduit at points in advance of said wheels, said shiftable deflector including an under carriage, and rails mounted upon the base of the conduit for supporting said under carriage.



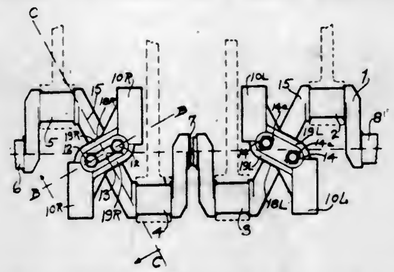
1,350,266. SEAT-SUPPORT ON AIRCRAFT. ALLIOTT VERDON ROE, Hamble, Southampton, England. Filed Oct. 31, 1918. Serial No. 260,517. 4 Claims. (Cl. 344—30.)

1. In an aeroplane, the combination with a fuselage having a framework comprising longeron, cross strut and tie members, of a series of transverse joists, a pair of longitudinal beams secured to said joists, a seat, means for attaching the said seat to said beams, a tension wire attached at each side to said seat and passing under said beams, and a tension adjusting member connected in said wire.

1,350,267. HEAT-REGENERATOR. LEWIS BAILEY SKINNER, Denver, Colo. Filed Feb. 10, 1919. Serial No. 276,126. 5 Claims. (Cl. 263—14.)

1. Metallurgical apparatus comprising the combination, with a metallurgical furnace, of a heat regenerator having passages for conducting to and for conducting from said furnace, respectively, said passages being defined and

separated by a metal wall, and the wall surface next the furnace gases being provided with an adherent protective coating of condenced metalliferous fume.

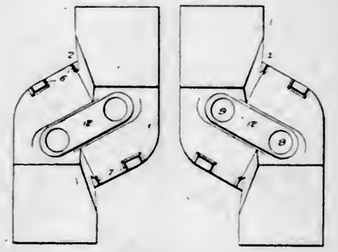


1,350,268. PROCESS OF PROTECTING METAL PIPES EXPOSED TO HIGH TEMPERATURES. LEWIS B. SKINNER, Denver, Colo. Filed Feb. 11, 1918, Serial No. 216,503. Renewed July 9, 1920. Serial No. 395,172. 6 Claims. (Cl. 91—70.)

1. In the art of heat exchange by regeneration, a process of protecting the surfaces of metallic conduits exposed to the heating gases which consists in depositing on said surfaces a coating of zinc oxid bearing fume from said heating gases.

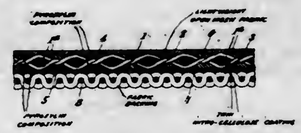
3. In the art of heat exchange by regeneration of heat contained in metallurgcial gases, a process of protecting the surfaces of metallic conduits exposed to the heating gases which consists in depositing on said surfaces a coating of fume from said heating gases, said coating being composed of compounds of volatile metallic constituents of the ore under treatment.

6. In the art of heat exchange by regeneration, the process which comprises preliminarily passing combustion gases carrying zinciferous fume from a reverberatory furnace into contact with iron regenerator pipes, while controlling the heat in such manner as to substantially prevent burning said pipes, until an adherent coating of fume is condensed thereon, and then operating the furnace in such manner that the gases passing in contact with the coated pipes are at a temperature above about 1000° C., while passing air for combustion through said pipes.



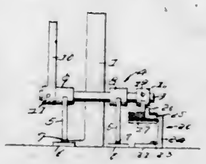
1,350,269. DETACHABLE COUNTERBALANCE FOR MOTOR CRANK-SHAFTS. ROLLAND S. TROTT, Denver, Colo. Filed May 2, 1919. Serial No. 294,236. 9 Claims. (Cl. 74—5.)

8. The combination with a crank shaft having two arms, and a counterbalance supported by the latter, said counterbalance composed of two members adapted to cross the point of support, each of which members has a weight at its opposite ends.



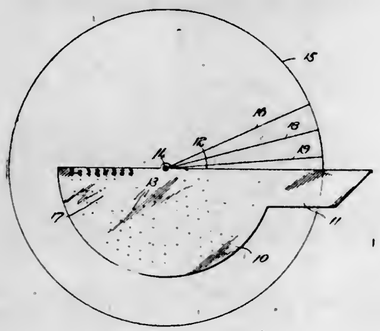
1,350,270. DETACHABLE COUNTERBALANCE-WEIGHT FOR MOTOR CRANK-SHAFTS. ROLLAND S. TROTT, Denver, Colo. Filed Sept. 24, 1919. Serial No. 325,864. 9 Claims. (Cl. 74—5.)

1. A crankshaft counterbalance including two members having weighted outer ends and an oblique center connecting the weighted ends, the inner faces of the oblique centers provided with lugs between which the oblique arms of the crankshaft are received with the weighted ends of each member disposed on the opposite sides of the



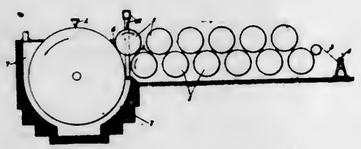
arms, bolts extending transversely of the centers of the two members for securing the counterbalances to the arms of the crank shaft.

1,350,271. METHOD OF FORMING ARTIFICIAL LEATHER AND THE PRODUCT THEREOF. CHARLES ELWOOD ARNOLD, Wilmington, Del., assignor to du Pont Fabrikoid Company, Wilmington, Del., a Corporation of Delaware. Filed Oct. 23, 1915. Serial No. 57,416. 38 Claims. (Cl. 154—2.)



1. The process which comprises embedding a light fabric in a coating composition, the fabric having previously had its diagonal stretch reduced by the application of a coating.

1,350,272. FOOT-OPERABLE IMPRESSION THROW-OFF. JOSEPH W. BERNET, New London, Conn. Filed Nov. 29, 1918. Serial No. 264,682. 1 Claim. (Cl. 74—81.)

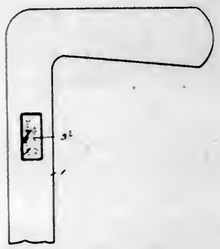


A foot actuable throwoff attachment for printing presses consisting of a rock shaft having connected therewith a link for attachment to the crank arm of the throwoff shaft and a contractile spring provided with a terminal sleeve for engagement with said throwoff shaft, a pedal carried by the rock shaft, means for supporting the rock shaft in convenient relation to the front of the machine, and a locking member mounted for movement into and out of the path of the pedal and consisting of a slotted base of which the slots are engaged by guide pins or bolts, a standard having an offset or shoulder for engagement with the pedal when the locking member is in the path of the latter, and a terminal upstanding projection at the extremity of said offset for engagement by the foot of the operator to move said member into and out of operative relation with the pedal.

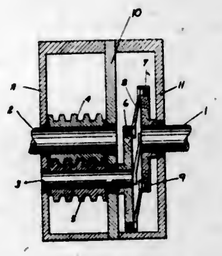
1,350,273. PROTRACTOR. BENJAMIN K. FISHER, St. Louis, Mo. Filed Mar. 24, 1917. Serial No. 157,084. 3 Claims. (Cl. 33—75.)

1. A protractor comprising a body having a ruling edge and a fixed axis of rotation about which it is adapted to be rotated over a surface to be marked, and through which body an indicated point fixed relatively to the surface to be marked can be observed, said body having a plurality of rows of division points indicated thereon and arranged concentric with the axis of rotation of the body, whereby the rotation of the body will bring the division points of a given row successively into coincidence with an indicated point fixed relatively to the surface to be marked to determine successive positions of the ruling edge.

1,350,274. PROCESS OF MAKING PHOTOGRAPHIC FILMS. EDMUND M. FLAHERTY, Parlin, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Dec. 5, 1918. Serial No. 265,324. 16 Claims. (Cl. 18—57.)



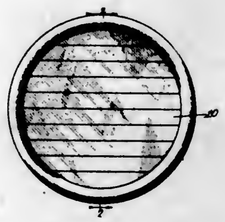
1. The process which comprises depositing a nitrocellulose film from a solution containing nitrocellulose, normal butyl acetate and a diluent.



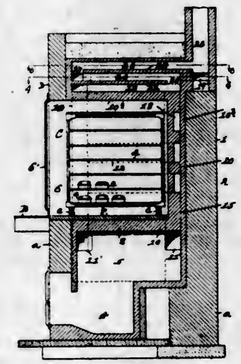
16. The process which comprises depositing a nitrocellulose film from a solution containing nitrocellulose, normal butyl acetate, normal butyl alcohol and camphor upon a revolving drum, continuously stripping the film from the drum, and then drying and winding the film into rolls.

1,350,275. IDENTIFICATION DEVICE. GOODMAN GAFINOWITZ, Burlington, Vt. Filed May 24, 1918. Serial No. 236,297. 1 Claim. (Cl. 40—10.)

The combination with a handle substantially circular in cross section having a polygonal recess provided in the side and end walls thereof with a continuous groove, of a card correspondingly shaped to the recess and fitted within the same inwardly relative to said groove, a transparent cover superposed upon the card to lie in a plane inwardly with respect to said groove, and a resilient split wire loop corresponding to the polygonal shape of the recess to prevent movement of the loop therein and of slightly greater size than the groove for snapping engagement therewith, the ends of the wire being turned outwardly of said groove toward the center of the recess and lying wholly within the plane of the external surface of the handle.

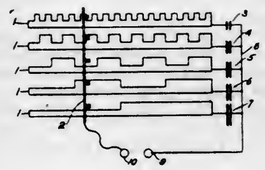


1,350,276. DIFFERENTIAL LOCK AND REVERSING MECHANISM. EDWIN J. GOULD, Oakland, Calif. Filed May 22, 1920. Serial No. 383,512. 4 Claims. (Cl. 74—99.)



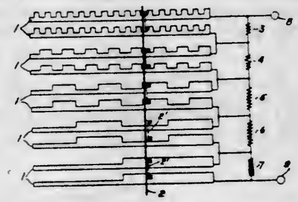
1. The combination in a reversing mechanism, of two intermeshing toothed wheels, two disk wheels operating in conjunction with said toothed wheels, pivoted connection rods securing said disk wheels each to the other, to impart a reverse action from one of said toothed wheels to one of said disk wheels and from thence to the other of said disk wheels substantially as set forth.

1,350,277. COVER FOR HEADLIGHTS. LARS O. GRONDAHL, Pittsburgh, Pa., and AUGUST H. PFUND, Baltimore, Md. Filed Oct. 29, 1917. Serial No. 198,983. 3 Claims. (Cl. 240—48.4.)



1. A cover for headlights comprising two mating pieces of glass fitted together, each of the mating surfaces being provided with prismatic projections fitted together, one set of faces of the prismatic projections sloping rearwardly at an angle with the vertical, the other set of faces sloping slightly downwardly and inwardly from the horizontal.

1,350,278. MANUFACTURE OF BAKED GOODS. AMOS F. HARTZELL, Knoxville borough, Pa., assignor to Standard Oven Company, Pittsburgh, Pa. Filed Nov. 27, 1918. Serial No. 264,318. 3 Claims. (Cl. 107—56.)



1. A baking oven comprising a furnace portion, a baking chamber above said furnace portion, means for heating the top of the baking chamber including a pair of horizontally spaced substantially horizontal flues, a second pair of horizontally spaced substantially horizontal flues, each of the last mentioned flues being vertically spaced with respect to one of the first mentioned flues and in communication therewith, flue means connecting the first mentioned pair of flues with the furnace portion, an outlet having the second pair of flues communicating therewith, the products of combustion being directed forwardly and then rearwardly with respect to the baking chamber through said pairs of flues, a third pair of vertically spaced substantially horizontal flues displaced between the other pair of flues, one of the same being in communication with said outlet, and a flue means connecting the other or said third pair of flues with the furnace portion, the third pair of flues being adapted to direct the products of combustion rearwardly and then forwardly with respect to the baking chamber.

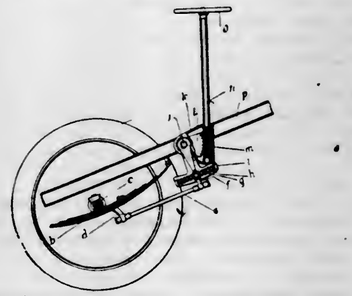
1,350,279. ADJUSTABLE CONDENSER. PAUL J. HOWE, Ridgewood, N. J., assignor to Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed Feb. 7, 1918. Serial No. 215,937. 4 Claims. (Cl. 250—41.)

1. The combination, with a series of five condensers of progressively varying values, of contact means and a single operating member therefor, said contact means comprising means adapted, under control of said operating member, to connect said condensers singly or in various combinations in parallel of twos, threes, fours, etc., to suitable terminals.

1,350,280. ADJUSTABLE RHEOSTAT. PAUL J. HOWE, Ridgewood, N. J., assignor to Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed Feb. 7, 1918. Serial No. 215,938. 4 Claims. (Cl. 219—48.)

4. The combination, with a series of three or more resistances of varying values, of a contact device therefor comprising a series of brushes, a contact member for each such brush, and a series of toothed cams, one for each such brush and adapted to move it into contact with, or to permit it to withdraw from, the corresponding contact member, said cams so toothed and said brushes and contact members so interconnected that by operation together of said cams said resistances may be connected to suitable terminals singly or in various series combinations.

1,350,281. PROCESS OF PRODUCING ARTIFICIAL LEATHER AND PRODUCT THEREOF. JAMES LYNAH, Newburgh, N. Y., assignor to du Pont Fabrikoid Company, Wilmington, Del., a Corporation of Delaware. Filed Oct. 23, 1915. Serial No. 57,418. 18 Claims. (Cl. 154—2.)

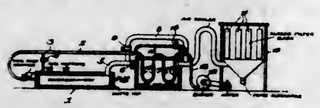


1. The process which comprises embedding an open mesh woven textile fabric in a coating composition, and then combining the same with a fabric backing.

1,350,282. [WITHDRAWN.]

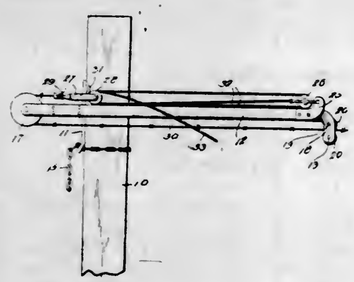
1,350,283. [WITHDRAWN.]

1,350,284. [WITHDRAWN.]



1,350,285. STEERING-CONTROLLER. PHILIP A. WEIGEL, Riverton, N. J., assignor of one-third to Edward Gumbel and one-third to Generoso Di Giacomo, Philadelphia, Pa. Filed Oct. 13, 1919. Serial No. 330,233. 2 Claims. (Cl. 74—79.)

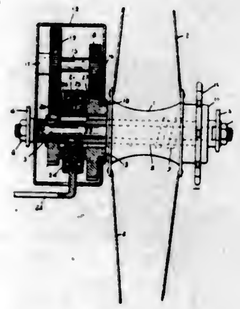
1. In a steering controller the combination with an automobile frame, of a stud shaft journaled thereon, a



worm-gear-segment and a relatively rigid T-lever mounted on said shaft, a ball lever mounted co-axially with said T-lever, a bar carried by and secured to lugs on said T-lever, a slotted opening in said ball lever, said bar passing through said opening, washers on said bar on either side of said ball lever, springs positioned around said bar and between said lugs and washers and means for actuating said segment, substantially as described.

1,350,286. PROCESS OF TREATING ORES. LEWIS BAILEY SKINNER, Denver, Colo. Continuation of application filed Feb. 11, 1918, Serial No. 216,594. This application filed Feb. 10, 1919. Serial No. 276,125. 20 Claims. (Cl. 75—17.)

1. The process of treating complex zinkiferous ores carrying precious metal values which comprises preparing a mixture of an oxidized ore of the character specified with an excess of carbonaceous reducing material, the mixture containing matte-forming constituents, charging said mixture on the hearth of a reverberatory furnace, firing the furnace with suitable fuel and smelting the charge at a furnace temperature of at least about 1200° C. to produce molten matte and supernatant slag shielded by a nonoxidizing atmosphere, conducting from the furnace fume resulting from reduction and volatilization of zinc from the charge, and continuing the heat treatment of said molten mass until slag tapped from the furnace contains not substantially more than about 6 per cent. zinc.



1,350,287. WIRE-STRETCHER. BENNIE NORTWED, Kellerton, Iowa. Filed Apr. 7, 1919. Serial No. 288,022. 1 Claim. (Cl. 254—65.)

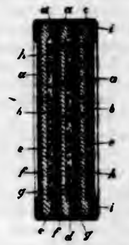
A device of the character described comprising a post engaging saddle plate, an arm mounted thereon at one side extending forwardly in the line of wire stretching a considerable distance, and extending in the opposite direction a much shorter distance, a wire keeper at the forward end of the arm, a wire guiding pulley at the rear end, and a wire take-up device mounted adjacent the rear end of the arm, positioned and constructed to engage and draw a wire forwardly from said pulley.

1,350,288. VARIABLE-SPEED DEVICE FOR CYCLES. ROBERT R. BARON, Indianapolis, Ind., assignor, by direct and mesne assignments, of one-half to George A. Hug, Indianapolis, Ind. Filed Aug. 4, 1919. Serial No. 315,212. 2 Claims. (Cl. 74—59.)

1. A variable speed device for cycles comprising an axle, a shaft thereon, a wheel, a gear fixed thereto, a gear loosely mounted on said shaft, reduction gears connecting said gears, a clutch interposed between said first mentioned gears and keyed to said shaft to allow of longitudinal motion of the same, means for shifting said clutch, a sprocket mounted in proximity to said wheel, said sprocket being operatively connected to said shaft.

2. A variable speed device for cycles comprising an axle, a hollow shaft surrounding said axle, a wheel mounted on said hollow shaft, a gear fixed to said wheel, another gear loosely mounted on said hollow shaft, reduction gears connecting said two gears, a clutch-part interposed between said gears and keyed to said hollow shaft, means for sliding said clutch-part longitudinally on said hollow shaft to engage either one of said gears or stand between them free of engagement with either, and means for driving said hollow shaft, substantially as set forth.

1,350,289. STRUCTURE. THOMAS EDGAR RICHARDS, London, England. Filed Sept. 4, 1918, Serial No. 252,649. Renewed July 10, 1920. Serial No. 395,380. 13 Claims. (Cl. 20—1.)



13. In a portable and knockdown hangar for aeroplanes, in combination, a series of triangular rafter trusses supported at their rear ends and extending forward and obliquely upward, a ridge member uniting said trusses, purlins uniting said trusses at their front and rear ends, said trusses having a vertical member arranged to come directly under the ridge member, means for supporting said trusses beneath said vertical members, said trusses extending forward from said vertical members as cantalivers, and interfittings whereby the whole may be knocked down for easy transportation.

REISSUES.

14,929. DRY BATTERY. FERDINAND P. BAUMANN, Küsnacht, Switzerland, assignor, by mesne assignments, to G. H. Rein, New York, N. Y. Filed May 27, 1920. Serial No. 384,737. Original No. 1,267,620, dated May 28, 1918, Serial No. 79,198, filed Feb. 18, 1916. 3 Claims. (Cl. 204—38.)

3. A battery unit comprising a carbon electrode in plate form, an opposite metallic electrode also in plate form and arranged against one face of the carbon plate but insulated therefrom, a cavity being provided between said plates and containing an electrolyte, the carbon plate being impregnated throughout its exterior face with an im-

pervious filling which penetrates the pores at the surface thereof only to which face is also intimately attached a metal covering.

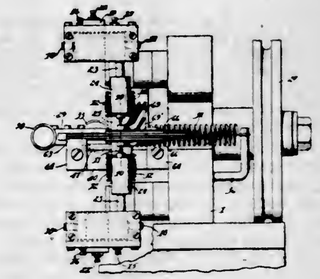
14,930. NON-CUMULATIVE WAX POLISH. WILLIAM H. DAMON, Los Angeles, Calif. Filed Mar. 24, 1919. Serial No. 284,837. Original application filed Aug. 30, 1916, Serial No. 118,594. Renewed July 2, 1917, Serial No. 178,268. Original No. 1,240,545, dated Sept. 18, 1917. 7 Claims. (Cl. 134—24.)

1. The herein described cleaning and polishing composition consisting of water, soap, diatomaceous earth, wax, and light petroleum distillate, substantially in the proportions specified.

2. A composition consisting of two gallons of water, one pound of soap, one to two pounds of diatomaceous earth, two pounds of wax, and two and one-half gallons of light petroleum distillate, substantially as described and for the purposes specified.

3. A polish containing soap, a finely powdered mild abrasive of low specific gravity, a light hydrocarbon volatile at ordinary temperatures, and sufficient water to permit the soap and hydrocarbon to be brought into the form of an emulsion and the abrasive into suspension in the emulsion.

4. A cleaning and polishing composition containing soap, a finely powdered mild abrasive, a waxy substance, a fluid hydrocarbon, and sufficient water to permit the soap and hydrocarbon to be brought into the form of an emulsion and the abrasive into suspension in the emulsion.



5. A cleaning and polishing composition containing soap, a finely powdered mild abrasive, wax, a light hydrocarbon, and sufficient water to permit the soap and hydrocarbon to be brought into the form of an emulsion and the abrasive into suspension in the emulsion.

6. A cleaning and polishing composition containing soap, a finely powdered mild abrasive, a waxy substance, light petroleum distillate, and sufficient water to permit the soap and petroleum distillate to be brought into the form of an emulsion and the abrasive into suspension in the emulsion.

7. A polish containing soap, a finely powdered mild abrasive of low specific gravity, a hydrocarbon volatile at ordinary temperatures, and sufficient water to permit the soap and hydrocarbon to be brought into the form of an emulsion and the abrasive into suspension in the emulsion, the water and the hydrocarbon being in relatively large proportions compared with the other ingredients.

14,931. EYELETING-MACHINE. FRANK L. HARMON, Beverly, Mass., assignor to Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Oct. 11, 1919. Serial No. 330,137. Original No. 1,262,336, dated Apr. 9, 1918, Serial No. 875,371, filed Dec. 3, 1914. 22 Claims. (Cl. 218—15.)

1. An eyeleting machine, comprising mechanism for punching holes in material, and inserting and clenching eyelets in said holes, and means for feeding the material to space the eyelets connected and arranged to operate while the clenching of the eyelets is being performed.

2. An eyeleting machine, comprising mechanism for punching holes in material, inserting eyelets in said holes, and clenching said eyelets, combined with means for feeding the material while the eyelet is being clenched, said means consisting in a mounting for the clenching instrumentality connected and arranged to move it laterally as the clenching takes place.

3. An eyeleting machine, comprising a telescopically combined punch and set mechanism having means to impart punching and setting movements thereto, an anvil mounted to coöperate therewith, and means for moving said punch and set mechanism laterally while the set is being advanced for clenching.

4. An eyeleting machine, comprising a punch and set telescopically combined, means for imparting punching and setting movements to the punch and set respectively, and means for intermittently moving the punch and set laterally to feed the material and space the eyelets, said means being connected and arranged to operate during that part of the cycle of operation in which the set is moved forward to clench the eyelet.

5. An eyeleting machine, comprising a punch, a race-way adapted to present an eyelet in alinement with said punch at an initial position thereof, means for moving said punch forward to thread an eyelet thereon, then laterally to remove the eyelet from the race-way, and then farther forward to punch a hole in the material and position the eyelet relative thereto, a backing against which said punch is adapted to operate, means for clenching the eyelet so positioned, and means for imparting a further lateral movement to the punch to feed the material and space the eyelets.

6. An eyeleting machine, comprising an eyelet race-way having a stationary delivering end adapted to deliver eyelets yieldingly therefrom, a punch mounted to aline with the foremost eyelet in said race-way in its initial position, means for moving said punch forward to engage the eyelet, then laterally to remove the eyelet, and then farther forward to punch a hole in material and position the eyelet relative thereto, an anvil backing coöperative with said punch, means for clenching the eyelet so positioned, and means for moving said punch and clenching means laterally to feed the material and space the eyelets.

7. An eyeleting machine, comprising a punch and set telescopically combined, means for imparting operative movements thereto, an anvil backing coöperative therewith, and an eyelet race-way having a stationary delivery end, said means for imparting operative movements to the punch being arranged to first move the punch forward to thread an eyelet in said race-way thereon, then move the punch laterally to remove the eyelet, then position the eyelet on the material, and then move the punch again laterally to feed the material and space the eyelets.

8. An eyeleting machine, comprising an operatively combined punch and set, means for imparting operative movements thereto, and an anvil backing having a pliable mounting adapted to permit self adaptation and adjust-

ment of the anvil relative to the punch and set in the operation thereof, and means to support said anvil backing against the operative movements of the punch and set mechanism.

9. An eyeleting machine, comprising a pair of telescopically combined punch and set mechanisms oppositely mounted and facing each other, mechanism for imparting operative movements thereto, and an anvil backing interposed between said punch and set mechanisms having a pliable mounting adapted to permit self adaptation and adjustment relative to the punch and set mechanisms in the operation thereof.

10. An eyeleting machine, comprising a punch and a set coöperatively mounted to operate on a material, mechanism for imparting operative movements thereto, means presenting a backing for the operation of said punch and set having a pliable mounting adapted to permit self-adjustment of said backing relative to the punch and set, and an edge guide for the material mounted adjacent to, but clear of, and having its support relatively remote from said backing means.

11. An eyeleting machine, comprising a punch and a set mounted in coöperative relation for acting on a material, mechanism for imparting operative movements thereto, an anvil backing for said punch and set adjustable in the direction of movement thereof, and an edge guide for the material mounted adjacent said anvil but clear thereof and with its support relatively remote therefrom whereby the anvil may be adjusted without interfering with said guide.

12. An eyeleting machine, comprising a punch and a set coöperatively arranged for acting on a material, mechanism for imparting operative movements thereto, an anvil backing presenting a punch block and a clenching surface coöperative with the punch and set respectively having a pliable mounting adapted to permit self-adjustment of said backing relative to the punch and set, and an antifriction edge guide for the material formed as a roll mounted adjacent to said anvil, but clear thereof and with its support relatively remote therefrom.

13. An eyeleting machine, comprising a pair of telescopical combined punch and set mechanisms oppositely mounted with an interposed anvil backing, means for imparting operative movements to said mechanisms, a yoke frame in which said mechanisms are slidably fitted, and means consisting in a face cam connected to move in synchronism with the operation of the punch and set mechanisms for moving said yoke frame intermittently to impart lateral feeding movements of said punch and set mechanisms.

14. A machine of the kind described, comprising a tool for performing a manufacturing result on a material with means for operating the same, and means for feeding the material consisting in a cam connected to move in timed relation to said tool operating means and an element coöperative therewith for effecting said feed movement, said cam presenting a plurality of operative paths adapted to produce different operating strokes for feeding and having a neutral portion common to all of said paths whereby said feeding element is returned to the same point when actuated by any one of the paths of said cam, and said element engageable therewith being adjustable to engage any one of said operative parts at will.

15. A machine of the kind described, comprising tool mechanism adapted to perform a manufacturing result on a material, means for operating said mechanism, and means for effecting a relative feed between the material and said tool mechanism, said means consisting in a cam connected to move in timed relation with said tool operating mechanism, said cam presenting a plurality of operative paths each adapted to produce a different feeding result and having a neutral portion common to all of said paths whereby said feeding element is returned to the same point when actuated by any one of the paths of said cam, and an element connected to effect said feed movement and adjustable to engage any one of said paths at will.

16. A machine of the kind described, comprising tool mechanism for producing a manufacturing result on a material, means for operating said mechanism, and means for effecting a relative feed between said tool mechanism and the material, said means consisting in a cam connected to move in timed relation with said tool operating mechanism, said cam presenting a series of operating paths adapted to produce different feeding strokes, and a member adjustable to engage any one of said paths at will and connected to effect said feed, said cam being formed to return the parts operated by said element engageable therewith to the same initial position regardless of the operating path engaged thereby.

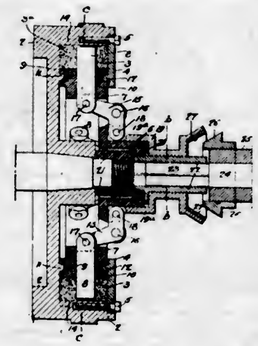
17. In a fastener setting machine, a telescopic punch and set, and a hammer for operating the same, said hammer having independently adjustable elements acting respectively to operate the punch and set.

18. A hammer for use in a fastener setting machine employing a punch and set, said hammer comprising a lever-arm bifurcated at its extremity to provide opposed, spaced arms, a vertically adjustable punch operating element, and a vertically adjustable set operating element located between said arms.

19. In a fastener setting machine, a telescopic punch element and set, a punch operating hammer, and an adjustable element carried by said hammer and adapted to contact with said punch.

20. In a fastener setting mechanism, a telescopic punch element and set, a set operating hammer, and an adjustable element carried by said hammer and adapted to contact with said set.

21. In a fastener setting machine, a telescopic punch and set, and a hammer for operating the same, said hammer having independently adjustable elements acting respectively, to operate the punch and set, said elements having screw adjusting means and devices for locking the same in adjusted position.



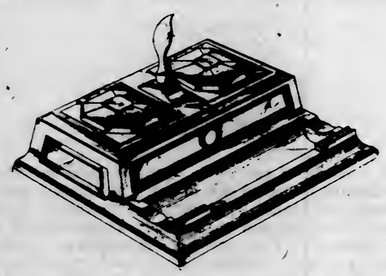
22. A hammer for use in a fastener setting machine employing a punch and set, said hammer comprising a lever arm bifurcated at its extremity to provide opposed, spaced arms, a vertically adjustable punch operating element and a vertically adjustable set operating element located between said arms.

14,932. DUPLEX EYELETER. FRANK L. HARMON, Beverly, Mass., assignor to Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Jan. 2, 1920. Serial No. 349,030. Original No. 1,262,583, dated Apr. 9, 1918, Serial No. 836,324, filed May 4, 1914. 22 Claims. (Cl. 218—15.)

21. In a fastener setting machine, a punching device and a setting device telescopically arranged, an operating member for said devices, and means for relatively moving said devices and member laterally for successive operation of said devices by said member.

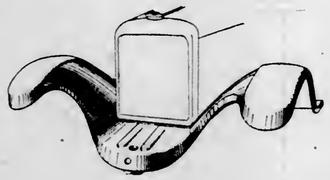
14,933. CLUTCH. DAVID LAKE, Cleveland, Ohio, assignor to The L. & H. Clutch Co., Norristown, Pa., a Corporation of Pennsylvania. Filed June 30, 1919. Serial No. 307,827. Original No. 1,234,776, dated July 31, 1917, Serial No. 103,912, filed June 15, 1916. 25 Claims. (Cl. 192—18.)

13. The combination in a clutch, of a driving and a driven element; a plastic fluid mass forming a power transmitting element carried by the driving element; and plungers carried by the driven element and arranged to be projected into the plastic fluid mass through which the power is transmitted.



14,934. TRENCH-SANDAL. CHARLES O. ROE, Indianapolis, Ind., assignor to Roe Metal Sandal Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Oct. 25, 1919. Serial No. 333,413. Original No. 1,276,964, dated Aug. 27, 1918, Serial No. 197,829, filed Oct. 22, 1917. 16 Claims. (Cl. 36—63.)

1. A sandal of the herein described class comprising a sole-member composed of a plurality of hingedly connected sections containing a plurality of perforations, spikes passing through said perforations, means formed along the edges of said sole-member for securing the marginal edges of a spike-retaining means, a spike-retaining means adapted to be inserted under the preceding means and resting upon the upper ends of the spikes for holding the latter in operative position, and means for locking said spike-retaining means in operative position.

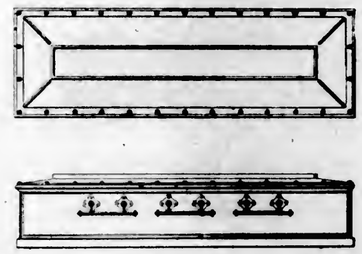


DESIGNS.

56,093. COMBINED CIGAR-LIGHTER AND INK-STAND. LOUIS V. ARONSON, Newark, N. J. Filed Oct. 15, 1919. Serial No. 330,924. Term of patent 7 years.

The ornamental design for a combined cigar lighter and inkstand, as shown.

56,094. AUTOMOBILE SPLASH-BOARD. EDWARD. H. BELDEN, Toledo, Ohio, assignor to Industrial Research Corporation, Toledo, Ohio, a Corporation of Delaware. Filed Feb. 24, 1919. Serial No. 278,991. Term of patent 14 years.

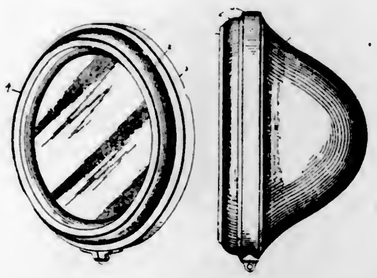


The ornamental design for an automobile splash-guard, as shown.

56,095. CONTAINER. HAZEL BRILL, Brooklyn, N. Y., assignor to Brass Goods M'f'g Co., New York, N. Y., a Corporation of New York. Filed Jan. 6, 1920. Serial No. 349,819. Term of patent 14 years.

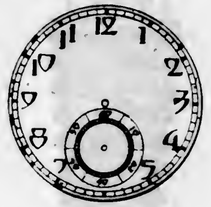
The ornamental design for a container, as shown.

56,096. BURIAL-CASKET. JOHN E. CASE, New York, N. Y., assignor to Athens Shipbuilding Corporation, New York, N. Y. Filed Feb. 21, 1920. Serial No. 360,394. Term of patent 7 years.



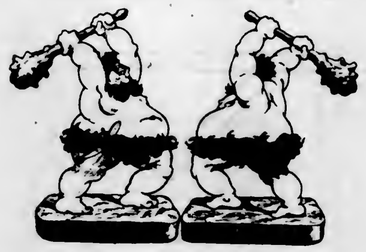
The ornamental design for a burial casket, as shown.

56,097. STAND. WILLIAM F. FAAS, Cleveland, Ohio. Filed Dec. 23, 1919. Serial No. 347,022. Term of patent 7 years.



The ornamental design for a stand, as shown.

56,098. LAMP. CHARLES E. GODLEY. Detroit, Mich. Filed Apr. 16, 1920. Serial No. 374,482. Term of patent 14 years.

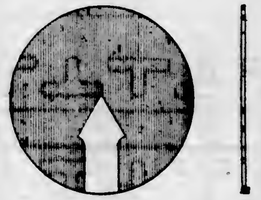


The ornamental design for a lamp, substantially as shown and described.

56,099. WATCH-DIAL. FRANCIS A. GOODREW, Elgin, Ill., assignor to Elgin National Watch Company, Elgin, Ill., a Corporation of Illinois. Filed Mar. 6, 1920. Serial No. 363,838. Term of patent 14 years.

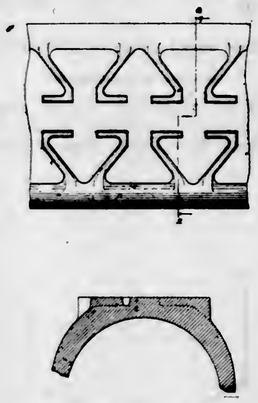
The ornamental design for a watch dial, as shown.

56,100. STATUETTE. JOHN J. KEARNEY, Berwyn, and GEORGE H. WINTER, Chicago, Ill. Filed Jan. 6, 1920. Serial No. 349,817. Term of patent 3½ years.



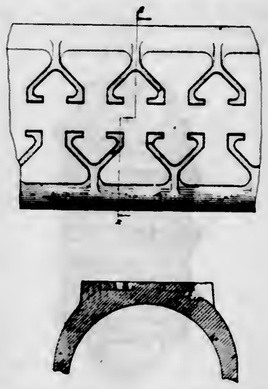
The ornamental design for a statuette, as shown.

56,101. METAL SPONGE-CUP. HOWARD MERKEL, West Springfield, and RAYMOND W. GUY, Longmeadow, Mass. Filed Apr. 12, 1919. Serial No. 289,762. Term of patent 14 years.



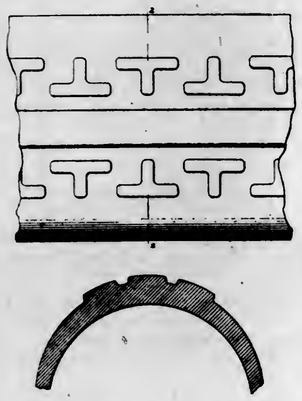
The ornamental design for a metal sponge cup, as shown.

56,102. HIGHWAY-GUIDE DEVICE. WARNER E. McMULLAN and HENRY JAMES HICKEY, Fort Dodge, Iowa. Filed Mar. 20, 1920. Serial No. 367,491. Term of patent 14 years.



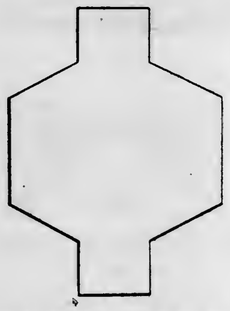
The ornamental design for a highway guide device, as shown.

56,103. TIRE. ANDREW J. PENNINGTON, Tulsa, Okla., assignor to U. S. Compression Inner Tube Company, Tulsa, Okla., a Corporation of Delaware. Filed Mar. 2, 1920. Serial No. 362,783. Term of patent 14 years.



The ornamental design for a tire, as shown.

56,104. TIRE. ANDREW J. PENNINGTON, Tulsa, Okla., assignor to U. S. Compression Inner Tube Company, Tulsa, Okla., a Corporation of Delaware. Filed Mar. 2, 1920. Serial No. 362,784. Term of patent 14 years.



The ornamental design for a tire, as shown.

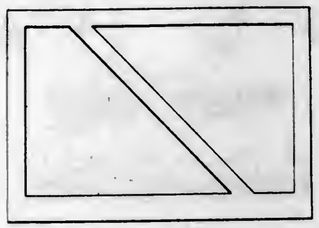
56,105. TIRE. ANDREW J. PENNINGTON, Tulsa, Okla., assignor to U. S. Compression Inner Tube Company, Tulsa, Okla., a Corporation of Delaware. Filed Mar. 2, 1920. Serial No. 362,785. Term of patent 14 years.

The ornamental design for a tire, as shown.

56,106. ROOFING SHINGLE. CALVIN RUSSELL, Penn Yan, N. Y., assignor to Carrie H. Russell. Filed Sept. 19, 1919. Serial No. 325,024. Term of patent 14 years.

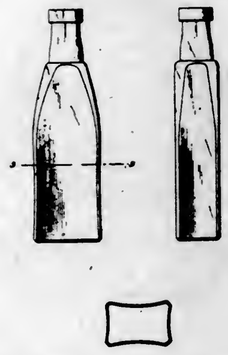
The ornamental design for a roofing shingle, as shown.

56,107. BOTTLE-STOPPER. FERDINAND RUSTANT, San Francisco, Calif. Filed Feb. 10, 1919. Serial No. 276,232. Term of patent 14 years.



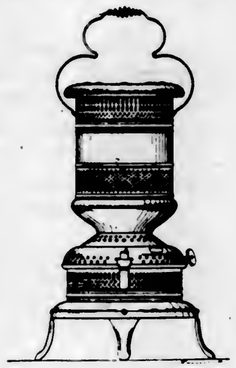
The ornamental design for a bottle stopper, as shown.

56,108. BOTTLE-STOPPER. FERDINAND RUSTANT, San Francisco, Calif. Filed Feb. 11, 1919. Serial No. 276,443. Term of patent 14 years.



The ornamental design for a bottle stopper, as shown.

56,109. AUTOMOBILE SIDE-CURTAIN. RALPH K. THOMSON, Sioux Falls, S. D. Filed Nov. 29, 1919. Serial No. 341,546. Term of patent 14 years.



The ornamental design for an automobile side curtain, as shown.

56,110. BOTTLE. HUBERT RAYMOND WELLER, Brooklyn, N. Y., assignor to Garrett & Company, Incorporated, Brooklyn, N. Y., a Corporation of New York. Filed Mar. 12, 1920. Serial No. 365,330. Term of patent 14 years.

The ornamental design for a bottle, as shown.

56,111. OIL-STOVE. FRED E. WHITE, Gardner, Mass., assignor to Central Oil & Gas Stove Company, Gardner, Mass., a Corporation of Massachusetts. Filed Apr. 21, 1919. Serial No. 291,751. Term of patent 14 years.

The ornamental design for an oil stove, as shown.

56,112. POCKET CIGAR-HOLDER. FRANK WOJCIECHOWSKI, Staunton, Ill. Filed Mar. 10, 1920. Serial No. 364,751. Term of patent 7 years.

The ornamental design for a pocket cigar holder, as shown.

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 104,895. (CLASS 1. RAW OR PARTLY-PREPARED MATERIALS.) AMERICAN BURTONIZING COMPANY, New York, N. Y. Filed July 7, 1917.

POMAX

Particular description of goods.—Material Not Itself of a Malt Nature Containing Reaction Products of Certain Sugars and Amino Bodies Used as a Substitute for Malt in Making Beverages.

Claims use since December, 1915.

Ser. No. 108,353. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) COMMANDER MILL CO., Minneapolis, Minn. Filed Jan. 8, 1918.

SODAK

Particular description of goods.—Wheat-Flour.

Claims use since Mar. 14, 1912.

Ser. No. 110,347. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) JAMES JOHNSTON, Spokane, Wash. Filed Apr. 20, 1918.

Particular description of goods.—Coffee.

Claims use since January, 1915.

Ser. No. 110,636. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NON-METALLIC TIRES.) VOORHEES RUBBER MFG. CO., Jersey City, N. J. Filed May 3, 1918.

No claim being made to the representation of a section of hose.

Particular description of goods.—Hose Having an Exterior Made Up of Rubber or a Composition of Rubber.

Claims use since October, 1914.

Ser. No. 111,082. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) SEATTLE PAINT COMPANY, Seattle, Wash. Filed May 20, 1918.

Ironite

Particular description of goods.—Ready-Mixed Paints.

Claims use since March, 1905.

Ser. No. 111,199. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) S. GLEMBY, INC., New York, N. Y. Filed May 25, 1918.

The lining in the drawing represents shading only. The exclusive use of the words "Lovelee," "Trade Mark,"

"Hair Net" and the representation of a hair-net are disclaimed apart from the mark shown in the drawing.

Particular description of goods.—Hair-Nets.

Claims use since May 15, 1918.

Ser. No. 111,431. (CLASS 9. EXPLOSIVES, FIREARMS, EQUIPMENTS, AND PROJECTILES.) F. I. A. T. FABBRICA ITALIANA AUTOMOBILI TORINO, Turin, Italy. Filed June 8, 1918.

FIAT

Particular description of goods.—Small-Arms, Rifles, Trench-Guns, Machine-Guns, Ordnance-Guns, Cartridges, Shells, Bombs, Grenades, Blasting-Powder, Fulminates, Gunpowder, Explosive Nitro Compounds, Pyrotechnic Compounds, Tripods, and Stands for Firearms, Fore Sights, Rear Sights, Wind-Gage Sights, and Loading-Clips for Small-Arms.

Claims use since Jan. 1, 1917.

Ser. No. 111,686. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE ATLANTA BARBER'S SUPPLY CO., Atlanta, Ga. Filed June 20, 1918.

LEMO

Particular description of goods.—Face and Massage Cream and Shampoo and a Preparation for Cleansing the Hair and Removing Dandruff.

Claims use since Mar. 1, 1918.

Ser. No. 111,687. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE ATLANTA BARBER'S SUPPLY CO., Atlanta, Ga. Filed June 20, 1918.

DIXIE DEW

Particular description of goods.—Toilet Water.

The said trade-mark has been continuously used in its business since July, 1916, and in the business of its predecessors, Matthews & Lively Co., since January, 1913.

Ser. No. 113,270. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) UNITED SALES SYNDICATE LTD., San Francisco, Calif. Filed Sept. 19, 1918.

DORIOT

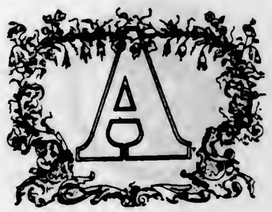
Particular description of goods.—Face-Powders, Toilet Powders, Sachet-Powders, Talcum Powders, Foot-Powders, Powders for the Relief of Perspiration, Toilet Water, Skin-Lotion, Shaving-Lotion, Bay-Rum, Florida Water, Colognes, Perfumes, Pomades, Pomade-Sticks, Grease Paints, Hair-Wax, Eyebrow-Pencils, Nail-Enamels, Nail-Polishes, Nail-Acids, Nail-Powders, Nail-Cream, Hair-Dressings, Hair-Pomades, Hair-Dyes, Hair-Bleaches, Shampoo Powders and Liquids, Brilliantine, Hair-Curling Fluid, Bandoline, Perfumed Toilet Extracts, Face-Creams, Toilet Creams, Hand-Creams, Massage-Creams, Shaving-Creams for Use After Shaving, Wrinkle-Creams, Bleaching-Creams, Freckle-Creams, Muscle-Oils, Massage-Oils, Vegetable Oils for Toilet Purposes, Floral Perfume-Oils, Synthetic Perfume-Oils, Tooth Powders and Pastes, Tooth-Washes, Mouth-Washes, Antiseptic Toilet Washes and Liquids.

Claims use since Oct. 17, 1917.

Ser. No. 113,461. (CLASS 37. PAPER AND STATIONERY.) HAROLD STEWART BALSON, Toronto, Ontario, Canada. Filed Sept. 26, 1918.

Particular description of goods.—Blank or Partly-Printed Tags.

Claims use since Mar. 24, 1918.



Ser. No. 114,462. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) JOHN E. DIAMENT COMPANY, Cedarville, N. J. Filed Dec. 3, 1918.

Particular description of goods.—Canned Pears and Canned Tomatoes.

Claims use since October, 1901.

Ser. No. 115,800. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) BOOTT MILLS, Lowell, Mass. Filed Feb. 12, 1919.

Particular description of goods.—Blue Drillings in the Piece.

Claims use since 1873.

Ser. No. 116,578. (CLASS 1. RAW OR PARTLY-PREPARED MATERIALS.) KULLMAN, SALZ & CO., San Francisco, Calif. Filed Mar. 14, 1919.

No claim being made to the words "Pure Oak Tan, Brand" apart from the mark shown in the drawings.

Particular description of goods.—Hides and Leather.

Claims use since Sept. 22, 1906.

Ser. No. 116,951. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) W. H. BROWN SON & CO., New York, N. Y. Filed Mar. 27, 1919.

Grandmother Chintz

The exclusive use of the word "Chintz" not being claimed apart from the mark as shown in the drawing.

Particular description of goods.—Chintz.

Claims use since about Jan. 15, 1919.

Ser. No. 117,975. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) C. F. HATHAWAY & SONS, North Cambridge, Mass. Filed Apr. 29, 1919.

Applicant disclaims the descriptive word "Bread" apart from the mark as shown in the drawing. No claim is made to the words "Our Toast" except in association with the subject-matter shown in the drawing. The pictures of children shown in the drawing are fanciful.

Particular description of goods.—Bread.

Claims use since Mar. 31, 1919.

Ser. No. 118,691. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) MEAD JOHNSON & CO., Evansville, Ind. Filed May 19, 1919.

Particular description of goods.—A Manufactured Product Composed of Dextrin, Maltose, Sodium Chlorid, and Moisture.

Claims use since June 1, 1915.

Ser. No. 118,692. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) MEAD JOHNSON & CO., Evansville, Ind. Filed May 19, 1919.

Particular description of goods.—A Manufactured Product Composed of a Specific Amount of Maltose, Dextrin, and Moisture.

Claims use since June 1, 1915.

Ser. No. 118,693. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) MEAD JOHNSON & CO., Evansville, Ind. Filed May 19, 1919.

Particular description of goods.—Infants' Food.

Claims use since June 3, 1918.

Ser. No. 118,828. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) CONTINENTAL SERUM LABORATORIES CO., Muscatine, Iowa. Filed May 23, 1919.

VETSOL

Particular description of goods.—Worm Medicine for Swine.

Claims use since about Jan. 1, 1919.

Ser. No. 118,922. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) LEHN & FINK, INC., New York, N. Y. Filed May 26, 1919.

Lysol

Applicant is the owner of registered trade-marks, Nos. 18717, 27456, 53937, and 53938.

Particular description of goods.—Shaving Cream and Soap.

Claims use since about March, 1917.

Ser. No. 119,699. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) FRED H. WHITE, Charlotte, N. C. Filed June 16, 1919.

The pictorial representation of the goods is disclaimed apart from the other features of the mark.

Particular description of goods.—Cocoa Pudding.

Claims use for a period of twelve months.

Ser. No. 119,712. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) MARABOU TRADING COMPANY, INCORPORATED, New York, N. Y. Filed June 17, 1919.

TRADE MARK

The lining on the drawing is for shading purposes only. Disclaimer is hereby made of the use of the words "Trade Mark" apart from the other features of the mark shown on the drawing.

Particular description of goods.—Confectionery—Namely, Candies and Chocolates.

Claims use since about January, 1914.

Ser. No. 119,753. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) THE SALT'S TEXTILE MANUFACTURING COMPANY, Bridgeport, Conn., and New York, N. Y. Filed June 18, 1919.

BEAVERTEX

Particular description of goods.—Velvets and Plushes in the Piece.

Claims use since about Oct. 1, 1918.

Ser. No. 120,348. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) JOE LOWE CO. INC., New York, N. Y. Filed July 8, 1919.

The letters of the words are colored yellow and are on a blue background surrounded by a yellow border. No claim is made to the words "Taste Well" apart from the trade-mark shown in the drawing.

Particular description of goods.—Bread, Cake, Pies, and Ice-Cream.

Claims use since Jan. 1, 1919.

Ser. No. 120,612. (CLASS 37. PAPER AND STATIONERY.) KIMBERLY-CLARK COMPANY, Neenah, Wis. Filed July 16, 1919.

ROTOPLATE

Particular description of goods.—Book-Paper.

Claims use since Jan. 1, 1915.

Ser. No. 120,837. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) LINCOLN TYPEWRITER CO., New York, N. Y. Filed July 22, 1919.

No claim being made to the exclusive use of the words "Guarantee Satisfaction, All Makes Rebuilt."

Particular description of goods.—Typewriters.

Claims use since June 15, 1919.

Ser. No. 121,655. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) OTTO W. BONN, New York, N. Y. Filed Aug. 14, 1919.

LOALCO

Particular description of goods.—A Non-Fermentable Body Sugar and a Syrup Thereof.

Claims use since about Apr. 17, 1919.

Ser. No. 122,029. (CLASS 39. CLOTHING.) VARSITY UNDERWEAR COMPANY, Baltimore, Md. Filed Aug. 26, 1919.

Particular description of goods.—Pajamas, Night-Shirts, Night-Robes, and Sleeping-Garments of That Type Commercially and Commonly Known as Sleepers, and Knitted and Textile Underwear Comprising Shirts, Drawers, and Union-Suits for Men, Women, and Children, Combination-Suits, and Running-Pants.

Claims use since on or about May, 1907.

Ser. No. 122,220. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NON-METALLIC TIRES.) MCRAE WHOLESALE HARDWARE COMPANY, Helena, Ark. Filed Sept. 2, 1919.

No claim being made for the exclusive right to the words "Made Right" apart from the trade-mark shown in the drawing.

Particular description of goods.—Inner Tubes for Pneumatic Tires.

Claims use since June 22, 1919.

Ser. No. 122,616. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) SUN-LIGHT ARC CORPORATION, New York, N. Y. Filed Sept. 12, 1919.

No claim is made to "100,000 Candle Power."

Particular description of goods.—Arc-Lights to be Used in Motion-Picture Work and to be Used in the Ordinary Way of Illumination and to Illuminate Objects to be Photographed.

Claims use since Dec. 15, 1917.

Ser. No. 123,740. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) JENCKES SPINNING COMPANY, Pawtucket, R. I. Filed Oct. 13, 1919.

Particular description of goods.—Textile Fabrics in the Piece for Use in the Manufacture of Pneumatic and Solid Tires.

Claims use since Feb. 1, 1883.

Ser. No. 123,833. (CLASS 39. CLOTHING.) AMSTERDAM, BORGOS & ADAMS, New York, N. Y. Filed Oct. 16, 1919.

Ace High

Particular description of goods.—Ladies' Hats and Hat-Frames for Ladies' Hats.

Claims use since the 8th day of April, 1919.

Ser. No. 124,697. (CLASS 39. CLOTHING.) SLONIM BROTHERS, Duluth, Minn. Filed Nov. 8, 1919.

The portrait shown in the drawing is fanciful. No claim is made to the words "Duluth" or "Standard" apart from the mark shown in the drawing.

Particular description of goods.—Men's, Women's, and Children's Knitted Hose; Knitted or Textile One, Two, and Three Piece Underwear; Knitted Sweaters, Women's and Children's Dresses and Aprons, Men's Caps, Canvas and Leather Gloves and Mittens, Necktles, Shirt-Collars, Dress-Shirts, Negligée Shirts, Work-Shirts, Undershirts, Leather Vests and Coats, and Overalls.

Claims use since Nov. 4, 1919.

Ser. No. 124,942. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) LILLIAN BROOKS MORRIS, Yonkers, N. Y. Filed Nov. 15, 1919.

RAINBOW

Particular description of goods.—Cakes and Candies.

Claims use since May 15, 1919.

Ser. No. 124,946. (CLASS 39. CLOTHING.) PENN GARMENT COMPANY INC., Williamsport, Pa. Filed Nov. 15, 1919.

RIGHT-O-WAY

Particular description of goods.—Work-Shirts, Dress-Shirts, and Shirt-Waists for Men, Women, and Children.

Claims use since Nov. 10, 1919.

Ser. No. 125,169. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) BAKE-RITE OVEN MANUFACTURING COMPANY, Reno, Nev., and San Francisco, Calif. Filed Nov. 22, 1919.

BUTTER KREAM KRACKNELLS

Consisting of the words "Butter Kream Kracknells," no claim being made to the exclusive use of the words "Butter Kream" apart from the mark as shown in the drawing.

Particular description of goods.—Cookies, Cakes, Pastry, Bread, Fruits, Nuts, and Raisins.

Claims use since Nov. 1, 1919.

Ser. No. 125,758. (CLASS 37. PAPER AND STATIONERY.) OSBORNE PAPER COMPANY, Marion, Ind. Filed Dec. 9, 1919.

SoSmooth

No claim being made to the words "So Smooth" apart from the mark shown.

Particular description of goods.—Writing and Printing Papers and Writing-Tablets.

Claims use since September, 1917.

Ser. No. 126,416. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTCAL PREPARATIONS.) LABORATORIO CHIMICO FARMAC. V. BALDACCI, Pisa, Italy. Filed Dec. 24, 1919.

Katarsolfina

Particular description of goods.—A Pharmaceutical Preparation for the Treatment of the Nervous System and of the Nutrition.

Claims use since Apr. 30, 1919.

Ser. No. 126,417. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTCAL PREPARATIONS.) LABORATORIO CHIMICO FARMAC V. BALDACCI, Pisa, Italy. Filed Dec. 24, 1919.

CREOSARSOLO

Particular description of goods.—A Pharmaceutical Preparation for the Treatment of the Pulmonary Organs.

Claims use since Apr. 30, 1919.

Ser. No. 127,071. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ELSIE WIPPEL, Cincinnati, Ohio. Filed Jan. 12, 1920.

Alldox

Particular description of goods.—Body-Tissue Tonic, Headache-Powders, Laxative Tablets, Cold and Grippe Tablets, Digestive Tablets, Antiseptic Healing-Oil, Liniment for Local Application in Rheumatism, Soreness of Muscles, Neuralgia, Sciatica, Stiffness of Joints, Lumbago, Backache, Sprains, Bruises, Pneumonia, and Congestion of the Lungs and Throat, Eye-Water, and Cough and Croup Mixture.

SUPERBILT

Particular description of goods.—Trunks.
Claims use since about Mar. 1, 1920.

Ser. No. 129,554. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE K-W MEDICINE CO., Smiths Grove, Ky. Filed Mar. 11, 1920.

DR. WADDELL'S

The portrait being that of Dr. G. W. Waddell, deceased.
Particular description of goods.—A Remedy for Piles.
Claims use since the year 1890.

Ser. No. 129,591. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) FERRITONE CHEMICAL COMPANY, Council Bluffs, Iowa. Filed Mar. 12, 1920.

Particular description of goods.—Laxative Pills.
Claims use since Jan. 5, 1920.

Ser. No. 129,594. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) GUTHRIE & COMPANY LIMITED, Singapore, Straits Settlements, and London, England. Filed Mar. 12, 1920.

Particular description of goods.—Dry, Paste, and Ready-Mixed Paints and Varnishes.
Claims use since Jan. 30, 1919.

Ser. No. 129,599. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) MERCK & CO., New York, N. Y. Filed Mar. 12, 1920.

DIGITAN

Particular description of goods.—An Extract of Digitalis in Powder, Solution, and Tablets.
Claims use since Dec. 11, 1918.

Ser. No. 129,602. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) WILLIE PETERSON, Newark, N. J. Filed Mar. 12, 1920.

(R. F. P. of A. C. D.)

Particular description of goods.—A Medicine Used in the Treatment of Blood.
Claims use since Jan. 15, 1914.

Ser. No. 129,623. (CLASS 17. TOBACCO PRODUCTS.) CARRERAS LIMITED, London, England. Filed Mar. 13, 1920.

The picture and name and the manner of displaying said name being fanciful.
Particular description of goods.—Smoking and Chewing Tobacco, Cigars, and Cigarettes.
Claims use since Nov. 4, 1919.

Ser. No. 129,624. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) CRAMER & CASPER, Enid, Okla. Filed Mar. 13, 1920.

Enidoma

Particular description of goods.—A Preparation for the Treatment of Kidney, Liver, and Stomach Troubles.
Claims use since Dec. 15, 1919.

Ser. No. 129,686. (CLASS 2. RECEPTACLES.) THE TROY CARRIAGE SUN SHADE COMPANY, Troy, Ohio. Filed Mar. 13, 1920.

Envobag

Particular description of goods.—Mailing-Packages for Containing Merchandise to be Sent Through the Mail and for Containing Correspondence in an Envelope Forming a Part of the Mailing-Package.
Claims use since Dec. 4, 1919.

Ser. No. 129,692. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE W. D. BUCHANAN CO., Greenville, Ohio. Filed Mar. 15, 1920.

ORLANDO

Particular description of goods.—Candy.
Claims use since Feb. 21, 1919.

Ser. No. 129,697. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) CALIFORNIA WINE ASSOCIATION, San Francisco, Calif. Filed Mar. 15, 1920.

WAHTOKE

Particular description of goods.—Flowers of Sulfur.
Claims use since Jan. 1, 1910.

Ser. No. 129,715. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) HACHMEISTER-LIND CHEMICAL COMPANY, Pittsburgh, Pa. Filed Mar. 15, 1920.

HALICO

Particular description of goods.—Oil Soap, Auto-Soap, Bar-Soap, Chip-Soap, Scouring-Powder, Emery Cake, White Buffing-Finish, Metal-Polishing Rouges, Glass-Polishing Rouges, Optical Polishing-Rouges, Metal-Cleaner, Dry-Cleaning Soaps, Liquid-Soap, Shampoo-Soap, Liquid-Soap Base, Spotting Fluid, Tripoli Composition.

Zementine

Particular description of goods.—Water-Paint.
Claims use since about Jan. 1, 1895.

Ser. No. 129,741. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) PHILADELPHIA QUARTZ COMPANY, Philadelphia, Pa. Filed Mar. 15, 1920.

R

Particular description of goods.—Sodium Silicate.
Claims use since prior to or about Feb. 27, 1920.

Ser. No. 120,742. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) PHILADELPHIA QUARTZ COMPANY, Philadelphia, Pa. Filed Mar. 15, 1920.

X

Particular description of goods.—Sodium Silicate.
Claims use since prior to, on, or about Feb. 27, 1920.

Ser. No. 130,010. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JENNIE ABRAMSON, Chippewa Falls, Wis. Filed Mar. 22, 1920.

T. W. R.

Particular description of goods.—A Salve for Skin Eruptions, Such as Eczema, Poison-Ivy, Ringworm, Itch, &c.
Claims use since Mar. 1, 1919.

Ser. No. 130,028. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) RUDOLF FRITSCHE, New York, N. Y. Filed Mar. 22, 1920.

Iodanol

Consisting of the word "Iodanol."
Particular description of goods.—A Photographic Developing Compound.
Claims use since Mar. 1, 1920.

Ser. No. 130,139. (CLASS 37. PAPER AND STATIONERY.) HECO ENVELOPE COMPANY, Chicago, Ill. Filed Mar. 24, 1920.

HECOLOOK

Particular description of goods.—Mailing-Envelops.
Claims use since January, 1919.

Ser. No. 130,191. (CLASS 17. TOBACCO PRODUCTS.) ARDATH TOBACCO COMPANY, LIMITED, London, England. Filed Mar. 26, 1920.

SPLENDO

Particular description of goods.—Cigarettes.
Claims use since Dec. 19, 1904.

Ser. No. 130,193. (CLASS 17. TOBACCO PRODUCTS.) ARDATH TOBACCO COMPANY, LIMITED, London, England. Filed Mar. 26, 1920.

999

Particular description of goods.—Cigarettes.
Claims use since Feb. 18, 1911.

Ser. No. 130,194. (CLASS 17. TOBACCO PRODUCTS.) ARDATH TOBACCO COMPANY, LIMITED, London, England. Filed Mar. 26, 1920.

555

Particular description of goods.—Cigarettes.
Claims use since Feb. 18, 1907.

Ser. No. 130,258. (CLASS 1. RAW OR PARTLY-PREPARED MATERIALS.) AMERICAN BURTONIZING COMPANY AND WALLERSTEIN LABORATORIES, New York, N. Y. Filed Mar. 27, 1920.

WALCO

Particular description of goods.—Cereal Extracts Used as a Substitute for Malt in Making Beverages.
Claims use since Nov. 21, 1919.

Ser. No. 130,376. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) NATIONAL ANILINE & CHEMICAL COMPANY, INCORPORATED, New York, N. Y. Filed Mar. 30, 1920.

Particular description of goods.—Dyestuffs.
Claims use since Mar. 10, 1920.

Ser. No. 130,377. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) NATIONAL ANILINE & CHEMICAL COMPANY, INCORPORATED, New York, N. Y. Filed Mar. 30, 1920.

Particular description of goods.—Dyestuffs.
Claims use since Mar. 10, 1920.

Ser. No. 130,378. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) NATIONAL ANILINE & CHEMICAL COMPANY, INCORPORATED, New York, N. Y. Filed Mar. 30, 1920.

Particular description of goods.—Dyestuffs.
Claims use since Mar. 10, 1920.

Ser. No. 130,379. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) NATIONAL ANILINE AND CHEMICAL COMPANY, INCORPORATED, New York, N. Y. Filed Mar. 30, 1920.

Particular description of goods.—Dyestuffs.
Claims use since Mar. 10, 1920.

Ser. No. 130,380. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) NATIONAL ANILINE & CHEMICAL COMPANY, INCORPORATED, New York, N. Y. Filed Mar. 30, 1920.

Particular description of goods.—Dyestuffs.
Claims use since Mar. 10, 1920.

Ser. No. 130,381. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) NATIONAL ANILINE & CHEMICAL COMPANY, INCORPORATED, New York, N. Y. Filed Mar. 30, 1920.

Particular description of goods.—Dyestuffs.
Claims use since Mar. 10, 1920.

Ser. No. 130,382. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) NATIONAL ANILINE & CHEMICAL COMPANY, INCORPORATED, New York, N. Y. Filed Mar. 30, 1920.

Particular description of goods.—Dyestuffs.
Claims use since Mar. 10, 1920.

Ser. No. 130,383. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) NATIONAL ANILINE & CHEMICAL COMPANY, INCORPORATED, New York, N. Y. Filed Mar. 30, 1920.

Particular description of goods.—Dyestuffs.
Claims use since Mar. 10, 1920.

Ser. No. 130,384. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) NATIONAL ANILINE & CHEMICAL COMPANY, INCORPORATED, New York, N. Y. Filed Mar. 30, 1920.

Particular description of goods.—Dyestuffs.
Claims use since Mar. 10, 1920.

Ser. No. 130,385. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) NATIONAL ANILINE & CHEMICAL COMPANY, INCORPORATED, New York, N. Y. Filed Mar. 30, 1920.

Particular description of goods.—Dyestuffs.
Claims use since Mar. 10, 1920.

Ser. No. 130,386. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) NATIONAL ANILINE & CHEMICAL COMPANY, INCORPORATED, New York, N. Y. Filed Mar. 30, 1920.

Particular description of goods.—Dyestuffs.
Claims use since Mar. 10, 1920.

Ser. No. 130,387. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) NATIONAL ANILINE & CHEMICAL COMPANY, INCORPORATED, New York, N. Y. Filed Mar. 30, 1920.

Particular description of goods.—Dyestuffs.
Claims use since Mar. 10, 1920.

Ser. No. 130,497. (CLASS 39. CLOTHING.) TEDMOR WAIST COMPANY, New York, N. Y. Filed Apr. 1, 1920.

TEDMOR

Particular description of goods.—Outer Waists.
Claims use since Feb. 28, 1920.

Ser. No. 130,792. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) BIANCHINI, FÉRIER, Lyon, France. Filed Apr. 8, 1920.

"ECLATANTE"

Particular description of goods.—Piece Goods of Silk, Wool, Linen, Cotton, and China-Grass.
Claims use since Sept. 9, 1910.

Ser. No. 130,825. (CLASS 40. FANCY GOODS, FURNISHINGS, AND NOTIONS.) ALBERT C. FISCHER, Chicago, Ill. Filed Apr. 8, 1920.

SERVICISED
LOOK FOR IT ON ALL PURCHASES

No claim is made for the words "Look for It on All Purchases."
Particular description of goods.—Hairpins, Shoe, Middy, and Corset Lacings, Snap-Fasteners, Hooks and Eyes, Pearl Buttons, Cloth Buttons.

Particular description of goods.—Dyestuffs.
Claims use since June 10, 1920.

Ser. No. 134,665. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE RED WING COMPANY, INC., Fredonia, N. Y. Filed July 7, 1920.

RED WING

Particular description of goods.—Grape Jam, Raspberry Jam, Strawberry Jam, Raspberry Preserves, Strawberry Preserves, Currant Jelly, Grape Jelly, Tomato Catsup, Chilli Sauce, Apple-Cider Vinegar, and Pitted Cherries.

The trade-mark has been continuously used in the business of said corporation as applied to grape jam since Dec. 10, 1919; as applied to raspberry jam since Nov. 18, 1913; as applied to strawberry jam since Nov. 18, 1913; as applied to raspberry preserves since Aug. 8, 1916; as applied to strawberry preserves since Aug. 8, 1916; as applied to currant jelly since Aug. 12, 1916; as applied to grape jelly since Aug. 12, 1912; as applied to tomato catsup since Nov. 18, 1913; as applied to chilli sauce since Nov. 18, 1913; as applied to apple-cider vinegar since Nov. 18, 1913; as applied to pitted cherries since July 28, 1916.

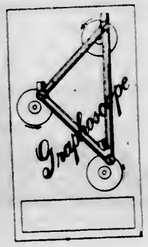
Ser. No. 134,681. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) WESTINGHOUSE UNION BATTERY CO., Swissvale, Pa. Filed July 7, 1920.

WESTINGHOUSE

Particular description of goods.—Secondary Batteries, and Connectors Therefor.
Claims use since July 1, 1920.

Ser. No. 134,791. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) EVANGELIST F. RUSS, Chicago, Ill. Filed July 10, 1920.

Evangelist F. Russ



The said trade-mark being a facsimile of applicant's signature.
Particular description of goods.—A Salve for the Alleviation of Eczema, Scrofula, Itch, and Skin Eruptions.
Claims use since June 15, 1920.

Ser. No. 134,824. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) EDWARD W. KEMP, Cleveland, Ohio. Filed July 12, 1920.

E W Kemp

A facsimile signature of the applicant.
Particular description of goods.—Laundry Bluing.
Claims use since July 20, 1919.

Ser. No. 134,887. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) THE FOREIGN PATENTS CORPORATION, New York, N. Y. Filed July 13, 1920.

Particular description of goods.—Motion-Picture-Projecting Machines, and Parts Thereof.
Claims use since June 1, 1918.

Ser. No. 135,017. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) THE PROCTER AND GAMBLE COMPANY, Cincinnati, Ohio. Filed July 15, 1920.

IVORY SOAP FLAKES

No claim is made for the words "Soap" and "Flakes" apart from the mark shown in the drawing.
Particular description of goods.—Soap Flakes.
Claims use since Sept. 7, 1918.

Ser. No. 135,076. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) AARON T. SEERCY, Chicago, Ill. Filed July 16, 1920.

ATS

Particular description of goods.—A Liquid for Cleaning Leather.
Claims use since June 15, 1920.

Ser. No. 134,644. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) CHAS. HOLLINSHED CO. INC., New York, N. Y. Filed July 7, 1920.

All reading matter, with the exception of the word "Pansoyeta," is hereby disclaimed.

Particular description of goods.—Choice Refined Deodorized Soy-Bean Oil.

Claims use since May 3, 1920.

Ser. No. 134,648. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) E. F. JONES COFFEE COMPANY, St. Louis, Mo. Filed July 7, 1920.

OLDCROW

Particular description of goods.—Coffee.

Claims use since May 28, 1920.

Ser. No. 134,654. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) NATIONAL ANILINE & CHEMICAL COMPANY, INCORPORATED, New York, N. Y. Filed July 7, 1920.

Particular description of goods.—Dyestuffs.

Claims use since June 10, 1920.

Ser. No. 134,655. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) NATIONAL ANILINE & CHEMICAL COMPANY, INCORPORATED, New York, N. Y. Filed July 7, 1920.

Particular description of goods.—Dyestuffs.

Claims use since June 10, 1920.

Ser. No. 134,656. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) NATIONAL ANILINE & CHEMICAL COMPANY, INCORPORATED, New York, N. Y. Filed July 7, 1920.

Particular description of goods.—Dyestuffs.

Claims use since June 10, 1920.

DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS IN PATENT CASES.

COMMISSIONER'S DECISIONS.

Ex parte Kuhn and Shailor.

Decided July 27, 1918.

Patents—Invention—Electrical Heating Unit.

Where the prior art disclosed in one patent an electrical heating unit consisting of a series of separate resistance-coils formed of a double spiral wound in conical form, each coil being joined to the next by a binding-post, another patent disclosed a heater having a series of coils of a continuous piece of wire, and others disclosed heating-coils of a single spiral, the wire being led back through the coil, *Held* that no invention was involved in modifying the first-named construction by making the wire continuous and winding the coils in a single instead of a double spiral in view of the other references.

[This application has matured into Patent No. 1,310,994, dated July 22, 1919.]

Appeal from Examiners-in-Chief.

ELECTRICAL HEATING UNIT.

Messrs. Whittemore, Hulbert, & Whittemore for the applicants.

Whitehead, *First Assistant Commissioner:*

The applicants appeal from the decision of the Examiners-in-Chief affirming the decision of the Primary Examiner in finally rejecting claims 5 and 6, which read as follows:

5. An electrical heating unit comprising a continuous resistor having a series of convoluted portions each formed of a single spiral and provided with a central terminal wire and a series of insulators for detachably engaging and supporting each of said convoluted portions.

6. An electrical heating unit, comprising a single continuous resistor having a series of conical convoluted portions, and a series of conical insulators for detachably engaging and supporting each of said convoluted portions.

The reference cited by the Examiner is Seiler, No. 379,822, March 20, 1888.

The invention is an electrical heating unit consisting of a series of coils made from a single piece of wire. The coils are wound in the form of a spiral, the wire from the upper end being led back through the coil.

A number of claims have been allowed by the Examiner to specify the construction and arrangement of the insulators about which the coils are placed. The present claims merely specify that the resistor is made of a continuous piece of wire and that the coils are provided with a central terminal wire.

The patent to Seiler shows a series of resistance-coils wound in conical form; but the wire is not continuous, each coil being joined to the next by a binding-post, and the coils are not wound as in applicants' case, but in a double spiral.

It was old, however, to make an electrical heater having a series of coils of a continuous piece of wire, as is shown in the patent to Seiler, No. 302,673, cited in the concurring opinion of one of the Examiners-in-Chief on the petition for rehearing. It was also old to form heating-coils of a single spiral, the wire being led back through the coil. This is shown in the patent to Coleman, No. 530,637, cited in the decision above referred to, and also in the patents to Carpenter, No. 433,671; Hoskin, No. 877,843, and Johnson, No. 1,064,739.

It must be held, therefore, that the appealed claims define nothing constituting invention over the prior art. In other words, that broadly to modify the Seiler construction by making the wire continuous and winding the coils in a single instead of a double spiral would not be invention.

In connection with the petition for rehearing before the Examiners-in-Chief there were presented two claims as substitutes for the appealed claims. These claims are slightly more specific than the appealed claims; but for the reasons stated with respect to the appealed claims they are not regarded as patentable.

The decision of the Examiners-in-Chief is affirmed.

DECISIONS OF THE U. S. COURTS.

U. S. Circuit Court of Appeals—Second Circuit.

Bellows and Slack *v.* New York Central Railroad Company. Same *v.* Pressed Steel Car Company.

Decided May 13, 1920.

1. Patents—Appeal—Right of Holder of Legal Title to Prosecute Appeal Independent of Exclusive Licensee.

Where suit was brought by the legal owner of a patent, joined with an exclusive licensee holding a license containing a provision that if the patent should be held invalid or should be held to infringe other patents the licensee should have the right to surrender the agreement and should not thereafter be obliged to pay royalties, and the district court held the patent invalid, upon refusal of the licensee to appeal the legal owners have sufficient interest in maintaining the validity of the patents to entitle them to prosecute an appeal, although the patent had expired and no injunction could be granted.

2. SAME—PATENTABILITY—USE IN NEW DEVICE OF CONSTRUCTION PREVIOUSLY USED IN REPAIR JOBS.

Where in the use of steel cars having longitudinal sills it was found that the sill was often broken between the end of the car and the body-bolster by reason of collision or buffing and it was the practice to repair such breaks by removing the end of the sill beyond the break and splicing an end section to the main body of the sill, claims of the Bellows patent, No. 693,218, covering a car provided with a sill with a sectional end spliced to the body at a point between the body-bolster and the end, *Held* invalid because devoid of invention, as it involves only the idea of using for new cars a construction theretofore used in repair jobs. (*National Harrow Co.* v. *Quick*, 74 Fed. Rep., 236.)

3. SAME—NOVELTY—STEEL CAR.

The Bellows patent, No. 693,218, for a steel car, claims 2 and 3 *Held* void in view of prior uses.

APPEAL from the District Court for the Southern District of New York. Action by Arthur B. Bellows and Louis M. Slack and the Cambria Steel Company, plaintiffs, against the New York Central Railroad Company, defendant, and the same plaintiffs against the Pressed Steel Car Company, defendant, for infringement of Letters Patent No. 693,218.

Decrees for defendants. Plaintiffs, Arthur B. Bellows and Louis M. Slack, appeal.

Mr. George H. Parmelee and *Mr. Clarence P. Byrnes* for the appellants.

Mr. Alfred W. Kiddle and *Mr. Wylie C. Margeson* for the appellees.

Before WARD, ROGERS, and MANTON, Circuit Judges.

MANTON, *Cir. J.*:

These actions were heard as one and will be treated in one opinion.

When the actions were tried in the district court, the Cambria Steel Company, an exclusive licensee of the appellants, joined in the action. The claims were held invalid in the district court and the Cambria Steel Company refused to prosecute an appeal. Its license agreement, dated February 21, 1900, contained the following clause:

This agreement is based upon the understanding that the patents of the parties of the first part are valid, and if any of them shall be invalid or shall infringe patents to others, the party of the second part shall have the right to surrender this agreement and shall not thereafter be obliged to pay royalties under it.

Prior to making this agreement, the Cambria Steel Company was not engaged in the business of making structural-steel cars but became engaged in such manufacture thereafter. Under the license agreement, they agreed to pay the appellants five dollars per car and did so up to the date of the decree below. Many cars were built and a considerable sum was paid as royalties. When the Cambria Steel Company refused to further pay royalties or to prosecute this appeal, a motion for a severance of parties was granted and thereafter the individual plaintiffs prosecuted the appeal. A motion was thereafter made to dismiss this appeal. It was denied. At the time of such denial, it was determined to hear the merits of the appeal when we might reconsider the motion to dismiss. The license to the Cambria Steel Company appears to be a right to make and sell the cars, using the construction which, the appellants contend, is covered by their patent. It was not an assignment. (*Waterman* v. *Mackenzie*, 138 U. S., 252.) The Cambria Steel Company could not sue in its own name alone, and Bellows and Slack were made parties. We are satisfied that the appellants have an interest in maintaining the validity of the patents. The patent has expired and no injunction can be granted. The infringement alleged at bar is in reference to the car made by the manufacturer and used by the railroad company in 1910. Notice of infringement was not given until 1915. However, we shall pass upon the merits of the case rather than dismissing the appeal, as urged by the appellee.

The patent in suit relates to a sill which has been referred to as a "spliced sill" used in the manufacture of the underframe which supports the car-body of freight-cars. Frames of this and like character were made of wooden beams and planking prior to 1898. Then the steel car made its appearance. Steel plates and sheets were pressed by highly-draulic presses into different shapes and replaced wooden parts in the wooden cars. Among the parts wherein steel replaced wood were the lateral sills which not only supported the load, but were obliged to meet the buffing-blows and collisions which are of every day occurrence in the life of a freight-car.

On the 11th of February, 1902, the patent here considered was granted to Bellows. Later, the appellant Slack obtained an interest in the patent by assignment. Claims 2 and 3 of the thirteen claims of the patent are in suit and are as follows:

2. A car having a longitudinal sill with a sectional end spliced to the body of the sill at a point between the body-bolster and its end; substantially as described.

3. A car having at the side a plate-girder with an end portion detachably fixed to the body of the plate-girder at a point between the body-bolster and the end; substantially as described.

In his specifications, the inventor says:

The center sill and plate-girders are preferably made sectional—that is to say, divided at each end at a point between the body-bolster and the end of the car—and spliced, as at B, the splicing, which is sufficiently illustrated in Fig. 3, being effected by suitable flanged sections and rivets. The object is that in case the car should be injured at the end by collision the damaged end sections of the sill and plate girders may be detached and replaced with relatively small cost as compared with cutting out and replacing the entire sill, as in prior car constructions, or replacing the entire plate-girders. Within the scope of my broader claims I may, however, make the sill or the plate-girders, or both, continuous throughout their length. For economy of construction I preferably form plate-girders of less depth from the body-bolster outwardly than between the body-bolster, as shown at 12 in Fig. 1.

The act of infringement relied upon by the appellants was the sale of a car on July 26, 1910, by the Pressed Steel Car Company and the use of said car by the New York Central Railroad Company. Reading the patent, taken in conjunction with the testimony of the inventor, it is clear to us that the invention relates to making longitudinal sills of cars in sections and splicing end portions or sectional ends of the central portion of the sills at a point between the body-bolster and the end of the car, the object or purpose being to easily repair the end sections of the sill if damage should occur by reason of collision or buffing, the thought being that the repair would be less costly and, instead of the entire sill crumbling or bending, which

might result in the loss of the entire structure, the greater part of the car could be spared damage by the injury being confined to the sectional end, due to the splicing of the sills at a point between the body-bolster and the end of the car. The splicing of the sills referred to at a point between the body-bolster and the end does not confine the construction to original construction, but may involve the repair of a section of the car which may have been damaged by collision. The longitudinal sill referred to in claim 2 is not limited to any particular character of sill. It may be composed of metal beams and of suitable section as the specification reads. It comprehends any kind of a sill, whether it be wood or metal or a composite of wood and metal. The plate-girder referred to in claim 3 (which is referred to in the specifications as metal in the side sills) is used in the side sills, as it is referred to in the specifications as—

metal plates having one or more flanged metal pieces at the top and bottom edge.

Thus, the inventor utilized web-plates with a reinforcing-angle on the top to form the top chord and a reinforcing-angle on the bottom forming the bottom chord. We are satisfied that these plate-girder sides, when used in gondola or flat cars, are cargo-carrying members intended to carry part of the load and in turn, transmit the same to the body-bolster. The plate-girder extending between the body-bolster and into the space between the body-bolster and the end of the car, is the body or web of the plate-girder and it is to this that the end portion or sectional end is to be spliced by flanged sections and rivets. The manner of uniting the central and end portions is by a butt-splice. The webs of the central and end portions abut each other and are spliced together by means of splice-plates. In the construction of these cars by the Cambria Steel Company, using this sectional sill, the lower angle or chord is continuous from end to end of the car. It is by thus splicing that the inventor is able to—

remove and replace without necessarily removing the car from the track or even unloading the car.

Whether this is done, as claimed by the inventor, must necessarily depend upon the force of the collisions and damage done. It is contended by the appellant that it requires the features of the two claims to make up the total of Bellow's invention of the detachable underframe end, but we fail to find any combination of the features of the two claims together referred to in the patent. It is not referred to as a "detachable underframe end" nor does the patent require the splice to be adjacent to the body-bolster. This is not found in the claims in suit. We agree with the district court that the claims refer to details of construction.

On examining the prior art and prior uses in this structural-sill art, we are not convinced that the appellant Bellows was the first to make a successful structural-sill car. Hardie and Reese built a car with structural-steel shapes long prior to Bellows's period. The Lehigh Valley tender-underframe, which has been offered in evidence, shows the method of splicing these underframes by the splicing of center sills. The proofs establish that for many years prior to the inventor's date of conception, the Lehigh Valley Railroad Company had followed the practice of splicing center sills of damaged locomotive-tender underframes. Center sills and side sills were of rolled channels, the lightest of them being about six inches in depth and some were twelve inches in height. Any experience which this railroad company had and in which the injury was sustained by collision, it was found that it resulted principally in bending or breaking the center sills between the body-bolster and the end sills and its spliced center sills, comprised of rolled channel, and extended through the bolster at each end of the car and had sectional ends spliced thereto at a point between the bolster and the end sills. The drawings which were offered in evidence clearly show the cars having true body-bolsters. Nor can it be said that this is not an apt case of inception, because the construction as used by the Lehigh Valley Railroad Company was in connection with a tender. It is true that the inventor here entitles his patent a steel car, but when examined as to claims and specifications, it is found that the invention has to do with the sills used in car construction. The appellants are, therefore, confronted with the rule so long established and time-honored: That which infringes, if later, would anticipate if earlier. (*Peters* v. *Active Mfg. Co.*, 129 U. S., 530; *Knapp* v. *Morss*, 150 U. S., 221.) Applying an old contrivance in a new way, if such it be, to this analogous subject of constructing the underframe of a car without any novelty in the mode of applying the old construction to the new purpose, is not a valid subject-matter of patentable invention. The idea that using the construction theretofore used in repair jobs for new cars is not invention. (*National Harrow Co.* v. *Quick*, 74 Fed. Rep., 236.)

It also appears from the testimony that there were 2,000 Baltimore & Ohio cars made embodying center sills having sectional ends spliced thereto at a point between the body-bolster and the end of the cars—precisely the construction contended for in claim 2 of the patent in suit, and part of which were delivered on December 20, 1899. Some of these cars went into service before the date of this application. We think the construction of these cars anticipates appellants' invention. An examination of the drawings of the so-called Erie cars, contract for which construction was made August 2, 1899, and, as appears from a tracing dated December 11, 1899, shows the central or longitudinal sill with a sectional end spliced to the body of the sill at a point between the bolster and its end. The first car was delivered February 25, 1900, and the last car shipped May 19, 1900. In view of this construction, we cannot escape the conclusion that the idea of splicing was originated by Mr. Hanson. He supervised the construction at the Pressed Steel Car Company's plant. In the latter part of 1896 and the early part of 1897, one Hardie of Pittsburgh

designed a steel hopper-car for the Pittsburgh & Lake Erie Railroad. The drawings, which were completed January 22, 1897, and under which a large number of cars were built by the Schoen Pressed Steel Company, provided for a plate-girder side with an end portion detachably fixed to the body of the plate-girder by spliced plates running forward and back of the bolster. It is immaterial that the lower angle of this car is continuous from end to end for the reason that in the appellants' structure, as indicated in the patent in suit, the lower chord or angle 9 of the plate-girder side, projects beyond the bolster for the purpose of being utilized as one of the splicing members. This is what was done in the Hardie car. The sectional end of the Hardie car is just as detachably fixed to the plate-girder side as a sectional end or end portion of the appellants' car. The Hardie car discloses the use of the plate-girder side as a load-carrying member with a sectional end spliced thereto, and this construction will permit the sectional end or end portion of the plate-girder side to be replaced in a damaged car just as readily as in appellants' car by removing the rivets at the head of the bolster, uniting the section end with the gusset-plate and either straightening or cutting off the lower angle. This sectional end may be repaired. We think that construing claim 3, either broadly or reading it literally and limiting it to a construction in which the web of the plate-girder side extends beyond the bolster into the space between the bolster and the end of the car to which extended web a sectional end is spliced, or the splicing of the sectional end in front of or at or back of the bolster, the result is the same—the Hardie car is a complete anticipation. In addition thereto, it is clear that the Reese car, the drawings of which were made in the spring of 1897, which was placed in service on June 28, 1897, with the Pittsburgh & Lake Erie Railroad and which has been constantly in use since, anticipates the patent in suit. In these cars, the load was carried by the plate-girder side, the center sills being utilized for the attachment of draft-rigging and for the transmission of pulling and buffing strains. The sectional end of the plate-girder side in this car can be replaced just as readily as in appellants' car. It would only be necessary to remove the rivets passing through the upper angle, the web, and the lower angle of the sectional end. The fact that this freight-car has been in constant use since that date is sufficient answer to the claim of commercial failure. Indeed, the subject of splicing ends of the car was considered in the proceedings of the Master Car-Builders' Association in 1897. This method of construction of underframe was advocated by Mr. Barr and, we think, he clearly sets forth the extension of the longitudinal sills into the space between the bolster and the end sill, and that to these extending ends of the lateral sills there could be secured section ends to bridge the space between the lateral sills and the end sills so that in ordinary cases of damage, repairs could be made without disturbing the general frame. It may be that Bellows has improved on Barr's idea, but the mere fact that the new method of construction is a better one than the old, requiring perhaps less repair and having greater strength than the old one, does not alter the rule that it is not invention to produce a mere change in an instrument or machine of one material into another. (*Hicks* v. *Kelsey*, 18 Wall., 670.)

We conclude that the splicing of the sills between the bolster and the end of the car was not new and that the appellants' patent has been anticipated by uses in the prior art.

The decrees are affirmed.

Interference Notices.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., August 11, 1920.

Peter S. Maroosis, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of William S. Maroosis, corner of Washington avenue southeast and Oak street, Minneapolis, Minn., for registration of a trade-mark and trade-mark registered January 28, 1902, No. 37,688, to Peter S. Maroosis, 257 and 259 First avenue south, Minneapolis, Minn., and a notice of such declaration sent by registered mail to said Peter S. Maroosis at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said Peter S. Maroosis, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

M. H. COULSTON,
First Assistant Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., August 17, 1920.

Frederick Gardner, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of the Ward Baking Company, Southern Boulevard and East One Hundred and Forty-third street, New York, N. Y., for registration of a trade-mark and trade-mark registered January 8, 1907, No. 59,440, to Frederick Gardner, 151 East Van Buren street, Chicago, Ill., and a notice of such declaration sent by registered mail to said Frederick Gardner at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said Frederick Gardner, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

M. H. COULSTON,
First Assistant Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., August 17, 1920.

H. Chaloner & Co., their assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of the Pendleton Creamery Company, Pendleton, Ind., for registration of a trade-mark and trade-mark registered June 18, 1901, No. 36,614, to H. Chaloner & Co., 36 Water street, New York, N. Y., and a notice of such declaration sent by registered mail to said H. Chaloner & Co. at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said H. Chaloner & Co., their assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

M. H. COULSTON,
First Assistant Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., August 17, 1920.

Retailers' Cooperative Association, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Henry Thayer & Co., Inc., of 150 Broadway, Cambridge, Mass., for registration of a trade-mark and trade-mark registered November 12, 1912, No. 89,143, to Retailers' Cooperative Association, of 423 Market street, Camden, N. J., and a notice of such declaration sent by registered mail to said Retailers' Cooperative Association at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said Retailers' Cooperative Association, its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

M. H. COULSTON,
First Assistant Commissioner.

Amendments to Amendments.

RULE 74. When an amendatory clause is amended, it must be wholly rewritten, so that no interlineation or erasure shall appear in the clause, as finally amended, when the application is passed to issue. If the number or nature of the amendments shall render it otherwise difficult to consider the case or to arrange the papers for printing or copying, the Examiner or Commissioner may require the entire specification to be rewritten.

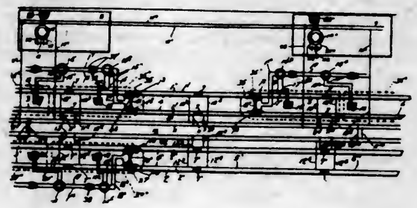
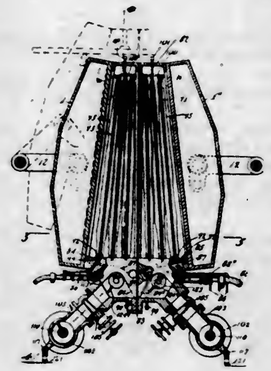
PATENTS



GRANTED AUGUST 24, 1920.

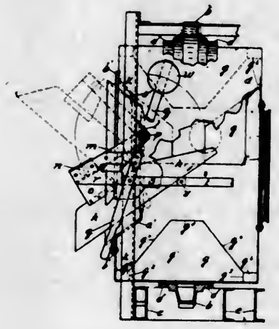
1,350,290. WORK-HOLDER. RUDOLPH BECKER, Roselle Park, N. J., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed Sept. 6, 1918. Serial No. 252,939. 20 Claims. (Cl. 112—104.)

1. In a sewing machine, stitch-forming mechanism, and a work-holder intermittently movable with respect thereto, said work-holder having opposed means for clamping a portion of the work adjacent the stitch-forming mechanism, one of which forms a deflector for holding another portion of the work away from the stitch-forming mechanism.



1,350,291. TELEPHONIC APPARATUS. ISIDOR BERLINER, ABRAHAM BERLINER, and SAMUEL BERLINER, Toronto, Ontario, Canada. Filed Mar. 12, 1917. Serial No. 154,331. 3 Claims. (Cl. 246—9.)

1. The combination with track rails divided into insulated sections, of a train having its axles insulated from its wheels, telephones on said train, wires connecting said telephones with said wheels, a central station having a telephone, wires running parallel to said tracks, wires connecting said last named wires with said telephone in said central station, bond wires connecting said track sections with said wires parallel to said tracks, and a battery in said central station for said telephones.



1,350,292. ART OF FILTERING MATERIALS. JOHN J. BERRIGAN, Orange, N. J., assignor to Henry R. Worthington, New York, N. Y., a Corporation of New Jersey. Filed Dec. 8, 1915. Serial No. 65,652. 26 Claims. (Cl. 210—185.)

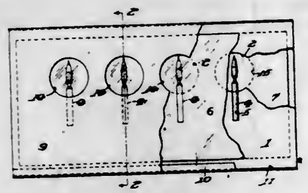
1. In a filter, the combination, with a casing, a hollow filter element supported therein and comprising walls of filter cloth, and means for conducting material to be filtered to the interior of the casing, of means for conducting away filtrate from the interior of the hollow filter element, and means for supplying a heated fluid to the interior of said filter element while the filtration is in progress.

21. In a process of filtering, the step which comprises maintaining a body of heated fluid within the filter element during the filtering operation.

1,350,293. CONCRETE-MIXERS. EDWARD W. BRACKENBURY, Milwaukee, Wis., assignor to The T. L. Smith Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed June 19, 1914. Serial No. 846,056. Renewed Apr. 15, 1920. Serial No. 374,201. 9 Claims. (Cl. 83—73.)

1. In a concrete mixer, a rotary mixing drum having an end movable therewith and provided with a discharge opening near the axis of the drum, and an inclined discharge spout entering the drum in a position to cross the plane of the discharge end of the drum at a point lower than the discharge opening, said discharge end of the drum being depressed to carry the discharge opening within the drum nearer to the medial plane of the drum.

2. In a concrete mixer, a rotary mixing drum having mixing and lifting blades and a discharge end movable

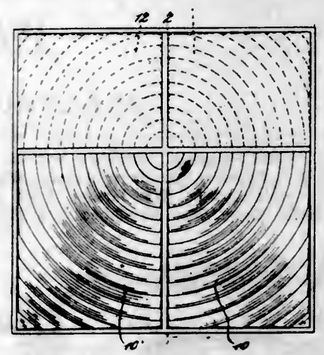


therewith, a conical ring passing through an opening in the discharge end of the drum with its smaller end projecting within the drum and forming a discharge opening in a plane closer to the medial plane of the drum than said discharge end of the drum, and an inclined discharge spout entering the drum through the discharge opening in a position to cross the plane of the discharge end of the drum at a point lower than the discharge opening.

3. A rotatable mixing drum containing a plurality of tapering scoops symmetrical in form and position as referred to the medial plane of the drum, each scoop having its wide end attached to the periphery of the drum, and its narrow end opening toward the axis of the drum, and supplemental blades of comparatively small height extending from the front edge of the sides of the scoops to the drum heads and adapted and arranged to deflect material at the bottom corners of the drum into the scoops.

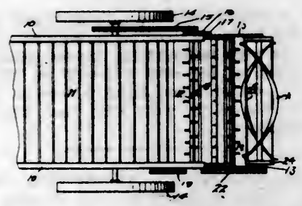
4. A mixer, comprising a rotary drum having lifting and mixing elements therein, and provided at its discharge end with a conical ring having its smaller end projecting into the drum from said discharge end, and a pivotally supported discharge spout mounted to swing into the drum to an inclined position across the plane of the discharge end at a point lower than the discharge opening.

5. In a concrete mixer, a rotary mixing drum having mixing and lifting blades, a pivotally mounted discharge spout having its pivots located between the planes in which the heads of the drum are located, and supporting bearings for said pivots, said pivots and bearings being located outside of the drum and said spout being inclined toward the interior of the drum when in an inoperative position.



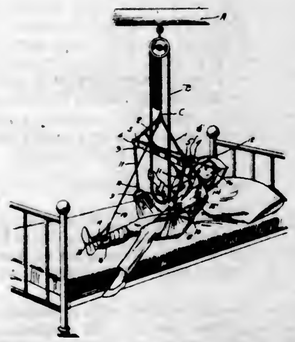
1,350,294. CONTAINER FOR TALKING-MACHINE STYLI. HENRY C. BROWN, Merion, and ERNEST JOHN, Ardmore, Pa., assignors to Victor Talking Machine Company, a Corporation of New Jersey. Filed Mar. 18, 1916. Serial No. 85,053. Renewed June 4, 1920. Serial No. 386,580. 4 Claims. (Cl. 206—44.)

1. A container for talking machine styli comprising a body having an aperture and a slot communicating therewith, transparent material on each side of said body covering said aperture, and a cover enveloping said body and having openings registering with said aperture, the sides of said slots being adapted to wedge between them the shank of a stylus and to direct the point of a stylus into said aperture.



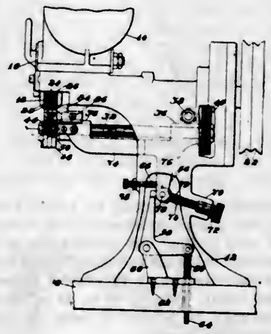
1,350,295. ILLUMINATING MEANS. LAWRENCE N. CHAMPEAU, Jersey City, N. J., assignor to Kirby, Champeau Co., Inc., New York, N. Y., a Corporation of New York. Filed Apr. 18, 1919. Serial No. 290,938. 9 Claims. (Cl. 241—1.)

1. A lens adapted to be associated with an artificial source of illumination, said lens having an axis in which the light source is to be substantially located and having upon one side of a diametrical line through said axis a series of prisms each tapering toward said axis along any radius from said axis through said prisms and having upon the opposite side of said axis line and upon the



opposite face of said lens a series of prisms each tapering away from said axis along any radius from said axis through said prisms.

1,350,296. MANURE-SPREADER. WILLARD J. COOK, Des Moines, Iowa. Filed Aug. 20, 1919. Serial No. 318,724. 7 Claims. (Cl. 275—6.)



2. In a device of the class described, a spreader having an apron in the bottom thereof adapted to feed material rearwardly, a drum mounted at the rear end of said apron and adapted to pulverize the material received therefrom, and a spreading cylinder disposed rearwardly of the pulverizing cylinder, having blades mounted thereon of equal width throughout their length, and adapted to deposit fertilizer upon an arc of greater width than the width of the spreader.

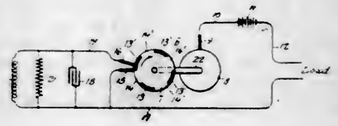
1,350,297. SELF-ASSISTING APPARATUS FOR INVALIDS. JAMES F. COOLEY, Richmond, Calif. Filed Sept. 4, 1918. Serial No. 252,589. 2 Claims. (Cl. 5—44.)

1. A device of the character described including a body supporting sling, a separable head piece associated therewith, a suspension bar disposed transversely across said sling and normally in proximity to said head piece when said sling is at rest, flexible connections between the head piece and the said bar, other connections between the outer ends of said sling and said bar, hoisting means attached to said bar for raising the sling to an elevated position, said sling adapted, during elevation to so incline itself in accordance with the weight of the person carried thereby as to bring the head piece in a plane above the body of the sling.

1,350,298. CEMENTING-MACHINE. JOHN W. COSGROVE, Medford, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 4, 1918. Serial No. 220,240. 21 Claims. (Cl. 91—49.)

5. In a machine of the class described, opposite rotatable operating and feeding member, the feeding member consisting of a plurality of relatively movable sections contacting with the work over a width approximately that of the operating member.

18. In a machine of the class described, a work-engaging member, and connections for moving the work-engaging member, said connections including an element constructed and arranged to permit it to be reversed with respect to an associated connecting element and thereby to move the work-engaging member from different normal positions.

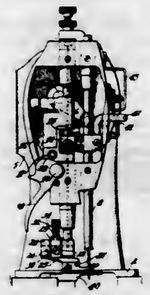


1,350,299. RIM NIGHT-LATCH. THOMAS E. CROUCH, Stamford, Conn., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Filed Feb. 24, 1920. Serial No. 361,025. 8 Claims. (Cl. 70—46.)

1. The combination of a spider adapted to be secured to a door, a bolt and its mechanism mounted in and carried by the spider, and a casing detachably secured to the spider.

1,350,300. INTERRUPTER-SPARK-SUPPRESSION METHOD AND DEVICE. WILLIAM J. CRUMPTON, Evanston, Ill. Filed Apr. 26, 1917. Serial No. 164,735. 5 Claims. (Cl. 175—294.)

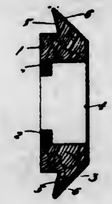
1. The combination with a pair of interrupter contacts, of means for opening and closing said contacts, and means for preventing sparking between said contacts consisting of a shunt comprising a reactance, a resistance, and a condenser connected in parallel, and means for connecting said shunt across said contacts before said contacts are opened and after said contacts are closed.



2. The combination with a pair of interrupter contacts, of means for opening and closing said contacts, and means for connecting said condenser across said contacts before said contacts are opened and after said contacts are closed.

3. The combination with a pair of interrupter contacts, of means for opening and closing said contacts, and means for preventing sparking between said contacts, consisting of a shunt across said contacts, the said shunt comprising a condenser, a resistance, and a reactance connected in parallel.

4. The combination with a pair of interrupter contacts, of means for opening and closing said contacts, and means for preventing sparking between said contacts, consisting of a shunt across said contacts, the said shunt comprising a condenser and a reactance connected in parallel.



5. The combination with a pair of interrupter contacts, of means for opening and closing said contacts and means for preventing sparking between said contacts consisting of a shunt across said contacts, said shunt comprising a resistance and a reactance connected in parallel.

1,350,301. PRESSER MECHANISMS FOR SEWING-MACHINES. ALBERT H. DE VOE, Westfield, N. J., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed Dec. 26, 1917. Serial No. 208,724. 19 Claims. (Cl. 112—235.)

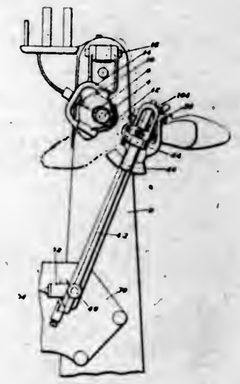
1. In a sewing machine, a presser mechanism including a foot and a presser-bar, a spring yieldingly urging said foot into engagement with the work, a second spring supported by said foot and sustaining said presser-bar, in combination with work-feeding mechanism including a feed-dog movable up and down whereby during the normal operation of the machine the presser-bar is prevented from vibrating up and down with the feed-dog during the stitching of work of a uniform thickness whatever it may be.

1,350,302. SIGN. GEORGE LEO ELDRIDGE, New Brunswick, N. J. Filed Nov. 7, 1919. Serial No. 336,449. 2 Claims. (Cl. 40—125.)

1. A sign comprising a frame having eaves whose rear edges are spaced forwardly from the rear edge of the body of the frame, and a panel therefor having ears adapted to be folded around and behind said eaves and secured thereby.

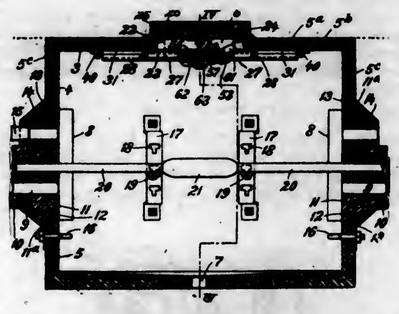
1,350,303. INDICATOR. JACOB W. ELVIN, Chicago, Ill. Filed Aug. 24, 1914, Serial No. 858,386. Renewed December 31, 1919. Serial No. 348,541. 1 Claim. (Cl. 40—70.)

In a memorandum indicator, a card having a small opening therein, a circular disk pivoted thereon and disposed so that the disk protrudes beyond the edge of the card where it may be engaged, said disk being provided with a series of numerals adapted to be successively exposed through the small opening in the card by turning the disk, and said disk having a peripheral notch disposed so that it will be in the protruding part of the disk when the zero point of the disk is exposed through said small opening, the periphery of the disk being otherwise circular.



1,350,304. CAPSULE FOR ANTISEPTICS AND THE LIKE. LEO E. EVSLIN, New York, N. Y. Filed June 19, 1918. Serial No. 240,808. 5 Claims. (Cl. 167—3.)

1. A capsule of the class described having a passageway therein providing for the egress of fumes therefrom, means whereby the capsule may be opened, and said means being of a character such that the opening of the capsule separates the parts forming said passageway for the purpose set forth.

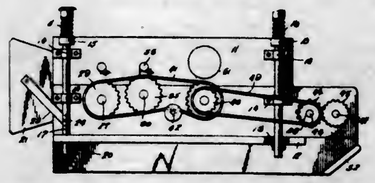


5. A capsule comprising a body part and a cover part, the cover part having a flange thereon telescoping the body part, the body part having a plurality of projections formed thereon for engaging the flange of the cover part to retain said flange spaced from the body part intermediate said projections to thereby provide a plurality of passageways for the passage of air through the capsule, and said flange being shaped to engage said projections in a manner to retain the cover out of engagement with the upper edge of the body.

1,350,305. TRIMMING-MACHINE. JOSEPH FAUSSE, Brockton, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 30, 1917. Serial No. 204,640. 21 Claims. (Cl. 12—87.)

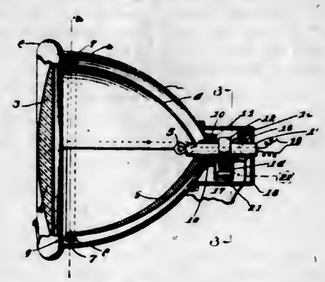
6. In a machine for trimming an insole attached to a last, a cutter, and a gage constructed and arranged to engage the last edge to limit the penetration of the cutter, the end of the gage being arranged to contact with the last at the heel breast portion as the cutter approaches this portion of the insole, and to serve as a fulcrum about which the last may be rotated to lead the point of cut out to the edge of the insole.

1,350,306. MANHOLE CONSTRUCTION. ISAAC C. FORSHEE, Germantown, Pa., and CHARLES GILMAN, Plainfield, N. J. Filed June 9, 1917. Serial No. 173,908. 13 Claims. (Cl. 72—100.)



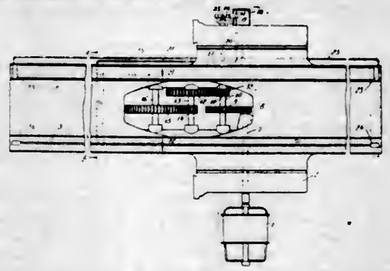
1. As a new article of manufacture, a monolithic reinforced concrete manhole having a continuously curved side wall acting as an arch when subjected to pressure from any lateral direction, said manhole being manufactured above ground and adapted to be transported and set in position as a unit, and having a conduit opening in the side wall thereof and having a pulling-in bolt set in the side wall opposite to said conduit opening.

1,350,307. WIRE-MILL. THOMAS FULLBRIGHT, St. Louis, Mo. Filed Oct. 16, 1918. Serial No. 258,349. 2 Claims. (Cl. 153—54.)



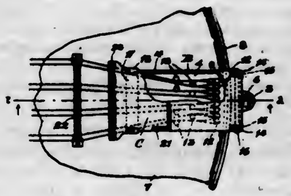
1. A mill for straightening wire or the like comprising two superimposed sections, transverse grooved and serrated rolls carried by both of the sections and contacting

respectively, a hopper having upper and lower inclined walls at the delivery mouth of the mill, angularly arranged straps pivotally connected to the lower mill section and to the sides of the hopper, and means for simultaneously revolving the rolls of the upper and lower sections at the same rate of speed in an opposite direction, ears on the



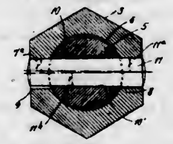
upper section, ledges on the lower section, brackets on both of the sections, headed rods passing through the respective ears, brackets and ledges, springs between the heads of said bolts and the ears, and means for adjustably securing the bolts to the ledges whereby to hold the sections of the mill associated and to regulate the tension of the springs.

1,350,308. ADJUSTABLE REFLECTOR FOR HEADLIGHTS. DAVID A. GARDEN, St. Louis, Mo. Filed Aug. 16, 1919. Serial No. 317,942. 1 Claim. (Cl. 240—41.)



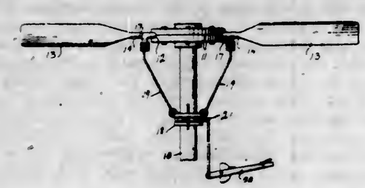
A non-glaring long-distance headlight, comprising a casing, a reflector made in two sections and mounted in said casing, one of said sections being fixed at the top of said casing and the other one of said sections being mounted to rotate to a position above and behind the said fixed section; and means connected to the said rotatable section for moving the same to a position above and behind said fixed section as well as for bringing said rotatable section to a position below said fixed section.

1,350,309. LUBRICATING SYSTEM FOR PLANERS. GEORGE E. GREENLEAF, Plainfield, N. J., assignor to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 3, 1919. Serial No. 280,435. 7 Claims. (Cl. 184—5.)



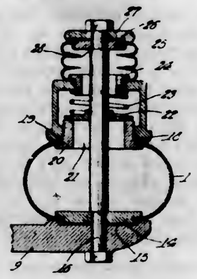
7. The combination with a planer bed, a reciprocating table on the bed and gearing and shafting for driving and reversing the table, of a lubricating system comprising a double-ended plunger pump, piping leading from one end of the pump to the ways or bearing surfaces on the bed, other piping independent of the first piping leading from the other end of the pump to the bearing surfaces of the gearing and shafting, a pump operating shaft connected with the table drive gearing and reversing when the gearing reverses, mechanism interposed between the operating shaft and the pump for operating the pump during rotation of the shaft in each direction, independent reservoirs for receiving lubricant from the bearing surfaces on the bed and from the gearing and shafting respectively, and independent pipes leading respectively from the said reservoirs to the corresponding ends of the pump.

1,350,310. TAILPIECE FOR BANJOS AND THE LIKE. ALBERT D. GROVER, New York, N. Y. Filed Jan. 7, 1918. Serial No. 210,756. 8 Claims. (Cl. 84—300.)



1. A banjo, or the like, provided with a tailpiece comprising a base-plate secured to the rim of the instrument and extending over the head toward the bridge, a plurality of slightly spaced lugs projecting upwardly from said base-plate and constructed to receive the looped ends of wire strings, the spaces between the lugs being of less width than the knotted end of a gut-string or silk string, and a plurality of fixed pins extending upwardly from said base-plate and arranged in two rows in such a way that the strings pass at an angle to the longitudinal axis of the instrument from the first row of pins to the second row of pins and from there over the bridge, whereby said pins serve to relieve the strain on the ends of the strings.

1,350,311. PLUG OR THREAD GAGE. FRANK O. HOAGLAND, Bridgeport, Conn. Filed Nov. 9, 1918. Serial No. 261,779. 3 Claims. (Cl. 279—97.)

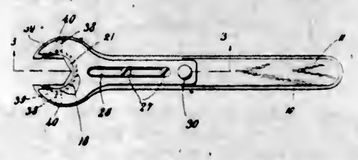


1. The combination of a gage member provided with a gaging surface thereon and having a cylindrical shank, a handle having a cylindrical aperture for receiving and closely fitting the shank, and a tapered pin of approximately circular cross section for securing the shank in place, the handle having two approximately central opposite transverse cylindrical pin-receiving holes arranged with their walls in alinement at one side and the shank having a transverse cylindrical pin-receiving hole which is approximately central but which is laterally offset on the side of the said alined walls out of exact register with the handle holes, the last said hole being of such diameter that the pin bears at one side against the alined walls of the handle holes and at the other side against the opposite wall of the shank hole.

1,350,312. MECHANISM FOR ADJUSTING PROPELLER-PITCH. WALTER L. HUBBARD, Ferris, Ill. Filed Dec. 4, 1918. Serial No. 265,230. 10 Claims. (Cl. 170—163.)

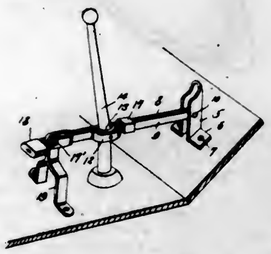
1. A propeller having a propeller shaft, confronting disks mounted upon the shaft and mutually grooved to provide spindle passages extending tangentially to a circle concentric to the axis of the shaft, propellers having spindles rotatably mounted in said passages and extending entirely across the disks and beyond the disks on each side, means for rotating said spindles, the extremities of the spindles opposite the blades being formed with angularly extending arms, means connected to said arms whereby the spindles may be rotated to thereby control the pitch of the blades, and means detachably engaging the disks with each other.

1,350,313. SHOCK-ABSORBER. OSCAR S. JEFFRIES, Sr., Philadelphia, Pa., assignor of one-half to George W. Kirk, Philadelphia, Pa. Filed Sept. 9, 1919. Serial No. 322,713. 4 Claims. (Cl. 267—22.)



1. The combination with an automobile having a chassis, an axle and an oscillating arm pivotally connected to said chassis and rigidly secured to said axle of a shock absorber comprising a globular cushion member secured to the end of said oscillating arm and said chassis, a second cushion member and a reciprocating rod connecting the first mentioned cushion member with the second mentioned cushion member.

1,350,314. SNAP-FASTENER. MICHAEL KATZMAREK, Duluth, Minn. Filed Apr. 9, 1918, Serial No. 227,589. Renewed Feb. 12, 1920. Serial No. 358,128. 5 Claims. (Cl. 24—211.)

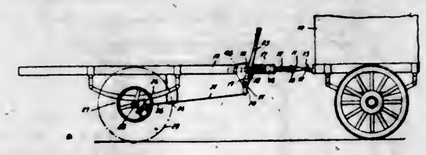


1. A snap-fastener comprising two separable parts adapted to be secured to material, one of said parts having a post projecting therefrom provided with a circumferential recess, the other of said parts having a spring wire loop engageable in said recess to hold said post, a spring controlled spindle for operating said loop, and a guide-plate, supported in the last named part, having openings to receive said spindle and loop.

1,350,315. WRENCH. MICHAEL KATZMAREK, Duluth, Minn. Filed Sept. 9, 1918, Serial No. 253,294. Renewed Feb. 12, 1920. Serial No. 358,129. 2 Claims. (Cl. 81—60.)

1. A wrench having a handle with an enlarged head, a gripping head rotatably engaged therein, teeth formed on the periphery of said gripping head, plungers operable in said enlarged head adapted to engage said teeth, cylindrical hubs on the opposite faces of said gripping head, plates slidable on said handle having semi-circular recesses on their forward ends, the forward ends of said plates projecting over marginal portions of the said gripping head and having the said cylindrical hubs snugly engaged in the said recesses thereby holding said gripping head in position, and means permitting the operation of said plates whereby either or both may be retracted from said gripping head.

1,350,316. AUTOMOBILE-LOCK. AUGUST W. KEMMLING, Springfield, Mo. Filed Aug. 19, 1919. Serial No. 318,440. 1 Claim. (Cl. 70—128.)



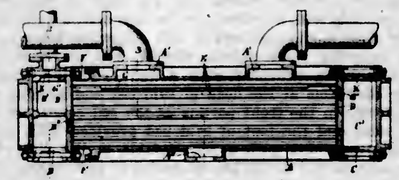
In a locking device for shifting levers of automobiles, a bracket, bars hinged together on the bracket and normally having independent movement with respect to each other, one of the bars being offset to receive a shifting lever, a yoke attached to the bar within the offset portion to engage the said lever, a plate on the other bar shaped to embrace the companion bar to prevent spreading of the bars and means for locking the ends of the bars together.

1,350,317. ALLOY FOR ELECTRIC WELDING. EDWARD J. KINGSBURY, New York, N. Y. Filed Nov. 20, 1919. Serial No. 339,344. 4 Claims. (Cl. 219—8.)

1. An electric welding alloy containing iron, carbon, manganese, and vanadium.

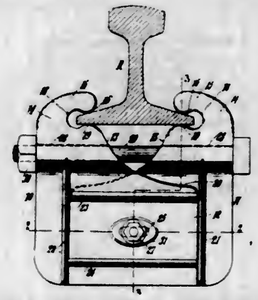
1,350,318. AUTOMOBILE-BRAKE. EDWARD V. LAWRENCE, Englewood, N. J., assignor to E. V. Lawrence Safety Brake Company, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 8, 1918. Serial No. 248,870. 10 Claims. (Cl. 188—112.)

8. A trailer comprising means for coupling to a tractive element, a brake actuating means adapted to be moved automatically to a limited extent in response to the relative movements between the trailer and its tractive element, a brake drum on a trailer wheel, a relatively stationary support, a brake member mounted thereon and adapted to coöperate with the drum, and a brake setting



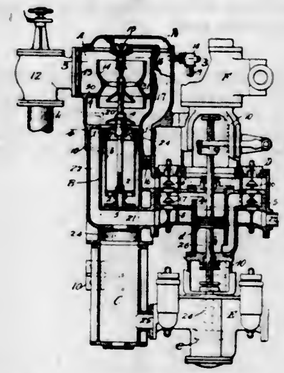
gearing arranged to set the brake under movement of the automatic brake actuating means for forward wheel rotation and dependent upon a predetermined adjustment of the brake member to release the brake in spite of the automatic actuating means.

1,350,319. SPARK-PLUG. OTIS L. LONGWORTH, Detroit, Mich., assignor of one-half to A. L. McCormick, Detroit, Mich. Filed Sept. 27, 1919. Serial No. 326,839. 3 Claims. (Cl. 123—169.)



1. A spark plug having a chamber and openings thereinto of small area as compared to that of the chamber and having two spark gaps, one of which is formed within said chamber and the other in one of said openings communicating with the chamber.

1,350,320. FEED-WATER HEATER. LUTHER D. LOVEKIN, Philadelphia, Pa. Filed Sept. 25, 1916. Serial No. 122,046. 1 Claim. (Cl. 257—236.)

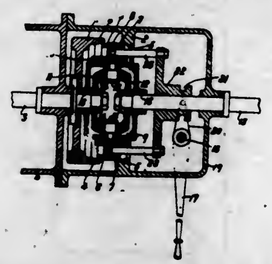


Heat exchange apparatus comprising in combination a casing inclosing a vapor chamber with an upper inlet for the vapor and a lower outlet for the liquid of condensation, a group of horizontally disposed tubes traversing said chamber and arranged in rows diagonally inclined downwardly and toward a central vertical plane of the intertube space, correspondingly inclined baffle plates arranged between the rows of tubes to provide diagonal vapor and water of condensation paths leading inwardly and downwardly from the upper and side edges of the intertube space, and a central downwardly extending escape passage for liquid of condensation, and a trough shaped baffle extending along and partially closing the upper end of said passage.

1,350,321. RAIL-ANCHOR. JOHN LUNDIE, New York, N. Y. Filed Nov. 17, 1919. Serial No. 338,521. 29 Claims. (Cl. 238—327.)

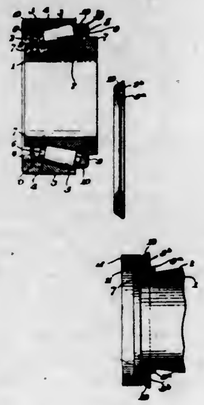
4. A rail anchor, provided with means for automatically gripping the rail, by the influence of the creep of the rail, said anchor comprising twin, overlapping, road-bed-engaging blades.

1,350,322. FEED-WATER-HEATING APPARATUS. THOMAS C. MCBRIDE, Philadelphia, Pa., assignor to Worthington Pump and Machinery Corporation, a Corporation of Virginia. Filed July 27, 1918. Serial No. 246,960. 25 Claims. (Cl. 261—34.)



1. In feed water heating apparatus, the combination with the steam and water chamber, of a bucket having openings for the flow of water into the bucket on excessive flow through the heater, and ports controlled by the bucket for delivering water from the heater on the lowering of the filled bucket and closing the ports to stop the flow on the emptying and raising of the bucket.

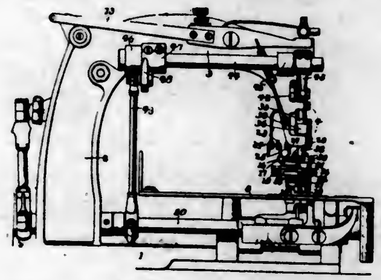
1,350,323. GATE. CHARLES A. MCCANN, Springfield, Ill. Filed June 16, 1919. Serial No. 304,412. 9 Claims. (Cl. 39—82.)



1. The combination with a gate having a frame, of a support, a panel longitudinally slidable in the frame and having a slot in one end, and an arm having one end pivotally connected to the support and the opposite end pivoted in the slot of the longitudinally slidable panel.

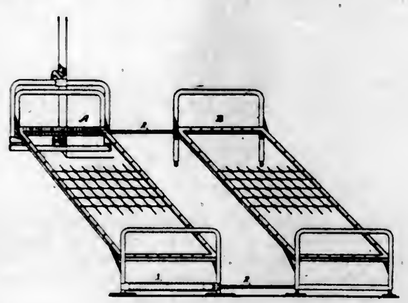
1,350,324. REVERSING-GEAR. COLIN HUGH MACMILLAN, Anniesland, Glasgow, Scotland. Filed June 2, 1920. Serial No. 386,028. 5 Claims. (Cl. 74—34.)

1. In a reversing gear, in combination, a drive shaft, a driven shaft, a differential gear interposed between said drive shaft and said driven shaft, a housing for said differential gear, a driver on said drive shaft provided with a clutch face, a stationary arresting member provided with a brake face, a clutch member sleeving said housing and provided with opposed faces engageable alternately with said clutch face and said brake face, means for shifting said clutch member toward said clutch face or toward said brake face, and means whereby the force effecting frictional engagement between said clutch member and said clutch face or between said clutch member and said brake face is proportionated to the torque exercised on said driven shaft.



1,350,325. METHOD OF ASSEMBLING ANTIFRICTION-BEARINGS. ALFRED H. MILLER, Philadelphia, Pa., assignor, by mesne assignments, to Wright Roller Bearing Company, Philadelphia, Pa., a Corporation of Delaware. Filed June 17, 1919. Serial No. 304,958. 6 Claims. (Cl. 29—84.)

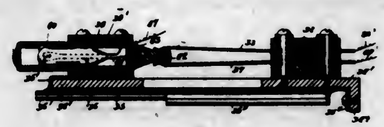
1. The method of mounting retaining rings on an annular member provided with an annular groove in which the ring is to seat comprising pressing a retaining ring having a dished web upon said member into line with said groove, and then straightening the web of said ring.



1,350,326. STITCH-FORMING MECHANISM FOR SEWING-MACHINES. JAMES R. MOFFATT, Chicago, Ill., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed June 16, 1915. Serial No. 34,426. 11 Claims. (Cl. 112—100.)

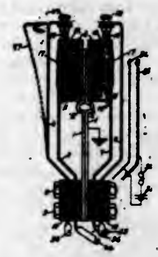
1. The combination with a work support, a feed, a presser foot, a main presser bar, needles, and complemental stitch forming mechanism, of a cross thread laying mechanism including a thread guide movable in a direction substantially parallel with the line of feed, a thread hook cooperating therewith, an auxiliary presser bar movable up

and down with the main presser bar, means for oscillating said auxiliary presser bar, and devices operated by said auxiliary presser bar for actuating said thread guide and said thread hook.



1,350,327. BED. MABEL MOIR, San Francisco, Calif. Filed Jan. 2, 1917. Serial No. 140,262. 1 Claim. (Cl. 5—18.)

In combination with a fixed support, a frame centrally hinged to said fixed support and sustained thereby, a pair of beds in alinement, the head of one of said beds being hung within said frame and provided with a slideway extending transversely therein and the foot of said bed being provided with a slideway at its base extending transversely therein, the openings of said slideways being narrower than the inner portion thereof, and the other of said beds being provided with a rod extending transversely therefrom at the head of said bed and slidable in the slideway in the front portion of the bed connected to said frame, and the foot of said bed provided with said rod being provided with a rod slidable in the slideway in the rear portion of the bed connected to said frame, and each of said rods being provided with a head in the slideway in which it is slidable of greater diameter than the opening of said slideway.

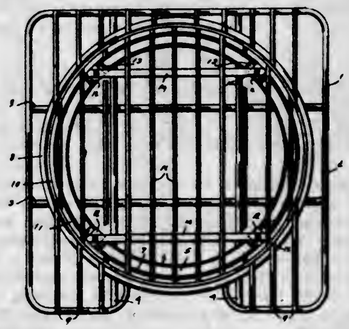


1,350,328. SWITCHBOARD AND THE LIKE. FREDERICK A. MUSCHENHEIM and FREDERIC W. BLASDALE, New York, N. Y. Original application filed Jan. 12, 1918, Serial No. 211,502. Divided and this application filed Aug. 17, 1918. Serial No. 250,289. 6 Claims. (Cl. 177—326.)

6. In an electric switchboard, two adjacent electric contacts, a conducting socket associated with said contacts, said contacts and sockets being adapted for connection with a signaling circuit, and a signal lamp having a conducting sleeve adapted to slip into said socket, a filament one end of which is connected with said sleeve, and a

plug connected with the other end of said filament and adapted to engage said contacts and electrically bridge the gap between them.

1,350,329. ELECTRICAL PROTECTIVE APPARATUS. FREDERICK R. PARKER, Chicago, Ill. Filed Mar. 8, 1907, Serial No. 361,354. Renewed Jan. 8, 1920. Serial No. 350,249. 27 Claims. (Cl. 200—115.)



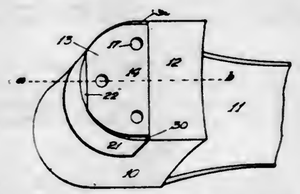
1. In apparatus of the character described, a high-potential electricity arrester comprising a pair of electrodes normally held in separated relation and in close proximity to each other by a suitable dielectric, an extension on one of the electrodes adapted to produce heat upon abnormal electrical conditions, a suitable terminal cap on the said extension, a circuit-controlling spring, and a piece of heat-susceptible material normally holding the circuit-controlling spring in contact with the said cap.

2. In apparatus of the character described, a high-potential electricity arrester comprising electrodes normally held in close proximity to each other, an extension on one of the electrodes adapted to produce heat upon abnormal electrical conditions, a terminal for the said extension, circuit-controlling means, and heat-susceptible material normally holding the said terminal and circuit-controlling means in electrical connection with each other.

3. In apparatus of the character described, a high-potential electricity arrester comprising electrodes normally held in close proximity to each other, excess-current heat-producing means associated with one of the electrodes whereby an arc in the arrester heats the heat-producing means, circuit-controlling means, and heat-susceptible material normally holding the circuit-controlling means in circuit with the heat-producing means.

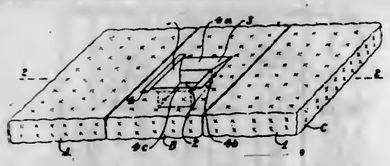
1,350,330. TURNTABLE-RACK FOR OVENS. ORA LEE PARTONNAR, Kansas City, Mo. Filed Aug. 13, 1919. Serial No. 317,274. 1 Claim. (Cl. 126—338.)

A turntable rack for ovens, consisting of a portable shelf member, an annular channeled member mounted on said shelf member and having an inner and outer vertical flange, a circular guard disposed outwardly of and in a plane above said channeled member, a plurality of spaced apart rods connected between the ends of said shelf member and said guard and adapted for holding the latter elevated, and a turn table mounted on said shelf member and within said guard, said turntable comprising an annular vertical flange provided on its inner side with a plurality of pivotally mounted wheels traveling in said channeled member and a plurality of spaced apart parallel



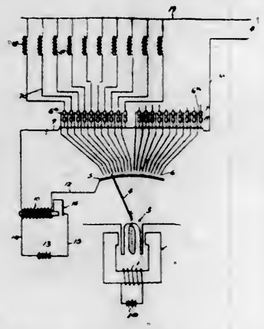
bars arranged on the upper edge of the flange and forming with the rods supporting said guard a grating for the rack.

1,350,331. SHELF-REACHER. JULIUS PEDERSEN, Bridgeport, Conn. Filed Mar. 29, 1919. Serial No. 286,170. 6 Claims. (Cl. 294—23.)



1. In a device of the character described, a support, a slotted member extending upwardly from an end of the support, a rod extending lengthwise of the support, and having its upper end curved and extending through the slot of said member, a pair of jaws pivoted to the member, and links pivoted to the jaws and pivoted to said curved upper end of the rod.

1,350,332. RUBBER HEEL. JOHN R. PETTIT, New York, N. Y. Filed Jan. 3, 1919. Serial No. 269,497. 2 Claims. (Cl. 36—35.)



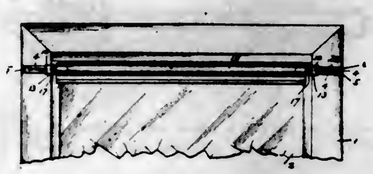
2. In a shoe heel, in combination, a resilient member, a U-shaped metallic plate enclosing said member, and means passed through the outside of said plate for securing said plate and said member to said heel.

1,350,333. MATTRESS. EMILIE ERIK, née RADSTAAKE, New York, N. Y. Filed June 11, 1919. Serial No. 303,418. 1 Claim. (Cl. 5—13.)

A sanitary appliance for invalids, comprising in combination a properly supported mattress provided with an opening having a vertical wall at the upper end and the other walls tapering upwardly from approximately the middle of their height, a metallic frame having a groove on three of its sides and a rim on the one remaining side, secured to the lower edge of aforesaid openingg, a pan adapted to slide within aforesaid groove and to register with aforesaid opening, and a cover corresponding in shape to the upper part of the opening in the mattress.

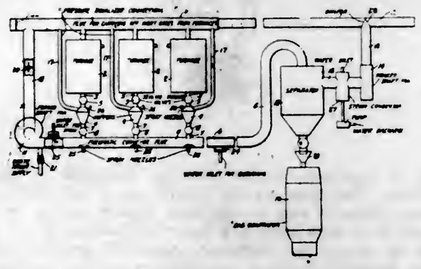
1,350,334. METHOD OF AND MEANS FOR ESTABLISHING ELECTRICAL CIRCUITS. ALBERT A. RADTKE, Chicago, Ill. Filed Sept. 8, 1919. Serial No. 322,449. 9 Claims. (Cl. 175—320.)

1. The hereindescribed method of causing low tension current to flow in a circuit having a plurality of gaps, which consists in inducing a high potential discharge through that part of the circuit having the gaps by decreasing the size of one of the gaps, and thus breaking down the resistance of the other gap and establishing an arc.



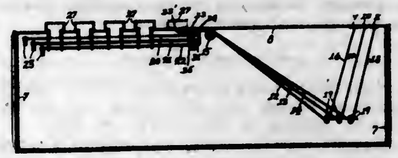
1,350,335. SUPPORT FOR REINFORCING-RODS. GEORGE H. REED, Newark, N. J. Filed Apr. 23, 1920. Serial No. 375,966. 3 Claims. (Cl. 72—122.)

1. A reinforcing rod support comprising a series of blocks of cementitious material, a continuous strand around which the blocks are molded at spaced intervals and means on each block for holding a reinforcing rod.



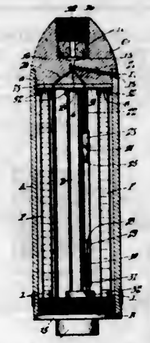
1,350,336. WINDOW-CURTAIN FIXTURE. JOSEPH J. REILLY, Newark, N. J. Filed Mar. 20, 1919, Serial No. 283,851. Renewed July 9, 1920. Serial No. 395,120. 3 Claims. (Cl. 156—24.)

1. A fixture as characterized comprising, a plurality of horizontal bars, each adapted for disposition in service at one side of a window opening, the said bars having parallel spaced sections, one of said sections being longer than the other to rest in parallel relation to the window frame, both of said sections having offset portions to



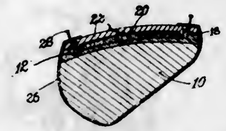
form securing members for mounting the sections and the bars on the window frame; and a sliding, adjustable bracket adapted for pivotally mounting the rotary window-sash roller.

1,350,337. PROCESS AND APPARATUS FOR CONVEYING AND TREATING MATERIALS. GEORGE I. RHODES, Glen Ridge, and HAROLD V. COES, Montclair, N. J. Filed Nov. 13, 1917. Serial No. 201,818. 31 Claims. (Cl. 202—5.)



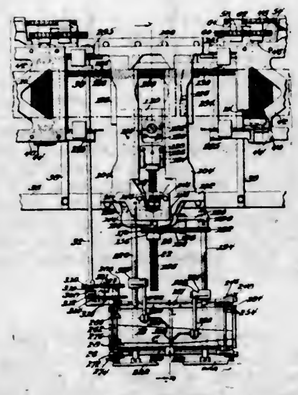
1. The process of conveying solid materials which are likely to be burned or oxidized in air, which consists in introducing such solid material into a current of gaseous conveying medium coming in a different path at such speed as to pneumatically convey the solid material so introduced, said gaseous conveying medium being substantially free of air and substantially inert with respect to said solid material during the conveyance, and collecting the material at the end of the conveyance substantially free of said inert conveying medium.

1,350,338. TOY. BRAYTON G. RICHARDS, Chicago, Ill. Filed Nov. 22, 1916. Serial No. 132,834. 15 Claims. (Cl. 35—9.)



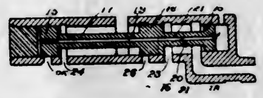
1. A construction of the class described comprising a body; a movable object on said body; a plurality of controlling members movably mounted on said body and associated with said object; means for assembling and dispersing said members on said body; and means operable through an assembled set of said members for moving said object, substantially as described.

1,350,339. SHELL. JAMES EDWIN RICHARDS, Horton township, Renfrew county, Ontario, Canada. Filed Oct. 13, 1919. Serial No. 330,315. 4 Claims. (Cl. 102—29.)



3. A shell, comprising a base, a casing, a firing tube in the casing having a firing piston adapted to be propelled by powder therein, springs holding the firing piston in normal position, a spring held plunger adapted to be propelled by the firing piston, a cap adapted to be exploded by the spring held plunger on impact by the piston, a powder tube in communication with the cap, and a shrapnel chamber in communication with the firing tube.

1,350,340. SHOE-LAST. JOHN C. SCHELTER, Rochester, N. Y., assignor to Fitz-Empire Double Pivot Last Company, Auburn, Me., a Corporation of Maine. Filed Oct. 1, 1918. Serial No. 256,443. 2 Claims. (Cl. 12—133.)

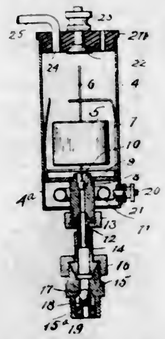


1. A shoe last having a waterproof bottom and having a cavity in said bottom constructed and arranged to hold a moistened pad.

1,350,341. WOODWORKING-MACHINE. JOEL F. SHEPPARD, 2d, and WILLIAM D. FLETCHER, Dover, N. H. Filed Dec. 21, 1918. Serial No. 267,815. 20 Claims. (Cl. 144—144.)

1. A wood working machine having, in combination, a planing cutter, means for effecting relative feeding movements of the cutter and the work, means associated with the respective ends of the cutter for adjusting the cutter laterally with respect to the work and for tilting the cutter toward and from said work.

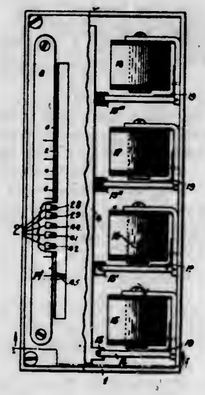
1,350,342. VALVE FOR PERCUSSIVE TOOLS. WILLIAM A. SMITH, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Oct. 25, 1919. Serial No. 333,232. 5 Claims. (Cl. 121—27.)



1. In a percussive tool, a valve chest, a valve adapted to operate therein, a head at one end of said valve controlling an auxiliary exhaust port, a head intermediate the ends of the valve controlling an admission port and an auxiliary exhaust port, said valve being forced in one direction by constant pressure against one end face and thrown to its opposite position by a fluctuating pressure against an opposite end face.

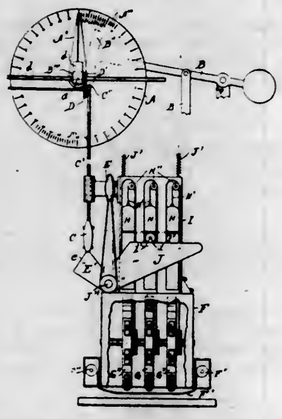
1,350,343. PROCESS FOR THE MAKING OF AN INSULATING AND PROTECTIVE COATING. EDWARD R. STOWELL, Portland, Ind., assignor to Stowell Fireproofing Company, Manistee, Mich., a Corporation of Delaware. Filed July 1, 1918, Serial No. 242,852. Renewed Apr. 10, 1920. Serial No. 373,006. 2 Claims. (Cl. 134—45.)

2. The herein described process for the making of a refractory and protective coating by combining sodium hydroxid with water, adding to each gallon of this lye solution approximately eight pounds of powdered carbid of silicon, incorporate well, let stand in covered container of sufficient capacity until the hydrogen gas formed by the action of the free alkali on the free silicon in the composition is exhausted, stirring the foam like composition which will result until it is reduced to the original quantity and then adding one pint of 50 to 54 degree sodium silicate to each gallon of the composition as thus formed.



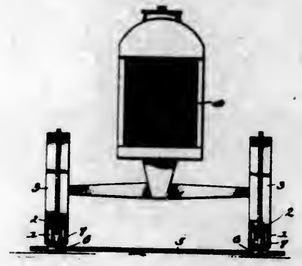
1,350,344. APPARATUS FOR PRIMING ENGINES. FREDERICK D. SWEET, Cleveland, Ohio. Filed July 12, 1917. Serial No. 180,031. 11 Claims. (Cl. 123—187.5.)

1. The combination with an internal combustion engine of a priming device comprising a receptacle adapted to be mounted adjacent the engine and in communication with the fuel supply for the engine, means for controlling said



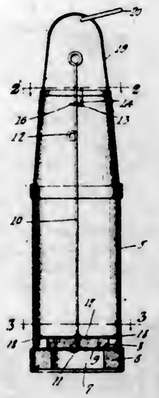
communication, a valve controlling the outlet from said receptacle, a float within the receptacle said float being operatively connected with the valve whereby as fluid fuel is supplied to the receptacle the float will rise and open the valve.

1,350,345. TELEMETRIC DEVICE. HARRY L. TANNER, Brooklyn, N. Y., assignor, by mesne assignments, to Tanner Engineering Company, Inc., Brooklyn, N. Y. Filed June 7, 1918. Serial No. 238,747. 7 Claims. (Cl. 177—351.)



1. In a changeable exhibitor, a plurality of movable permutation elements, a plurality of notches in each element, the notches in the elements being differentially arranged, a plurality of normally invisible indicating members biased toward said elements, and means for moving said elements to cause said members to advance selectively into said notches to render visible an indication.

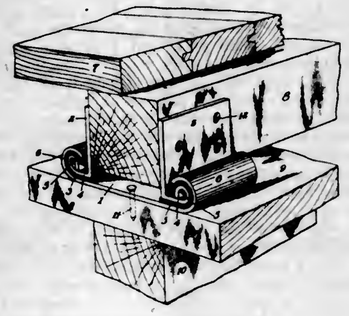
1,350,346. LEATHER-MARKING APPARATUS. ROY E. TOUCHETT, Fond du Lac, Wis. Filed Oct. 3, 1918. Serial No. 256,721. 5 Claims. (Cl. 101—42.)



1. Leather marking apparatus, including the combination with adjustable mark applying mechanism, of an indicator dial provided with a pointer and an annular row of circular contacts, a selective switch, movable along the contacts, a manually operable lever, operably connected to move the pointer into engagement with a selected contact, and electro-magnetic mechanism adapted to utilize the selected contacts to control the adjustment of the mark applying mechanism.

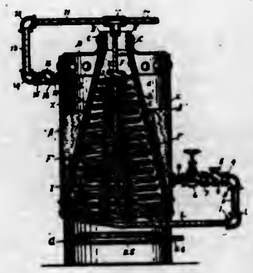
1,350,347. POWER-UNIT-LOCATING MEANS. EMMET L. VAN DOLSEN, Shelbyville, Ind. Filed June 16, 1919. Serial No. 304,503. 4 Claims. (Cl. 180—53.)

1. A power block for use with tractors comprising a spacing member, a pair of shoes adjustably mounted on the spacing member and provided with faces conforming to the treads of the wheels of the tractor and means adjustably securing the shoes on the spacing member.



1,350,348. WELL-BUCKET. JAMES A. VAN PELT, Morrilton, Ark., assignor of one-half to Herbert N. Van Pelt, Morrilton, Ark. Filed May 17, 1920. Serial No. 381,940. 4 Claims. (Cl. 166—19.)

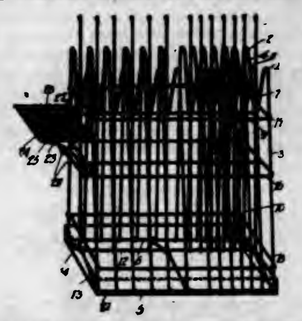
1. A well bucket including a relatively long body portion, a bottom member secured within the body portion and having a central opening, a controlling rod extending into the body portion and carrying a valve member on one end thereof adapted to close the central opening, means for supporting the upper end of the controlling rod against lateral movement, and means supported adjacent the valve member for preventing lateral movement of the valve member.



1,350,349. SOUND-INSULATING SUPPORT. ADOLPH FRED WALTHER, Cleveland, Ohio. Filed Mar. 26, 1919. Serial No. 285,332. 4 Claims. (Cl. 20—6.)

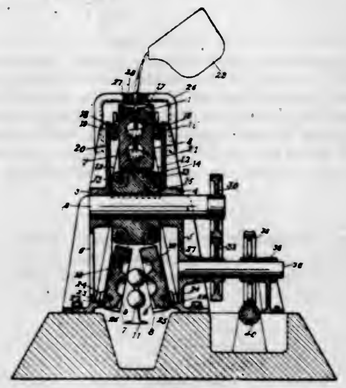
2. An insulating support for building elements, consisting of the combination of a base member having lateral upwardly turned-in side portions; two side members extending angularly from said base member, each having an outwardly extending portion surrounded by the lateral

edge portions respectively of said base member; and sound-insulating material interposed between the adjacent surfaces of said base and side members.



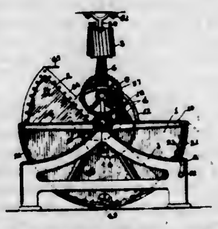
1,350,350. STEAM PRODUCTION. CHARLES M. WILCOX, New Paris, Ohio, assignor of one-half to Charles H. Harris, New Paris, Ohio. Filed Mar. 20, 1919. Serial No. 283,872. 5 Claims. (Cl. 122—167.)

1. A construction of the nature set forth comprising a tank forming a water jacket, steam generating coils located in the hollow of the tank, a pipe-line connecting one termini of the coils with the interior of the tank below the water level, a check-valve interposed in said pipe-line to prevent back pressure from the coils to the tank, a pipe-line connecting the other termini of the coils with the interior of the tank above the water level, a check-valve interposed in said second pipe-line to prevent back pressure from the tank into the coils, and means for taking usable pressure from the coils, all substantially as shown and described.



1,350,351. TABLEWARE-DRAINER. ARTHUR ABBOTT, Toronto, Ontario, Canada. Filed Sept. 2, 1919. Serial No. 321,265. 3 Claims. (Cl. 141—11.)

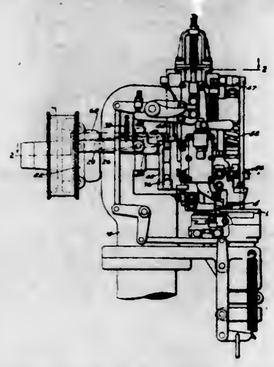
2. A tableware drainer comprising a frame consisting of two parallel rows of spaced looped members, the members of each row presenting relatively short inner arms and relatively long outer arms, the two rows of inner arms being connected together and the two rows of outer



arms being spaced apart, and means for supporting dishes in an upright position between the said outer arms.

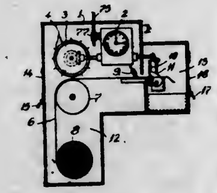
1,350,352. CASTING-MACHINE. DAVID G. ANDERSON, Columbus, Ohio, assignor to The Ohio Malleable Iron Company, Columbus, Ohio, a Corporation of Ohio. Filed Oct. 20, 1916. Serial No. 126,755. 4 Claims. (Cl. 22—75.)

1. In a casting machine, the combination of a supporting frame, a horizontal shaft journaled in the frame, a spider fixed to the shaft, a plurality of oppositely disposed mold blocks hinged to the spider, molds formed in adjacent faces of the blocks, rollers carried by the frame adapted to engage the mold blocks to close the molds, studs fixed to the mold blocks adapted to engage a flange of the frame to open the molds, and means to rotate the shaft.



1,350,353. WASHING-MACHINE. JOSEPH H. BAIR, Haddonfield, N. J. Filed Dec. 27, 1918. Serial No. 268,508. 7 Claims. (Cl. 68—37.)

1. In a washing machine the combination of an agitator, an ejection and suction device constituting an oscil-



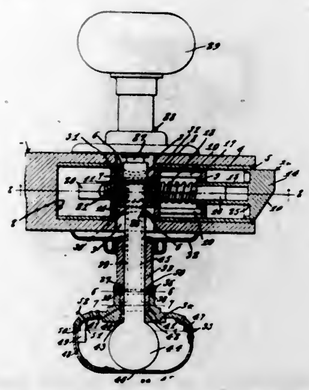
lating sliding guide for the agitator, and means for imparting motion of translation in a curved path to the agitator.

1,350,354. SOLE-FITTING MACHINE. FREDERIC E. BERTRAND, Lynn, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 10, 1916. Serial No. 83,253. 19 Claims. (Cl. 12—17.)

2. An insole chaneling machine, having in combination, a channeling tool, a sole support movable toward and from said tool, driving mechanism, a feeler mounted to engage the sole and to be moved thereby when the sole is moved by said support, and connections whereby a movement of said feeler produced by its engagement with the sole modifies the operation of said driving mechanism.

1,350,355. RECORDING APPARATUS FOR RAILWAY-SIGNALS. LEON S. BRACH, New York, N. Y. Filed Mar. 6, 1913. Serial No. 752,405. 19 Claims. (Cl. 234—27.5.)

1. In a device of the class described, a signal member, a movable pencil controlled by said signal member, a movable tape disposed for being marked upon by said pencil, a casing inclosing all of said parts and having an opening therein at a point adjacent a portion of the tape whereby access is given into the casing for manually impressing a record upon the tape, said casing also having an opening disposed adjacent said pencil through which the marked tape is projected, and a housing arranged about said second opening for receiving and inclosing the projected portions of the tape, said housing having an entrance opening controlled by secret fastening means.

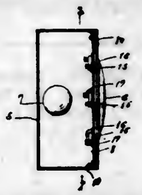


2. In a device of the class described, the combination with a plurality of railway tracks, of a plurality of recording members one for each of said railway tracks, and means associated with said tracks and with said recording members respectively whereby the passage of a vehicle over one of said tracks will effect an operation only of the recording member associated with that track, a record tape arranged to be operated upon by said recording members, and means whereby each of said recording members will be caused to inscribe a mark upon said record tape extending longitudinally of said record tape and to impress marks upon said record tape extending transversely of said record tape at opposite ends of said longitudinally extending mark.

3. In a device of the class described, the combination with a plurality of railway tracks, of a plurality of normally inoperative recording members one for each of said railway tracks, means associated with said tracks and with said recording members respectively, whereby the passage of a train over any one of said tracks will effect a movement into operative position of the recording member associated with that track, a record receiving member adapted to be marked upon by said recording members only when said recording members are moved into operative position, a signal member, and a recording member associated with said signal member disposed for marking continuously upon said record receiving member.

4. In a device of the class described, a signal member, a record impressing member controlled by said signal member, a record receiving member disposed for being operated upon by said record impressing member, means for moving parts of said record receiving member away from said record impressing member, and time controlled means for severing said moved parts.

5. In a device of the class described, a signal member, a record impressing member controlled by said signal member, a record receiving member disposed for being operated upon by said record impressing member, means for moving parts of said record receiving member away from said record impressing member, time controlled means for severing said moved parts, and means for guarding said severed parts.



1,350,356. LOCK. IRA D. BRILL, Marlington, W. Va. Filed Feb. 28, 1920. Serial No. 361,974. 2 Claims. (Cl. 70—91.)

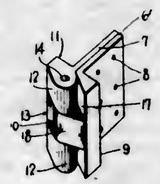
1. In a device of the class described, a barrier; a bolt slidable therein; an inner knob shaft journaled in the barrier; a pinion carried by the inner knob shaft; an outer knob shaft journaled in the barrier and in the pinion; a key insertible into the outer knob shaft and constituting mechanism for connecting the outer knob shaft with the pinion: oppositely disposed slides mounted for reciprocation in the barrier and having racks coöperating with the pinion: and interengaging elements on the slides and on the bolt whereby either slide may retract the bolt when said slide is retracted.

1,350,357. RAILWAY SIGNAL-LAMP. CHARLES H. COBB, Great Falls, Mont. Filed June 21, 1918. Serial No. 241,262. 3 Claims. (Cl. 240—22.)

1. The combination with a lamp having a source of light and a bull's eye in one side thereof; a plate arranged in the lamp and interposed between the source of light and the bull's eye, said plate having an opening

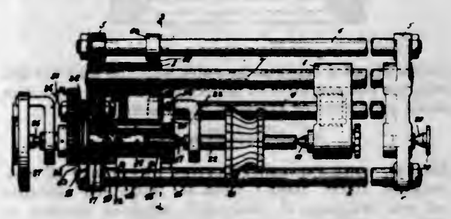
therein in alinement with the bull's eye; segments of colored glass arranged in the opening; and means to retain the segments of colored glass in the opening.

1,350,358. TESTING SYSTEM. THOMAS H. S. CONE, Boundbrook, N. J. Filed Apr. 17, 1919. Serial No. 290,752. 15 Claims. (Cl. 73—51.)



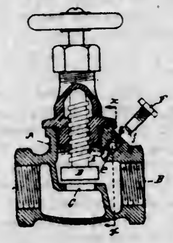
1. The process of testing a line of fluid-filled tubing for leaks or obstructions therein; consisting of closing an end of said line and of varying the pressure or density of the fluid in said line to a predetermined extent, thereupon opening said closed end through a vent restricted in accordance with a previously determined standard and observing the time required for a given degree of restoration of the normal pressure of said fluid.

1,350,359. ALLOY. HUGH S. COOPER, Cleveland, Ohio, assignor, by mesne assignments, to Zircon Tool & Alloy Corporation, a Corporation of New York. Filed Aug. 22, 1918. Serial No. 250,929. 3 Claims. (Cl. 75—1.)



1. An alloy for high speed cutting tools containing a preponderating amount of nickel, zirconium one-half to two per cent., and an amount of aluminum and silicon at least double the amount of zirconium.

1,350,360. HINGE. ROBERT W. CRANE, Los Angeles, Calif. Filed July 30, 1919. Serial No. 314,191. 1 Claim. (Cl. 16—107.)

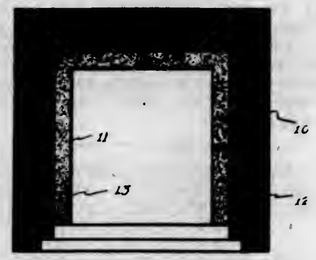


A hinge of the character set forth embodying two leaf sections, each of said sections being provided with a flange on its inner vertical edge, one of said sections having an inner beveled face, a knuckle formed on said beveled face of the flange at a point intermediate the upper and lower ends thereof, a pair of knuckles formed on the flange of the other leaf section providing therebetween an intervening space into which engages the knuckle of the first mentioned section, the inner face of the flange of the second mentioned section at a point between the knuckles being beveled, each of the first and last mentioned knuckles being correspondingly rounded or beveled to conform with the beveled confronting inner faces of the vertical flanges of said sections and engaging therewith.

1,350,361. RELIEVING ATTACHMENT FOR LATHES. OTTO CRONAU, New York, N. Y. Filed July 23, 1919. Serial No. 312,742. 7 Claims. (Cl. 82—19.)

1. A relieving attachment for lathes comprising a stationary frame adapted to be arranged between and supported by the head and tail stocks of a lathe, a work support oscillatably suspended in said frame, means for continuously rotating a work piece mounted in said support, and means driven by the head stock spindle for oscillating said support to intermittently relieve the work from engagement with the tool.

1,350,362. STOP AND WASTE COCK. GEORGE W. DECKER, Erie, Pa., assignor of one-third to Edward A. Kern and one-third to George A. Friedricks, Erie, Pa. Filed Oct. 30, 1919. Serial No. 334,510. 1 Claim. (Cl. 277—57.)



The combination in a stop and waste-cock, including a housing having a valve-seat opening therein, and a valve adapted to seat thereon, said housing having an axially inclined vent-opening therein, and discharge opening at right angles to said vent opening, an internal-valve-seat-shoulder in said vent-opening below said discharge opening, and a screw threaded plug adapted to seat on said valve-seat opening, substantially as set forth.

1,350,363. HEAT-RESISTING SAFE OR CABINET. RALPH H. DICK and CARL F. WOLTERS, Marietta, Ohio, and ROSER B. SUTTER, Newark, N. J., assignors to The Safe-Cabinet Company, Marietta, Ohio, a Corporation of Ohio. Filed Mar. 28, 1917. Serial No. 158,057. 3 Claims. (Cl. 109—2.)

1. A fire-heat resisting document-preserving cabinet constructed with inner and outer sheet metal walls and having an inner wetting insulation disposed outside said in-

ner sheet metal wall and comprising material which under heat gives off steam and operates to retard the entrance of heat to the interior of the safe, and a relatively dry in-

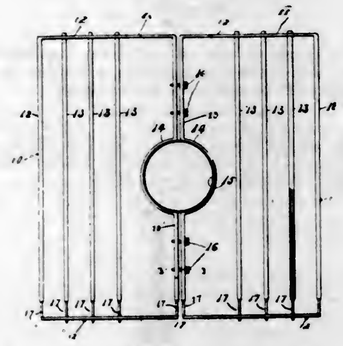
sulation disposed between the outer wall and said wetting insulation and operative to protect said wetting insulation against premature or excessive vaporization.

1,350,364. ORE CONCENTRATION. BENJAMIN H. DOSENBACH, Butte, Mont.; Edna M. Dosenbach executrix of said Benjamin H. Dosenbach, deceased, assignor to Edna M. Dosenbach. Filed Nov. 16, 1917. Serial No. 202,266. 11 Claims. (Cl. 83—85.)

1. In a process of concentrating ores the operations of subjecting a modifying agent to the solvent action of water to remove water soluble matter therefrom, introducing the remainder of said agent in the gaseous state into an ore pulp thereby effecting flotation of certain constituents of the ore, and separating the floated constituents from the remainder of the ore.

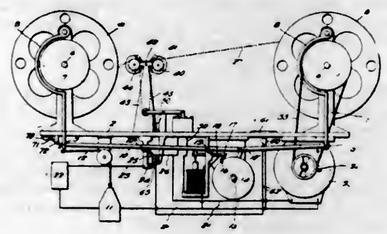
1,350,365. ART OF MAKING EMBOSSED DESIGNS. LOUIS H. FUELLING, New York, N. Y., assignor to The United States Printing and Lithograph Co., Brooklyn, N. Y., a Corporation of Ohio. Filed Mar. 6, 1918. Serial No. 220,847. 4 Claims. (Cl. 41—25.)

1. The improvement in the art of making embossed designs which consists in mounting a piece of fabric in a fixed position on a pressure resisting backing, rendering the fabric pressure resisting, making an impression from the stiffened fabric, while mounted, upon a softened plastic mass by applying relatively high pressure to the backing, the fabric and the plastic mass, removing the fabric and its backing, causing the plastic mass to become rigid, preparing a die therefrom, preparing a photographic reproduction of the fabric as mounted upon its backing at a time prior to the said pressure stage, printing an image thereof upon paper and impressing the die upon said paper in registry with the said print.



1,350,366. METHOD AND APPARATUS FOR CONDITIONING PREPARED FABRIC. FREDERICK M. FURBER, Revere, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 1, 1918. Serial No. 260,637. 20 Claims. (Cl. 91—55.)

5. Apparatus of the class described having, in combination, a closed casing having one side made of porous material, a water container opening into the casing, a heating device between the water container and said side, a granular material surrounding the heating device.

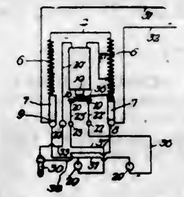


15. The method of conditioning prepared fabric which comprises applying to the uncoated side of the fabric heat and a relatively slight degree of moisture diffused through a porous material.

1,350,367. CLOTHES-DRIER. HIRAM W. GIDDINGS, Mansford, Wash. Filed July 18, 1919. Serial No. 311,697. 2 Claims. (Cl. 126—341.)

1. A clothes drier for attachment to a vertical support comprising a pair of sections each having end members, telescoping connecting bars between the end members, the innermost of the connecting bars being laterally bowed, and clamping screws engaged through the said innermost bars at opposite sides of the bowed portions.

1,350,368. TESTING APPARATUS. JOHN A. D. HERRINGTON, Tupelo, Miss., assignor of one-fourth to Elie B. Hulsey, Earle, Ark., one-fourth to Wiley A. Blair and one-fourth to George H. Hill, Tupelo, Miss. Filed June 1, 1917. Serial No. 172,315. 8 Claims. (Cl. 73—51.)

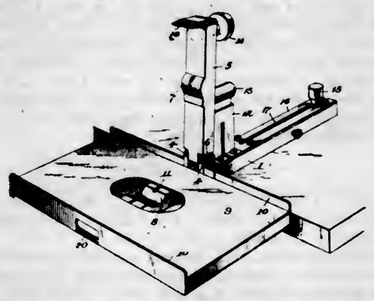


1. In apparatus for testing the margins of strips, web or films, means for moving the strip, means for interrupting the movement, means for normally holding said interrupting means, and means including spaced levers having rollers engaging the margins of the strip for releasing, on the existence of a fracture in the strip, said interrupting means.

1,350,369. CIRCUIT-CONTROLLING MECHANISM. ACHILLES DE KHOTINSKY, Chicago, Ill., assignor to Central Scientific Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 29, 1916. Serial No. 94,512. 5 Claims. (Cl. 175—375.)

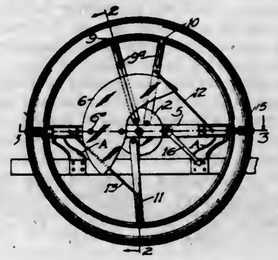
1. In a circuit-controlling mechanism, the combination of a pair of fixed contacts spaced apart, a contact member adapted to engage said contacts adjacent its ends and

pivotally supported between its ends, magnetic means for actuating said contact member, and means for supplying



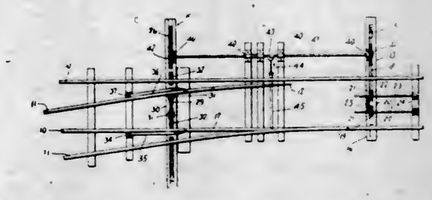
said magnetic means with a relatively small quantity of current from the supply to the circuit controlled by said mechanism but at a greatly reduced voltage.

1,350,370. SPRING-WHEEL. WALLA LEVISTON and JOHN PERRY, Kansas City, Mo. Filed Nov. 7, 1918. Serial No. 261,580. 1 Claim. (Cl. 152—32.)



A spring wheel comprising a hub and spokes, a rim spaced from the felly, springs arranged in circular series about the felly and the rim and having intermediate loops projecting laterally between the felly and the rim, said springs being arranged in pairs in transverse relation, the loops in each spring being in the form of a double compound curve providing a contracted loop having alining outwardly and inwardly projecting ends lying against the outer edges of the rim and felly, and circular clamping plates extending around the felly and rim on opposite sides, between which and the rim and felly the respective ends of the springs are secured.

1,350,371. SHEET-UNITING DEVICE. ARTHUR W. MCCURDY, Victoria, British Columbia, Canada. Filed June 12, 1917, Serial No. 174,303. Renewed Dec. 9, 1919. Serial No. 343,644. 6 Claims. (Cl. 1—46.)

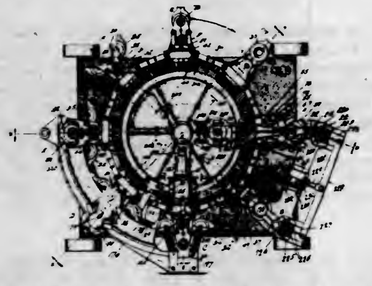


1. In a device for uniting sheets or films of material, the combination of a grooved bar having a seat or depression intersecting the groove; a sheet-supporting bed or table carried by said bar and having an opening to expose the depression in the bar; a second bar movable toward and from the first, provided with a swell or boss to fit the depression in the grooved bar, and slotted to form a continuation of the groove therein, a magazine freely communicating with said groove and adapted to contain a series of pins in immediate contact with one another; and a slide or plunger movable in the groove and serving to force a pin placed therein, lengthwise of the groove, across the depression, and through sheets clamped between said bars.

1,350,372. COMBINED SPARE-TIRE SUPPORT AND RIM-REMOVING APPARATUS. ROBERT L. MAPSON, Los Angeles, Calif., assignor of one-third to Lorenzo Sperbeck and one-third to E. I. Wheeler, Los Angeles, Calif. Filed Oct. 1, 1919. Serial No. 327,755. 7 Claims. (Cl. 224—29.)

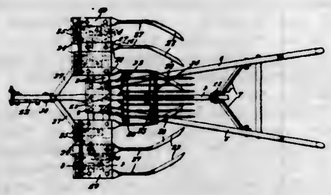
1. In an apparatus of the class described, a supporting member, a member revolubly mounted centrally thereon, a pair of spaced clamp members pivoted to said revolubly mounted member and their outer ends provided with clamps adapted to clamp the free ends of a vehicle rim, means for supporting one of said clamp members intermediate its ends, another clamp member pivoted to said revoluble member opposite to the pivotal mounting of the other clamp member and its free ends adapted to engage the rim intermediate its ends for supporting the same.

1,350,373. RAILROAD-SWITCH. LUDWIK MARSZALEK, Passaic, N. J. Filed May 8, 1920. Serial No. 379,864. 3 Claims. (Cl. 246—357.)



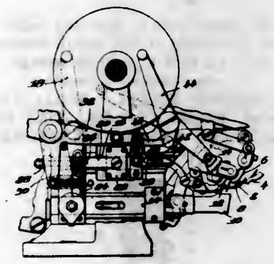
1. The combination with a railway switch, of a car actuated switch setting mechanism located in advance of the switch and including a rock shaft disposed longitudinally of the track, means for connecting the switch points to the rock shaft, whereby operation of the latter will move the switch points to set the switch, a transversely movable rack bar for operating the rock shaft, a pivoted T-shaped lever located between the rails of the track, spaced parallel levers having one of their ends pivotally secured between the rails and extending longitudinally of the latter, right angularly disposed downwardly extending arms rigidly secured to said levers and engageable in notches provided in the T shaped bar and means located beyond the opposite end of the switch for returning the latter to normal position.

1,350,374. CINEMATOGRAPH. RUDOLPH B. MICHALEK, Newark, N. J. Filed June 13, 1919. Serial No. 303,900. 7 Claims. (Cl. 88—17.)



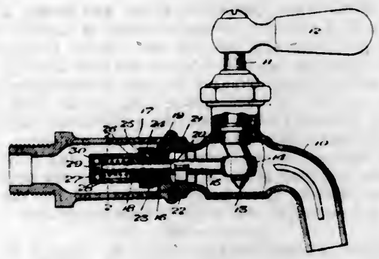
1. A cinematograph comprising a casing, a fixed guide for a film, a movable film guide adapted to be held against the fixed guide, a sprocket projecting through the guides, the guides having apertures therein for framing pictures on the film and having slots for the sprocket, the front of the casing having an entrance for light, the narrow side of the casing having an opening substantially in line with the apertures of the film guides, and means for imparting a step-by-step movement to the sprocket.

1,350,375. GLASS-WORKING MACHINE. EDWARD MILLER, Columbus, Ohio, assignor to Chapman J. Root, Terre Haute, Ind. Filed Nov. 8, 1917. Serial No. 200,865. 27 Claims. (Cl. 49—5.)



1. In a glass-working machine, the combination with a movable table, molds comprising relatively movable parts carried by said table, a reciprocable table actuator, a primary air valve shifted by said actuator, a pneumatically operated secondary air valve controlled by the primary air valve, air-pressure motors controlled by the secondary valve, and connections between said air-pressure motors and the molds.

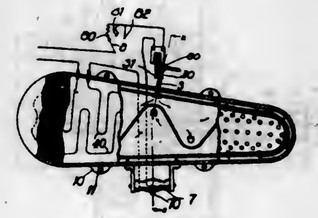
1,350,376. COMBINED HARROW AND CULTIVATOR. JAMES W. MONTGOMERY, Thomasville, Ga. Filed Jan. 26, 1920. Serial No. 354,074. 4 Claims. (Cl. 97—10.)



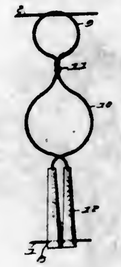
1. The combination with a beam, a cross strip connected thereto, and depending frames secured to the cross strip, of a bottom plate secured to each frame, rearwardly extending blades carried by each plate, said blades having obliquely disposed cutting edges, a breast plate adjustably connected to each bottom plate, and means carried by each breast plate for cutting downwardly into the soil.

1,350,377. INSEAM SEWING-MACHINE. ALFRED R. MORRILL, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Feb. 26, 1918. Serial No. 219,313. 9 Claims. (Cl. 112—39.)

1. An inseam sewing machine, having, in combination, a needle, a channel guide, a back gage, and mechanism for forcing the back gage against the work under spring pressure prior to the penetration of the work by the needle and for positively advancing the gage during the retraction of the needle.



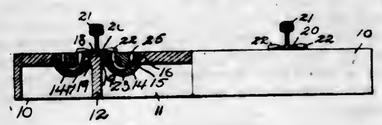
1,350,378. FULLER-BALL. PHILIP MUELLER, Decatur, Ill., assignor to Adolph Mueller, trustee, Decatur, Ill. Filed Nov. 12, 1919. Serial No. 337,487. 8 Claims. (Cl. 251—44.)



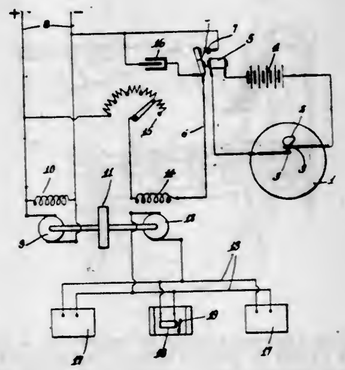
1. In combination, a valve stem, a sleeve having a through opening of like diameter throughout its length adapted to receive said stem, means on the stem for limiting forward movement of said sleeve thereon, an elastic valve body upon said sleeve, a flange carried by the sleeve and against which the valve seat end of the elastic valve body engages, a ferrule carried by said sleeve and encircling the inner end of said elastic body, and yieldable means upon said stem and engaging said sleeve for urging said sleeve forward on said stem.

1,350,379. CLOTHES-PRESSING MACHINE. CHARLES R. NELSON, Seattle, Wash. Filed Apr. 4, 1919. Serial No. 287,531. 1 Claim. (Cl. 68—9.)

A clothes pressing head having a perforated pressing face, two slightly separated plates adjacent the pressing face, and provided with a steam supply connection and forming a steam distributing chamber, that one of said plates which is the nearer to the pressing face being perforated and spaced from the perforated pressing face, a sinuous partition extending lengthwise of and within the steam distributing chamber, and stopping short of each end thereof, the perforations leading from the steam distributing chamber to the perforated pressing face being positioned at the bottom of the angles formed by the sinuosities of said partition, and a heating element in direct contact with the unperforated plate of the steam distributing chamber.

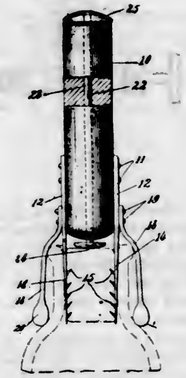


1,350,380. CLOTHESLINE. FRANK C. NELSON, Clarksburg, W. Va., assignor of one-half to George W. De Witt, Clarksburg, W. Va. Filed Mar. 20, 1920. Serial No. 367,325. 3 Claims. (Cl. 68—3.)



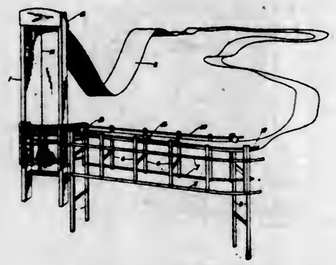
1. A clothes pin comprising a resilient wire body having the strands of wire twisted to form an attaching loop at one end, a larger loop formed at the lower end, the extremities of the strands of wire crossing one another at the lower end of said larger loop and terminating in parallel ends and an upwardly tapered wooden jaw engaged with each parallel end.

1,350,381. RAILROAD-TIE. GEORGE F. A. OCHS, Newark, N. J. Filed Oct. 17, 1919. Serial No. 331,262. 5 Claims. (Cl. 238—59.)



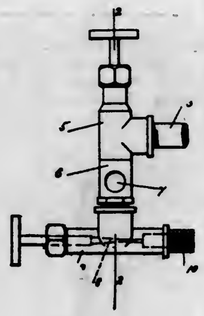
1. A railroad tie having recesses flanking the rail position, readily removable inserts in said recesses and partly covered by the rail, said inserts having means therewith for securing them to the rail, the inserts and tie having coacting means for holding the inserts in place.

1,350,382. ELECTRIC CONTROL SYSTEM. PERCY R. OWENS, Mount Kisco, N. Y. Filed Aug. 3, 1918. Serial No. 248,180. 5 Claims. (Cl. 58—24.)



1. In an electric control system, the combination of a plurality of devices to be actuated, a circuit to which said devices are connected, a generator connected to supply current to said circuit, having a separately excited field, means for continuously rotating the armature of said generator, a power circuit for said generator field, adapted to be closed and opened, and means for making and breaking said last-named circuit at desired intervals.

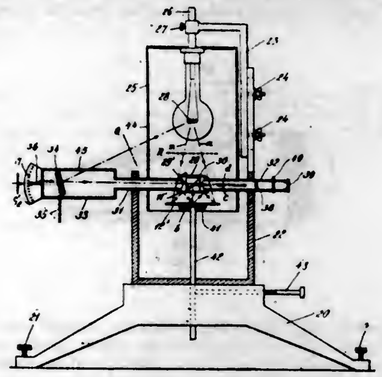
1,350,383. CORK-EXTRACTOR. JOHN PALAHNIUK, Brule Mines, Alberta, Canada. Filed Mar. 14, 1919. Serial No. 282,661. Renewed June 2, 1920. Serial No. 386,048. 2 Claims. (Cl. 65—47.)



1. In a cork extractor, the combination with a cylinder handle, of a pair of resilient arms engaged therewith, said arms extending below and adapted to enter a bottle neck, a plurality of upturned spurs formed integrally with said resilient arms, means for guiding said arms as they are forced into the bottle, a rod slidable centrally in said handle and a convex head formed at the lower end of said rod adapted to contact with the upper end of the cork whereby it may be forced upon said spurs.

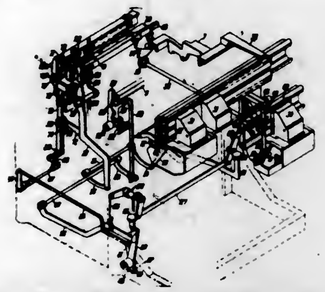
1,350,384. GAME. GEORGE HENRY PARKER, Stamford, Conn., assignor to Christine R. Parker, Stamford, Conn. Filed Aug. 12, 1919. Serial No. 317,027. 10 Claims. (Cl. 46—57.)

2. In an amusement device, in combination, a circuitous runway having an elevated starting end and an adjacent but lower discharge end, means to elevate balls from said discharge end to said starting end, and means to indicate the order of arrival of the balls at said discharge end.



1,350,385. ATTACHMENT FOR INTERNAL-COMBUSTION ENGINES. LOUIS P. PETERSON, Enderlin, N. D. Filed Apr. 14, 1920. Serial No. 373,773. 1 Claim. (Cl. 277—67.)

A moistening attachment for an internal combustion engine, comprising an upper valve casing provided with an inlet for water and a vertically arranged outlet, a needle valve controlling the said outlet, an observation chamber secured to the lower end of the upper valve casing and provided with a sight window, a lower valve casing provided with an inlet for the water which falls drop by drop through the observation chamber, said lower valve casing being secured to the lower part of the observation chamber and provided with a horizontally arranged outlet for water and with means for securing it to an engine, and a needle valve controlling the water outlet of the lower casing.

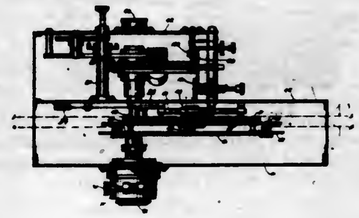


1,350,386. COLORIMETRY OF PAINTS AND PIGMENTS. AUGUST HERMAN PFUND, Baltimore, Md. Filed Jan. 14, 1920. Serial No. 351,423. 13 Claims. (Cl. 88—14.)

1. A method of accentuating tints which comprises subjecting a beam of light from an appropriate source to a plurality of reflections from surfaces of the tint to be accentuated, and segregating the multiply-reflected beam

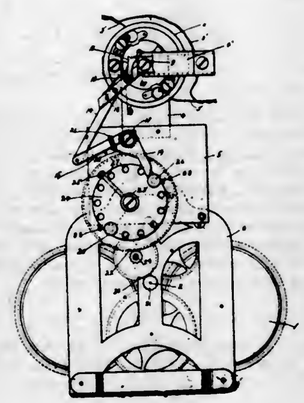
of light and comparing the same with an appropriate standard; substantially as described.

1,350,387. COMBINED TYPEWRITING AND COMPUTING MACHINE. HENRY L. PITMAN, East Orange, N. J., assignor to Underwood Computing Machine Company, New York, N. Y., a Corporation of New York. Filed Oct. 25, 1917. Serial No. 198,375. 48 Claims. (Cl. 235—59.)



4. The combination with a typewriter carriage, of a computing unit having two primary elements, one traveling relatively to the other to effect a step-by-step movement, automatically-interrupted connections between said traveling element and said typewriter carriage, enabling a synchronized movement of said traveling element with said typewriter carriage solely for a computing zone, a keyboard including numeral keys for effecting a combined typewriting and computing operation, and means for recompleting the connection automatically interrupted between said traveling element and said typewriter carriage from said keyboard.

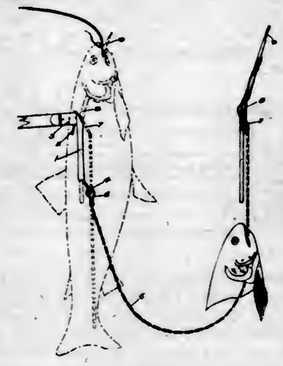
11. The combination with a typewriter carriage, of a computing unit having a traveling element connectible to travel with said typewriter carriage, back-spacing mechanism for said typewriter carriage, and connections enabling a traversing movement of said traveling element by said back-spacing mechanism independently of said carriage.



1,350,388. MOVING-PICTURE MACHINE. JOSEPH PODJEVIN, Schenectady, N. Y. Filed Jan. 14, 1915. Serial No. 2,116. 29 Claims. (Cl. 88—18.8.)

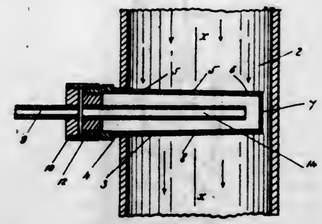
1. In a moving picture apparatus the combination of a movable carrier for a picture bearing element or a sensitive plate, mechanism for moving said carrier step by step, a shutter, mechanism for intermittently moving said

shutter, and means for interlocking said mechanisms to cause said carrier and said shutter to move alternately.



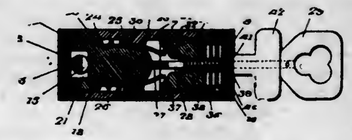
1,350,389. TIME-CONTROLLED MECHANISM FOR OPERATING ELECTRIC SWITCHES. THOMAS WINFRED SOUTH, De Kalb, Ill., assignor of one-half to Roy A. Gilbertson, De Kalb, Ill. Filed Mar. 6, 1917. Serial No. 152,614. 3 Claims. (Cl. 200—36.)

1. A mechanism for controlling a rotary electric switch comprising a clock work; an oscillatory arm adapted, when actuated, to operate said switch; means for actuating said arm, said means comprising a rotatable shaft, a disk mounted on said shaft, so as to be adjustable thereon around its axis; means for securing said disk in its positions of adjustment on said shaft; a plurality of engaging elements on said disk adapted, upon rotation of the latter, to engage with and actuate said arm; and an operative connection between said clock work and said disk, substantially as described.



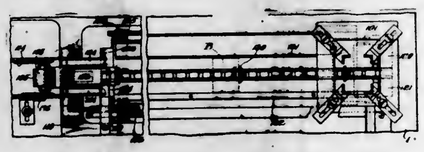
1,350,390. FISH-STRINGER. CLARENCE L. STEIN, Aurora, Ill., assignor of one-half to Halsey M. Johnson, Aurora, Ill. Filed Oct. 6, 1919. Serial No. 328,938. 2 Claims. (Cl. 224—7.)

1. A fish stringer including a holder, means for connecting the same to a support, a threading stem having one end insertible into the holder and the other end extending at an angle thereto, a flexible element detachably



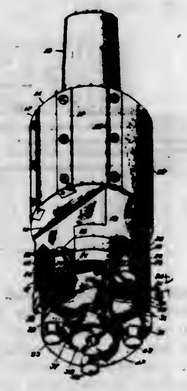
connected at one end to an intermediate portion of the stem and connected at its other end to the holder.

1,350,391. OIL-ATOMIZER. LUSTER STILES, Jr., Evansville, Ind. Filed July 7, 1919. Serial No. 309,246. 2 Claims. (Cl. 184—50.)



2. The combination, with a steam supply pipe, of an atomizing cylinder secured to the pipe and extending crosswise of it, said cylinder having a closed end, steam inlet holes on one side one of which is arranged near its closed end, said cylinder having also an outlet hole in the middle part of its other side, an imperforate heating tube for lubricant secured within the said cylinder and extending longitudinally of it and having its open end arranged crosswise of the steam inlet hole near the closed end of the said cylinder, and means for supplying lubricant to the outer end of the said heating tube.

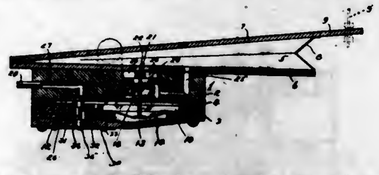
1,350,392. LOCK. JAMES M. TAYLOR, Detroit, Mich. Filed Mar. 12, 1920. Serial No. 365,286. 15 Claims. (Cl. 70—105.)



2. A lock comprising a detent, a guard for the detent, a spring-pressed member for moving the guard to protective position, and a key having two relatively movable members, one of said members having means for operating said spring-pressed member to open the guard and the other member having means for moving the detent when the guard is opened.

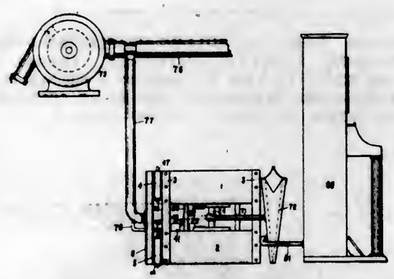
1,350,393. CONVEYING AND STACKING MECHANISM. JAMES N. TZIBIDES, New York, N. Y., and RILEY HERBERT PARKER, Winthrop, Mass.; said Parker assignor to said Tzibides. Original application filed Feb. 19, 1915, Serial No. 9,232. Divided and this application filed Mar. 2, 1918. Serial No. 219,975. 21 Claims. (Cl. 214—6.)

19. Apparatus for stacking boxes comprising a support, a second support, means for transferring a box from the first support to the second support, said means being arranged to turn the box and deposit it in a vertical position, and means for yieldingly engaging the box as it is deposited on the second support to prevent it from tipping over.



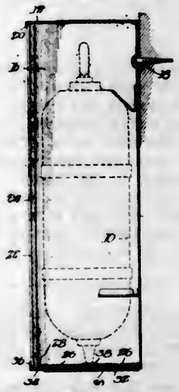
1,350,394. BORING-TOOL. JACOB VAN DER VORN, Chicago, Ill. Filed May 2, 1919. Serial No. 294,193. 7 Claims. (Cl. 77—58.)

1. A boring tool having a head grooved on its under side with radial grooves of size and shape to receive cutters, said grooves being located between block-like extensions having their lower faces lying in a common plane, the outer edge of each of said extensions consisting of a beveled face, said faces being positioned so as to make the forward walls of said grooves shorter than the rear walls, a retaining ring positioned on the underside of said head adjacent and parallel to the said lower faces of said extensions, screws passing through said ring into threaded engagement with said extensions at points adjacent to the forward walls of said grooves to securely clamp the cutters in place, and a centrally positioned adjusting screw engaging a central threaded opening in said head and having a cylindrical guiding portion fitting into a guiding portion of said opening and having a conical portion for engaging the cutters to force them outward as said screw is screwed into said threaded opening.



1,350,395. PRIMARY VALVE FOR PNEUMATIC MUSICAL INSTRUMENTS. BURT R. VAN VALKENBURG, Oakland, Calif. Filed Mar. 8, 1916. Serial No. 82,829. 3 Claims. (Cl. 84—178.)

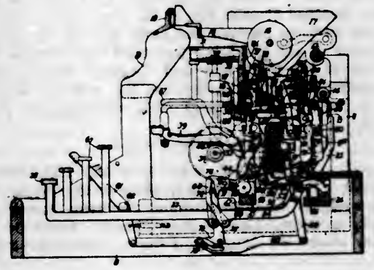
1. A pneumatic action of the character described comprising a valve chest having primary passages, flexible closures for the inlet ends of said passages, tracker bar diaphragms positioned opposite the other ends of said passages, primary valves attached to said diaphragms, stems



attached to said flexible closures and positioned to be engaged by said primary valves, and pneumatic-operative means controlled by said primary valves.

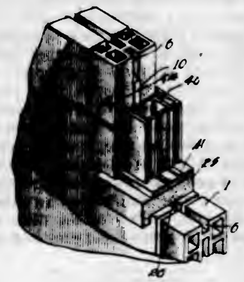
1,350,396. VACUUM-PUMP. BURT R. VAN VALKENBURG, Oakland, Calif., assignor to American Photo Player Company, Berkeley, Calif., a Corporation of California. Filed Sept. 19, 1918. Serial No. 254,828. 3 Claims. (Cl. 230—2.)

1. A pump including a pair of motor chambers, pistons in said chambers, flexible walls connected to the edge of said pistons and to a wall of the chambers, said chambers having inlets for admitting air between the pistons and flexible walls and the walls of the chamber, valves for controlling said inlets, means connecting said pistons, a bellows operated by each of said pistons, a manifold for each bellows provided with inlets leading into the bellows, valves for said inlets, means for allowing the air to escape from said bellows when compressed.



1,350,397. AUTOMATIC SEAL-CLOSURE FOR BOXES. JOHN A. WACHTER, Chicago, Ill. Filed Feb. 7, 1920. Serial No. 357,037. 4 Claims. (Cl. 232—1.)

3. A box open at one side, a removable frangible closure for the open side, a locking plate slidably engaged with

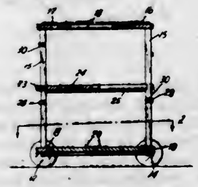


the box to secure the closure against opening movement, and concealed means effective to automatically operate independently of the closure at the termination of the locking movement of the plate to secure the latter against removal when said plate is in one position, and ineffective to secure the plate against removal when the latter is reversed.

1,350,398. TYPEWRITING-MACHINE. JOHN WALDHEIM, Elizabeth, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 10, 1918. Serial No. 253,368. 54 Claims. (Cl. 197—5.)

1. In a typewriting machine, in combination, a set of key-levers, a plurality of type-sets, means for permitting a relative movement between each type-set and said set of key-levers, so as to bring any selected type-set and the set of key-levers into position to coöperate with each other, and means whereby said key-levers may be connected with or disconnected from the selected type-set while the latter is in coöperative relation therewith.

1,350,399. WALL CONSTRUCTION. WILLIAM E. WILSON, Mason City, Iowa. Continuation of application Serial No. 752,419, filed Mar. 6, 1913. This application filed Oct. 26, 1917. Serial No. 198,713. 5 Claims. (Cl. 72—41.)



1. In a wall, the main body of which is composed of hollow tiles having spaced apart hollow lobes, the openings of which are arranged horizontally with a longitudinal groove therebetween in the upper and lower faces of said tiles, in combination similarly formed tiles arranged vertically to define an opening in the wall with their groove adjacent the opening in registry with the upper groove of the horizontal course of tiles forming the bottom of the opening, whereby to receive a rib on the casing of the opening to provide a wind seal between the casing and the wall.

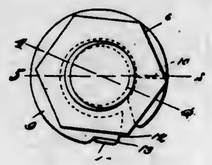
1,350,400. BRACKET. ORETA L. YEOMANS, Kis-Lyn, Pa. Filed Nov. 5, 1919. Serial No. 335,804. 2 Claims. (Cl. 156—36.)

2. In combination with a roller provided with a threaded trunnion, a supporting bracket having an opening, a cap provided with a shank insertible through the opening of the bracket, said shank being provided with a socket to receive the threaded trunnion of the roller, a gudgeon carried by the opposite end of the roller, and a second supporting bracket provided with an opening to receive the gudgeon.

1,350,401. BABY-WALKER. STEFAN ZOCH, Munising, Mich. Filed Mar. 22, 1919. Serial No. 284,233. 1 Claim. (Cl. 155—22.)

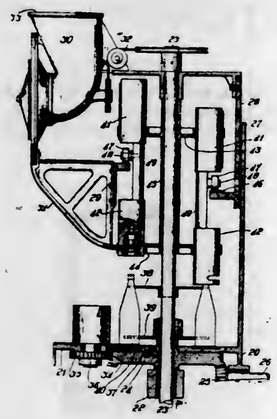
In combination with the posts of a platform baby walker having a seat and two symmetrical plates hinged to said platform, cross strips passing from one of said posts to another for supporting said seat in its operative position, outwardly turned flat springs attached to the inner side of adjacent posts, reëntrantly bent ends on said springs, a beading, plates provided with pockets secured to the adjacent edges of said seat and one of said first named plates, said beading adapted to engage in the pockets of said plates, substantially as described and for the purpose set forth.

1,350,402. COMBINED FLYTRAP AND GARBAGE-CAN. LOUIS JOSEPH CEREGHINO, Alameda, Calif. Filed Dec. 4, 1916. Serial No. 134,933. 7 Claims. (Cl. 43—120.)



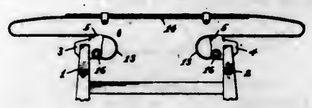
1. A device of the character described comprising a casing forming a chamber, a pan located within said chamber, and provided with a screen-covered spout having an inlet opening therein, and a removable screen cover for said pan.

1,350,403. CLEANING AND POLISHING APPARATUS. RUTHERFORD B. CHASE, Chicago, Ill. Filed Aug. 14, 1919. Serial No. 317,476. 3 Claims. (Cl. 15—8.)



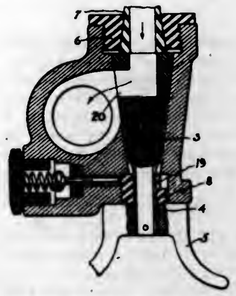
2. A device of the kind described comprising a frame adapted to hold a series of type matrices, and a cover strip adapted to extend over the letter on each matrix and leave the parts on either side thereof exposed.

1,350,404. NUT-LOCK. JOHN A. ETTLER, San Francisco, Calif., assignor of one-half to John V. Oppel, San Francisco, Calif. Filed Apr. 27, 1920. Serial No. 377,069. 3 Claims. (Cl. 151—37.)



2. A nut lock comprising a nut having a circumscribed beveled lower face and an open end ring having a beveled face matching the beveled face of the nut, one end of the ring being secured to the nut, the other end of the ring tending to move laterally with relation to the face of the nut when pressure on the ring is released, the free end of the ring having an arcuate scoring edge.

1,350,405. CAPPING MECHANISM. JOHN J. GAYNOR, Chicago, Ill., assignor to Arrow Bottlers Machinery Company, trustee, Chicago, Ill., a Corporation of Illinois. Filed Dec. 26, 1917. Serial No. 208,824. 10 Claims. (Cl. 226—84.)

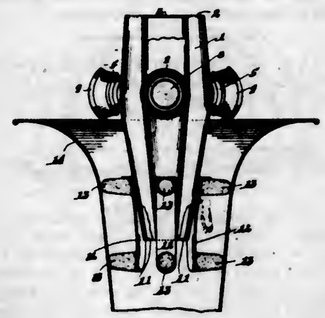


1. In a machine of the class described, the combination of a capping head body, crimping means carried by said body and symmetrically arranged around the axis thereof, and a cap-feed chute and magnetic means positioned on opposite sides of the axis of said body.

1,350,406. BUMPER-SUPPORTING MEANS. JAMES GUTHRIE, Cleveland, Ohio, assignor to The Ohio Motor Vehicle Company, a Corporation of Ohio. Filed Jan. 22, 1920. Serial No. 353,255. 6 Claims. (Cl. 293—55.)

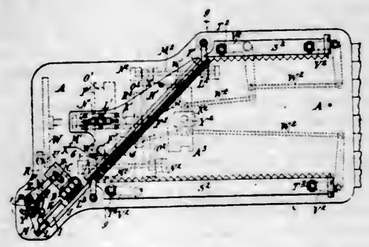
6. In a bumper supporting means, the combination of a rail, the rail having its end bent in circular form, the free end of the circular portion of the rail terminating in an eye, a block, the block having a seat, the block being provided with a recess for receiving said eye, the block having openings at each side of the recess for receiving a pin, the distance between the inner face of the rail and the center of its eye being less than the distance from the seat of the block and said openings therein, and a pin passing through said openings and said eye when the rail is resting against said seat, substantially as described.

1,350,407. THROTTLE-VALVE FOR PERCUSSIVE TOOLS. HARRY V. HAIGHT, Sherbrooke, Quebec, Canada, assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Oct. 22, 1918. Serial No. 259,247. 1 Claim. (Cl. 277—3.)



A combined throttle and water valve for controlling the distribution of water and motive fluid, both under pressure, to two separate points, comprising a casing having a tapered aperture and a motive fluid port communicating therewith, a tapered valve plug in said aperture having a central passage and a communicating radial opening adapted to coöperate with the said motive fluid port in the casing for conttrolling motive fluid under pressure, said valve plug having a reduced stem extending from the smaller end, a disk removably mounted on said reduced stem and having a cam surface, a water port in the casing having a valve seat of yieldable material, a puppet valve seating on said yieldable seat for controlling said water port in the casing, and having an extension adapted to engage the cam surface of the disk, so that rotation of the tapered plug valve and cam disk will open and close the water valve.

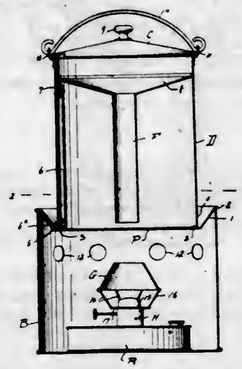
1,350,408. THIENYLQUINOLIN CARBOXYLIC ACIDS. MAX HARTMANN and ERNST WYBERT, Basel, Switzerland, assignors to Society of Chemical Industry in Basle, Basel, Switzerland. Filed Oct. 21, 1918. Serial No. 258,957. 2 Claims. (Cl. 23—24.)



1. As new products the herein described 2-thienylquinolin-4-carboxylic acids, obtained by condensing isatin compounds with acetothienone, which constitute well crystalized compounds of determined fusion point, are easily soluble in most of the organic solvents and in strong mineral acids and serve for histological and therapeutical purposes.

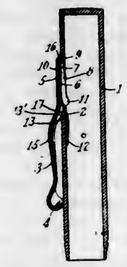
1,350,409. APPLIANCE FOR HORN MUSICAL INSTRUMENTS. GUY B. HUMES, Chicago, Ill. Filed Mar. 22, 1919. Serial No. 284,265. 6 Claims. (Cl. 84—400.)

4. In a device of the class described, a plurality of tubes fastened together at their longitudinal sides, each of said tubes having one end thereof closed and a lateral opening intermediate their ends; an outwardly projecting interiorly threaded annular flange secured to each of said tubes at said lateral opening; an annular seat at the base of said flange; a membranous member disposed on said seat over said opening; and an exteriorly threaded ring having an inwardly projecting flange at one end and adapted to thread into said annular flange, thereby clamping said membranous member to said seat, substantially as described.



1,350,410. METHOD AND APPARATUS FOR ASSEMBLING AND ATTACHING TILING. WILLIAM J. KENT, Brooklyn, N. Y., assignor to New York Belting & Packing Company, a Corporation of New York. Filed Dec. 24, 1918. Serial No. 268,197. 30 Claims. (Cl. 154—1.)

1. A method of assembling and attaching tiling to form sheets or mats, consisting in feeding tiles having adhesive sides edgewise and transversely with respect to a sheet body until a row of required length is completed, forcing said tiles edgewise against the adjacent edge of the sheet to secure them thereto, and feeding the sheet longitudinally to make room for another row of tiles.

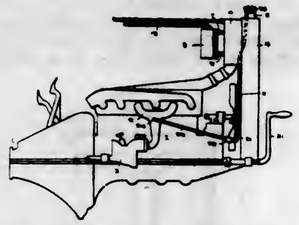


1,350,411. WATERING DEVICE. CARL F. KOLLIN, Marshalltown, Iowa, assignor of one-half to George P. Thornblade, Marshalltown, Iowa. Filed Jan. 26, 1920. Serial No. 354,004. 1 Claim. (Cl. 119—73.)

A watering device comprising, in combination, a hollow base having its top open, a heating unit arranged within said base, a pan detachably engaged with the open end of the base and closing the same, a drum carried by the pan and serving as a water container, said pan extending beyond the drum and providing a trough, a marginal portion of the trough engaging the upper edge of the base whereby said pan and drum are supported in applied position with respect to the base; a wall of the drum having an opening in communication with the trough, a vertically disposed air tube carried by and arranged within the drum and communicating with the atmosphere through a wall of the drum at a point below the top of the trough, and a filling tube arranged within the drum and having its lower end spaced from the lower end of the drum, the upper portion of the filling tube being provided with a

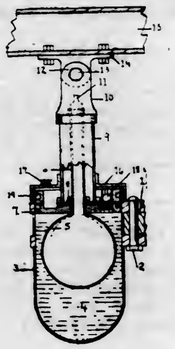
head frictionally engaging the wall of the drum at a point above the upper end of the air tube, said filling tube and head being removable with respect to the drum, the frictional contact of the head of the filling tube with the wall of the drum maintaining said tube in applied position and also permitting the position of the tube within the drum to be adjusted with respect to the bottom of the drum.

1,350,412. CLIP FOR FOUNTAIN-PEN CAPS OR THE LIKE. DAVID J. LA FRANCE, Cambridge, and WILLIAM P. DE WITT, Somerville, Mass., assignors, by mesne assignments, to De Witt-La France Co., a Corporation of Massachusetts. Filed Sept. 13, 1918. Serial No 253,858. 7 Claims. (Cl. 24—11.)



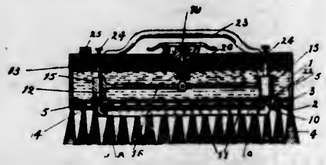
1. The combination, with a cap having a slot formed in the side thereof, of a clip adapted at one end to engage the side of said cap, the opposite end of said clip constructed and arranged to substantially fit said slot, and yielding means coöperating with said cap and clip and adapted to maintain said clip in operative engagement with said cap and also adapted to normally prevent said clip from becoming detached from said cap.

1,350,413. FUEL-VAPORIZING SYSTEM FOR INTERNAL-COMBUSTION ENGINES. JESSE D. LANGDON, Waterville, Wash. Filed June 30, 1917. Serial No. 178,016. 4 Claims. (Cl. 123—25.)



1. The combination with an internal combustion engine and an air tight water cooling system thereof having

a water level, of means for withdrawing water and fuel vapor from said system above said water level and delivering it to the intake of the engine, and means for

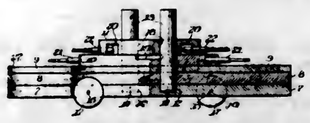


supplying liquid fuel to be vaporized to said system at said water level to be vaporized at the level of the water so to pass through said means with the water vapor to the engine intake.

1,350,414. HYDRAULIC AIR-CUSHION. JESSE D. LANGDON, Waterville, Wash. Filed Apr. 1, 1918. Serial No. 226,052. 5 Claims. (Cl. 257—64.)

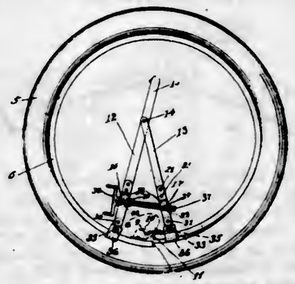
1. A device of the character described embodying a member having a liquid chamber and an opposite air chamber therein, a member movable in said member between and separating said chambers to reduce and enlarge said chambers, an inflatable compressible air container within said liquid chamber to be compressed by the reduction in volume in said chamber and by its expansion enlarging the volume of said chamber to separate said members, and means for permitting the flow of liquid from the air chamber past the second named member into the liquid chamber.

1,350,415. FOUNTAIN-BRUSH. EMILE LAROCHE, Montreal, Quebec, Canada. Filed Oct. 3, 1919. Serial No. 328,178. 4 Claims. (Cl. 15—51.)



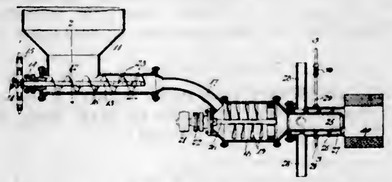
1. A fountain brush comprising a hollow body casing adapted to hold a supply of fluid, the bottom portion of said body casing provided with openings extending therethrough, a rod slidably mounted in said casing, a presser bar connected to the upper end of said rod, a support connected to the inner end of said rod and formed with enlarged perforated ends, stems disposed within said body and adapted for adjustment to regulate said openings, the enlarged ends of said support adapted for movement on said stems to open and close said openings.

1,350,416. RAILROAD-TIE. JAMES KENT MCGILL, Belledeau, La. Filed Aug. 25, 1919. Serial No. 319,657. 1 Claim. (Cl. 238—106.)



A railroad tie comprising a unitary structure having a longitudinally undulating under surface made up of several waves of slight curvature of substantially the same depth but of varying length, the crests of the downwardly extending waves being formed on arcs of a substantially smaller radius than those of the upwardly extending waves and the crests of two of the downwardly extending waves being disposed directly under the portions of the tie to which the rails are secured and such waves extending for a substantial distance to each side thereof.

1,350,417. CONVERTIBLE TOY BATTLESHIP AND TANK-CAR. WILLIAM E. MCLAREN, Chicago, Ill., assignor, by mesne assignments, to McLaren-Sleight Corporation, St. Joseph, Mich., a Corporation of Michigan. Filed Aug. 21, 1919. Serial No. 318,897. 4 Claims. (Cl. 46—35.)

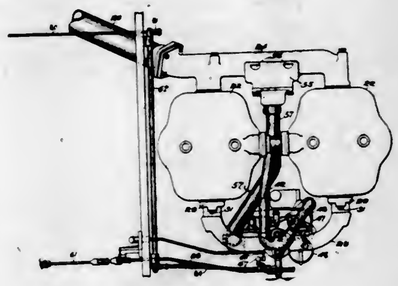


1. In a convertible toy, the combination with an elongated bottom member, of a pair of spaced apart rods fixed at one of their ends to said member and extended at right angles therefrom, a plurality of elongated members each having a pair of spaced apart and registering openings, a smaller member fixedly mounted on one of the last named members and having a pair of openings in register with said other openings and provided with a transversely disposed groove between its openings, a projection in simulation of a cannon extended from each end of the fixed member, another member of less size than the fixed member and having a pair of spaced apart openings to register with the other openings and provided near each of its ends with a transverse recess, the last named member having at each of its ends a longitudinally extended opening therein, a rod in simulation of a cannon detachably mounted in each of said openings, the said members being super-imposed one on the other in the order named with the rods on the first named member extended through said registering openings and beyond the last named member to provide the effect of smoke stacks whereby a miniature battleship, in appearance, as one form of the toy, will be provided, and whereby the removal of the member carrying the fixed part and the recessed member from the said rods can be effected, and the member adjacent to the member carrying the centrally disposed rods can be slid therefrom on said rods, and the member carrying the fixed member can be placed between said members and supported by the said rods, and the recessed member can be placed cross-wise of the thus constituted side members with its recesses engaging the upper edges of the said members and its lower portion engaging the groove in the fixed member, and so that the recessed member can be fixed to the side members by means of the detachable rods carried by the recessed member to produce, in appearance, a miniature tank car as another form of the toy.

1,350,418. DEMOUNTABLE-RIM BREAKER. BERNARD HENRY MERSCH, Covington, Ky. Filed Jan. 28, 1918. Serial No. 214,181. 1 Claim. (Cl. 157—1.)

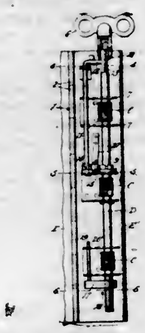
A hand implement for use in upsetting and resetting demountable rims for resilient wheel tires comprising a long main rock lever having a forked inner end, a short pull or draft lever pivotally connected to the said long main rock-lever at a point substantially near the upper or outer handle end of the latter and having a forked inner end, an orificed swivel mounted in the fork of the long main rock-lever, a swivel having a threaded orifice and mounted in the fork of the short draft-lever, a hand-screw adapted to freely engage the plain-orificed swivel in the fork of the long main rock-lever and to have threaded-engagement with said threaded orifice of the last-named swivel, a pair of two-part claws pivotally attached to each of the said forked ends of the said respective adjustably-connected long main rock-lever and short draft-lever and adapted for readily detachable and adjustable hooking-engagement with the opposite circumferential edges of the said demountable rim, to straddle the transversely-split portion or joint therein, for easy separation and closing, as set forth.

1,350,419. PROCESS AND APPARATUS FOR REDUCING METALLIC OXIDS. WALTER L. MORRISON, Los Angeles, Calif. Filed Jan. 22, 1918. Serial No. 213,259. 9 Claims. (Cl. 75—17.)



1. A process of reducing metallic oxids which comprises dividing the oxids to a sufficient degree to allow them to be gas borne; subjecting the oxids to the action of hot reducing gases; precipitating the reduced metal together with slag forming material; and working said slag and metal to separate said metal from said slag.

1,350,420. CONCRETE TIE. WILLIAM F. MORRISON, Vallejo, Calif. Filed May 17, 1920. Serial No. 381,855. 6 Claims. (Cl. 238—91.)

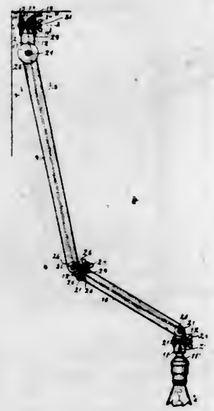


5. A railway tie comprising a concrete body, rail supporting members mounted upon the body longitudinally and reinforcing rods embedded in the body and having upwardly arched portions adjacent therein and engaging under said rail supporting plates.

1,350,421. FUEL SYSTEM FOR INTERNAL-COMBUSTION ENGINES. ADOLPH ROSNER, Bridgeport, Conn., assignor, by mesne assignments, to The Locomobile Company, Bridgeport, Conn., a Corporation of Delaware. Filed Aug. 9, 1918. Serial No. 249,124. 7 Claims. (Cl. 123—122.)

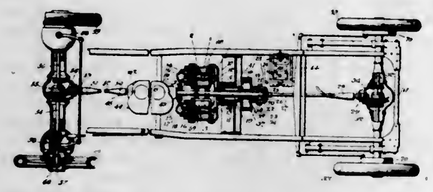
1. The combination with an internal combustion engine, of means for furnishing a combustible mixture thereto, means providing for supplies of warm and cool air for the generation of said mixture, and means to cause an increased supply of mixture to said engine to be accompanied by an increased supply of cool air.

1,350,422. LOOSE-LEAF BINDER. ADOLPH RUBIN, St. Louis, Mo., assignor to Sieber Products Mfg. Co., St. Louis, Mo., a Corporation of Missouri. Filed Feb. 26, 1919. Serial No. 279,280. 16 Claims. (Cl. 129—41.)



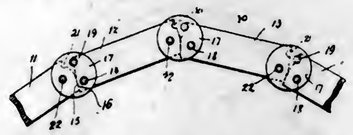
1. A loose leaf binder provided with flexible devices for retaining the leaves in position, a manually operable winding shaft that is adapted to be turned in one direction to tighten said flexible devices and in the opposite direction to slacken said devices, and means for preventing said winding shaft from being turned far enough in the opposite direction to reverse said devices and wind them onto said shaft improperly.

8. A loose leaf binder, comprising tapes or bands for retaining the leaves in position, a winding shaft for tightening said tapes, a rigid pawl that coöperates with a ratchet on said shaft to lock said shaft, a releasing device on which said pawl is pivotally mounted, and means for causing said pawl to be disengaged from said ratchet when said releasing device is moved in one direction.



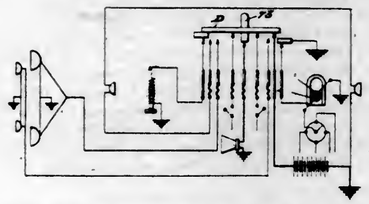
12. A loose leaf binder provided with a back composed of a plurality of rigid sections hinged or pivotally connected together, leaf clamping members carried by said back, tapes or bands for causing said leaf clamping members to securely clamp the leaves together, and a winding shaft and locking mechanism for said shaft arranged inside of and supported by said back.

1,350,423. ELECTRIC-LAMP SUPPORT. ALBERT C. RUNKEL, Milwaukee, Wis. Filed Sept. 5, 1916. Serial No. 118,417. 6 Claims. (Cl. 248—8.)



1. An electric lamp support, comprising a base member having eyed ears, a tubular universal joint member having eyed ears on its opposite ends some of which are in engagement with the eyed ears of the base member, a tubular arm having eyed ears at its opposite ends, the ears at one end being in engagement with some of the ears of the joint member, another tubular arm having eyed ears at its opposite ends, the ears on one end being adjacent the ears at the outer end of the other arm, a tubular universal joint member interposed between the adjacent ends of the two arms and having eyed ears which are in engagement with the adjacent ears of the arms, a tubular lamp socket member positioned adjacent the outer end of the second mentioned arm and provided with eyed ears, a tubular universal joint member interposed between the socket member and the outer end of the second mentioned arm and having eyed ears which engage adjacent eyed ears of the arm and the socket member, bolts connecting the respective parts together, and nuts mounted on the bolts for adjusting the frictional contact of the respective parts.

1,350,424. POWER-TRANSMISSION SYSTEM. JACOB SCHURCH, Holtville, Calif., assignor to Imperial Electric Company, Holtville, Calif., a Corporation of California. Filed Jan. 12, 1916. Serial No. 71,648. 19 Claims. (Cl. 290—12.)



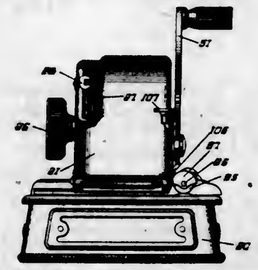
1. A prime mover, concentric rotors having windings, one of said rotors being connected to the prime mover, and a driven member connected to two other of said rotors, one of said rotors constituting a common field for the other rotors.

1,350,425. TOOL-ROD. EMERICH R. SCHWARZ and ALPHONSE J. MARTENAY, Chicago, Ill. Filed Feb. 6, 1919. Serial No. 275,468. Renewed July 3, 1920. Serial No. 394,014. 6 Claims. (Cl. 287—92.)

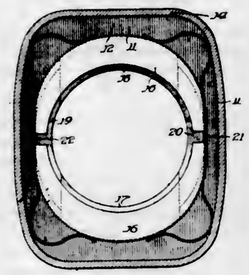
1. In a tool rod, the combination with alined rod sections having ends abutting against each other through part of their meeting surfaces and beveled from each other through the remainder of their opposite end surfaces, of side plates one on each side of said rod overlapping the sections, said sections being connected through the side plates at points remote from the edges thereof to permit relative angular movement of the sections.

1,350,426. ELECTRICAL CONTROL SYSTEM FOR AUTOMOBILES. WENDELIN P. SENG, Chicago, Ill. Original application filed Feb. 24, 1917, Serial No. 150,649. Divided and this application filed Nov. 9, 1917. Serial No. 201,145. 10 Claims. (Cl. 171—97.)

4. In an electrical control system for automobiles, the combination with the electrical supply, the head-lights, and the circuits for such, of a controlling mechanism for the lights operable by means of a key, a key removable from such controlling mechanism, and means for locking the key against withdrawal from said controlling mechanism when the main lamps of the head-lights are "on."



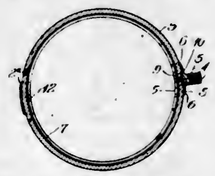
1,350,427. HEAT-TREATING BOX. WILLIAM H. SMITH, East Cleveland, Ohio. Filed July 31, 1919. Serial No. 314,445. 4 Claims. (Cl. 263—49.)



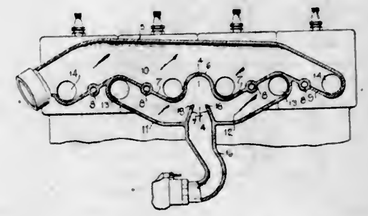
1. A box of the character described comprising a body portion and a cover therefor, said body portion having a substantially circular cross-section and rounded ends.

1,350,428. CHECK-WRITING MACHINE. CHARLES G. TIEFEL, Rochester, N. Y., assignor to Todd Protectograph Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Sept. 23, 1918. Serial No. 255,274. 19 Claims. (Cl. 197—6.4.)

1. In a machine of the class described, the combination with an invariably moved shaft and means for effecting said movements, of a paper feed actuating member on said shaft, a spring transmitting movement of the shaft to the member while permitting movement of the shaft relative to the member as the member is arrested, work feeding devices connected for actuation by movements of the member, a printing couple for printing words of different lengths and means for selecting the words to be printed, and devices controlled by the selecting means for differentially limiting movements of the feed actuating member.

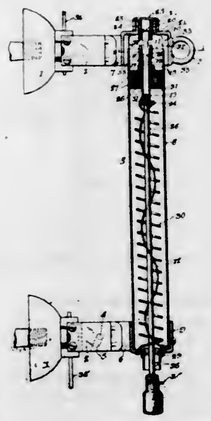


1,350,429. JOURNAL DUST-GUARD. WILLIAM S. TROWBRIDGE, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed May 8, 1918. Serial No. 233,250. 3 Claims. (Cl. 64—22.)



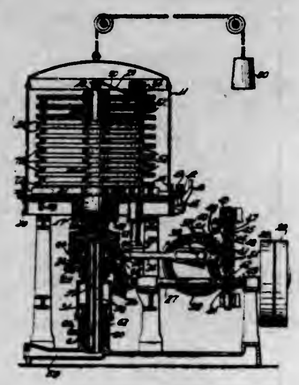
1. A journal dust guard, including a pair of metal containers U-shaped in transverse section, a plurality of segments all adapted to be inserted in a journal box through the axle opening therein and assembled in operative position within the box, each of said containers adapted to receive a plurality of the segments, and springs coöperating with the journal box guard recess and the containers to press the latter toward the axle and to cause movement of the guard responsive to movement of the axle with respect to the journal box.

1,350,430. OPHTHALMIC MOUNTING. JOHN R. VAN TASSEL, Geneva, N. Y., assignor to Standard Optical Company, Geneva, N. Y., a Corporation. Filed June 24, 1918. Serial No. 241,489. 6 Claims. (Cl. 88—47.)



1. An ophthalmic mounting comprising a split nonmetallic ring and a split metallic ring, one of which surrounds the other, and two clips for securing a temple between them, each clip being separate from both rings but surrounding the outer ring and engaging the inner ring to hold the rings together, the metallic ring having lateral extensions at its split lying in the split of the nonmetallic ring and engaging the split ends of such nonmetallic ring.

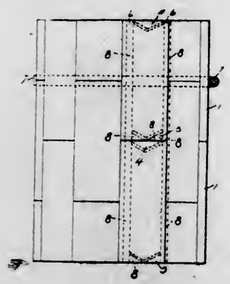
1,350,431. ENGINE-MANIFOLD. FRANKLIN E. ARNDT, Galion, Ohio, assignor of one-half to David C. Boyd, Galion, Ohio. Filed Nov. 17, 1917. Serial No. 202,534. 2 Claims. (Cl. 123—122.)



1. An engine manifold having intake and exhaust passages and a wall separating said passages having a portion projecting into the exhaust passage for the impingement of the exhaust gases thereon, said manifold having a carbureter connection communicating with the intake passage and means extending into the intake passage at the juncture of the carbureter connection with the manifold to direct the incoming gaseous charge upon the projecting portion of said wall of the manifold, said means in conjunction with the wall of the intake passage being adapted to retain a priming charge in the passage and prevent the priming charge flowing into the carbureter connection.

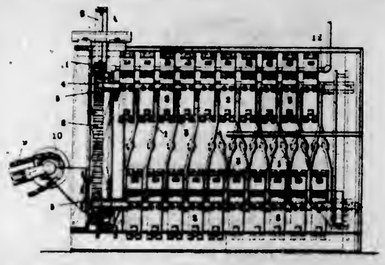
1,350,432. FUSE-SWITCH. JOHN P. ARNDT, Milwaukee, Wis. Filed Nov. 15, 1917. Serial No. 202,110. 11 Claims. (Cl. 200—114.)

1. A fuse switch comprising a casing having a closed end and an open end, a spring pressed air-compressor piston working within said casing, a fuse secured to the open end of the casing and to the piston and held in tension by the spring, and means for conducting the compressed air generated in the closed end of the cylinder against the ruptured ends of the fuse when the circuit is opened.



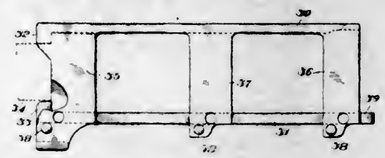
1,350,433. FILTER. FRANK K. ATKINS and EARL F. ATKINS, New York, N. Y. Filed Sept. 20, 1916. Serial No. 121,119. 25 Claims. (Cl. 210—18.)

1. In a filter, a substantially flat filter plate, means for building up a cake on said plate and a cutter constructed and arranged to break up the cake after it is formed, said filter plate and said cutter being relatively movable.



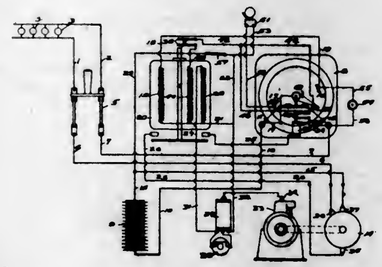
18. In a filter, a filter plate having a filter cloth on its active surface, means for causing fluid to flow through said cloth from the interior of the plate to the outside thereof, adapted to lift the cloth away from the surface of the plate, a hard edged scraper mounted to be out of contact with the cloth except when the fluid is flowing, the scraper extending across the active face of the plate, the plate and the scraper being relatively movable while the fluid is flowing to scrape the surface of the cloth.

1,350,434. CEMENT SECTION FOR CIRCULAR BUILDINGS. HERMAN J. BARSNESS, Black Earth, Wis. Filed Dec. 12, 1919. Serial No. 344,461. 1 Claim. (Cl. 72—6.)



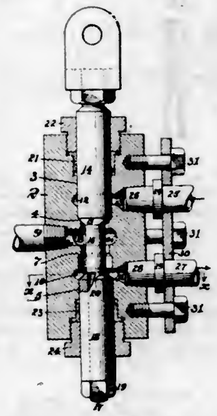
In water tight concrete construction for circular buildings, horizontally curved cement staves with V shaped grooves along one edge and truncated V shaped tongues on the opposite edge, and grooves starting at the edges and descending to the center in the top, and similar grooves in the bottom with greatest depth at the edges of the staves and parallel with the grooves in the top, forming channels all around the staves when assembled as a circular building, in combination with a coagulating liquid binder poured into the channels to seal the staves together at their joints and produce a water tight structure, with hoops around the outside to prevent spreading.

1,350,435. CARCASS SCRAPING AND POLISHING MACHINE. FRANK V. BRECHT and HELMUTH W. TOMTZ, St. Louis, Mo., assignors to The Gus V. Brecht Butchers' Supply Company, St. Louis, Mo., a Corporation of Missouri. Filed Oct. 2, 1918, Serial No. 256,604. Renewed Jan. 29, 1920. Serial No. 354,874. 6 Claims. (Cl. 17—11.)



1. In a carcass scraping and polishing machine, the combination of a rotatable member for supporting and advancing the carcass, carcass scraping devices supported on the periphery of the rotatable member and means for actuating said devices independently of the motion imparted to them by the rotatable member.

1,350,436. YOKE FOR DRAFT-GEARS. CHARLES A. CARSCADIN, Chicago, Ill., assignor, by mesne assignments, to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed Mar. 30, 1917. Serial No. 158,717. 10 Claims. (Cl. 213—42.)

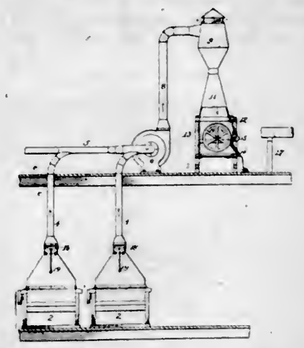


2. A yoke for draft gears comprising separable top and bottom members, and means for adjustably securing said bottom member to said top member in one of a plurality of positions spaced relatively thereto.

1,350,437. ELECTRIC SYSTEM. MARK C. COSGRAY, Sandusky, Ohio, assignor to The Matthews Engineering Company, Sandusky, Ohio, a Corporation of Ohio. Filed Jan. 30, 1919. Serial No. 274,066. 5 Claims. (Cl. 290—30.)

1. In an electric system, translating devices, a battery, an ampere-hour meter, a dynamo connected to the battery and the meter, an engine connected to the shaft of the dynamo, a switch for opening and closing the electric connection and having a coil connected to the meter and operated when the meter reaches a predetermined point to close the switch, the switch having a second coil for maintaining the switch closed, the switch having a third coil operating to open the switch when a predetermined quantity of electricity passes through the meter in one direction and when a predetermined quantity of electricity passes through the meter in the opposite direction.

1,350,438. FLUID-PRESSURE VALVE. JOSEPH DAVIDSON, East Point, Ga. Filed Feb. 24, 1916. Serial No. 80,240. 3 Claims. (Cl. 277—16.)

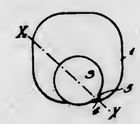


1. In a fluid pressure valve, a body part having a through passage comprising two end portions of uniform diameters separated by oppositely directed valve seat portions arranged at a distance apart and also having a port opening from the passage between the valve seats and further having separate additional ports opening from the side walls of the end portions of the passages at a distance from the respective valve seats and respectively terminating in annular chambers surrounding and opening into said passages, combined with a plunger structure of greater length than the body part and comprising two plunger portions of uniform diameters respectively closely fitting the end portions of the passage so as to be surrounded by the annular chambers and connected by a neck portion of less cross sectional area than the passage between the valve seats, and which plungers adjacent to the neck portion are provided with seating portions adapted to the valve seats but arranged at a distance apart greater than the distance between the valve seats and less than the distance between the additional ports entering the sides of the end portions of the passage in which the plungers operate, the ends of the plungers extending beyond the end portions of the passages of the body part, and suitable packing means surrounding each of the end portions of the plunger and fitting the opposite ends of the body part, whereby each end of the plunger structure is exposed beyond the body.

2. In a fluid pressure valve, a body part having a through passage comprising two end portions of uniform diameters separated by oppositely directed valve seat portions arranged at a distance apart and also having a port opening from the passage between the valve seats and further hving separate additional ports opening from the side walls of the end portions of the passages at a distance from the respective valve seats, combined with a plunger structure comprising two plunger portions of uniform diameters respectivexely closely fitting the end portions of the passage and connected by a neck portion of less cross sectional area than the passage between the valve seats, and which plungers adjacent to the neck portion are provided with seating portions adapted to the valve seats but arranged at a distance apart greater than the distance between the valve seats and less than the distance between the additional ports entering the sides of the end portions of the passage in which the plungers operate, said plunger structure having one of its plungers provided with a neck and a shank of smaller diameter extending from said neck upon which the other plunger is sleeved and clamped thereon in fixed spaced relation from the other plunger.

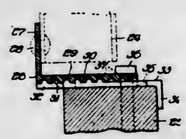
3. In a fluid pressure valve, the combination of a body having a thorough passage, consisting of two bores in allnement of substantially the same diameter and separated by oppositely directed valve seats, and also having a lateral port from the passage between the valve seats and additional independent lateral ports opening from the sides of the bores of the same diameter at a distance from the respective valve seats, and in which each of said independent lateral ports provides communication with the bore by an annular chamber extending substantially arounnd the bore, a plunger structure comprising two plunger portions of uniform diameters each snugly fitting the respective bores of the same diameter and connected by a neck portion of less cross sectional area than the cross sectional area of the passage through the valve seats and the passage between said seats, said plungers extending beyond each of the bores and provided with oppositely directed seating portions for the valve seats and in which said seating for portions are separated a distance greater than the distance between the valve seats and less than the distance between the independent lateral ports entering the passages occupied by the plungers, and suitable packing means surrounding each of the plungers and fitting the opposite ends of the body whereby each end ot the plunger structure is exposed beyond the body.

1,350,439. LINT-COLLECTING SYSTEM. JOSEPH DAVIDSON, Greenville, S. C., assignor of one-half to American Machine & Manufacturing Company, a Corporation of North Carolina. Filed Mar. 29, 1917. Serial No. 158,174. 4 Claims. (Cl. 13—17.)



2. The herein described method of collecting lint directly from a plurality of separate sources such as linters, which consists in causing a plurality of separate bodies of freely floating lint to be formed from the separate sources under independent regulated air-blast in respect to each of said sources and suction from a common source sufficiently to cause the separate bodies of lint to be respectively held in suspension within separately confined spaces, collecting all of the plurality of bodies of suspended lint and commingling them under the action of said suction from the common source, transferring the commingled and collected lint to a distant place by means of air pressure, relieving the air pressure employed in transferring the lint before the lint is subjected to the condensing treatment to convert it into batting, and finally condensing the said commingled lint under a relatively light atmospheric pressure.

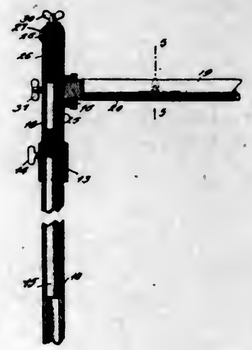
1,350,440. APPARATUS FOR AGGLOMERATING ORES. EDWARD W. DAVIS, Duluth, Minn. Filed Nov. 19, 1918. Serial No. 263,130. 37 Claims. (Cl. 266—21.)



36. The combination in sintering apparatus of a track, a series of trucks mounted on said track to receive charges of material to be sintered, a vacuum chamber adjacent said track, means for forming an air tight communication between each of said trucks and said vacuum chamber during the travel of said trucks adjacent thereto, and reciprocating feeding means mounted adjacent said track and adapted to move said series of trucks by engagement with one of them, said feeding means having a part adapted to engage one of said trucks automatically upon its forward stroke and to pass by said truck upon its return stroke.

1,350,441. MANUFACTURE OF LENSES. THEODORE B. DRESCHER, Rochester, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed Dec. 4, 1919. Serial No. 342,334. 4 Claims. (Cl. 49—82.1.)

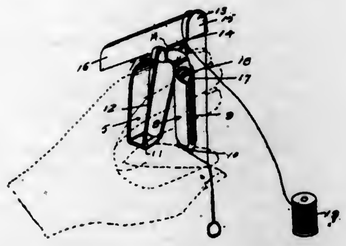
4. A lens blank adapted to form the minor lens of a fused bifocal lens, said blank having a relatively small projection extending at the side thereof and beyond its boundary.



1,350,442. CAR END CONSTRUCTION. JOHN DUNCAN, Boone, Iowa. Filed Oct. 23, 1919. Serial No. 332,615. 2 Claims. (Cl. 105—411.)

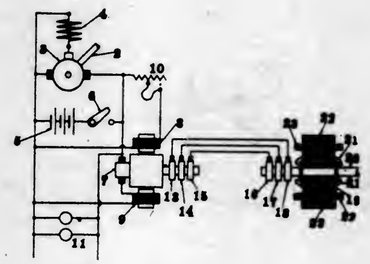
1. In a railway car, an end sill, an end post, and a bracket operatively connecting the same comprising a plurality of relatively adjustable parts whereby said bracket is applicable to end sills and posts which may have different dimensions.

1,350,443. BAG-HOLDER. ALBERT EDSTROM, Duluth, Minn. Filed Dec. 13, 1916. Serial No. 136,603. Renewed June 30, 1919. Serial No. 307,781. 1 Claim. (Cl. 83—26.)



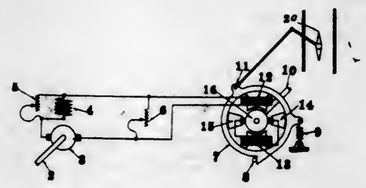
The combination with a bag holder comprising a pair of upright supports, a pair of heads carried by and adjustable vertically with respect to the upper portion of the supports, a cross bar connecting the said heads, a pair of horizontal swinging arms supported on said heads, bag engaging teeth carried by the cross bar and a spring controlling movement of one of said arms, of means for locking the other arm in a predetermined angular position in respect to the cross bar, and against swinging movement in either direction, and means for adjusting the effective length of each arm separately.

1,350,444. MEANS FOR ESTABLISHING ELECTRICAL CONNECTIONS. ALFRED L. EUSTICE, Chicago, Ill., assignor to Economy Fuse & Manufacturing Company, Chicago, Ill., a Corporation of New York. Filed July 20, 1917. Serial No. 181,719. 8 Claims. (Cl. 200—134.)



1. A clip for electrical connections including a support, conducting members mounted on said support, and means operable between said support and said conducting members for moving the conducting members toward each other.

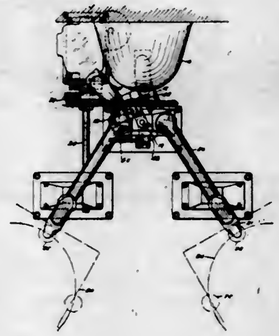
1,350,445. AUTOMATIC TATTING APPARATUS. GEORGE E. FRAZIER, Clever, Mo., assignor of one-half to Schyler C. Cobb, Clever, Mo. Filed Mar. 13, 1920. Serial No. 365,623. 13 Claims. (Cl. 66—10.)



1. As an article of manufacture, an apparatus of the character described comprising a bobbin holder having a slot in one of its walls and means at one end for supporting a bobbin, the walls of said holder loosely embracing the bobbin, whereby a loop of thread may be passed over the bobbin through the holder and drawn from beneath the bobbin and beyond the holder.

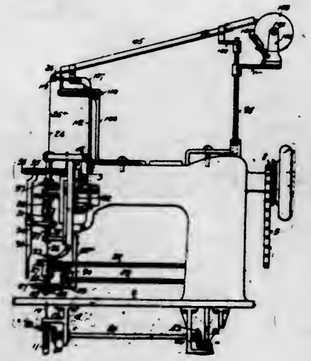
1,350,446. SPEED-REGULATING APPARATUS. VALÈRE A. FYNN, St. Louis, Mo., assignor to Wagner Electric Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed May 27, 1918. Serial No. 236,821. 6 Claims. (Cl. 175—355.)

1. In speed regulating apparatus, the combination of a device to be regulated, speed controlling means therefor, a dynamo electric machine having both members movable, one member being connected to the speed controlling means and the other driven at a speed proportional to that of the device to be regulated, and means for producing in said last named member a magnetic field revolving with respect to said member in a direction opposed to the direction of rotation of said member.



1,350,447. SPEED-REGULATING APPARATUS. VALÈRE A. FYNN, St. Louis, Mo., assignor to Wagner Electric Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed May 27, 1918. Serial No. 236,822. 5 Claims. (Cl. 175—355.)

1. In speed regulating apparatus, the combination with a device to be regulated, of speed controlling means therefor, a dynamo electric machine having both members movable, one member being driven at a speed proportional to that of the device to be regulated and the other member being connected to the speed controlling means, and means independent of the dynamo electric machine for varying the excitation of said dynamo electric machine in response to variations in speed of the device to be regulated.

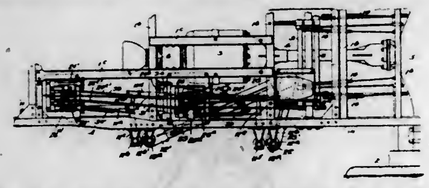


1,350,448. APPARATUS FOR CONVEYING MOLTEN GLASS. JOSEPH B. GRAHAM, Evansville, Ind., and Richard La France, Toledo, Ohio, assignors to The Owens Bottle Machine Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 17, 1918. Serial No. 229,010. 12 Claims. (Cl. 49—55.)

1. The combination with means for discharging molten glass, of a switch device comprising a plurality of means for receiving and directing the glass to different positions, said receiving and directing means being brought individually into operative position by the movement of

the switch, the latter having an intermediate position permitting the glass to be discharged independently of said receiving and directing means.

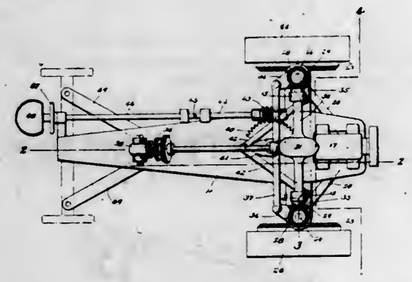
1,350,449. BEAD-SEWING MACHINE. JOHN A. GROEBLI, New York, N. Y. Filed Nov. 10, 1917. Serial No. 201,259. 11 Claims. (Cl. 112—99.)



3. A bead sewing machine comprising stitching mechanism, means for holding a supply of strung beads, a separator for controlling the feeding of the beads to the stitching mechanism and a trough interposed between said supply holding means and said separator and having inclined portions adapted to aline the beads.

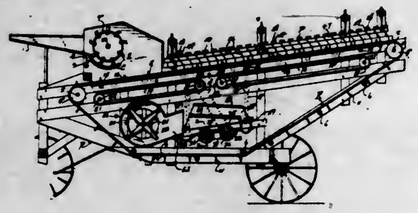
8. A bead sewing machine comprising a needle, a thread looper coöperating therewith, means coöperating with said looper for controlling the feeding of the beads on the sewing thread in relation to the stitching operations, and means coöperating with said looper to move the beads toward the point of stitching.

1,350,450. OPERATING MECHANISM FOR VEHICLES. EMIL GRUENFELDT, Cleveland, Ohio, assignor, by mesne assignments, to The Baker R & L Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 2, 1915. Serial No. 48,629. 15 Claims. (Cl. 180—77.)



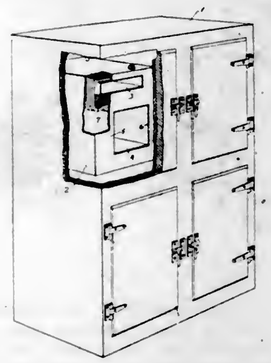
1. In a vehicle having a plurality of control stations and brake operating means, the combination of an operating member for said brake operating means at each station, movable devices arranged when moved to one position to engage and lock one of said members and when

moved to their other position to engage and lock the other member, whereby the operating means can be actuated at



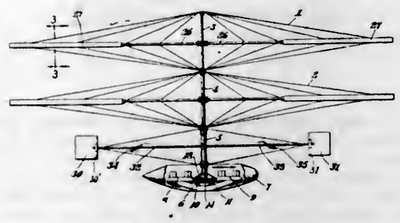
any time from one control station only, means for moving said devices, and a brake setting mechanism adjacent to one of said operating members.

1,350,451. TRACTOR. JACOB GUTH, Salem, Ill. Filed Nov. 26, 1918. Serial No. 263,276. 4 Claims. (Cl. 280—95.)



1. In a tractor having a main frame, the combination with a transversely disposed frame arranged near the forward end of said main frame, of vertically disposed members mounted for rotation in the ends of said transverse frame, wheels carried by said vertically disposed members, a pair of crank arms carried by each vertically disposed member, the members of each pair of crank arms being disposed substantially at right angles to each other, one arm of each pair normally projecting inwardly toward the center of the main frame and the other arm of each pair projecting rearwardly, a pivotally mounted crank arm on the main frame, connecting rods between said pivotally mounted crank arm and the inwardly projecting crank arms on the vertically disposed members, and a rod connecting the rearwardly projecting crank arms on said vertically disposed members.

1,350,452. THRESHING-MACHINE. JOHN L. HARRINGTON, Winston-Salem, N. C., assignor to Southern Implement Manufacturing Co., Columbus, Ga., a Corporation of Georgia. Filed Nov. 3, 1919. Serial No. 335,256. 3 Claims. (Cl. 130—30.)



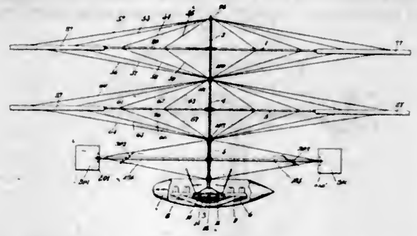
1. A machine of the class described including a separating element, a carrier movable above said element, picker teeth supported above the carrier, and a compression member disposed between adjacent teeth.

1,350,453. REFRIGERATING-TANK. FRED J. HEIDEMAN, Detroit, Mich., assignor, by direct and mesne assignments, to Household Utilities Corporation, Detroit, Mich., a Corporation of Delaware. Filed Apr. 16, 1919. Serial No. 290,545. 9 Claims. (Cl. 62—95.)

4. The combination with a coil for circulation of a cooling medium, of a tank containing a liquid wherein said coil is immersed, said tank having an air passage surrounded by the coil, said coil having unequal portions at the respective sides of said air passage whereby an unbalanced cooling effect and a consequent thermo-siphon circulation is induced within said tank.

1,350,454. FLYING-MACHINE. PETER COOPER HEWITT, Ringwood Manor, N. J. Filed June 14, 1919. Serial No. 304,187. 45 Claims. (Cl. 244—19.)

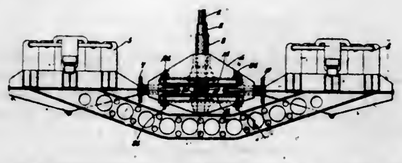
28. A helicopter having at least one lifting propeller the propeller diameter being between



$$\frac{T}{H.P.}\times\frac{\sqrt{T}}{17}$$

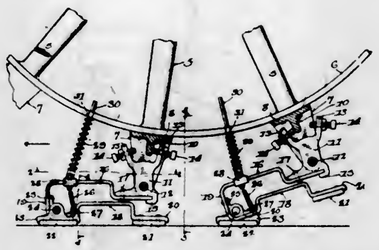
and

$$\frac{T}{H.P.}\times\frac{\sqrt{T}}{17}.$$



where the lift per horse power is no less than 12 pounds per horse power, the propeller blade area being no greater than 6% of the propeller disk area and the propeller blades being of aeroform shape.

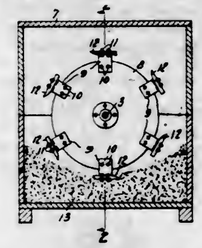
1,350,455. HELICOPTER. PETER COOPER HEWITT, Ringwood Manor, N. J. Filed June 14, 1919. Serial No. 304,188. 40 Claims. (Cl. 244—19.)



1. A propeller blade of aeroform shape having throughout its length its greatest transverse strength and its center of transverse support forwardly of the center of pressure upon the blade.

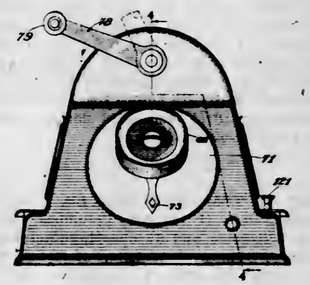
1,350,456. HELICOPTER. PETER COOPER HEWITT, Ringwood Manor, N. J. Filed June 14, 1919. Serial No. 304,189. 21 Claims. (Cl. 244—19.)

1. In a helicopter, the combination of a propeller shaft, a driving gear, a gear driven thereby and connected with said shaft, one of said gears being yieldably supported, and means co-acting with said last-mentioned gear to hold the same in mesh with the other gear.



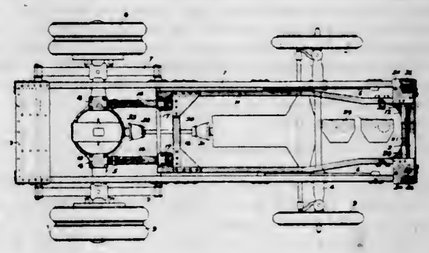
1,350,457. VEHICLE-WHEEL. LEO HOFMEISTER, Milwaukee, Wis. Filed July 18, 1919. Serial No. 311,770. 12 Claims. (Cl. 305—13.)

10. A vehicle wheel having a rim portion provided with projections, foot pieces pivotally connected with said projections and provided with resiliently yielding bearing members having heel and toe portions adapted for independent yielding movement, each foot piece including a connecting member, a resilient forwardly projecting arm and an integral rearwardly projecting arm parallel therewith and spaced therefrom, the bearing members being adapted to yield resiliently in the direction of the supporting connecting members, such movement being limited by the connecting member arranged to serve as a stop.



1,350,458. SHOVEL-TESTING MACHINE. MARTIN HOKANSON, Duluth, Minn. Filed Sept. 11, 1916. Serial No. 119,547. 2 Claims. (Cl. 73—51.)

1. A machine for testing shovel and similar blades to determine their resistance to wear, comprising a rotor having means on its periphery for attaching thereto the blades to be tested, with the blades tangential to the periphery of the rotor and their broad faces normal to the radial plane of the rotor, a casing inclosing said rotor for



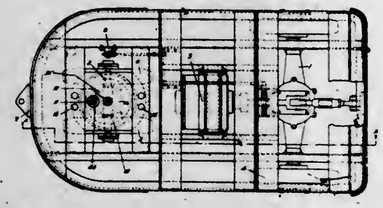
containing abrasive material of the kind on which the blades are to be used, said casing being provided in its bottom with a screen and with an outlet below said screen for the escape of worn out abrading material, and means to draw air down through the screen and the outlet.

1,350,459. CHECK-WRITER. MAGNUS H. JOHANSON, Rochester, N. Y., assignor to Todd Protectograph Co., Rochester, N. Y. Filed Apr. 26, 1917. Serial No. 164,665. 44 Claims. (Cl. 197—6.4.)

1. In a printing machine, a type carrier having a plurality of circumferentially extending types and mounted for rotation about a single axis to effect both type-selection and printing, means comprising indicating devices for effecting the type selecting rotation of the carrier, devices for effecting the printing rotations of the type carrier, and a platen connected for operation by the devices for effecting the printing rotations of the type carrier.

1,350,460. MOTOR-VEHICLE. CLYDE C. KEESLER, Canastota, N. Y., assignor to Watson Wagon Company, Canastota, N. Y., a Corporation of New York. Filed Apr. 26, 1917. Serial No. 164,659. 3 Claims. (Cl. 180—57.)

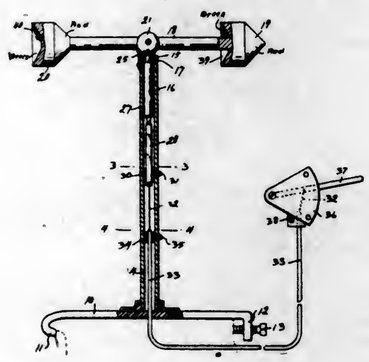
1. A motor vehicle comprising a main frame, axles, ground wheels on the axles, springs between the axles and



the main frame, a sub-frame, springs located between one of the axles and a portion of the sub-frame and normally yieldingly supporting the sub-frame to permit movement of the sub-frame relatively to the main frame, the sub-frame being pivoted to the main frame at a point remote from the springs supporting said sub-frame, and a power plant and vehicle body carried by the sub-frame, substantially as and for the purpose described.

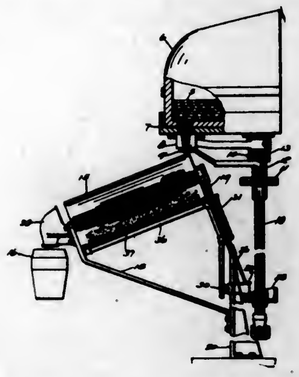
1,350,461. CANDLE-LAMP. EDWARD J. KNAPP, Syracuse, N. Y., assignor to E. J. Knapp Candle and Wax Co., Inc., Syracuse, N. Y., a Corporation of New York. Filed Oct. 7, 1919. Serial No. 329,033. 3 Claims. (Cl. 67—21.)

3. A candle lamp including a cup shaped base having an outwardly extending annular flange and an upwardly extending annular flange having a smooth external conical surface which meets the surface of the former flange, a candle seated in the base, a cap for the candle having an internal smooth conical surface at its lower end complemental to the conical surface of the face and movable into coherence therewith before the lower edge face of the cap engages the first mentioned flange, substantially as and for the purpose set forth.



1,350,462. AUTOMOBILE-VEHICLE. CHARLES C. MARTIN and JAMES H. COTTON, Columbus, Ohio, assignors to the Kilbourne and Jacobs Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Mar. 8, 1919. Serial No. 281,511. 6 Claims. (Cl. 280—97.)

1. In an automobile vehicle a frame mounted at one end on the rear axle, a plate member mounted on the front portion of said frame, a depending guide member on said plate member, a vertical member carried on the front axle receiving said guide member in its upper portion and formed to surround the front axle in its lower portion, and a member engaging said guide member and said vertical member to secure the same together, and means for imparting a rotary movement to said vertical member to steer said front axle.

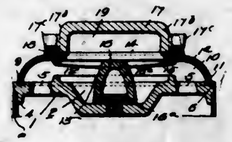


1,350,463. DIRECTION-SIGNAL FOR AUTOMOBILES. WILLIAM L. MILLER and ERNEST A. F. MILLER, Jr., Coffeyville, Kans., assignors of one-third to Nell A. Cooke, Coffeyville, Kans. Filed June 28, 1919. Serial No. 307,397. 3 Claims. (Cl. 116—46.)

1. An automobile signal comprising a tubular support, an internally threaded, rotatable member mounted within the upper end of the support and extending out through the upper end thereof, an indicating member carried by said rotatable member, a longitudinally movable, threaded member mounted within the tubular support and engaging with the rotatable member, said last named member being

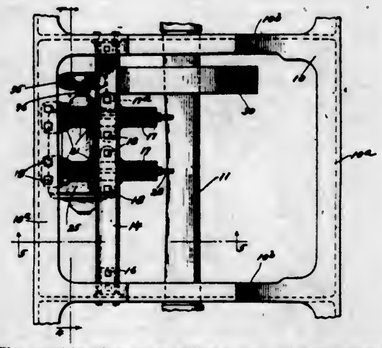
held from rotation but having longitudinal movement, an actuating lever, a flexible connection between the actuating lever and the second named member, and a spring detent acting to resist a rotation of the first named rotatable member.

1,350,464. MEANS FOR TRANSFERRING HOT GLASS. MICHAEL J. OWENS, Toledo, Ohio, assignor to The Owens Bottle Machine Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 15, 1918. Serial No. 228,583. 12 Claims. (Cl. 49—55.)



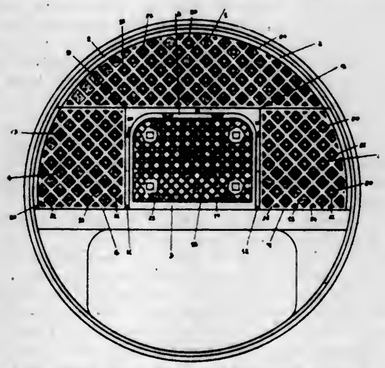
12. The combination of a trough, means to deliver hot glass thereto, and means to revolve the trough about an axis extending lengthwise of the trough.

1,350,465. PRIMER FOR SMALL-ARMS AMMUNITION. HARLEY T. PECK, Lebanon, Ohio, assignor to The Peters Cartridge Company, Cincinnati, Ohio, a Corporation of Ohio. Filed June 12, 1920. Serial No. 388,676. 3 Claims. (Cl. 52—2.)



1. A priming composition containing di-plumbic di-trinitro-resorcinol.

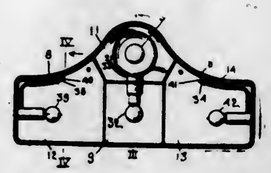
1,350,466. OIL-BURNER. JOHN LINCOLN PERKINS, Sabetha, Kans. Filed May 13, 1919. Serial No. 296,752. 1 Claim. (Cl. 158—91.)



A burner of the type described, including the pan or base-section having a perimetrical flange-like portion provided with air-orifices and with a circular groove, said base-section also having an upstanding ledge at its upper edge, and an upper complemental superposing section having its outer marginal edge received by said groove, said base-section and superposing section having interior ledges or rips with their upper and lower edges arranged in planes above and below each other respectively.

1,350,467. PNEUMATIC-TIRE DRIVE FOR DYNAMOS OF RAILWAY-CARS. EDWARD POSSON, Chicago, Ill. Filed Jan. 17, 1918. Serial No. 212,275. 8 Claims. (Cl. 105—113.)

5. The combination in a railway car, of a truck frame, a dynamo suspended from said frame, a driving wheel detachably secured to an axle of said car, a driven wheel carried by the shaft of said dynamo, one of said wheels comprising a pneumatic tire coacting with the periphery of the other wheel, and positively adjustable means for sliding said dynamo toward and from said axle.



1,350,468. FURNACE-FRONT BAFFLE CONSTRUCTION. JOHN REID, New York, N. Y. Filed Mar. 3, 1919. Serial No. 280,410. 8 Claims. (Cl. 110—172.)

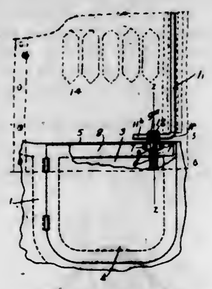
1. In furnace front baffle construction, a back plate forming the inner front wall of the fire box and having a fuel opening, a plurality of baffles partially covering said walls and situated on the back plate of the furnace front above and on either side of the fuel passage opening and a yoke piece bridging the distance across said fuel opening at the upper end thereof and covering the portion of said wall left uncovered by the aforesaid baffles.

3. In furnace front baffle construction, a base having a plurality of holes, a grid in crossed bar form secured to said base having flanges forming retaining lips, and refractory material filling said grid and having holes therethrough corresponding to and alining with the aforesaid holes.

1,350,469. TRAFFIC-SIGNAL. HERMAN R. SAXON, Toledo, Ohio. Filed Nov. 2, 1916. Serial No. 129,062. 1 Claim. (Cl. 40—132.)

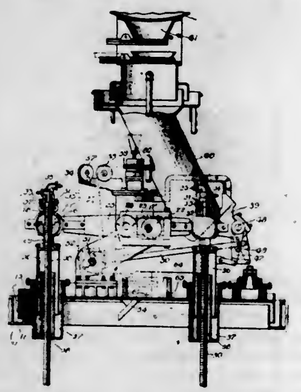
A traffic signal embodying a housing, a tail light, a way disclosing light above said tail light, compartments in said housing for said lights, said compartments having a partition separating said lights, a pair of directing lights, and a compartment for each directing light, each directing light compartment having a partition between it and the tail light, and between it and the way disclosing light.

1,350,470. WATERPROOF CONNECTION FOR SPARK-PLUGS. ALBERT SCHMIDT, Flint, Mich., assignor to Champion Ignition Company, Flint, Mich., a Corporation of Michigan. Filed Nov. 20, 1917. Serial No. 204,550. 5 Claims. (Cl. 123—169.)



1. The combination with a spark plug comprising a casing, an insulator therein and projecting beyond the outer end thereof, an electric terminal at the outer end of said insulator, and means at the outer end of said casing for securing said insulator therein, of a metallic tube secured to said casing and projecting outward to surround said insulator, a detachable hood for inclosing said insulator and terminal, having a sleeve portion for fitting within said tube and separating the same from said terminal, and a coöperating electrical contact for said terminal mounted on said hood.

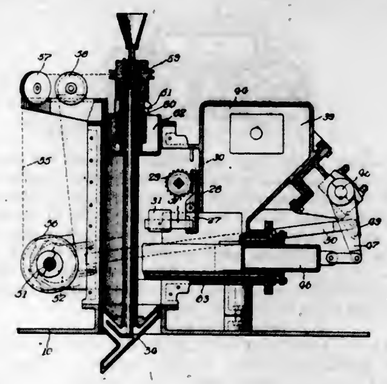
1,350,471. SIDE CURTAIN FOR VEHICLES. GEORGE W. SCOTT, Cleveland, Ohio, assignor of one-half to W. R. Horton, Cleveland, Ohio. Filed July 9, 1917. Serial No. 179,432. 2 Claims. (Cl. 296—139.)



1. In a structure of the character described, a hinged door, a supporting rod, the lower end of said rod extending at right angles to the main portion thereof and also formed with an off-set as described, a socket secured to the inside of said door, a shank in said socket formed with

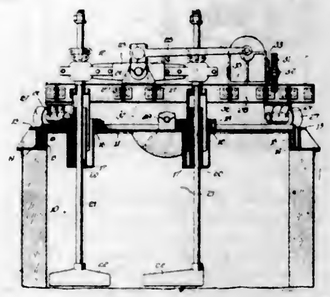
an aperture, and an eye bolt in said aperture to receive the lower right angled end of said rod to adjustably secure it to said shank.

2. In a structure of the character described, a supporting member secured to the inside of the door of said structure and lying substantially within the outer face thereof, a second supporting member capable of being removably supported by said first member, a vertically arranged supporting rod having a horizontally extending lower end off-set from the vertical portion thereof, and means for adjustably securing the horizontal lower end of said rod to said removable supporting member to allow the vertical portion of said rod to be adjusted longitudinally of said door.



1,350,472. GAS-PRODUCER. SAMUEL B. SHELDON, Duluth, Minn. Filed June 11, 1918. Serial No. 239,361. 8 Claims. (Cl. 48—85.2.)

1. In a gas producer, the combination of a walking beam, and pokers mounted on opposite sides of the center thereof for disturbing the fuel in the coking zone.

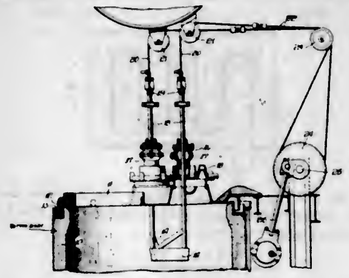


1,350,473. GAS-PRODUCER ARRANGEMENT. SAMUEL B. SHELDON, Duluth, Minn. Filed June 11, 1918. Serial No. 239,362. 4 Claims. (Cl. 48—86.)

1. In a gas producer, the combination of a fuel hopper having a water jacketed floor directly above the top cover of the producer and so closely located to the top cover as to necessitate artificial cooling to prevent warping, a fuel distributer mounted adjacent to said hopper floor, means for cooling said distributer, the fuel hopper floor extending and terminating directly over the distributer,

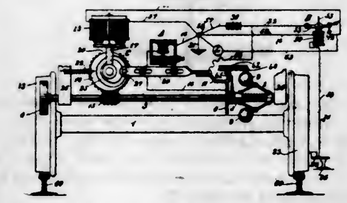
a plunger for feeding fuel from the hopper onto said distributer, and means for actuating said plunger and distributer.

1,350,474. GAS-PRODUCER. SAMUEL B. SHELDON, Duluth, Minn. Filed Sept. 6, 1918. Serial No. 252,862. 1 Claim. (Cl. 48—86.)



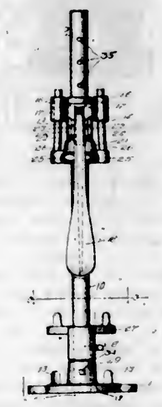
In a gas producer, the combination of a main body portion having a track thereon, a rotary top for the producer, a rotatably mounted superstructure mounted over said top and supported independently thereof, producer operating mechanism mounted on said superstructure, and propelling means mounted on said superstructure for driving said operating mechanism and for rotating said top and superstructure, the rotary top and superstructure being supported directly on said main body portion, and movably mounted on said track.

1,350,475. GAS-PRODUCER. SAMUEL B. SHELDON, Duluth, Minn. Filed Nov. 4, 1918. Serial No. 260,995. 1 Claim. (Cl. 48—85.2.)



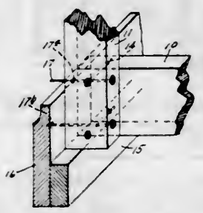
In a gas producer, the combination of a rotary body, a stationary top therefor sealed with respect to the body to prevent the escape of gas, said top having a plurality of relatively large poker receiving openings therein, a plurality of vertically movable pokers extending loosely through said top openings to permit the pokers, when in the fuel, to lag as the body rotates, closures for said openings including ball and socket joints to permit the pokers to lag, the poker shanks being regularly vertically and reciprocally movable through the balls respectively of said joints, poker actuating mechanism, and a

flexible member extending between each of said pokers and said actuating mechanism whereby the pokers are raised



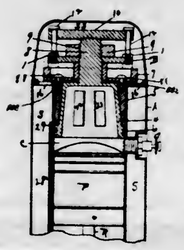
positively and lowered solely by gravity at regular intervals to maintain the fuel bed in a uniformly porous condition.

1,350,476. AUTOMATIC SPEED-CONTROLLER FOR MOVING VEHICLES. PAUL J. SIMMEN, Buffalo, N. Y. Filed Feb. 23, 1917. Serial No. 150,306. 16 Claims. (Cl. 246—182.)



1. In combination, a railway divided into blocks, a series of signal rails along each block, means for energizing and deenergizing each series, a vehicle adapted to move along the railway, an actual speed indicator, a permissive speed indicator and a retarding device on the vehicle, and means on the vehicle adapted to actuate the permissive speed indicator whenever the vehicle is not passing over an energized signal rail.

1,350,477. BOTTLE-CAPPER. JAMES W. SMALL, Chicago, Ill. Filed Apr. 12, 1920. Serial No. 373,074. 3 Claims. (Cl. 226—84.)

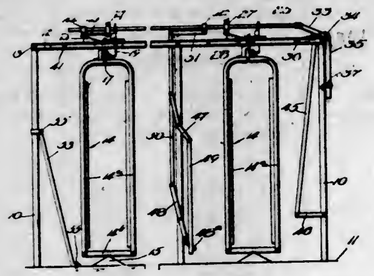


1. A bottle capper comprising a cap-engaging member, a pair of guide rods connected with said member and arranged at the side thereof, sleeves for receiving said guide rods, and a lever for moving said cap-engaging member, said rods having portions thereon arranged to bind slightly in said sleeves when said lever is moved to its inoperative position to retain said lever in said position.

1,350,478. PORTABLE HOUSE. CHARLES M. STAFFORD, Minneapolis, Minn. Filed Oct. 12, 1918. Serial No. 257,872. 13 Claims. (Cl. 20—2.)

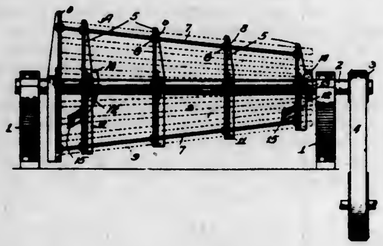
1. In a knock-down building, the combination with a sill and a joist, of a studding having one of its sides abutting the joist and its outer face abutting said sill, and two sets of nutted bolts extending through said studding, at right angles to each other, with one set thereof also extending through said sill and the other set thereof also extending through said joist, whereby said joist, sill and studding may be properly alined and separably interconnected rigidly together in their required working positions.

1,350,479. VALVE FOR INTERNAL-COMBUSTION ENGINES. JOHN A. TOOMEY, Los Angeles, Calif. Filed Apr. 22, 1919. Serial No. 291,807. 4 Claims. (Cl. 123—59.)



4. In an internal combustion engine, the cylinder C the inserted head 4, the rings 6, the nut and screw 9, the rigid plate B, the cross piece 10, and bolts 12, the valve 5, ports in the said cylinder C, head 4, and valve 5, for the intake and exhaust of gas and means for rotating the valve, in combination with the extension piece 8 between the head 4 and cross piece 10 substantially as described.

1,350,480. COW-STANCHION. RALPH W. WALTER, Mazomanie, Wis. Filed Mar. 10, 1919. Serial No. 281,813. 10 Claims. (Cl. 119—148.)



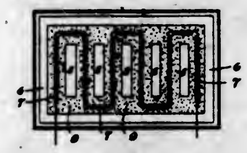
1. In combination, a series of stanchions, a longitudinal supporting rail above said stanchions, a longitudinally slidable rod carried by said rail, latch members carried by said rod and engaging said stanchions to operate the

same, and individual locking means carried by said rail adjacent each of said stanchions for locking said stan-

chions in closed position and simultaneously rendering inoperative the latch member adjacent thereto.

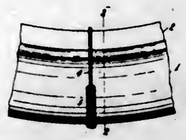
1,350,481. COATING APPARATUS AND METHOD. EDWARD L. WATROUS, deceased, El Paso, Tex., by Agnes B. Watrous, executrix, Evanston, Ill. Filed Sept. 20, 1919. Serial No. 325,254. 14 Claims. (Cl. 91—59.1.)

1. In apparatus of the class described means for subjecting freshly coated pipes, bars or the like to centrifugal action, said means comprising a rotatable shaft, a plurality of perforated disk-like plates spaced on said shaft and each provided with a plurality of spaced perforations, and means for rotating said shaft and plates.



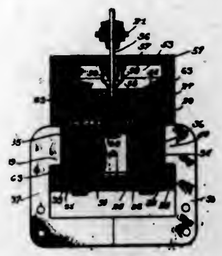
1,350,482. PROCESS OF EXPRESSING WAX FROM PETROLEUM DISTILLATES. WILLET C. WELLS and FRANK E. WELLS, Columbus, Ohio. Filed Apr. 23, 1914. Serial No. 833,897. 3 Claims. (Cl. 210—195.)

1. The herein described process of obtaining low cold test oils from viscid distillates of petroleum and the like consisting in feeding the distillates to a woolen fabric strainer which is uniformly and adequately supported by structure that does not materially obstruct the strainer, under sufficient pressure to express the oils from the distillate.



1,350,483. PROCESS FOR CARBONIZING ARTICLES AND APPARATUS FOR SAME. MERRITT D. WILBUR, Rochester, FRANCIS P. CANNON, Syracuse, and THOMAS J. MURPHY, Rochester, N. Y. Filed July 26, 1917. Serial No. 182,926. 8 Claims. (Cl. 148—10.)

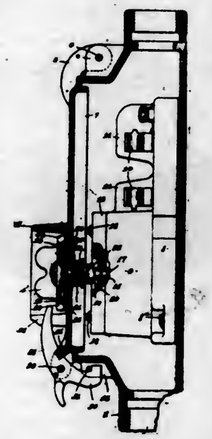
1. The process of carbonizing articles consisting in surrounding the article with a non fusible carbonizing material and quickly raising the temperature of such material, maintaining the same at a predetermined temperature for a certain length of time, and simultaneously



passing an electric current through the articles and the material between electrodes spaced apart from the articles by the carbonizing material.

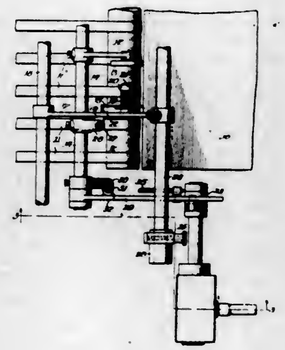
1,350,484. ANTISKIDDING DEVICE FOR TIRES. WILLIAM J. A. BAILEY, Boston, Mass., assignor, by mesne assignments, to Non Skid Company of America, Boston, Mass., a Corporation of Massachusetts. Filed May 26, 1917. Serial No. 171,263. 4 Claims. (Cl. 152—14.)

1. An anti-skid for tires comprising a cross-retaining member extending crosswise over the tread face of the tire, and a road-engaging, wear-resisting element comprising a metal coil mounted upon said cross-retaining member with closely wound convolutions flattened against said cross-retaining member.



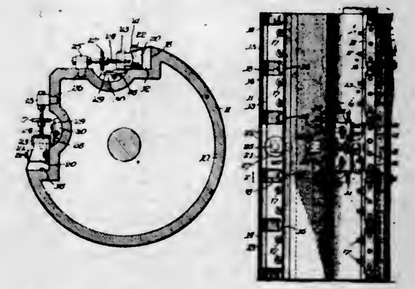
1,350,485. GRAPHIC RECORDING INSTRUMENT. JACOB W. BARD and OTIS WHITE, Springfield, Ill., assignors to Sangamo Electric Company, Springfield, Ill., a Corporation of Illinois. Filed Oct. 14, 1916. Serial No. 125,728. 12 Claims. (Cl. 171—265.)

1. A motor element for electrical instruments, comprising a mercury chamber casing having diametrically-opposite slots in the side wall thereof, plates composed of magnetic material fitted in said slots, a magnet having its poles fitted in said slots opposite said plates, and an armature in the mercury chamber.



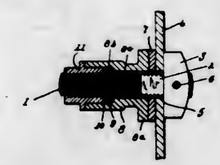
8. A motor element for electrical instruments, comprising a mercury chamber casing open at the bottom, a bracket, a bottom-plate for said casing carried by said bracket, a magnet connected with said bracket and having its poles at opposite sides of the mercury chamber, a return-plate carried by the bottom-plate and projecting into the mercury chamber casing, an armature extending between the magnet poles and said return-plate, and contacts carried by said bottom-plate and connecting with opposite sides of the mercury chamber.

1,350,486. ELECTRIC SWITCH AND BOX. CARL H. BISSELL, Syracuse, N. Y., assignor to Crouse-Hinds Company, Syracuse, N. Y., a Corporation of New York. Filed July 27, 1916. Serial No. 111,688. 8 Claims. (Cl. 200—50.)



1. The combination of a box having an opening in one side, a movable cover for the open side, an electric switch in the box, and means for operating the switch comprising a member located in a box, and a member carried by the cover and movable into and out of coacting relation with the former member during closing and opening of the cover, means for locking the cover in its closed position, and means actuated by the operating member on the cover for controlling the operation of the locking means, substantially as and for the purpose described.

1,350,487. PLURAL-SHEET DETECTOR. JOSEPH R. BLAINE, Oak Park, Ill., assignor to Miehle Printing Press and Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed May 31, 1917. Serial No. 172,129. 9 Claims. (Cl. 74—46.)

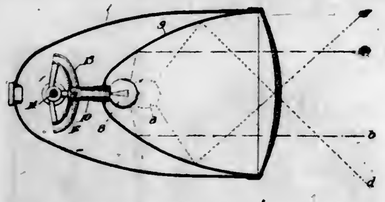


1. In sheet feeding means, the combination of a rotatable bodily movable detector cam, and means operable by the bodily movement of the cam for interrupting the feed of sheets, substantially as described.

1,350,488. SHIFTING PLATE-CLAMP. JOSEPH R. BLAINE, Oak Park, Ill., assignor to Miehle Printing Press and Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed May 24, 1918. Serial No. 236,279. 9 Claims. (Cl. 272.)

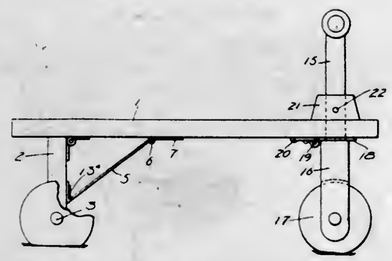
1. A clamp for positioning a flexible printing plate upon its supporting member, including a clamping member, a pin pivotally mounted therein, a pivotally mounted anchor pin, and a threaded member associated with said pins for adjusting the position of the plate.

1,350,489. REPAIR-PLUG. JAMES BROPSON, Cleveland, Ohio. Filed Dec. 29, 1919. Serial No. 348,084. 1 Claim. (Cl. 137—99.)



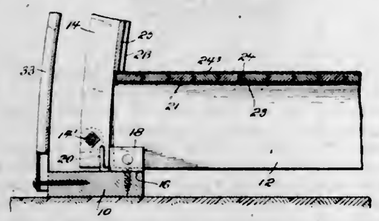
A repair plug comprising a bolt adapted to be inserted through a hole and provided with means at its inner end to prevent withdrawal from the hole, a tubular fitting inclosing the outer part of the bolt, said fitting having a cup at its outer end, a nut screwed on the outer end of the bolt and into said cup, packing under the inner end of the fitting and packing under the nut, in the cup.

1,350,490. INTERLOCKING WALL-BLOCK. ROBERT J. DYER, Oakland, Calif., assignor of one-third to H. B. Williams, San Francisco, Calif. Filed Aug. 10, 1918. Serial No. 249,234. 1 Claim. (Cl. 72—41.)



An elongated interlocking wall block formed with one substantially smooth unbroken face and the opposite face provided adjacent one end with a vertically disposed interlocking groove open at its opposite ends and having a contracted throat and said face formed adjacent its opposite end with an outwardly projecting interlocking tongue having an enlarged head, said block being formed at opposite ends respectively with an interlocking tongue and groove each of said tongues and grooves in the face and end walls extending the full depth of the block and said tongues projecting respectively beyond the normal side and end walls of said block.

1,350,491. AUTOMOBILE-HEADLIGHT. WILLIAM M. FELLERS, Warrington, Fla. Filed Apr. 17, 1916. Serial No. 91,661. 5 Claims. (Cl. 240—44.)

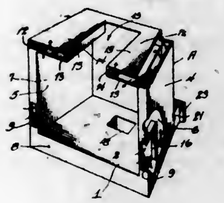


1. The combination with an automobile, of a headlight comprising a lamp and a parabolic reflector, an oscillating cam adapted to effect relative movement between the lamp and the reflector, and connections between the steering gear of the automobile and said cam whereby the cam is actuated in accordance with the direction of movement of the automobile, for the purpose described.

1,350,492. TOY VEHICLE. WILLIAM E. GLEESON, East McKeesport, Pa. Filed Sept. 23, 1919. Serial No. 325,757. 2 Claims. (Cl. 208—165.)

1. In a toy vehicle, a seat board, a pillow block hingedly secured to said board so as to be movable toward and away from the same, bracing means for securing the pillow block in a substantially vertical position, said board being provided with a slot extending from the forward end thereof, a holding collar hingedly secured to the board adjacent said slot, a steering spindle fitting through said collar so as to be rotatable therein and provided at its lower end with a fork, a steering ground wheel mounted in said fork, and a stop collar releasably secured to said spindle and normally engaging the upper face of the board so as to hold the spindle in vertical position while permitting turning thereof for steering purposes.

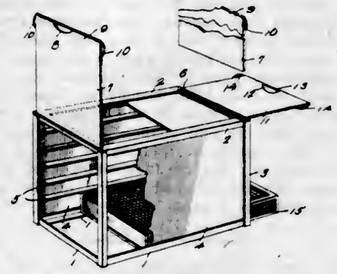
1,350,493. KNOCKDOWN BUILDING. CHAUNCEY M. GOODRICH, U. S. Army. Filed Nov. 13, 1918. Serial No. 262,385. 2 Claims. (Cl. 20—2.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)



1. A knock down building, including joists, supports, and a connecting member for securing the supports to the joists comprising a body portion, wings extending along the longitudinal edges of the body portion and bent at right angles thereto to form a socket for the reception of the end of a joist and spaced apart wings at one end of the body portion bent at right angles thereto and spaced from the first mentioned wings and lying in a plane at right angles to the planes of said first wings and forming a socket for the reception of the end of the supports.

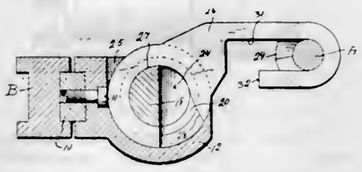
1,350,494. VEIL. RINA GREEN, Copenhagen, Denmark. Filed Oct. 28, 1919. Serial No. 333,964. 1 Claim. (Cl. 2—116.)

A veil including a single ply flexible and stretchable body adapted to be arranged over the face and beneath the chin of the wearer and provided with a transverse slit at a point opposite the mouth of the wearer to enable the wearer to eat or drink without lifting the veil.



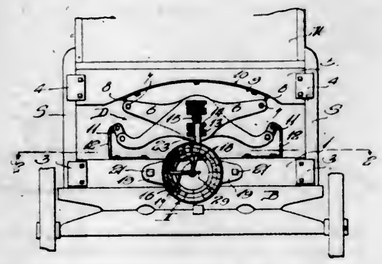
1,350,495. FIREPLACE. WALTER HAGENBUCH, Martinez, Calif. Filed Apr. 4, 1917. Serial No. 159,715. 1 Claim. (Cl. 126—121.)

A fire place structure comprising a hollow unit provided with double walls at its bottom, top, sides and rear, the top wall being centrally divided to form an opening for the escape of the products of combustion, air exit passages being formed between the double walls at opposite sides of the opening, the double side walls forming side passage ways communicating with said passages, baffle members arranged within said side passage ways, said fire place being provided with a front wall having inlet openings, said baffle members being disposed adjacent said inlet openings to direct the incoming air from the inlet openings downwardly to the bottom of the side passages, the rear marginal edge of the bottom wall having a rearwardly extended portion, and the lower marginal edge of the rear wall having an extension above said first mentioned extended portion whereby the two extensions form a vent in communication with the space between said bottom walls.



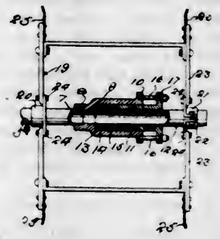
1,350,496. SHIPPING-CRATE. FRANK RICHARD HALE, Hartford, Conn. Filed Oct. 29, 1919. Serial No. 334,195. 3 Claims. (Cl. 217—40.)

1. A shipping crate comprising a receptacle formed of an angle iron frame having a bottom and side plates secured thereto, said frame having longitudinally and vertically extending guideways formed in the ends thereof, a cover slidable in the longitudinally extending guide-



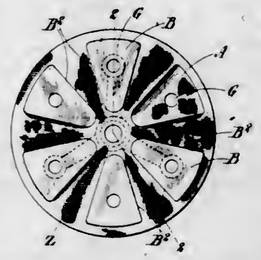
ways, end plates slidable in the vertically extending guideways, and removable containers supported in the receptacle.

1,350,497. AUTOMOBILE-LOCK. LOUIS B. HALLIDAY, Cincinnati, Ohio. Filed Dec. 8, 1919. Serial No. 343,164. 11 Claims. (Cl. 70—90.)



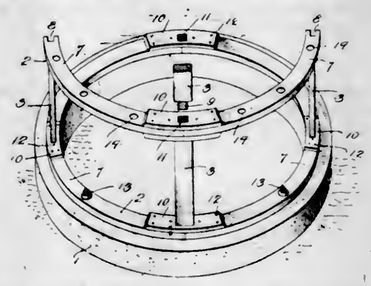
10. An automobile lock comprising a lock casing, a key-actuated locking member rotatably in the casing, and a hasp having a head adapted to be engaged by said locking member and locked from detachment from said locking member by a rotation of the locking member a predetermined distance in one direction, said hasp at the end opposite said head being longitudinally slotted and having an opening extending from the edge face of the hasp into said slot at the inner end of the slot.

1,350,498. LOAD-INDICATOR. ANDREW HALLNER, Arboga, Calif. Filed Apr. 7, 1919. Serial No. 288,110. 6 Claims. (Cl. 265—42.)



1. A load weighing device for vehicles comprising a spring device for disposition between the vehicle body and the running gear, a load indicator adapted to be fixedly carried by the running gear and having a downwardly movable spring-raised operating member depressed by compression of said spring device, and means for holding said operating member in a position against the tension of its spring raising means to prevent actuation of said member while hauling the load.

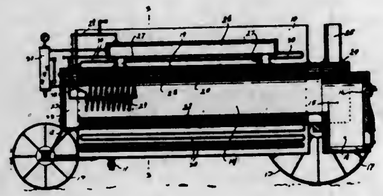
1,350,499. HOSE-REEL. EDWARD M. HAMNER, Diboll, Tex. Filed June 26, 1917. Serial No. 177,109. 1 Claim. (Cl. 299—78.)



In a hose reel, the combination with an inner hub adapted to be slipped over and to rotate around a supply pipe, an outer hub comprising clamps and bolts connecting them, spokes radiating from the respective hubs, annular flanges connecting the outer ends of the two sets of spokes, and slats connecting the spokes in pairs; of an outlet pipe to whose outer end the hose is adapted to be attached, its body being held between said clamping members, and a swivel coupling mounted on its inner end and adapted for connection with the supply pipe at a point within the reel.

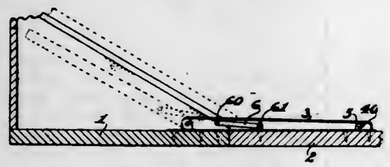
1,350,500. UNIVERSAL JOINT OF THE FLEXIBLE-DISK TYPE. EDWARD JOHN HARDY, Coventry, England. Filed Feb. 3, 1920. Serial No. 356,082. 2 Claims. (Cl. 64—96.)

1. The combination of a flexible universal joint disk, plates upon the surface of said disk, bolt holes in said plates and said disk, recesses molded in the surface of said disk into which said plates fit, the edges of said plates engaging the edges of said recesses, substantially as set forth.



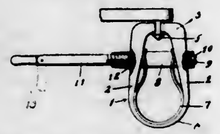
1,350,501. VENTILATED SILO. ROBERT HARTENBERGER, Sheboygan Falls, Wis. Filed Apr. 28, 1919. Serial No. 293,180. 1 Claim. (Cl. 20—1.4.)

A silo structure comprising a plurality of vertically spaced rings each formed of short arcuate sections abut-



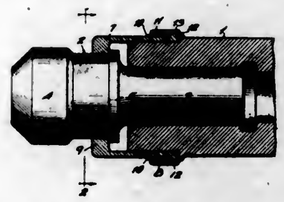
ting at their ends and provided in such ends with registering notches jointly forming mortises, horizontal connecting plates secured to the upper and lower sides of said ring sections and extending over the joints between them, said plates having central mortises alined with those aforesaid, and short studs of a length to extend between the adjacent rings, said studs being reduced at their ends to form tenons and shoulders at the inner ends thereof, said tenons being snugly received in said alined mortises and said shoulders resting tightly against said connecting plates, the tenons in each mortise being spaced slightly apart at their adjacent ends to permit the shoulders of said studs to bear tightly against said connecting plates.

1,350,502. COMBINED ASPHALT-KETTLE AND STEAM-GENERATING PLANT. CARL F. HETHERINGTON, Indianapolis, Ind. Filed Jan. 17, 1920. Serial No. 352,150. 14 Claims. (Cl. 126—343.5.)



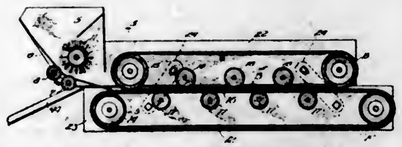
1. A heating kettle and steam generator comprising a kettle proper, a flue extending through the same, means for carrying products of combustion into and through said flue, a water leg entirely surrounding that portion of the flue disposed within the kettle and constituting a steam generator, and ducts leading from the steam generator to the exterior of the kettle.

1,350,503. LEAF-SUPPORTING MECHANISM. BENJAMIN IRVINE, Everett, Wash. Filed Apr. 12, 1920. Serial No. 373,374. 5 Claims. (Cl. 45—91.)



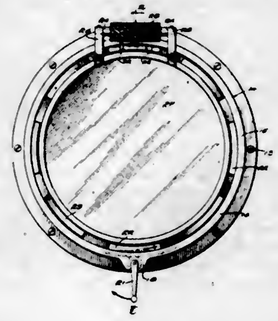
1. A support for a hinged leaf comprising a bar hinged inwardly of the hinge axis of the leaf, a link pivotally connecting the leaf and the bar outwardly of their pivots, and a hook carried by the leaf and adapted to be lockingly engaged with the outer end of the bar as it reaches its fully opened position.

1,350,504. HORSESHOE-CALK WRENCH. HANS P. JORGENSEN, Beloit, Wis. Filed June 9, 1919. Serial No. 302,870. 1 Claim. (Cl. 81—111.)



A device of the class described comprising a one-piece U-shaped metal bar having a thinned central portion and gradually thickened toward the ends of its arms, said ends being turned inwardly to provide a pair of jaws, the opposed outer sides of the two arms being provided with shallow sockets near the free ends of said arms, a one piece elongated yoke slidably receiving said arms, a U-shaped spring between said arms having its ends passed through said yoke, the bow of said spring bearing against the corresponding part of the aforesaid bar to retain said spring in place, and a pair of screws threaded through the opposite ends of said yoke and received at their inner ends in said shallow sockets, one of said screws having a handle for rotating the same to move the two arms inwardly against the resiliency of the aforesaid spring and the thinned portion of the bar from which said arms are formed.

1,350,505. PERCUSSION-TOOL. WILLIAM H. KELLER, Grand Haven, Mich., assignor to Keller Pneumatic Tool Company, Grand Haven, Mich., a Corporation of Michigan. Filed Apr. 13, 1918. Serial No. 228,341. 3 Claims. (Cl. 121—32.)

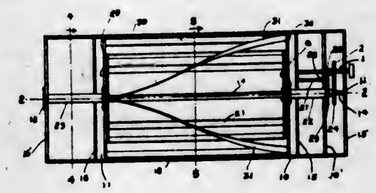


1. A percussion tool comprising, in combination, a body having formed in its periphery a longitudinal groove and an intersecting annular groove, the longitudinal groove being made of a depth greater than that of the annular groove, a tool operable in the body and having an annular flange, a holding member for the tool arranged to fit snugly in said longitudinal groove and having at its forward end a portion protruding into the path of movement of said tool flange, a retaining ring for said member fitting snugly in said annular groove and overlying the rear end of the holding member in the longitudinal groove, and means whereby the holding member and its retaining ring are adapted to interengage so that the retaining ring holds the holding member against movement in the operation of the tool.

1,350,506. NUT-BLANCHER. JAMES G. KENNEDY, Chicago, Ill., assignor of one-half to William H. Brown, Chicago, Ill. Filed Apr. 11, 1919. Serial No. 289,375. 8 Claims. (Cl. 146—14.)

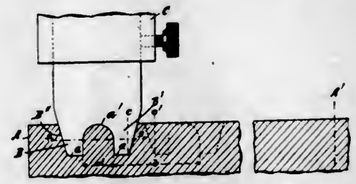
1. In a nut-blanching machine, the combination of a pair of conveyer belts arranged in substantially parallel relation with a space between said belts, mechanism for positively driving said belts at relatively different speeds in the same direction, means for feeding nuts to the space between said belts whereby the hulls are removed by the differential action of said belts, conveying means extending beyond one of said belts, and air suction means comprising a pair of vertically disposed pipes arranged above said extended conveying means and spaced apart therealong with the suction ends near the upper surface thereof, whereby an air current is adapted to remove the hulls from the kernels.

1,350,507. PORT-LIGHT. ALBERT HENRY KENNEWEG, Brooklyn, N. Y. Filed Apr. 16, 1920. Serial No. 374,345. 5 Claims. (Cl. 114—176.)



1. The combination with a port light of a member rotatably mounted thereabout and means actuated by the rotation of said member for opening and closing said port light.

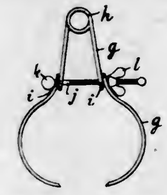
1,350,508. CONNECTOR FOR BAND-BRACELETS. SIGMUND L. LEDERER and GEORGE U. MEYER, Providence, R. I., assignors to Providence Stock Company, Providence, R. I., a Corporation of Rhode Island. Filed Jan. 8, 1919. Serial No. 270,225. 1 Claim. (Cl. 24—265.)



A bracelet connector comprising a frame member of sheet stock folded to form two spaced-apart loops the stock forming one of the walls of the loop having a middle resilient attaching tongue, and a socket member for housing the end of the bracelet provided with a pivot pin engaging said loops for hinging said two members together.

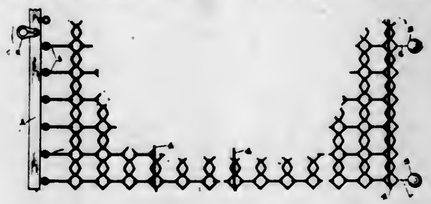
1,350,509. SAND AND SLIME SEPARATOR. JAMES D. MCDONALD, Hayden, Ariz. Filed Aug. 5, 1918. Serial No. 248,363. 3 Claims. (Cl. 83—81.)

1. In a slime and sand separator, the combination with a casing having an inlet at one end, a slime outlet at the other end, and a sand outlet at one side; of an outer reel rotatably mounted within the casing and having blades moving past said sand outlet, and an inner reel mounted within the outer reel and rotating in the opposite direction, both reels having skeleton heads.



1,350,510. TALKING-MACHINE RECORD, AND METHOD AND TOOL FOR MAKING SUCH RECORDS. FREDERICK W. MATTHEWS, West Orange, N. J., assignor, by mesne assignments, to Arrow Phonograph Corporation, a Corporation of Delaware. Filed Feb. 20, 1918. Serial No. 218,195. 18 Claims. (Cl. 274—42.)

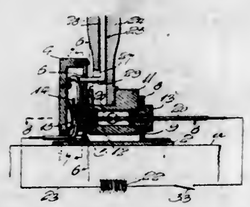
2. A master sound record having a laterally undulatory record ridge formed integral with the body of the record.



18. The method which consists in cutting simultaneously like undulations in both sides of a record ridge by means of a laterally-vibrating tool having cutting edges in simultaneous engagement with opposite sides of such ridge.

1,350,511. DIVIDERS, CALIPERS, AND LIKE INSTRUMENT. JOHN HENRY KEELEY MILLER, Clapham, London, England. Filed Nov. 6, 1919. Serial No. 336,041. 3 Claims. (Cl. 33—154.)

1. An instrument of the class described, comprising a single length of wire bent to form a spring looped at the top and bent also to form bolt-receiving loops in the legs, a threaded adjusting bolt passing through the loops in the legs and having nuts adapted to engage said loops.

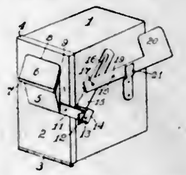


1,350,512. HARROW FOR ELIMINATING QUACK-GRASS AND THE LIKE. ALEXANDER MOWATT, Warkworth, Ontario, Canada, assignor, by direct and mesne assignments, of one-third to James H. E. Vrooman, one-third to Burton Asselstine, and one-third to Elsworth Mastin, Bellville, Ontario, Canada. Filed Sept. 25, 1919. Serial No. 326,118. 2 Claims. (Cl. 55—32.)

1. An implement of the class described comprising a draw bar; a chain drag connected therewith comprising a plurality of rows of connected links extending both longitudinally and transversely of the device, one series of rows of links being formed of rectangular links of substantially square cross section, the drag being formed in two sections, the links of the forward section being of substantially the same size as the links of the rear-

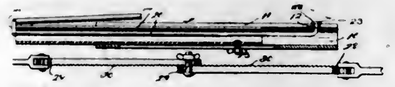
ward section, but of greater cross sectional area, the total weight of the rearward section being made substantially the same as that of the forward section by the inclusion therein of a larger number of links.

1,350,513. SIGNAL FOR MOTOR-VEHICLES. RANT Y. NEELY, Willamina, Oreg. Filed Oct. 9, 1919. Serial No. 329,558. 3 Claims. (Cl. 116—54.)



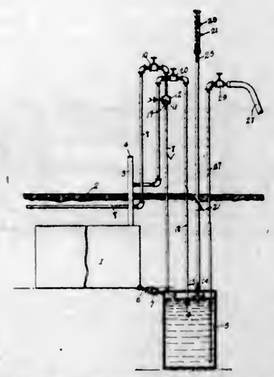
1. A signal comprising spaced bearing plates having openings formed therein, a signal arm having a head positioned between said plates, one of the plates being provided with an arcuate slot having side notches, trunnions extending through the openings of said plates and screwed into the head of said arm to pivotally mount the arm, a handle carried by the head of said arm and having a longitudinally extending passage having its outer end portion enlarged and provided with a side opening, a locking plunger slidable in the passage of the handle and having its inner end portion bent to provide a finger extending through the side opening and into the arcuate slot, and resilient means in the enlarged portion of the passage engaging the plunger to yieldably retain the same in a set position with the finger in one of the side notches of the arcuate slot.

1,350,514. BROOM-HOLDER. HARRY D. NEFF, Cambridge, Mass., assignor to Re-Flilt Broom Company, Boston, Mass., a Corporation of Massachusetts. Filed Apr. 9, 1919. Serial No. 288,834. 2 Claims. (Cl. 15—19.)



1. A brush holder consisting of a hollow casing downwardly and outwardly flared and shaped at its upper end to provide a flat internal seat for a plurality of bundles of brush fibers inserted into said holder from below and having a cut-out in one vertical wall below said seat of the width of at least one bundle of brush fibers, said casing between the upper edge of said cut-out and the said seat constituting a butt receiving compartment of substantially uniform width, and below said upper edge of the cut-out tapering inwardly and widening laterally to provide opposed clamping edges adapted to clamp the inserted brush bundles against endwise movement while permitting limited lateral expansion thereof, and a removable spring closure for said cut-out shaped to conform to the casing at said cut-out and clamping the underlying brush bundle against the opposed wall of the head.

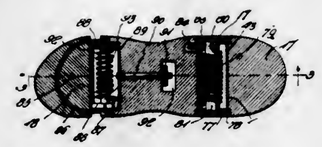
1,350,515. MAIL-BOX. OSBORN RICHARD PAYNE, Oelwein, Iowa. Filed May 29, 1919. Serial No. 300,754. 1 Claim. (Cl. 133—14.)



A mail box open at one end, a closure hinged to the lower horizontal edge of the box at said opening to swing vertically, a downwardly diminished open top receptacle mounted on the outside of said closure, and a cover for said receptacle hinged to said closure and marginally flanged downwardly to inclose the open end of the receptacle, the cover swinging open by gravity when the closure is swung downwardly to its opened position.

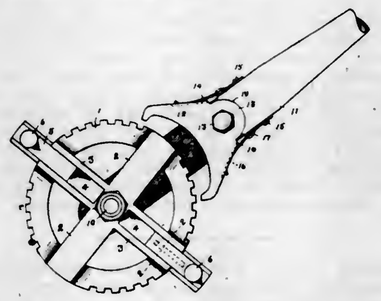
1,350,516. FOLDING COT AND STRETCHER. FREDERICK W. PFEIFER, St. Louis, Mo. Filed Sept. 13, 1918. Serial No. 253,944. 1 Claim. (Cl. 5—5.)

In a structure of the class described, the combination with side rails each made up of outer and inner tubular telescopic sections having alined slots in their upper sides and the outer section having a longitudinal slot in its lower side, a stud bolt projecting from the inner section through the last-named slot and receiving a nut for holding the sections relatively adjusted, and folding legs for supporting said rails and braces for holding them separated when so supported; of a flexible bottom connecting said rails and passing downward through their upper slots, its edges having longitudinal tubular pockets, in each pocket a rod made in sections, a hinge connecting the sections end to end at a point to be exposed when said tubular sections are telescoped together whereby one rod section and the bottom thereon can be folded over onto the other section, and connections between the remote end of the other rod section and the larger tubular section.



1,350,517. COMPRESSED-AIR DEVICE FOR HANDLING GASOLENE. WILEY H. PRIDGEN, Creek, N. C. Filed Nov. 21, 1919. Serial No. 339,721. 3 Claims. (Cl. 221—100.)

1. In a device of the class described, a measuring vessel; a storage tank discharging by gravity into the vessel;



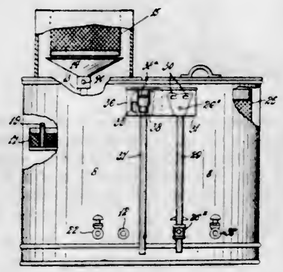
a valve controlling the passage of liquid from the tank to the vessel; a liquid discharge pipe extending into the vessel; means for supplying air under pressure to the vessel; a valve controlling said means; a valve controlling the egress of air from the vessel; and valve-controlled means for returning surplus liquid from the vessel to the tank.

1,350,518. ARTIFICIAL LEG. GEORGE W. PRISBREY, St. George, Utah, assignor of one-third to Grant Prisbrey, St. George, Utah. Filed Aug. 1, 1919. Serial No. 314,739. 13 Claims. (Cl. 3—6.)

1. In an artificial leg, a leg section, a foot section, a joint member pivotally connected to the leg section and pivotally connected to the foot section, and elastic means to swing the leg section and foot section about their pivoted connections, the axes of said pivotal connections crossing one another to permit different angular movements of the leg section and foot section relative to said joint member.

1,350,519. PIPE-FLANGE WRENCH. JOSEPH M. PUKELL, Duluth, Minn. Filed Mar. 26, 1920. Serial No. 369,040. 2 Claims. (Cl. 81—63.)

2. A wrench of the character described comprising a ratchet wheel, radially disposed opposed slots upon the outer face of the wheel, arms mounted in said slots radially adjustable beyond the wheel, pins rigidily fixed adjacent the outer ends of the arms for engagement with an object to be turned, and a handle pivotally mounted centrally upon the opposite side of the wheel carrying means for intermittent engagement with the ratchet wheel for turning it in either direction as desired.

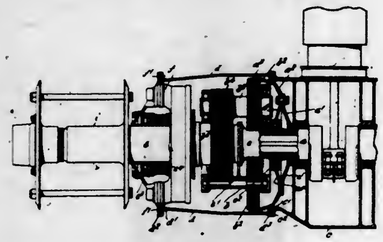


1,350,520. SEPARABLE BROOM-HEAD AND FILLER THEREFOR. MARTIN RASMUSSEN, Racine, Wis., assignor to A. R. Tesch, Milwaukee, Wis. Filed Aug. 28, 1919. Serial No. 320,433. 1 Claim. (Cl. 15—19.)

A demountable broom comprising a handle tapered at one end, two half-shell clamping members encircling the broom handle and pivoted to the same near the tapered end thereof, and provided with registering perforations, the central portion of the lower edge of the half-shell clamping members being formed upon an arcuate line whereby the clamping engagement of the said members with the filler on an elongated line is effected, in combination with a separable filler composed of strands united by rows of stitches and eyelets passing from one side of the filler to the other, the filler having an opening

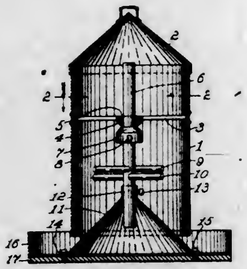
into which the tapered end of the handle is wedged, and bolts passing through the perforations in the half-shell members and the eyelets to clamp the filler to the handle.

1,350,521. OIL-FILTER. RICHARD WEST ROOTS, Ballarat, Victoria, Australia, assignor of one-third to Stanley Roots, Ballarat, Victoria, Australia, and one-third to James Falconer, Wellington, New Zealand. Filed Feb. 1, 1919. Serial No. 274,473. 2 Claims. (Cl. 210—43.)



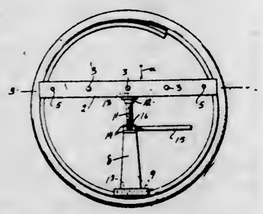
1. In an oil filter, a container adapted to contain heated water, a series of superposed gauze traps within the container of different diameters and having solid metal roofs, a hollow vertical spindle attached to the traps and discharging into the lowest and smallest trap, short pipes interposed between the gauze traps having their lower ends terminating near the bottom of the traps and their upper ends near the roofs of the traps, substantially as set forth.

1,350,522. EPICYCLIC GEARING. FREDERICK HENRY ROYCE, Derby, England, assignor to Rolls-Royce Limited, Derby, England. Filed Nov. 4, 1919. Serial No. 335,630. 2 Claims. (Cl. 74—56.)



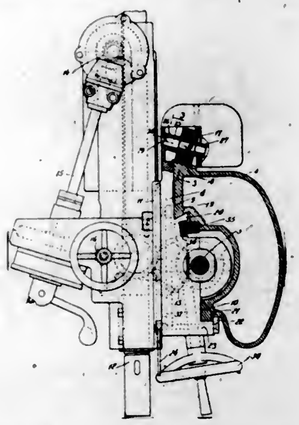
1. The combination of a driving and a driven member and gearing between said members, an end bearing for the driven member and means for adjusting the alinement of said end bearing in relation to the driving member, said means comprising a casing having an annular spigot, coaxial with the driven member, a second casing engaging at one end with said spigot and rotatable in relation to the first casing, said second casing terminating at its other end in an annular recess eccentric with re-

gard to the spigot, a housing supporting the aforesaid end bearing and a flange carried by the housing and ec-



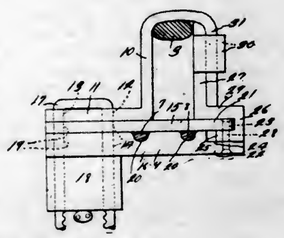
centric thereto, said flange engaging the annular recess in the second casing whereby the housing is rotatable in relation to said second casing.

1,350,523. ANIMAL-FEEDING DEVICE. JESSE R. ROYER, Janesville, Iowa. Filed Feb. 17, 1920. Serial No. 359,352. 2 Claims. (Cl. 119—53.)



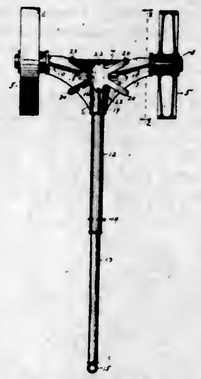
1. In an animal feeding device, a receiving vessel, a standard erected therein, a sleeve monted on said standard, a hollow body positioned around said standard having a convex base supported on said sleeve for rotatory and oscillatory movements, and an open-ended hopper supported on said hollow body, with its open lower end spaced from said receiving vessel.

1,350,524. WHEEL OR RIM SPREADER. ORA K. SAUDER, Grabill, Ind. Filed Aug. 11, 1919. Serial No. 316,761. 3 Claims. (Cl. 157—1.)



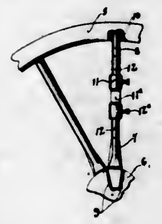
1. In a spreader of the kind set forth, the combination with a body having projecting spaced ends extending beyond the end of the body, of anti-frictional rollers journaled in said spaced ends adapted to engage substantially diametrically opposite portions of the rim, and means cooperating between the body and a portion of the rim at right angles to the point where the anti-frictional members engage the rim, to operate the spreader to cause the ends of the rim to spread apart, said means comprising a base member having a groove to engage and receive the rim, a screw threaded in the base member and having a swiveled head coacting against the body member of the spreader and means for imparting an intermittent motion to the screw.

1,350,525. SADDLE AND HEAD SUPPORTING MECHANISM FOR DRILLING-MACHINES. WILLARD T. SEARS, Brooklyn, N. Y., assignor to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed July 20, 1918. Serial No. 245,859. 6 Claims. (Cl. 77—28.)



1. The combination in a radial drilling machine of an arm having two horizontal guideways at the front side thereof, a saddle engaging the guideways and movable therealong, the saddle having a surface engaging the bottom surface of one of the guideways, a drill head carried by the saddle, rollers connected with the saddle and engaging the top surface of the upper guideway which is inclined downward toward the rear, and means for adjusting the rollers with respect to the saddle to effect engagement between the said bottom surface of the guideway and the corresponding surface of the saddle.

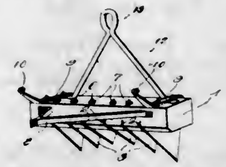
1,350,526. LOCK FOR STEERING MECHANISMS. OSCEOLA C. SLAUGHTER, Omaha, Nebr. Filed Oct. 10, 1919. Serial No. 329,853. 2 Claims. (Cl. 70—126.)



1. A lock for locking the spark and throttle levers to the steering wheel of an automobile, said lock comprising a U-shaped member adapted to arch one of the spokes of the steering wheel, one arm of said U-shaped member having pivoted thereto a pair of horizontally pivoted members, said members being adapted to receive therebetween the spark and throttle levers and means for locking the free ends of the horizontally pivoted members to the free arm of the U-shaped member.

1,350,527. AUTO-AMBULANCE TRUCK. JOSEPH H. STALEY, Columbus, Ind. Filed Nov. 24, 1919. Serial No. 340,373. 3 Claims. (Cl. 280—61.)

2. In a wrecking truck, a one-piece cylindrical wrought axle; a pair of wheels loosely mounted on the axle; a body comprising horizontal plates with integral depending blocks cast rigidly to the axle, said body having a standard integral with and above said horizontal plates with a vertical opening in the standard in front of the axle; a pipe vertically adjustable in the standard; means above the horizontal plates for holding a given adjustment; a saddle with a plurality of radial horns oblique to a plane in the axis of the pipe parallel with the axle of the truck fixed on the pipe; said body having ap integral and substantially horizontal hollow member in front of the axle; and a tongue in a plurality of telescoping sections fastened in said horizontal hollow member.



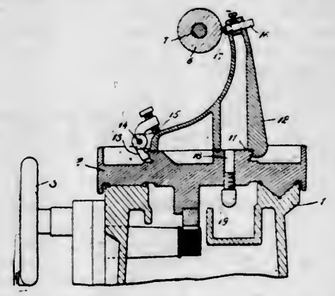
1,350,528. WHEEL-SPOKE-REPAIR MEANS. RICHARD A. STOUTE, Branksmere, Barbados, British West Indies; Jabez Griffith Corbin Ward and Arthur Laurie Parkinson Stoute, executors of said Richard A. Stoute, deceased. Filed Mar. 22, 1918. Serial No. 224,041. 3 Claims. (Cl. 301—104.)

3. An emergency spoke element for wheels comprising a spoke section adapted at one end to enter a socket in the hub and having a reduced tenon at its outer end, a socket member having spurs adapted to enter the felly, a second spoke section having tenons at its extremities whereof one engages said socket member, and an expansible coupling composed of a central member threaded at both ends and end members screwed onto the central member and having sockets in their outer ends receiving the tenons of said spoke sections.

1,350,529. VINE-CUTTER. GEORGE W. STUART, Bay Minette, Ala. Filed Nov. 13, 1919. Serial No. 337,648. 4 Claims. (Cl. 55—60.)

1. A vine cutter comprising a blade-carrying block elongated transversely of the line of draft, a plurality of rearwardly and downwardly inclined blades secured to the bottom of said block and disposed parallel to the line of draft, and a substantially V-shaped spreader secured to the front edge of said block and extending forwardly beyond it, whereby when the divice is drawn over the vines, the spreader will engage and deflect them laterally and downwardly beneath the cutting edges of the blades.

2. A vine-cutter comprising a blade carrying member, and a plurality of spaced rearwardly and downwardly inclined blades secured to the bottom of the carrying member, the cutting edges of the blades being of different distances from the bottom of the carrying member, the distance of the blades nearest the ends of the carrying member being the greatest and the distances of the others being gradually decreased toward the center of the carrying member, whereby the blades will conform to the shape of the ridges over which they are drawn.

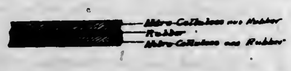


3. A vine-cutter comprising a blade carrying block having a plurality of spaced transverse slots in its bottom, a cutting blade fitted in each slot, and a plurality of hook-shaped fastening bolts, each bolt being extended through the block and engaged with the blades to retain the latter in the slots.

1,350,530. FISHING-FLOAT. ERNEST TALBOT, Lowestoft, England. Filed Oct. 29, 1919. Serial No. 334,118. 4 Claims. (Cl. 43—49.)

2. A float according to claim 1 in which the tapering end-parts are each constituted by winding the strip spirally upon itself to form a coil and thereafter withdrawing the center portion in an axial direction from the outer circumference of the so-formed coil, eyelets being wound into the convolutions of the coil.

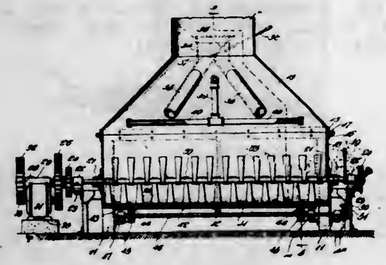
1,350,531. WHEEL-DRESSING MECHANISM. JOHN J. THACHER, Wethersfield, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed Oct. 1, 1918. Serial No. 256,428. 11 Claims. (Cl. 125—11.)



1. A wheel dressing mechanism for a grinding machine comprising, in combination, a hollow bracket connectible with a slide of the machine whereby it is guided for movement in a fixed path along the face of the grinding

wheel, a dressing tool carried by the bracket, means for supplying water to the interior of the bracket, and a duct for delivering water from the interior of the bracket to the wheel immediately adjacent the dressing tool.

1,350,532. PROCESS OF TREATING FILTRATION MEMBRANES. JUSTIN F. WAIT, Buffalo, N. Y. Filed Jan. 3, 1920. Serial No. 349,335. 4 Claims. (Cl. 210—9.)

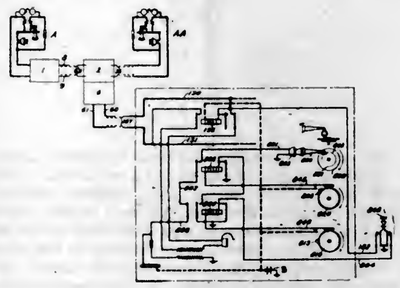


1. The process of preparing membranes for filtering uses consisting of supplanting the water contained in such membrane by a medium miscible both with water and the fluid to be filtered.

1,350,533. ARTICLE OF MANUFACTURE AND PROCESS FOR MAKING THE SAME. CHARLES WEBER, Newark, N. J. Filed Sept. 14, 1918. Serial No. 254,050. 10 Claims. (Cl. 154—2.)

1. A flexible, tough and substantially water-proof sheet of material made up of uniform intimately united layers, one of said layers being composed of nitro-cellulose and rubber and the adjacent layer being composed of rubber.

1,350,534. HYDRATOR FOR LIME. FRANZ W. WEBER, Woodville, Ohio. Filed Apr. 12, 1920. Serial No. 373,302. 4 Claims. (Cl. 222—4.)

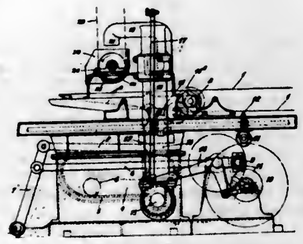


1. A hydrator comprising a receptacle including an upper hood section provided with a stack, a hopper positioned to one side of the hood of the receptacle, spouts extending downwardly from the bottom of the hopper in diverging relation and extending into the receptacle through the hood section thereof, a closure pivotally mounted in the lower portion of the hopper for selectively closing the entrance to one spout and directing material into the second spout, means for adjusting the position of the closure, mixing means in the receptacle, and water spraying means in the receptacle.

1,350,535. HAT-VENTILATOR. CHARLES ROBERT WILLIAMS, Omaha, Nebr. Filed Nov. 12, 1919. Serial No. 337,378. 3 Claims. (Cl. 2—114.)

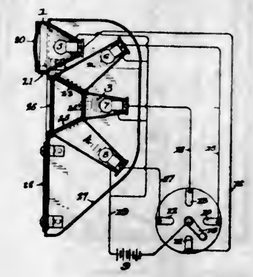
1. In combination with a hat having a sweat band therein, of a pivoted member secured to said sweat band, said pivoted member being provided with a pair of flexible arms adapted to extend in a horizontal plane and engage the head of the user of the hat and maintain a space between the sweat band and the head of the wearer, said flexible arms by their flexibility allowing the hinged member and the arms to be disposed behind the sweat band when not in use.

1,350,536. TELEPHONE-EXCHANGE SYSTEM. JOSEPH L. WRIGHT, Cleveland, Ohio, assignor to James R. Garfield, trustee, Cleveland, Ohio. Original application filed Feb. 26, 1912, Serial No. 680,015. Patent No. 1,244,571, dated Oct. 30, 1917. Divided and this application filed July 12, 1917. Serial No. 180,132. 6 Claims. (Cl. 179—6.)



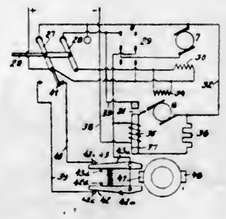
1. In a telephone system, the combination with a subscriber's line, of a transmitter adapted to be connected thereto, sound-producing means associated with the transmitter, and adapted to produce message impulses in the circuit of the latter, means for actuating the sound-reproducing means, and means for controlling the transmission of impulses to allow the same to begin only at a predetermined portion of a message.

1,350,537. VARNISHED-SURFACE BURNISHER. ROY A. ALEXANDER, Bellingham, Wash. Filed Nov. 24, 1919. Serial No. 340,236. 1 Claim. (Cl. 134—24.)



A composition resulting from a mixture of 4 oz. paraffin oil, 1½ oz. turpentine, 3 oz. alcohol, ½ oz. acetic acid, ½ oz. ammonia, 1½ oz. Putz pomade, 1 oz. ivory soap and 2 oz. water.

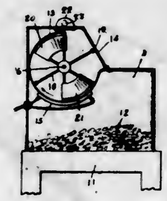
1,350,538. COATING OF CONFECTIONS AND THE LIKE. GEORGE RALPH BAKER, London, England, assignor to Joseph Baker and Sons Limited, London, England. Filed Feb. 14, 1920. Serial No. 358,570. 3 Claims. (Cl. 91—3.)



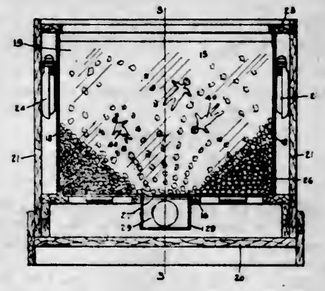
3. In apparatus for coating confectionery, the combination of an upper flooding vessel, an overflow surface or weir at one side of said vessel, a jacket for reception of a cooling medium for tempering the contents of said vessel, mechanical means for stirring the contents thereof, means for feeding coating substance to said upper flooding vessel, and means for maintaining said substance at desired temperature and consistency.

1,350,539. SIGNAL-LIGHT FOR AUTOMOBILES. WALTER H. BALTES, Milwaukee, Wis. Filed Dec. 10, 1917. Serial No. 206,566. 2 Claims. (Cl. 240—11.)

1. An automobile signal comprising a casing having an oblong opening in its face and a transparency therefor; a central lamp-containing compartment arranged within the casing in spaced relation to the transparency and formed with sides diverging toward the latter; a pair of convergently related lamp-containing compartments arranged within the casing respectively above and below the central compartment and also having sides diverging toward the transparency, said pair of compartments having their wider ends interposed between the casing and the wider end of the central compartment and secured to the casing, above and below the transparency; the smaller ends of the compartments adapted to contain sources of light; and legend-bearing transparent plates secured in the wider ends of the compartments in abutting relation with each other and the transparency.



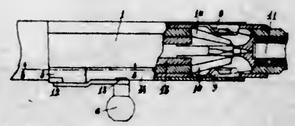
1,350,540. FEED MECHANISM FOR PLANERS. HAROLD L. BLOOD, Plainfield, N. J., assignor to Niles-Bement-Pond Company, Jersey City, N. J., a Corporation of New Jersey. Filed Oct. 19, 1916. Serial No. 126,523. 17 Claims. (Cl. 172—240.)



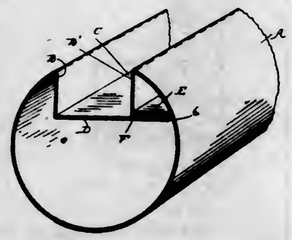
1. In a planer or other machine having a reciprocating table and an adjustable tool, the combination with the table and the tool, of a motor for feeding the tool, a table controlled mechanism for starting the motor at intervals as the table reciprocates, a device driven by the motor and connected to start simultaneously therewith, the said device serving after movement to a predetermined extent to stop the motor, and means whereby the amount of movement of the said device is limited independently of the amount of movement of the motor.

1,350,541. PEANUT-ROASTER. EARL C. BOOTH, Indianapolis, Ind., assignor to Holcomb & Hoke Manufacturing Company, a Corporation of Indiana. Filed Sept. 15, 1919. Serial No. 323,775. 4 Claims. (Cl. 34—7.)

3. A roasting machine having a cylindrical drum, means for heating the surface of said drum for roasting the contents thereof, a paddle wheel having a plurality of spokes thereon adapted to revolve within said drum, means for revolving said paddle wheel whereby the contents will be carried about the inner surface thereof, and a plate secured at each end to end spokes and passing over a diagonally mounted spoke near its center for causing said contents to be distributed toward the ends of said drum or gathered toward the center thereof whereby a uniform roasting will be effected.



1,350,542. DISPLAY DEVICE. EARL C. BOOTH, Indianapolis, Ind., assignor to Holcomb & Hoke Manufacturing Company, a Corporation of Indiana. Filed Dec. 23, 1919. Serial No. 347,029. 9 Claims. (Cl. 40—126.)

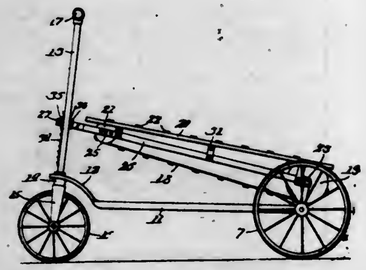


1. A display device for vending machines including a display chamber having a transparent front and adapted to be partially filled with articles to be displayed, and means for upwardly projecting the articles to be displayed, whereby they will attract attention.

1,350,543. AUTOMATIC FIREARM. KARL AUGUST BRÄUNING, Zaandam, Netherlands. Filed July 10, 1919. Serial No. 309,918. 1 Claim. (Cl. 42—3.)

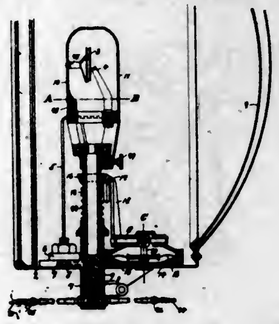
In an automatic firearm of the kind described, a fixed breech frame, a breech bolt, locking members arranged on said breech bolt, a slide movable on the breech frame adapted to act on the locking members and to open the breech, a fixed abutment on the fixed breech frame, and a lever pivotally mounted on said slide the longer arm of which is provided with an actuating knob while the shorter arm is applied against the aforesaid abutment of the fixed breech frame.

1,350,544. CHANNEL-TUBING. M LEWIS BROWN, Detroit, Mich., assignor to Universal Metal Company, Detroit, Mich., a Corporation of Michigan. Filed May 25, 1914. Serial No. 840,656. 5 Claims. (Cl. 189—77.)



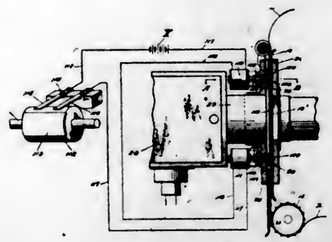
1. A channel tubing comprising a fashioned sheet metal blank having an integral channel portion comprising two sides and a bottom and an outer surrounding portion, the opposite edges of said blank meeting at one corner of the channel portion and being bent to form a lock seam with the thickness of the seam located in the space between one side of the channel portion and the outer tubing and engaging said outer tubing.

1,350,545. COMBINED NUT AND WASHER. WALTER HERBERT COOK, London, England. Filed Apr. 23, 1919. Serial No. 292,032. 5 Claims. (Cl. 151—25.)



2. A combined nut and washer, comprising a nut adapted to be screwed upon a bolt or the like, a washer, said washer being apertured centrally to clear the bolt but having prongs adapted to be forced inwardly to engage the bolt, thereby fixing the washer to the bolt, and means for securing said washer to said nut, said means normally allowing relative rotation but preventing axial movement.

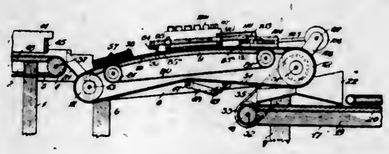
1,350,546. TREADMILL PLAY-CART. CHARLES B. CULVER, Cherry Valley, Ill. Filed Jan. 27, 1919. Serial No. 273,283. 8 Claims. (Cl. 208—38.)



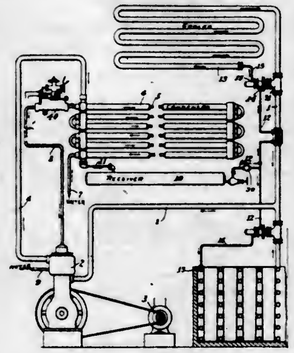
2. A device of the character described comprising a wheeled frame having a rear drive wheel and a front steering wheel, means for steering said wheel, an endless tread mill having a driving connection with said driving wheel, and means for varying the inclination of the tread mill.

1,350,547. SEARCH-LIGHT APPARATUS. GUSTAF DALÉN, Lidingön, Stockholm, Sweden, assignor to Svenska Aktiebolaget Gassaccumulator, Stockholm, Sweden. Filed Jan. 23, 1917. Serial No. 143,948. 7 Claims. (Cl. 240—41.)

1. A search light apparatus, comprising in combination a source of light, a screen device comprising a fixed member and a rotary member, a conduit for conveying an illuminating medium to said source of light, means for controlling the flow of illuminating medium, and means directly connected with said conduit and actuated by the illuminating medium flowing therein, for moving the rotary member out of screening position when said medium commences to flow and means for moving the rotary member back into screening position when the medium ceases to flow in said conduit, for the purpose set forth.



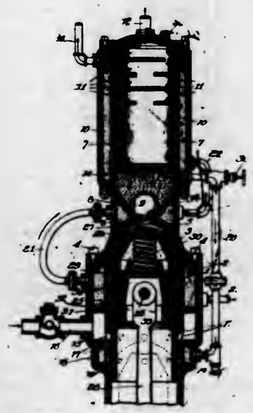
1,350,548. FILM-GATE AND TENSION MEANS FOR MOTION-PICTURE MACHINES. JOHN DARBY, Summit, N. J., assignor of one-half to Edwin F. Flindell, Summit, N. J. Original application filed Mar. 1, 1918, Serial No. 219,752. Divided and this application filed Dec. 11, 1918. Serial No. 266,250. 4 Claims. (Cl. 88—17.)



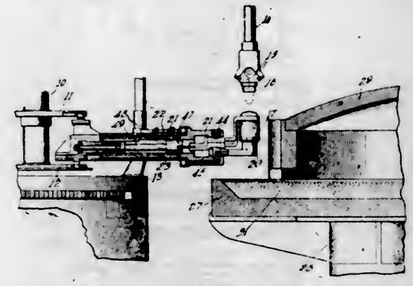
1. In a motion picture projecting machine, an intermittent tension device for the film strip, consisting of two vertical members connected by two cross members, pins in said cross members and electromagnets to act upon said pins to move said tension device.

1,350,549. NUT-BLANCHING MACHINE. JOSEPH M. DEMERATH, Rochester, N. Y. Filed Dec. 19, 1918. Serial No. 267,532. 21 Claims. (Cl. 146—14.)

1. In a nut blanching machine, the combination of a table, a plurality of slotted conveyers movable over said table, means for feeding nuts to said conveyers, an abrasive sheet supported on said table beneath said conveyers, and means for rolling and pressing nuts in said conveyers into contact with said abrasive sheet.

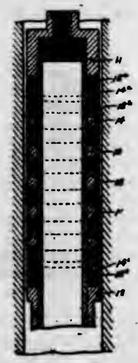


1,350,550. REFRIGERATING APPARATUS. JOHN F. HOFFMAN, Rochester, N. Y. Filed June 26, 1918. Serial No. 242,054. 17 Claims. (Cl. 62—8.)



1. In a refrigerating system, a cooling surface, and a valve for controlling the liquid supply to said surface controlled jointly by the pressure of the liquid supply and the temperature of the discharge from the cooling surface and having provision for cutting off said liquid supply with a reduction of pressure in the liquid supply.

1,350,551. ART OF LUBRICATION. WILLIAM M. JEWELL, Chicago, Ill., assignor to Chlorine Products Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 17, 1917. Serial No. 207,462. 9 Claims. (Cl. 230—6.)

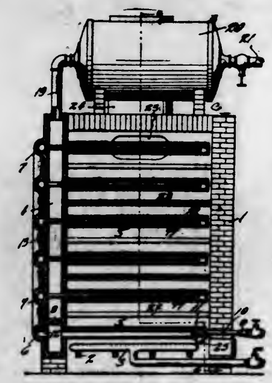


1. In the art of lubrication, the method which consists in lubricating contacting surfaces, one or both of which is movable with relation to the other, by interposing a lubricant between the same consisting of comparatively dry sulfuric acid under conditions excluding outside moisture.

1,350,552. GLASS-GATHERING MECHANISM. AUGUST KADOW, Toledo, Ohio, assignor to The Westlake Machine Company, Toledo, Ohio, a Corporation of Ohio. Filed May 25, 1917. Serial No. 170,895. 19 Claims. (Cl. 49—62.)

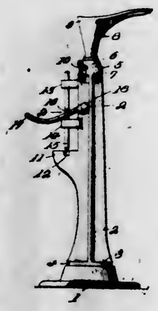
3. In apparatus for manufacturing glass, the combination of a vessel to contain molten glass, gathering mechanism and means for moving the same over the glass in said vessel, said mechanism comprising a gathering mold, an oscillatable elbow-shaped supporting device for the mold, means for oscillating the same while the gathering mechanism is over said vessel so as to bring the gathering end of the mold into and out of contact with said glass, said mold comprising separable elements, and means for opening and closing the same.

1,350,553. OIL-WELL PACKER. PATRICK H. MACK, Bradford, Pa., assignor to Oil Well Supply Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Nov. 23, 1915. Serial No. 62,962. 6 Claims. (Cl. 166—10.)



1. In packing structures for wells, a tubular body member, opposing recessed end members carried thereon, an upper expansible member entered in one end member, a lower expansible member entered in the opposite end member, a series of expansible members intermediate the upper and lower expansible members, and a series of rigid members alternating with the intermediate expansible members.

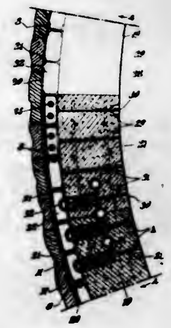
1,350,554. STEAM-GENERATOR. ROLAND B. MANNING and LEE R. MOORE, Dallas, Tex. Filed Mar. 17, 1919. Serial No. 283,177. 7 Claims. (Cl. 122—316.)



1. In a steam generator, a heating casing, a substantially vertical drum disposed near the heating casing

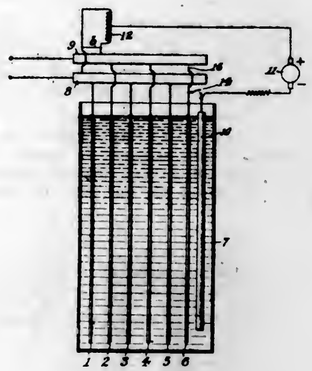
and provided in its lower portion with a cross partition forming a separate chamber, preheating tubes arranged within the heating casing and leading into the separate chamber, heating means for the heating casing, spaced tubular fingers arranged in superposed relation within the heating casing above the preheating tubes and leading

into the drum, supply tubes extending longitudinally within the tubular fingers and provided with outlet means, separate means of communication between the outer ends of the supply tubes and the separate chamber, and steam outlet means having communication with the upper portion of the drum.



1,350,555. REPAIR JACK-STAND. JAMES P. MARSHALL, Indianapolis, Ind. Filed Mar. 29, 1920. Serial No. 369,690. 1 Claim. (Cl. 12—123.)

A jack stand having a standard substantially cross-shaped in cross section, one of the arms being provided with an extension having a notch, said arm being provided with bearings, a punch slidably mounted in said bearings having a notch and a lever pivotally mounted on said standard working in the notch of said punch for reciprocating said punch toward and from the notch in the extension.



1,350,556. TUNNEL-LINING. JAMES C. MEEM, Brooklyn, N. Y., assignor of one-half to Frederick L. Cranford, Brooklyn, N. Y. Filed Apr. 24, 1919. Serial No. 292,306. 7 Claims. (Cl. 61—45.)

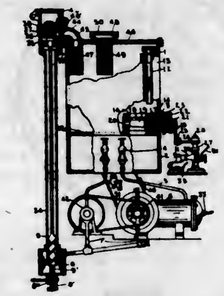
1. A tunnel lining comprising an outer wall lining of metal forming a series of inwardly opening cells provided with locking parts, an adjacent inner lining of blocks also provided with locking parts, and means for

introducing a binding material into said cells to interlock the locking parts of the cells and blocks together.

1,350,557. WELDING CONDENSER PARTS. RALPH D. MERSHON, New York, N. Y., and PERCY A. ROSS, Norwalk, Conn.; said Ross assignor to said Mershon. Filed Dec. 8, 1919. Serial No. 343,267. 6 Claims. (Cl. 219—10.)

1. The method of making a welded connection between the terminal of an electrode of a condenser and a bus-bar to which one or more other electrodes of the condenser are connected, the method comprising charging the condenser and discharging it through the joint between the terminal of the electrode and the bus-bar.

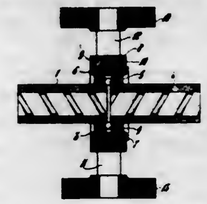
1,350,558. SCREW DRIVER AND PLACER. ISAIAH LEWIS MESSENGER, McGraw, N. Y. Filed Sept. 8, 1919. Serial No. 322,279. 2 Claims. (Cl. 145—52.)



1. An implement as described comprising a tubular handle having a slot, jaws pivotally connected together,

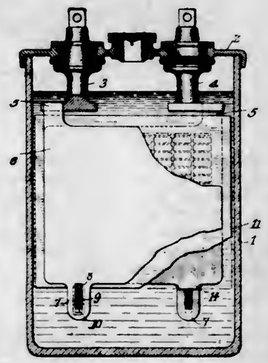
one of said jaws having a stud which is received in the slot, the jaws being provided with recesses, and a bit

slidably mounted with relation to the jaws and having a cross pin adapted to enter the recesses.



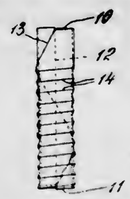
1,350,559. AUTOMATIC TRACTOR-OILER. ARTHUR E. MODRELL, near Saxton, Mo. Filed Mar. 20, 1920. Serial No. 367,500. 4 Claims. (Cl. 184—6.)

3. An oil storage tank; a tank lid detachably secured on said tank said lid having a filling opening and oil conducting means formed therethrough; a sediment collecting chamber formed integrally with the bottom of said tank; a cock casing formed integrally with said tank on the upper side of the bottom thereof; a cock body tightly secured in said cock casing; a cock stem oscillatably mounted in said cock body, said casing, said cock body and said cock stem having ports formed therethrough in register with each other; a crank on the outer end of said cock stem; an oscillatably mounted L crank; a connecting rod whereby one end of said L crank is connected with said cock crank; an electric circuit closer connected with said L crank for oscillation thereby; a manually operated pull rod one end of which is connected with the other end of said L crank; a plurality of sight feed oil conducting means whereby oil is conducted from the upper portion of said sediment chamber into the working parts of mechanisms; an oil well; oil draining means whereby oil is drained from said working parts of said mechanisms into said oil well; an oil box having an opening formed through one side thereof in register with the oil conducting means of said tank lid; and oil elevating means whereby oil is elevated from said oil well into said box.



1,350,560. REVERSIBLE TRAVERSING MOTION. HENRI ARNOLD JOHANNES DE BIJLL NACHENIUS, Haarlem, Netherlands. Filed Apr. 29, 1919. Serial No. 293,461. 5 Claims. (Cl. 74—40.)

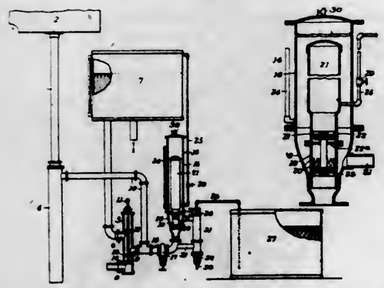
1. In a traversing motion, the combination of a screw having both right-hand and left-hand threads thereon; nuts coactive with said threads, each nut having a friction surface; a traversing member having friction surfaces for coaction with those on the nuts; and means dis-



posed at the opposite ends of the screw for coaction with said nuts to effect automatic reversal of the traversing member.

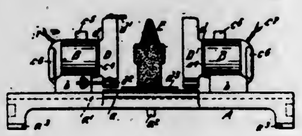
1,350,561. STORAGE BATTERY. IRVINE M. NOBLE and WALTER E. GOSSLING, Indianapolis, Ind., assignors to The Prest-O-Lite Company, Inc., a Corporation of New York. Filed Aug. 26, 1918. Serial No. 251,359. 2 Claims. (Cl. 204—29.)

1. The combination in a storage battery with the group of elements, the outside negative plates of which are provided with slotted projections or extensions from their lower edges, of insulating bridge strips supported by the slots in said projections and extending beyond the surface of the same substantially to the walls of the battery cell, and forming supports for the intermediate positive plates and separators, the bridge strips being formed with shoulders which engage with the outer surfaces of the projections to prevent spreading of the elements, and soft rubber caps applied over the ends of the bridge strips to form cushions between the same and the walls of the cell.



1,350,562. FOLDED METAL EXPANSION-SHIELD. JOHN EDWARD OGDEN, Cornwall, N. Y. Filed Mar. 29, 1919. Serial No. 286,146. 14 Claims. (Cl. 85—2.4.)

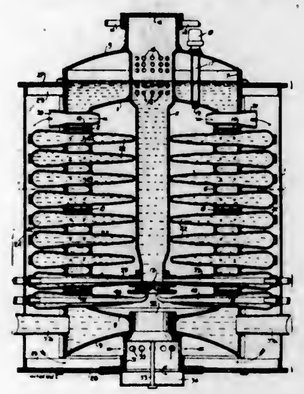
5. An expansion shield formed of a blank of sheet metal having a smaller transverse dimension at one end



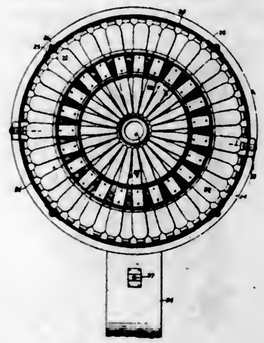
than at other parts thereof, rolled around a central axis into a tube formed to receive the threads of a bolt, a part of the bore of said tube being arranged to be restricted in at least one of its transverse dimensions before a bolt is inserted therein, and a metal of said blank being wrapped around itself near the part of the shield having the restricted bore.

1,350,563. HYDRAULIC ELEVATOR. JOSEPH P. OSCHGER, Chicago, Ill. Filed June 18, 1918. Serial No. 240,621. 10 Claims. (Cl. 138—8.)

1. In a hydraulic elevator, a pressure tank, an actuating cylinder, a supply and outlet pipe leading thereto, a controlling valve for said pipe, a cushioning reservoir connected to a branch of said pipe, a valve in said connection, an air chamber above said valve, and connections between said air chamber and the pressure tank for the elevator, substantially as described.

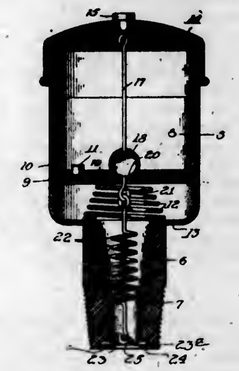


1,350,564. APPARATUS FOR USE IN MAKING CORES OR THE LIKE. ROSCOE C. PATTISON, Rochester, N. Y. Filed Sept. 2, 1919. Serial No. 320,969. 14 Claims. (Cl. 22—10.)



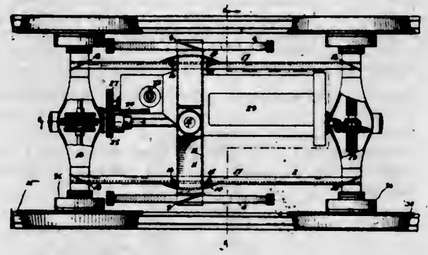
1. In an apparatus for forming sand, the combination with a sand-forming device, of a base having a part adapted to receive the sand-forming device, and a gripping device adapted to engage said forming device to aline the same on said base and adapted to be moved relatively to said base to move said forming device from the formed sand.

1,350,565. BOILER. JAMES P. PERRY, Glencoe, N. Mex. Filed Aug. 2, 1919. Serial No. 314,821. 4 Claims. (Cl. 122—161.)



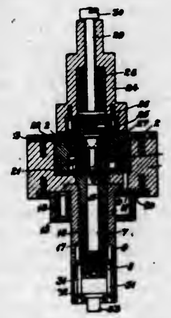
1. A steam boiler comprising; an inner boiler shell forming a fire box, an outer boiler shell forming an annular water space, a boiler jacket forming an outer heating space, water tubes inserted through the annular water space and projecting into the fire box and into the heating space, flues inserted through the boiler shells to conduct heat from the fire box to the outer heating space, a central water reservoir disposed through the fire box, and a ventilator tube centrally disposed in the boiler and provided

with perforations, a removable plug mounted in the ventilator tube to render accessible the boiler parts for inspection.



1,350,566. OIL-CUP. THOMAS G. PIHLFELDT and FELIX C. HARTUNG, Chicago, Ill. Filed Dec. 28, 1918. Serial No. 268,648. 9 Claims. (Cl. 184—45.)

7. An oil-cup comprising a body portion, a nipple attached to one end thereof, a cap fitting over the other end

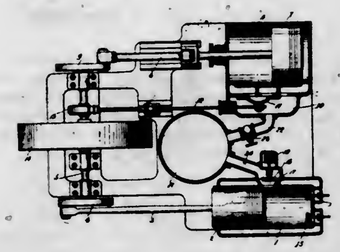


of said body portion, a centrally bored, perforated plunger movable within said body portion, a centrally-bored permeable membrane below said piston and movable within said body portion, a coiled spring below said permeable membrane and acting to force said membrane and piston outwardly, a swivelly mounted, tensed spring extending within the bore of the nipple, a ball attached to said spring and normally engaging the opening in said piston to close the same, and a link attached to said ball and to the cap.

1,350,567. RAILROAD-CAR. SOLOMON D. ROGERS, Sacramento, Calif., assignor to Commercial Cars Construction Co., San Francisco, Calif., a Corporation of California. Filed Nov. 15, 1916. Serial No. 131,365. 6 Claims. (Cl. 105—117.)

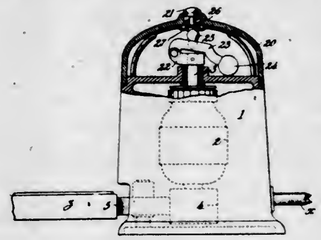
1. A motor car comprising a body, a truck for supporting the body, a motor supported on said truck, and an operative connection between said motor and a wheel axle of the truck, comprising the motor shaft, a worm operatively connected to said motor shaft and below the wheel axles of the truck, and a worm gear on one of said wheel axles meshing with said worm.

1,350,568. MACHINE FOR PRESSING RINGS HAVING PROFILED INNER SURFACES. PATRIK SAMUEL RYDBECK, Gottenborg, Sweden, assignor to Aktiebolaget Svenska Kullagerfabriken, Gottenborg, Sweden, a Corporation of Sweden. Filed July 19, 1919. Serial No. 311,997. 11 Claims. (Cl. 78—18.)



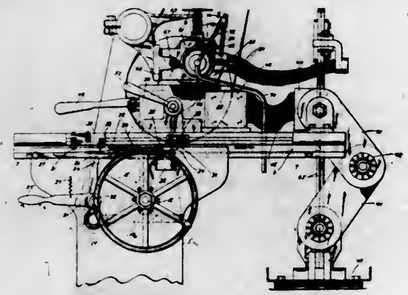
1. A machine for producing rings having a profiled inner surface, as for instance outer track rings of ball bearings, by upsetting tubular blanks in the longitudinal direction, comprising a mandrel, having outside the shape of the desired inner surface of the rings, said mandrel consisting of pairs of jaws movable with respect to each other to permit the placing of a tubular blank around the mandrel, means for supporting the blank during the upsetting operation, means for upsetting the blank placed on said supporting means and means for moving the said jaws to operative position.

1,350,569. SOFT-COLLAR HOLDER. SAMUEL SAMPSON, New York, N. Y. Filed July 3, 1920. Serial No. 393,782. 4 Claims. (Cl. 24—81.)



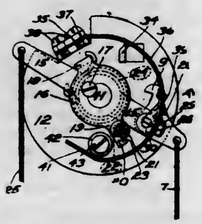
1. A soft collar holder comprising a plurality of resilient bars, each having an offset portion adjacent the center thereof, said offset portions being arranged to fit one within the other.

1,350,570. ENGINE. ERLING SARJENT, Kingfisher, Okla. Filed July 29, 1919. Serial No. 313,965. 2 Claims. (Cl. 60—15.)



1. The combination with an expansion engine, and an internal combustion engine, of a gas container located between the engines, a pipe connecting the container with the valve chest of the expansion engine, said internal combustion engine having a port in its wall constituting a valve seat and located at a point which will be uncovered by the piston of the internal combustion engine as the latter reaches the end of its power stroke, a valve casing at the side of the cylinder inclosing the said port, a valve in said port, and a pipe connecting the tank with said valve casing, whereby the pressure of gas in the casing operates to maintain the valve in closed position.

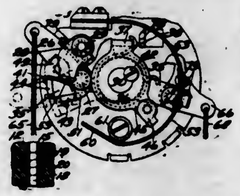
1,350,571. PHONOGRAPH-MOTOR. WILLIAM GENTRY SHELTON, New York, N. Y. Original application filed Mar. 17, 1916, Serial No. 84,869. Divided and this application filed Oct. 31, 1919. Serial No. 334,800. 8 Claims. (Cl. 200—80.)



1. The combination with an electrically driven part capable of manual starting, and its electric motor, of a switch controlling the circuit to such motor, and a speed-actuated means controlled by the driven part for operating such switch, the switch adapted to close the circuit at normal speed and open it to stop the motor at a speed below the normal, whereby the motor may be put in or out of circuit by the manual starting or retarding of such part.

1,350,572. WELDING APPARATUS. HERBERT M. SMITH, Great Barrington, Mass., assignor to Stanley Insulating Company, Great Barrington, Mass., a Corporation of Maine. Filed Sept. 30, 1918. Serial No. 256,284. 7 Claims. (Cl. 219—4.)

1. In a device of the kind described a stationary electrode and a traveling electrode, the traveling electrode constituting a work holder, power-actuated means for moving the traveling electrode and automatically operating means for stopping the movement of the traveling electrode at a predetermined point in its travel.



1,350,573. THERMOSTATICALLY-CONTROLLED DEVICE. RAYMOND D. SMITH, Milton, Mass., assignor to Tremont Products Company, Boston, Mass., a Corporation of Massachusetts. Filed July 24, 1916, Serial No. 110,952. Renewed Nov. 17, 1919. Serial No. 338,532. 20 Claims. (Cl. 67—87.)

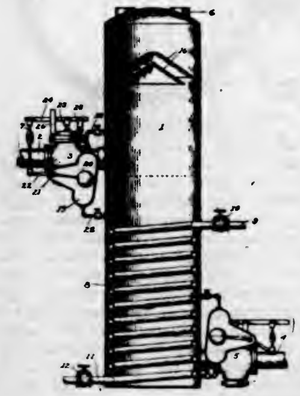
1. In combination a thermostatically-controlled device embodying a member tensioned for movement and means thereon arranged to engage a movable detent; and a bimetallic, resilient thermostat rigidly mounted at one end, free of operative restraint to thermally caused movement at its other end, and carrying said detent mounted thereon remote from said mounted end;—the coöperative arrangement of said detent and of the rigidly mounted end of said thermostat relative to the path of movement of said means, and to the direction of pressure thereof on said detent, being such that said pressure tends to cause yielding flexure of said thermostat in a direction to retract said detent from engagement with said means.

1,350,574. RECIPROCATIVE ACTUATING MECHANISM. RAYMOND D. SMITH, Milton, Mass., assignor to Tremont Products Company, Boston, Mass., a Corporation of Massachusetts. Filed Aug. 14, 1916, Serial No. 114,782. Renewed Nov. 17, 1919. Serial No. 338,533. 14 Claims. (Cl. 67—87.)

1. Actuating mechanism for operating a tension rotated device embodying, in combination with said device; a spring-connected actuator member arranged by movement to a relatively advanced position to tension said device for rotative follow-up movement; an automatically governed detent normally operative to prevent said follow-up movement of said device; a releasable detent for holding said member in its said advanced position when said device is so tensioned; and separately actuatable means

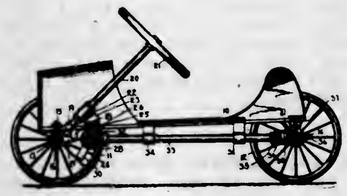
for tripping said automatically governed detent,—said means being operably related to said member and arranged to be rendered inoperative thereby except when said member is held in its said advanced position.

1,350,575. SELECTIVE ACTUATING MECHANISM. RAYMOND D. SMITH, Milton, Mass., assignor to Tremont Products Company, Boston, Mass., a Corporation of Massachusetts. Filed Aug. 21, 1916, Serial No. 116,099. Renewed Nov. 17, 1919. Serial No. 338,674. 14 Claims. (Cl. 67—87.)



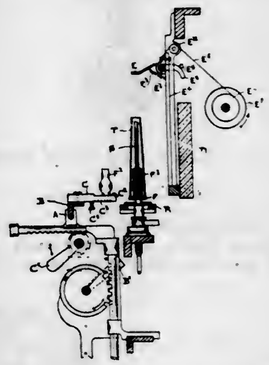
1. In combination with a rotary device adapted for limited reciprocative movement; a member pivoted concentrically with said device and arranged coöperatively for driving engagement with same, said member and said device being disengageable to permit independent reciprocation of said device relative to said member when the latter is in its normal position; a resilient connection tending to impel said member to its said normal position thereby to actuate said device; and releasable latch detent means normally arranged to catch and hold said member displaced from its said normal position and tensioned by said resilient connection.

3. Actuating means for a rotary device adapted for reciprocative movement, embodying, in combination with said device; releasable means normally arranged to check full movement of said device in one direction; normally inactive means, operably independent of said device, and adapted, upon movement independent thereof in said direction, to be operatively connected to said device; actuating instrumentalities for said normally inactive means arranged to be energized by movement thereof in said direction and thereafter operatively to move said last mentioned means in the reverse direction; means governed by said normally inactive means and arranged upon continued movement of said last mentioned means in said first direction, to release and positively to move said device in said first direction; and a releasable detent normally arranged and positioned to hold said device, near the extreme of its travel in the first said direction, against movement in said reverse direction; together with automatic means operatively controlled by movement of said normally inactive means in said first direction and adapted to cause a releasing movement of said detent.



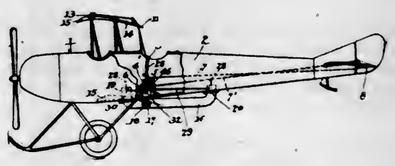
11. Tension-actuated, valve controlling mechanism, embodying, in combination with a valve stem, an actuating member rotatably mounted thereon and spring-impelled in one direction to a stop-limited rotative position; a detent to hold said member under tension of said spring at an opposite extreme rotative position; and means for releasable driving engagement between an extension of said valve stem and said member, whereby said stem is rotatively impelled by said member in a valve-closing direction, said means being actuatable to free said stem from said driving engagement so that said stem is adjustable independently of, and relative to, said member when the latter is in its said stop limited position.

1,350,576. APPARATUS FOR SEPARATING GASES AND VAPORS FROM LIQUIDS. THOMAS K. SMITH, Tulsa, Okla. Filed Jan. 4, 1919. Serial No. 269,565. 6 Claims. (Cl. 183—39.)



1. In apparatus for separating gases or vapors from liquid oil, a tank constituting a liquid container and a gas expansion chamber, an inlet leading directly into said expansion chamber, at a point intermediate the top and bottom portions of said tank to permit the joint inflow directly into said expansion chamber of associated gases and liquid, and the gases to expand and rise and the liquid to settle therefrom, and means automatically controlled by the elevation of the liquid in said tank for stopping the inflow of said associated gases and liquid thereinto.

1,350,577. OCCUPANT-PROPELLED VEHICLE. WINFIELD D. SMITH, Newark, N. J., assignor of one-half to Henry F. Hayes, Jr., Newark, N. J. Filed Sept. 6, 1919. Serial No. 322,215. 5 Claims. (Cl. 208—36.)

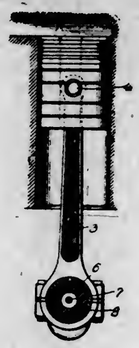


1. A wheeled vehicle having front and rear axles, a body mounted on the axles, a manually operated steering gear, a drive shaft extending longitudinally beneath the body, oscillating pedals, means for transmitting the oscillatory motion of the pedals to the driving shaft, and a gear and ratchet connection between the driving shaft and the rear axle whereby the oscillatory movement of the driving shaft is transformed into a constant rotation of the rear axle.

1,350,578. DOFFING MECHANISM FOR SPINNING-FRAMES AND THE LIKE. HENRY CHARLES SPEIGHT, Bradford, England. Filed Apr. 11, 1919. Serial No. 289,419. 5 Claims. (Cl. 118—18.)

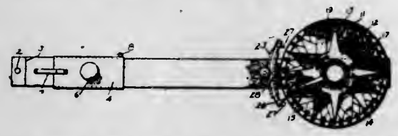
1. The combination with a spinning machine having a row of spindles, of doffing mechanism, comprising a pair of holders for each spindle, all of said holders being located in longitudinal alinement and adapted for reciprocatory movement vertically, longitudinally, and transversely with relation to the row of spindles, whereby the holders are always in vertical position.

1,350,579. CRAFT WITH AUTOMATIC STABILIZER. ARLYN T. VANCE, Los Angeles, Calif., assignor of one-half to F. J. Abbott, Jr., Los Angeles, Calif. Filed May 21, 1918. Serial No. 235,845. 2 Claims. (Cl. 244—29.)



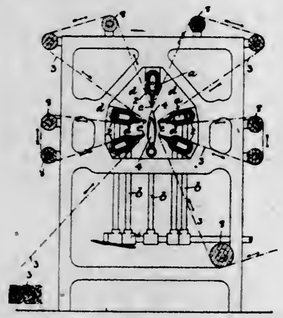
1. In an air-craft having a control lever and having ailerons and an elevator operatively connected with the lever, the combination with said lever of sheaves rotatively mounted on said lever, cables rove around said sheaves, releasable means selectively engaging the sheaves to hold the sheaves against turning relative to the lever, and means operative by tipping of the craft relative to its horizontal flying plane to exert a pull on the cables.

1,350,580. CONNECTING-ROD. ROBERT A. WEINHARDT, Detroit, Mich., assigner to Continental Motors Corporation, Detroit, Mich., a Corporation of Virginia. Filed May 31, 1918. Serial No. 237,607. 9 Claims. (Cl. 74—17.)



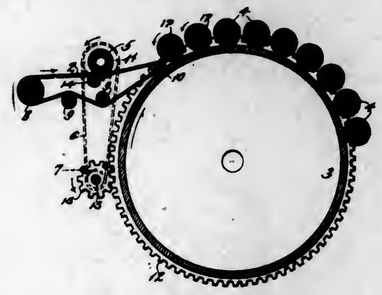
2. A connecting rod proportioned to have the center of

percussion of the mass thereof substantially coincident with the axis of the crank shaft bearing thereof, when the



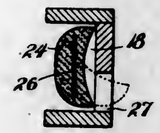
piston pin bearing axis is taken as the center of motion of the rod.

1,350,581. COURSE-FINDER. CORAL NOVELLO WESTWOOD, Victoria, British Columbia, Canada. Filed June 23, 1919. Serial No. 306,140. 9 Claims. (Cl. 33—75.)



1. A device of the character specified, comprising a blade, a hub near one end of the blade, a mariner's compass card mounted to rotate on the hub, a ring having pointers extending at angles of ninety degrees mounted on the hub above the card, a pointer journaled on the hub above the ring to rotate thereon, means for clamping the ring to the card and having means for clamping the pointer to the ring when desired, a fixed indicator on the blade, and a pair of indicators spaced apart from each other and arranged on opposite sides of the first-named indicator and simultaneously adjustable with respect thereto.

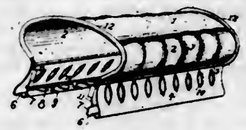
1,350,582. APPARATUS FOR SINGEING FABRICS. HAROLD WHITAKER, Lightcliffe, near Halifax, England, assignor to Bradford Dyers' Association Limited, Bradford, England. Filed Feb. 18, 1920. Serial No. 359,705. 8 Claims. (Cl. 26—14.)



1. A device for singeing fabrics comprising a burner, a series of fixed guides having thin wedge-like edges grouped about the space occupied by a flame projecting from the burner, a series of guiding rollers arranged to coöperate with some of the fixed guides in presenting one side of the fabric to portions of the flame, and another series of guiding rollers arranged to coöperate with the other fixed guides in presenting the opposite side of the fabric to other portions of the same flame so that both sides are singed during a single pass of the fabric over the flame.

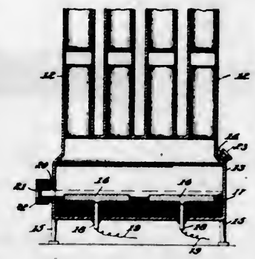
1,350,583. METHOD OF IRONING COLLARS. ISAAC F. WILLEY, Philadelphia, Pa. Filed Aug. 5, 1915. Serial No. 43,756. 1 Claim. (Cl. 68—9.)

A method of ironing a collar which consists in continuously feeding a collar with its inside surface uppermost and uncovered and exposed to the ironing devices forwardly laterally in a direction at right angles to its length, initially applying heat and pressure to the upper side and pressure alone to the underside of the forwardly-moving collar throughout the length thereof, then subjecting the collar during a portion of its forward traverse to heat and pressure at its upper side and throughout its length and yielding pressure at its under side and throughout its length, whereby the polish of the collar is increased, and then subjecting the forwardly-moving collar throughout its length to the applications of pressure upon the upper side of the collar and heat and pressure against the underside of the collar.



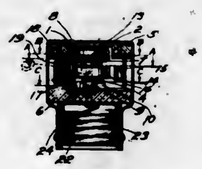
1,350,584. SASH-BALANCE. RICHARD J. WILLIAMS, San Francisco, Calif., assignor of one-half to Peter Grassi, San Francisco, Calif. Filed Apr. 1, 1919. Serial No. 286,634. 2 Claims. (Cl. 16—20.)

1. A window frame having a vertical weight channel at the side and a removal opening at one side, a weight having transverse dimensions to substantially fill the channel, said weight being crescent shaped in transverse section, with the greatest thickness less than the width of the removal opening of the casing, said weight being turnable with its concavity about the inner edge of the opening to remove it.



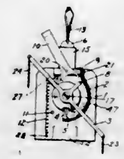
1,350,585. SOAP-HOLDER. JOHN WIRTH, New York, N. Y. Filed Nov. 30, 1918. Serial No. 264,784. 2 Claims. (Cl. 45—28.)

1. A soap holder of the character described comprising a multipart shell having hinged side walls, the lower free edges of the said walls being bent inwardly to provide spacing webs and upwardly to provide parallel soap en-



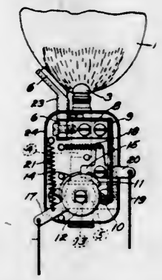
gaging flanges, the spacing webs being curved to afford finger grips and the flanges being formed with inwardly projecting soap-securing teeth.

1,350,586. ELECTRIC HEATER. CHARLES A. XARDELL, Utica, N. Y. Filed Apr. 13, 1920. Serial No. 373,590. 3 Claims. (Cl. 219—40.)



1. An electric heater comprising a radiator having a plurality of sections and having at its base a liquid-tight receptacle with which said radiator sections communicate, said receptacle having a normally closed filling opening, insulating material in said receptacle, electrodes embedded in said insulating material and having exposed upper surface, and suitable electric connections to said electrodes.

1,350,587. THERMODYNAMICALLY-CONTROLLED SOCKET-SWITCH FOR ELECTRIC LIGHTS. MALCOLM H. BAKER, Braintree, Mass.; Marie H. Baker, administratrix of said Malcolm H. Baker, deceased, assignor to Kenneth W. Crosby, trustee, Boston, Mass. Filed Oct. 25, 1915, Serial No. 57,879. Renewed Apr. 14, 1919. Serial No. 290,086. 10 Claims. (Cl. 200—116.)

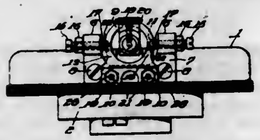


1. In an electric circuit switch, the combination with automatic switch-opening mechanism embodying main circuit controlling contacts tensioned normally to separate and a latch and controlling thermostat therefor positioned when the thermostat is thermally de-energized to prevent separation of said contacts and then thermally energized to permit said separation, of a pivoted, switch-controlling member progressively rotatable into alternate switch-closing and switch-opening positions thereof and adapted in said switch-closing position to close said contacts, a manually operable oscillatory device arranged as a ratchet and upon consecutive actuations thereof to drive said member from one to another of its said positions, and an electric heater for the thermostat, together with auxiliary circuit governing means for controlling said heater and arranged to be operated by said member,—whereby movement of said member to its said switch-opening position renders said heater operative thermally to energize the thermostat.

1,350,588. THERMODYNAMIC EXTINGUISHING DEVICE FOR LAMPS. MALCOLM H. BAKER, Braintree, Mass.; Marie H. Baker administratrix of said Malcolm H. Baker, deceased, assignor to Kenneth W. Crosby, trustee, Boston, Mass. Filed Apr. 26, 1915, Serial No. 23,991. Renewed Nov. 17, 1919. Serial No. 338,525. 28 Claims. (Cl. 67—87.)

1. In a lamp adapted to generate heat as an attribute of light, in combination; means to decrease the useful light emitted by the lamp; thermo-dynamic means arranged to govern the said decreasing means; and means for operatively altering the heat-receiving disposition of the said thermo-dynamic means relative to the source of substantially constant heat of the lamp, without directly varying the latter.

1,350,589. TIME-RETARDED EXTINGUISHING DEVICE FOR GAS-BURNERS. MALCOLM H. BAKER, Braintree, Mass.; Marie H. Baker, administratrix of said Malcolm H. Baker, deceased, assignor to Kenneth W. Crosby, trustee, Boston, Mass. Filed Sept. 10, 1915, Serial No. 50,075. Renewed Nov. 17, 1919. Serial No. 338,526. 12 Claims. (Cl. 67—87.)

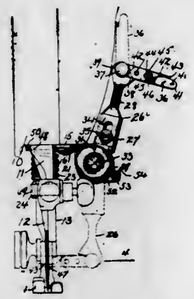


1. In a gas burner structure including a gas supply control valve, in combination; means to open the valve; means to tension the valve for automatic closure; a latch adapted to hold the valve open until manually tripped to release the same; and thermodynamic means arranged to arrest the valve at a partially closed position for a limited interval of time after release by said latch.

1,350,590. SOUND-BOX FOR SOUND RECORDING AND REPRODUCING MACHINES. ISAAC F. BURTON, Philadelphia, Pa., assignor to Victor Talking Machine Company, a Corporation of New Jersey. Filed Apr. 28, 1916. Serial No. 94,118. Renewed Jan. 17, 1920. Serial No. 352,230. 7 Claims. (Cl. 274—35.)

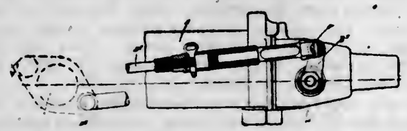
1. In a sound box for sound reproducing machines, the combination of a sound box casing, a diaphragm mounted therein, a stylus bar, a resilient ring forming a mounting for and surrounding said stylus bar, said ring being provided with a thin resilient extension projecting there-

from and integral therewith, means to pivotally mount said ring on said casing and to subject said ring to transverse compression, and a means engaging said ex-



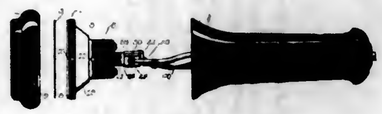
tension at spaced points respectively to flex said extension in opposite directions.

1,350,591. FERTILIZER AND PROCESS FOR MAKING SAME. JOHN N. CAROTHERS, Washington, D. C., assignor to Newton D. Baker, Secretary of War, trustee. Filed Jan. 14, 1920. Serial No. 351,440½. 6 Claims. (Cl. 71—9.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)



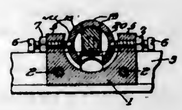
1. The process of making a fertilizer which consists in subjecting calcium phosphate to the action of a concentrated solution of nitric acid having a nitric acid content in excess of 40%, by weight, to form mono-calcium phosphate and calcium nitrate and then adding sufficient calcium cyanamid containing free lime to substantially convert said mono-calcium phosphate to di-calcium phosphate.

1,350,592. NEEDLE-THREADER FOR SEWING-MACHINES. ADOLPH CORDUAN, Roselle Park, N. J. Filed Apr. 30, 1919. Serial No. 293,618. 5 Claims. (Cl. 112—225.)



1. A needle threader for sewing machines comprising a threading hook secured on the end of an arm swinging in a vertical plane, a bracket to which the arm is secured, and means for supporting the bracket so that it can swing in a horizontal plane.

1,350,593. RECOIL APPARATUS OF ORDNANCE. ARTHUR TREVOR DAWSON and GEORGE THOMAS BUCKHAM, Westminster, London, England, assignors to Vickers Limited, Westminster, England. Filed July 9, 1919. Serial No. 309,787. 6 Claims. (Cl. 89—43.)

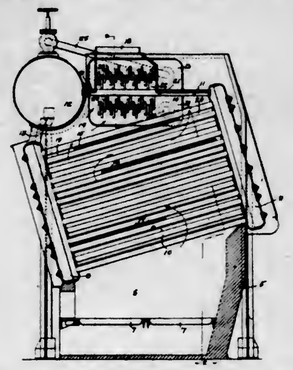


1. In ordnance recoil apparatus of the kind in which the braking is effected by the forcing of liquid through a port, the combination with the gun cradle, of a member serving to vary the area of said port in accordance with the angle of elevation of the gun, mechanism for automatically displacing said member as the gun is elevated, a portion of this mechanism being arranged externally and a portion internally with respect to the gun cradle, means whereby an element of the externally arranged portion of said mechanism can be readily removed for replacement or repair and means whereby when said element is removed said member can be locked in a predetermined position without necessitating the removal of any of the parts of the internally arranged portion of said mechanism.

1,350,594. TELEPHONE-RECEIVER. WILLIAM W. DEAN, Rochester, N. Y., assignor to Stromberg-Carlson Telephone Manufacturing Company, a Corporation of New York. Filed May 10, 1916. Serial No. 96,469. 25 Claims. (Cl. 179—119.)

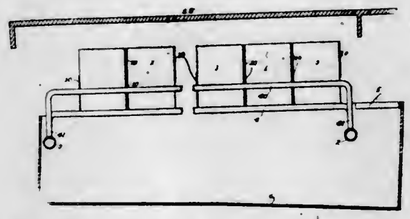
7. In a telephone receiver, an electromagnet core composed of silicon steel.

1,350,595. SOUND-BOX FOR SOUND-REPRODUCING AND SOUND-RECORDING MACHINES. ALBERT C. DIEHL, Pensauken, N. J., assignor to Victor Talking Machine Company, a Corporation of New Jersey. Filed Sept. 14, 1915, Serial No. 50,551. Renewed Jan. 17, 1920. Serial No. 352,232. 18 Claims. (Cl. 274—35.)



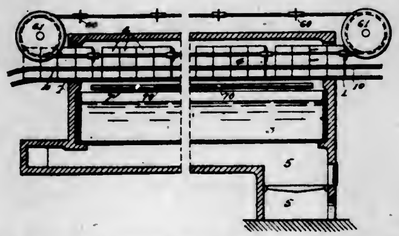
1. In a sound box, the combination of a stylus bar and a transverse resilient loop rigidly secured to said stylus bar, and having portions varying from each other in resilient flexibility.

1,350,596. SOUND-BOX FOR TALKING-MACHINES. ALBERT C. DIEHL, Pensauken, N. J., assignor to Victor Talking Machine Company, a Corporation of New Jersey. Filed May 31, 1916, Serial No. 100,880. Renewed Jan. 17, 1920. Serial No. 352,233. 11 Claims. (Cl. 274—35.)



1. A sound box comprising in combination a casing, a diaphragm therein and a stylus bar attached thereto, means for operatively mounting the stylus bar including a continuous member surrounding the stylus bar and having a plurality of independent spring elements disposed in opposite relation to each other, and means secured to said casing to vary the tension of said spring elements, said means comprising adjustable members each having a wedge-like portion adjacent one of said spring elements, said means coacting with said spring elements to tension said stylus bar in opposite directions.

1,350,597. SUPERHEATED-STEAM BOILER. EDWARDS RUSSELL FISH, Phoenixville, Pa. Filed Aug. 20, 1918. Serial No. 250,661. 8 Claims. (Cl. 122—478.)

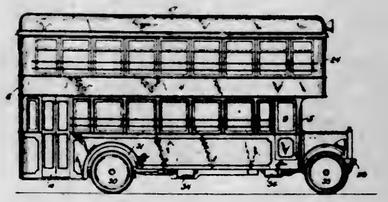


3. A superheated steam boiler including a bank of water tubes; other tubes extending at an angle to said first mentioned tubes whereby a space is provided; a flue outlet being provided above said second mentioned tubes; and a superheater having groups of superheater tubes spaced apart and spanning said second mentioned tubes whereby certain of said groups of tubes are positioned within said first space and others of said groups are positioned between said second mentioned tubes and said flue outlet, substantially as described.

1,350,598. DEVICE FOR REMOVING SEMISOLID OLEAGINOUS MATERIALS FROM CONTAINERS. WALTER B. FOGH, Seattle, Wash. Filed Aug. 12, 1918. Serial No. 249,488. 3 Claims. (Cl. 257—248.)

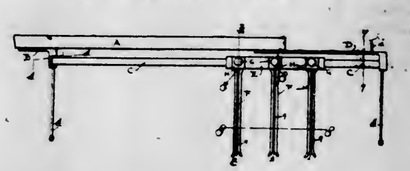
1. A heating device for cans containing semi-solid oleaginous compounds, comprising a series of heating pipes forming the bottom of a chute and other heating pipes at a higher level forming guard rails at the sides of the chutes.

1,350,599. PROCESS OF REMOVING SOLID OILS FROM CANS. WALTER B. FOGH, Seattle, Wash. Filed Nov. 6, 1918. Serial No. 261,434. 1 Claim. (Cl. 99—11.)



The process of removing solid and semi-solid oils from cans which consists in first opening the cans and placing them in position to drain by gravity, and then discharging melted portions of the same oil into the open ends of the cans.

1,350,600. PRODUCTION OF ANILIN BLACK UPON VEGETABLE TEXTILE FIBERS. EMILE AUGUSTE FOURNEAUX, Manchester, England. Filed Apr. 18, 1918. Serial No. 229,367. 6 Claims. (Cl. 8—5.)

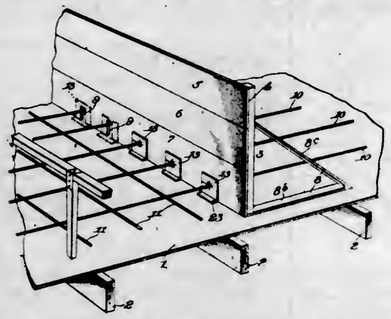


1. A process of producing black upon vegetable textile fibers which consists in impregnating the fiber with a solution comprising anilin, a strong mineral acid, formic acid, a thickener, boracic acid, chlorates of the alkali metals, an organic catalytic agent, an inorganic catalyst, then developing by drying with hot air, and finally by chroming.

1,350,601. BUS CONSTRUCTION. RODOLPHUS FULLER, Detroit, Mich. Filed Nov. 23, 1917. Serial No. 203,537. 3 Claims. (Cl. 296—24.)

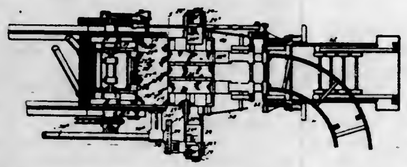
1. A coach body having completely inclosed lower and upper decks with the side walls of said body provided with windows for both decks and one side wall provided with doors at the lower deck, one of said doors permitting entrance to an inclosed motorman's compartment in the front end of the lower deck and the other door permitting entrance to an inclosed vestibule formed in the rear end of the lower deck and having a floor below the floor of the lower deck, stairs at the rear wall of said body leading from the vestibule of the lower deck to the rear inclosed end of the upper deck and providing clearance for a seat under said stairs in the vestibule of the lower deck, a seat in said clearance and a seat adjacent the well of said stairs on the upper deck.

1,350,602. DEVICE FOR CONSERVING CORD AND TWINE. OSCAR A. GALE, Eaton, Ohio. Filed Sept. 6, 1918. Serial No. 252,919. 3 Claims. (Cl. 211—36.)



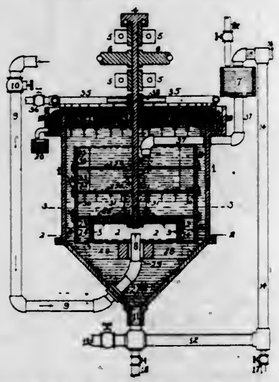
3. A device for conserving wrapping twine, consisting of a rectangular bar of any desired length carrying a movable sleeve of rectangular pipe, into the upper face of which are molded, or inserted a plurality of rectangular lugs to receive and hold in place clutches or clips of spring steel or wire, into which may be placed and held short lengths of twine, substantially as described.

1,350,603. BULKHEAD-STRUCTURE. JACOB GERRITSON and WILLIAM L. RIECK, Kankakee, Ill. Filed Dec. 6, 1919. Serial No. 343,059. 16 Claims. (Cl. 25—118.)



6. As an article of manufacture, a concrete stop for bulkhead construction, relatively thin in cross-section, flexible, and comprising a member including a body portion and a bendable portion adjacent one edge thereof,

the body-portion being provided with a central rod-encompassing aperture, and a series of slits radiating from

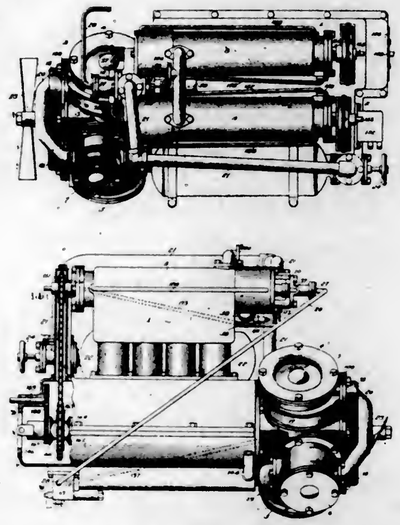


the aperture, one of the slits extending to the edge of the member.

1,350,604. BUMPING MECHANISM. HENRY W. B. GRAHAM, New London, Ohio, assignor to The Arnold-Creager Company, New London, Ohio, a Corporation of Ohio. Original application filed Mar. 1, 1916, Serial No. 81,425. Divided and this application filed Apr. 15, 1918. Serial No. 228,640½. 17 Claims. (Cl. 25—2.)

1. The combination of a support, means for filing brick molds with material, devices arranged at opposite sides of said support and movable transversely thereof for bumping the filled molds on said support during the intervals between movements thereof, each of said devices including a pivoted mold engaging member, means for feeding the molds intermittently to a position for filling by said filling means and then to a position for bumping by said bumping devices, and means for reciprocating said devices.

1,350,605. FLOTATION APPARATUS. WILLIAM E. GREENAWALT, Denver, Colo. Filed Apr. 17, 1916, Serial No. 91,675. Renewed May 3, 1919. Serial No. 294,564. 14 Claims. (Cl. 261—93.)

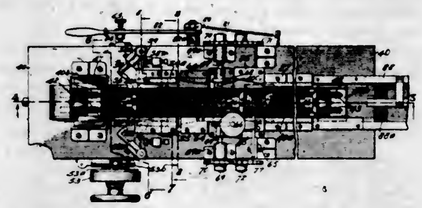


4. In apparatus for separating minerals from their gangue by flotation, a tank adapted to contain a liquid and the material to be treated, means for introducing a gas into the tank, means for impregnating the liquid with the gas, baffles arranged about the impregnator, and a casing to which the baffles are attached arranged in horizontal sections.

1,350,606. SAFETY DEVICE FOR VALUABLES. MARY E. GRUETZMACHER, Milwaukee, Wis. Filed Apr. 29, 1920. Serial No. 377,484. 4 Claims. (Cl. 24—87.)

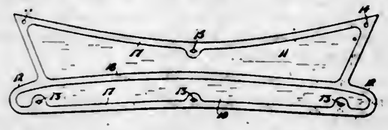
1. A fastening device comprising a pair of safety-pins integrally connected adjacent their points by means of a manipulating handle and detachably connected adjacent their bows by means of a slidable member.

1,350,607. INTERNAL-COMBUSTION ENGINE. JUDSON LELAND HAND, Sanger, Calif. Filed Dec. 2, 1916. Serial No. 134,725. 4 Claims. (Cl. 123—52.)



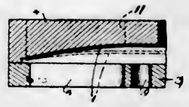
1. A thermo-dynamic power unit embodying two mechanically autonomous internal combustion motors, one of which furnishes power for external use, a compressor driven by the other motor and delivering air under pressure to both motors, a fuel pump driven by one motor and supplying fuel to the motors at substantially the same pressure as that at which the air is normally supplied thereto, a throttle valve for simultaneously controlling both the supply of air and fuel to the respective motors, said valve embodying means whereby the supply of air and fuel to one motor may be regulated independently of the other.

1,350,608. WRAPPER-APPLYING MECHANISM. JAMES B. HARRISS, Newark, N. J., assignor to P. Lorillard Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 17, 1917. Serial No. 186,670. 32 Claims. (Cl. 93—2.)



15. In a mechanism for closing the ends of a charge having the form of a partially wrapped package, wherein the wrapper is free from flap-forming slits and the ends to be closed project outwardly in the several planes of

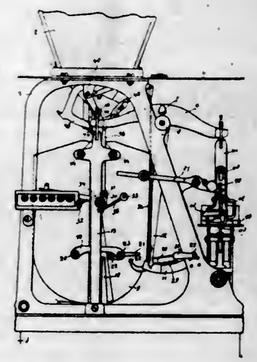
the applied portions of the wrapper, a traveling conveyer adapted to advance the charge continuously in approximately a single plane, and means for producing opposing end flaps at the ends of the package during advance of



the charge, said means including mechanisms for infolding the advance and rear walls of the charge, and means for compensating for buckling of the unfolded projecting ends during such infolding action.

1,350,609. COLLAR CONSTRUCTION. TAKEBE HASE, San Francisco, Calif. Filed Aug. 30, 1918. Serial No. 252,006. 1 Claim. (Cl. 2—67.)

An article of manufacture comprising a foldable single pieced rubber collar including an outer member, and an inner band member, with a concavely curved line of junction between the two members, said band member having its ends extending beyond their junction with the outer member, and reinforcements in said bands, with button holes formed in said reinforcements, coincident with the button holes of the band fabric.

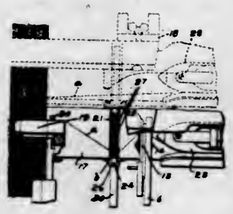


1,350,610. INLET OR CHECK VALVE. FRANK L. HENIG, Chicago, Ill., assignor, by mesne assignments, to Henig Engine Co., a Corporation of Illinois. Filed Dec. 4, 1918. Serial No. 265,309. 10 Claims. (Cl. 251—119.)

4. In a valve, a casing having a seat formed with a port and a valve having a hub and integral arms radiating therefrom, said casing being formed to permit bodily shifting of the valve up from its seat, said hub having an imperforate part alining with the port of the seat whereby to effect raising of the valve up from its seat by the fluid pressure impacting against the hub.

1,350,611. AUTOMATIC WEIGHING-MACHINE. CARL KADER, Hennef, Germany, assignor, by mesne assignments, to Obrima Automatische Waagenbau-Actiengesellschaft, Munich, Germany. Filed Sept. 26, 1919. Serial No. 326,676. 8 Claims. (Cl. 249—48.)

1. An improved automatic weighing machine for continuous use, comprising two oscillating closing traps of unequal size, the larger one of said traps offering the main entrance gap into the receptacle and the smaller trap providing a by-pass gap retained in the closed position until the larger trap closes, means for coupling the said two traps to each other in such a manner, that the larger trap will open the smaller trap by its over-weight as it closes, means for automatically uncoupling the two

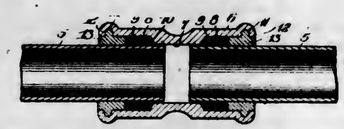


traps at the end of each weighing operation by the sinking motion of the receptacle, and means for automatically closing the smaller trap through its proper weight at the end of each operation.

1,350,612. NECKTIE-CLASP. CHARLES A. KREPLIN, Enid, Oklahoma. Filed Nov. 7, 1919. Serial No. 336,354. 3 Claims. (Cl. 24—253.)

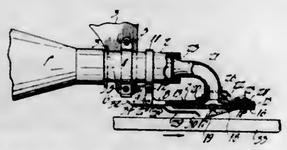
1. A tie clasp comprising a plate having one end thereof bent at substantially right angles thereto and provided with a V-shaped notch forming spaced gripping spurs, a finger-piece pivotally connected with said plate, a spring coacting with the plate and finger-piece, and a pin carried by the finger-piece and having its piercing end curved laterally in the direction of the plate and adapted to seat between the gripping spurs.

1,350,613. FILLING-THREAD CONTROLLER. FRED LACEY, Lowell, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Aug. 25, 1919. Serial No. 319,608. 8 Claims. (Cl. 139—85.)



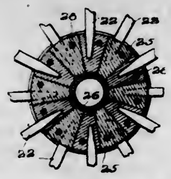
6. In a filling replenishing loom, the combination of the lay and shuttle-boxes, means for parting the old or spent filling between the cloth selvage and shuttle when in the adjacent shuttle box, a filling thread positioning device mounted on the lay transversely thereof and having a yielding surface to engage the filling between the cloth selvage and shuttle when replenishment of filling is to be effected.

1,350,614. THEATRICAL APPLIANCE. LANGDON McCORMICK, New York, N. Y. Filed Oct. 5, 1918. Serial No. 257,031. 13 Claims. (Cl. 46—70.)



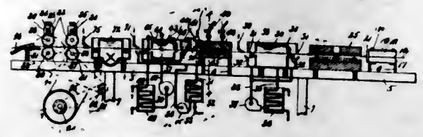
1. In a theatrical apparatus for producing illusionary effects, the combination of a movable collapsible object, a structure representing an area in or on which the movable object travels, means for simultaneously moving the object and the area structure surrounding same in the same direction, and means for expanding or collapsing the object while being moved to produce the illusionary effect of the object moving on or in the area surrounding same.

1,350,615. PIPE-SLEEVE. BENJAMIN MANCUSO, Batavia, N. Y. Filed Sept. 15, 1919. Serial No. 323,760. 2 Claims. (Cl. 285—114.)



1. A sleeve for connecting pipe sections having interiorly thereof a portion for closely and slidably engaging adjacent pipe ends, an enlarged portion forming an annular chamber at either end of said pipe engaging portion for the reception of packing and cementing material, an annular shoulder at either end of the sleeve for retaining said cementing material in position, and an exterior receptacle communicating with one of said chambers for the introduction of cementing material thereto when the sleeve is inclined from a horizontal position with the latter chamber at its lower end.

1,350,616. PHONOGRAPH. WALTER H. MILLER, Orange, N. J. Filed Oct. 7, 1918. Serial No. 257,157. 4 Claims. (Cl. 274—17.)



1. In a device of the class described, a phonograph recorder, and a device having a "breaker" disposed in proximity to and in advance of the recording stylus.

1,350,617. VEHICLE-WHEEL. ARTHUR MILLS, Sacramento, Calif. Filed Jan. 18, 1919. Serial No. 271,893. 5 Claims. (Cl. 21—69.)
